Congressional Record

PROCEEDINGS AND DEBATES OF THE 85th CONGRESS, FIRST SESSION

SENATE

THURSDAY, MAY 16, 1957

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Our Father, God, as so often in days whose record is now written, we pause in reverence at the footstool of Thy grace with a sense of our failure and fallibility, we come with the deep prayer that the great causes that will mold the future into the pattern of Thy desire and design, that will heal the world and rebuild it and usher in a just and abiding peace, may challenge the best that is in us and gain the supreme allegiance of our love and labor as we serve our brief day. To this end, may our spirits be as candles of the Lord which no darkness can put out. We ask it in the everblessed name of that Holy One whose life is the light of men. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Journal of the proceedings of Wednesday, May 15, 1957, was approved, and its reading was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on today, May 16, 1957, the President had approved and signed the following acts and joint resolution:

S. 120. An act for the relief of James F. Walsh;

S. 394. An act to waive the limitation on the time within which a Medal of Honor may be awarded to Comdr. Hugh Barr Miller, Jr., United States Navy;

S. 998. An act to amend the act of June 4, 1953 (67 Stat. 41), and for other purposes; and

S. J. Res. 22. Joint resolution requesting the President to designate the third Friday of May of each year as National Defense Transportation Day.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed a bill (H. R. 7441) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1958, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H. R. 7441) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1958, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to make an announcement for the information of the Senate. In addition to the bills and other measures which I announced yesterday as cleared for consideration today, there are six other measures which are cleared at the present time, and which may be acted upon if there is no objection. They are the following:

Calendar No. 232, Senate Resolution 124, citing Edward A. Hintz for contempt of the Senate;

Calendar No. 304, Senate bill 534, to amend section 702 of the Merchant Marine Act, 1936, in order to authorize the construction, reconstruction, or remodeling of vessels under the provisions of such section in shipyards in continental United States;

Calendar No. 305, Senate bill 836, to provide transportation on Canadian vessels between ports in southeastern Alaska and between Hyder, Alaska, and other points in southeastern Alaska or the continental United States either directly or via a foreign port, or for any part of the transportation;

Calendar No. 306, Senate bill 1446, to amend title 14, United States Code, so as to provide for retirement of certain former members of the Coast Guard Reserve;

Calendar No. 307, Senate bill 1806, to amend the Sockeye Salmon Fishery Act of 1947; and

Calendar No. 321, Senate bill 768, to designate the east 14th Street highway bridge over the Potomac River in the District of Columbia, as the Rochambeau Memorial Bridge.

With respect to the last-mentioned bill, I may state that the committee is anxious to have it receive early consideration by the Senate, inasmuch as it is the desire of the Government officials concerned that the dedication of the bridge occur during the forthcoming visit by the President of France.

Again, Mr. President, I should like to remind the Senate that on tomorrow the Senate will convene at 11 a. m., and will consider Calendar No. 309, House bill 6700, the Department of Commerce and related agencies appropriation bill.

I should also like to inform the Senate that the majority leader, who scheduled this proposed legislation, is ready and anxious to have the Senate proceed with consideration of the supplemental appropriation bill. He is prepared to ask the Senate to hold a session on Saturday, if necessary, in order to dispose of that appropriation bill. However, it is necessary for some of our colleagues to be away from the Senate on Saturday, because of longstanding engagements. Of course, in line with the spirit which prevails in the Senate, we endeavor to accommodate such Senators. Furthermore, under the rule it is necessary for the supplemental appropriation bill and the hearings and the report on it to be available 3 days before the bill is considered by the Senate; and any Senator can object to having the bill considered before it has been available for 3 days. A member of the minority has informed me that he would object to a request to take up the bill sooner than that. Therefore, the earliest day on which it will be possible for the Senate to consider the bill will be the coming Monday.

Mr. President, I do not wish to read in the newspapers that the administration is criticizing the leadership for a lag. I may say that last week I asked the clerk of each standing committee to attempt to have the chairman of his committee bring to the attention of the members of the committee each and every one of the 148 recommendations the Executive has sent to the Congress during this session. Although I realize that all of them cannot be acted upon, let alone be acted upon favorably, and prudence would not justify such a course, nevertheless I wish to be sure that at this session each recommendation that is made by the Executive does receive the earnest, sympathetic, and fair consideration of the committee concerned. Next week I plan to call a meeting of the chairmen of the standing committees, to ask them to give me their reports on the number of recommendations on which they have acted, their statements regarding when the others will be acted upon, and the time schedules.

Mr. President, I realize that we are approaching a time of the year when a great many graduation exercises will be held. Senators have been selected to receive honorary degrees and to deliver graduation addresses, and Senators must campaign for reelection. This is a very fertile time of the year in which to do so. However, the Senate has ahead

of it a majority of the appropriation bills, which must be acted upon between the present time and June 30, and the Senate also has a large number of Presidential recommendations upon which to act. I state to the Senate that we shall do everything we possibly can to accommodate Senators. There will not be a session of the Senate on Saturday of this week; but it may be necessary to have the Senate in session more days next week and more days the following week, as compared with the number of days of the week during which it has been necessary for the Senate to be in session in the past. Our schedule in that respect will depend upon how speedily action is taken by the Appropriations Committee.

So far as the leadership is concerned, we are prepared to have the Senate hold a session next Saturday and to have the Senate consider the supplemental appropriation bill. Its consideration has been delayed until Monday only because we have been informed that a Senator on the minority side stated that he would object to its earlier consideration.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the following committees or subcommittees were authorized to meet today during the session of the Senate:

The Committee on Foreign Relations;

The Public Roads Subcommittee of the Committee on Public Works; and

The Public Lands Subcommittee of the Committee on Interior and Insular Affairs.

ORDER FOR ADJOURNMENT TO 11 A. M. ON FRIDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until tomorrow, Friday, at 11 a. m.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nomination of William M. Johnson, to be postmaster at Granite City, Ill., which nominating messages were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. SALTONSTALL, from the Committee on Armed Services:

J. Sinclair Armstrong, of Illinois, to be an Assistant Secretary of the Navy, vice William B. Franke.

By Mr. FULBRIGHT, from the Committee on Banking and Currency:

C. Douglas Dillon, of New Jersey, to be Alternate Governor of the International Monetary Fund and the International Bank for Reconstruction and Development for the term of 5 years.

The PRESIDENT pro tempore. If there be no further reports of committees, the nominations on the Executive Calendar will be stated.

DEPARTMENT OF THE INTERIOR

Mr. JOHNSON of Texas. Mr. President, I should like to have the Senate consider first Calendar No. 494, the nomination of the Assistant Secretary of the Interior, because I understand there will be some discussion of Calendar No. 493. Therefore, I should like to have the other nominations acted on first, so that I may make some other plans, while that debate is taking place.

Therefore, Mr. President, I ask that Calendar No. 493 be temporarily passed over, and that at this time the Senate begin with Calendar No. 494, in considering the nominations on the Executive Calendar.

The PRESIDENT pro tempore. Without objection, it is so ordered; and Calendar No. 494 will be stated.

The Chief Clerk read the nomination of Roger Charles Ernst, of Arizona, to be Assistant Secretary of the Interior.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

GOVERNOR OF ALASKA

The Chief Clerk read the nomination of Michael A. Stepovich, of Alaska, to be Governor of the Territory of Alaska.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

THE DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

The Chief Clerk read the nomination of Andrew Parker, of the District of Columbia, to be a member of the District of Columbia Redevelopment Land Agency, for a term expiring March 3, 1962.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

IN THE NAVY

The Chief Clerk read the nomination of Vice Adm. Maurice E. Curts to have the grade, rank, pay, and allowances of admiral while performing certain duties.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

IN THE NAVY AND IN THE MARINE CORPS

The Chief Clerk proceeded to read sundry nominations in the Navy and in the Marine Corps.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the Navy and Marine Corps be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc; and, without objection, the nominations are confirmed.

POSTMASTERS

The Chief Clerk proceeded to read sundry nominations of postmasters.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the postmaster nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the postmaster nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, under the rule, the Senate will have the usual morning hour, for the introduction of bills and the transaction of other routine business; and in that connection I ask unanimous consent that statements be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, at the conclusion of the morning hour, we plan to have the Senate resume the consideration of executive business, to consider the nomination of Mr. Elmer F. Bennett, of Colorado, to be Solicitor for the Department of the Interior.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

EXEMPTION FROM PROHIBITIONS AGAINST CERTAIN TEACHERS IN CANAL ZONE

A letter from the Governor, Canal Zone Government, Balboa Heights, Canal Zone, transmitting a draft of proposed legislation to exempt certain teachers in the Canal Zone public schools from prohibitions against the holding of duel offices and the receipt of double salaries (with an accompanying paper); to the Committee on Appropriations.

REPORT ON LIQUIDATION OF RECONSTRUCTION FINANCE CORPORATION

A letter from the Secretary of the Treasury, transmitting, pursuant to law, a report on the progress of liquidation of the Reconstruction Finance Corporation, to March 31, 1957 (with an accompanying report); to the Committee on Banking and Currency.

REPORT ON REVIEW OF HOUSING AUTHORITY OF CITY OF CHARLESTON, S. C.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of the Housing Authority of the City of Charleston, S. C., Public Housing Administration, Housing and Home Finance Agency, dated April 1956 (with an accompanying report); to the Committee on Banking and Currency.

REPORT OF FOREIGN CLAIMS SETTLEMENT COMMISSION

A letter from the Chairman, Foreign Claims Settlement Commission of the United States, Washington, D. C., transmitting, pursuant to law, a report of that Commission, for the period ended December 31, 1956 (with an accompanying report); to the Committee on Foreign Relations.

AUDIT REPORT ON TENNESSEE VALLEY AUTHORITY

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Tennessee Valley Authority, for the fiscal year ended June 30, 1956 (with an accompanying report); to the Committee on Government Operations.

SGT. JOHN F. BAUGHMAN

A letter from the Secretary of the Army, transmitting a draft of proposed legislation for the relief of Sgt. John F. Baughman (with an accompanying paper); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution of the Senate of the State of California; to the Committee on Interior and Insular Affairs:

"Senate Resolution 124

"Resolution relative to the land use program for the lower Colorado River

"Whereas the Parker Dam County Recreation District has been created in San Bernardino County comprising in its entirety land owned by the United States; and

"Whereas the United States Department of the Interior has under consideration at the present time numerous proposals which would affect the use of the land along the Colorado River below Parker Dam; and

"Whereas such proposals would, in their present form, adversely affect the administration of said lands by the Parker Dam County Recreation District; and

"Whereas said district is authorized under the laws of this State to lease or otherwise acquire control of all or any of the land in the district from the United States upon such terms as may be mutually agreed upon by the trustees of the district and the United States, and to, in turn, rent or sublease any of such land to any person for any purpose, recreational or otherwise, not inconsistent with the terms of the lease or other agreement under which the district holds the land under the United States: Now, therefore, be it

"Resolved by the Senate of the State of California, That the Congress of the United States and the United States Department of the Interior are respectfully memorialized to give consideration to leasing or giving control to the Parker Dam County Recreation District the lands located within the boundaries of said district and that the department be requested to take no action with respect to land use which will affect the operation of said district; and be it further

"Resolved, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, the Secretary of the Interior, the Speaker of the House of Representatives, and each Senator and Representative from California in the Congress of the United States."

A concurrent resolution of the Legislature of the State of New Hampshire; to the Committee on Public Works:

"Whereas through Federal grant-in-aid programs the Federal Government by extravagant and unnecessary spending is forcing New Hampshire also to spend extravagantly to match and thus obtain back part of its own money; and

"Whereas New Hampshire citizens pay income taxes which go to Washington and are returned in part to New Hampshire under Federal grant-in-aid programs in amounts reduced by bureaucratic overhead, creating the false impression that the State is getting something for nothing; and

"Whereas in returning funds to New Hampshire the Federal Government ties strings to the use of these funds which interfere with local government, complicates the enactment of State legislation and forces the State to spend in fields it believes unwarranted; and

"Whereas it is common knowledge that local projects financed in part by Federal funds usually cost excessively because of unnecessary Federal requirements; and

"Whereas the New Hampshire Legislature feels that its citizens know better than the Federal Government how to spend the citizens' money and that local governments are more capable and efficient than the Federal Government in managing local programs; Now, therefore, be it

"Resolved by the members of the New Hampshire Legislature in the 1957 session assembled—

"1. That the Federal Government refrain from enacting new grant-in-aid programs and reexamine all such existing programs and end or reduce their costs wherever possible.

"2. That copies of this resolution be transmitted to the President of the United States, Vice President of the United States as President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each member from New Hampshire in the Senate of the United States and in the House of Representatives of the United States.

"3. That copies of this resolution be transmitted to the presiding officers of the legislature of the other 47 States for their information and consideration by the clerks of the senate and house of representatives of the State of New Hampshire.

"Senator PAUL G. KARKEVELAS,
"Sponsor.

"ERALSEY C. FURGUSON,
"President of the Senate.

"W. DOUGLAS SCAMMAN,
"Speaker of the House of Representatives.

"BENJAMIN F. GREER,
"Clerk of the Senate.

"GEORGE T. RAY, Jr.,
"Clerk of the House."

A resolution adopted by the Commissioners of Roads and Revenue, Glynn County, Brunswick, Ga., favoring the enactment of legislation to provide an increase in compensation of postal employees; to the Committee on Post Office and Civil Service.

A letter in the nature of a petition from the Los Angeles, Calif., Postal Organizations Council, signed by Carl H. Reister, secretary, praying for the enactment of legislation to provide increased compensation for postal employees; to the Committee on Post Office and Civil Service.

PROPOSED SALARY INCREASE FOR POSTAL EMPLOYEES—PETITION

Mr. JAVITS. Mr. President, I have received an enormous amount of mail, and I am sure many other Senators have received the same, relating to the problems of postal workers.

The distinguished Senator from South Carolina [Mr. JOHNSTON], the chairman of the Committee on Post Office and Civil Service, who, I am happy to say, is present in the Chamber, has informed me that on Monday next the committee will open hearings on the question of compensation for postal workers.

Mr. President, I have intimate experience and personal experience with many of these people, and in altogether too many cases, considering the dignity of the United States, do they have to find outside work and perform double jobs in order to make a living.

An analysis has been made of the rate of indebtedness among postal workers, under ordinary living standards, and it has been found that the rate of indebtedness is very much higher for postal workers than it is among those who work in private business.

Mr. President, it is our national responsibility to maintain an effective and efficient postal service. We should appropriate whatever money is needed for that purpose, adjust postal rates to what we consider to be the public interest, and call upon the Post Office Department to render such services free or for less than cost as we again think is in the national interest. But none of that, Mr. President, should be taken out of the backs of the postal workers. They were entitled to compensation which is commensurate with the standard of service they render and with prevailing rates of wages and compensation and job security in private business.

Mr. President, it is my deep conviction the postal workers are not receiving those benefits now. I hope very much this matter will have the sympathetic attention of the committee. I know the chairman of the committee to be one of the great, understanding friends of postal employees and their problems, and I hope very much this matter will have the speedy attention of Congress.

Mr. President, I ask unanimous consent to have printed in the RECORD a petition signed by several hundred postal workers of Syracuse, N. Y., and vicinity, bearing upon this subject.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

PETITION FOR PASSAGE OF H. R. 6 AND S. 27

We, the undersigned, feel that there is an overwhelming need for better personnel relations and a decent standard of living for postal employees and other Federal workers.

These conditions will be approached with the passage of H. R. 6 and S. 27. The former referring to personnel relations and the latter

of it a majority of the appropriation bills, which must be acted upon between the present time and June 30, and the Senate also has a large number of Presidential recommendations upon which to act. I state to the Senate that we shall do everything we possibly can to accommodate Senators. There will not be a session of the Senate on Saturday of this week; but it may be necessary to have the Senate in session more days next week and more days the following week, as compared with the number of days of the week during which it has been necessary for the Senate to be in session in the past. Our schedule in that respect will depend upon how speedily action is taken by the Appropriations Committee.

So far as the leadership is concerned, we are prepared to have the Senate hold a session next Saturday and to have the Senate consider the supplemental appropriation bill. Its consideration has been delayed until Monday only because we have been informed that a Senator on the minority side stated that he would object to its earlier consideration.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the following committees or subcommittees were authorized to meet today during the session of the Senate:

The Committee on Foreign Relations;

The Public Roads Subcommittee of the Committee on Public Works; and

The Public Lands Subcommittee of the Committee on Interior and Insular Affairs.

ORDER FOR ADJOURNMENT TO 11 A. M. ON FRIDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until tomorrow, Friday, at 11 a. m.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, and withdrawing the nomination of William M. Johnson, to be postmaster at Granite City, Ill., which nominating messages were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. SALTONSTALL, from the Committee on Armed Services:

J. Sinclair Armstrong, of Illinois, to be an Assistant Secretary of the Navy, vice William B. Franke.

By Mr. FULBRIGHT, from the Committee on Banking and Currency:

C. Douglas Dillon, of New Jersey, to be Alternate Governor of the International Monetary Fund and the International Bank for Reconstruction and Development for the term of 5 years.

The PRESIDENT pro tempore. If there be no further reports of committees, the nominations on the Executive Calendar will be stated.

DEPARTMENT OF THE INTERIOR

Mr. JOHNSON of Texas. Mr. President, I should like to have the Senate consider first Calendar No. 494, the nomination of the Assistant Secretary of the Interior, because I understand there will be some discussion of Calendar No. 493. Therefore, I should like to have the other nominations acted on first, so that I may make some other plans, while that debate is taking place.

Therefore, Mr. President, I ask that Calendar No. 493 be temporarily passed over, and that at this time the Senate begin with Calendar No. 494, in considering the nominations on the Executive Calendar.

The PRESIDENT pro tempore. Without objection, it is so ordered; and Calendar No. 494 will be stated.

The Chief Clerk read the nomination of Roger Charles Ernst, of Arizona, to be Assistant Secretary of the Interior.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

GOVERNOR OF ALASKA

The Chief Clerk read the nomination of Michael A. Stepovich, of Alaska, to be Governor of the Territory of Alaska.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

THE DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

The Chief Clerk read the nomination of Andrew Parker, of the District of Columbia, to be a member of the District of Columbia Redevelopment Land Agency, for a term expiring March 3, 1962.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

IN THE NAVY

The Chief Clerk read the nomination of Vice Adm. Maurice E. Curts to have the grade, rank, pay, and allowances of admiral while performing certain duties.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

IN THE NAVY AND IN THE MARINE CORPS

The Chief Clerk proceeded to read sundry nominations in the Navy and in the Marine Corps.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the Navy and Marine Corps be considered en bloc.

The PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc; and, without objection, the nominations are confirmed.

POSTMASTERS

The Chief Clerk proceeded to read sundry nominations of postmasters.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the postmaster nominations be considered en bloc.

The PRESIDENT pro tempore. Without objection, the postmaster nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, under the rule, the Senate will have the usual morning hour, for the introduction of bills and the transaction of other routine business; and in that connection I ask unanimous consent that statements be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, at the conclusion of the morning hour, we plan to have the Senate resume the consideration of executive business, to consider the nomination of Mr. Elmer F. Bennett, of Colorado, to be Solicitor for the Department of the Interior.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

EXEMPTION FROM PROHIBITIONS AGAINST CERTAIN TEACHERS IN CANAL ZONE

A letter from the Governor, Canal Zone Government, Balboa Heights, Canal Zone, transmitting a draft of proposed legislation to exempt certain teachers in the Canal Zone public schools from prohibitions against the holding of duel offices and the receipt of double salaries (with an accompanying paper); to the Committee on Appropriations.

REPORT ON LIQUIDATION OF RECONSTRUCTION FINANCE CORPORATION

A letter from the Secretary of the Treasury, transmitting, pursuant to law, a report on the progress of liquidation of the Reconstruction Finance Corporation, to March 31, 1957 (with an accompanying report); to the Committee on Banking and Currency.

REPORT ON REVIEW OF HOUSING AUTHORITY OF CITY OF CHARLESTON, S. C.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of the Housing Authority of the City of Charleston, S. C., Public Housing Administration, Housing and Home Finance Agency, dated April 1956 (with an accompanying report); to the Committee on Banking and Currency.

REPORT OF FOREIGN CLAIMS SETTLEMENT COMMISSION

A letter from the Chairman, Foreign Claims Settlement Commission of the United States, Washington, D. C., transmitting, pursuant to law, a report of that Commission, for the period ended December 31, 1956 (with an accompanying report); to the Committee on Foreign Relations.

AUDIT REPORT ON TENNESSEE VALLEY AUTHORITY

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Tennessee Valley Authority, for the fiscal year ended June 30, 1956 (with an accompanying report); to the Committee on Government Operations.

SGT. JOHN F. BAUGHMAN

A letter from the Secretary of the Army, transmitting a draft of proposed legislation for the relief of Sgt. John F. Baughman (with an accompanying paper); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution of the Senate of the State of California; to the Committee on Interior and Insular Affairs:

"Senate Resolution 124

"Resolution relative to the land use program for the lower Colorado River

"Whereas the Parker Dam County Recreation District has been created in San Bernardino County comprising in its entirety land owned by the United States; and

"Whereas the United States Department of the Interior has under consideration at the present time numerous proposals which would affect the use of the land along the Colorado River below Parker Dam; and

"Whereas such proposals would, in their present form, adversely affect the administration of said lands by the Parker Dam County Recreation District; and

"Whereas said district is authorized under the laws of this State to lease or otherwise acquire control of all or any of the land in the district from the United States upon such terms as may be mutually agreed upon by the trustees of the district and the United States, and to, in turn, rent or sublease any of such land to any person for any purpose, recreational or otherwise, not inconsistent with the terms of the lease or other agreement under which the district holds the land under the United States: Now, therefore, be it

"Resolved by the Senate of the State of California, That the Congress of the United States and the United States Department of the Interior are respectfully memorialized to give consideration to leasing or giving control to the Parker Dam County Recreation District the lands located within the boundaries of said district and that the department be requested to take no action with respect to land use which will affect the operation of said district; and be it further

"Resolved, That the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, the Secretary of the Interior, the Speaker of the House of Representatives, and each Senator and Representative from California in the Congress of the United States."

A concurrent resolution of the Legislature of the State of New Hampshire; to the Committee on Public Works:

"Whereas through Federal grant-in-aid programs the Federal Government by extravagant and unnecessary spending is forcing New Hampshire also to spend extravagantly to match and thus obtain back part of its own money; and

"Whereas New Hampshire citizens pay income taxes which go to Washington and are returned in part to New Hampshire under Federal grant-in-aid programs in amounts reduced by bureaucratic overhead, creating the false impression that the State is getting something for nothing; and

"Whereas in returning funds to New Hampshire the Federal Government ties strings to the use of these funds which interfere with local government, complicates the enactment of State legislation and forces the State to spend in fields it believes unwarranted; and

"Whereas it is common knowledge that local projects financed in part by Federal funds usually cost excessively because of unnecessary Federal requirements; and

"Whereas the New Hampshire Legislature feels that its citizens know better than the Federal Government how to spend the citizens' money and that local governments are more capable and efficient than the Federal Government in managing local programs; Now, therefore, be it

"Resolved by the members of the New Hampshire Legislature in the 1957 session assembled—

"1. That the Federal Government refrain from enacting new grant-in-aid programs and reexamine all such existing programs and end or reduce their costs wherever possible.

"2. That copies of this resolution be transmitted to the President of the United States, Vice President of the United States as President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each member from New Hampshire in the Senate of the United States and in the House of Representatives of the United States.

"3. That copies of this resolution be transmitted to the presiding officers of the legislature of the other 47 States for their information and consideration by the clerks of the senate and house of representatives of the State of New Hampshire.

"Senator PAUL G. KARKEVELAS,
"Sponsor.

"ERALSET C. FURGUSON,
"President of the Senate.

"W. DOUGLAS SCAMMAN,
"Speaker of the House of Representatives.

"BENJAMIN F. GREER,
"Clerk of the Senate.

"GEORGE T. RAY, Jr.,
"Clerk of the House."

A resolution adopted by the Commissioners of Roads and Revenue, Glynn County, Brunswick, Ga., favoring the enactment of legislation to provide an increase in compensation of postal employees; to the Committee on Post Office and Civil Service.

A letter in the nature of a petition from the Los Angeles, Calif., Postal Organizations Council, signed by Carl H. Reister, secretary, praying for the enactment of legislation to provide increased compensation for postal employees; to the Committee on Post Office and Civil Service.

PROPOSED SALARY INCREASE FOR POSTAL EMPLOYEES—PETITION

Mr. JAVITS. Mr. President, I have received an enormous amount of mail, and I am sure many other Senators have received the same, relating to the problems of postal workers.

The distinguished Senator from South Carolina [Mr. JOHNSTON], the chairman of the Committee on Post Office and Civil Service, who, I am happy to say, is present in the Chamber, has informed me that on Monday next the committee will open hearings on the question of compensation for postal workers.

Mr. President, I have intimate experience and personal experience with many of these people, and in altogether too many cases, considering the dignity of the United States, do they have to find outside work and perform double jobs in order to make a living.

An analysis has been made of the rate of indebtedness among postal workers, under ordinary living standards, and it has been found that the rate of indebtedness is very much higher for postal workers than it is among those who work in private business.

Mr. President, it is our national responsibility to maintain an effective and efficient postal service. We should appropriate whatever money is needed for that purpose, adjust postal rates to what we consider to be the public interest, and call upon the Post Office Department to render such services free or for less than cost as we again think is in the national interest. But none of that, Mr. President, should be taken out of the backs of the postal workers. They were entitled to compensation which is commensurate with the standard of service they render and with prevailing rates of wages and compensation and job security in private business.

Mr. President, it is my deep conviction the postal workers are not receiving those benefits now. I hope very much this matter will have the sympathetic attention of the committee. I know the chairman of the committee to be one of the great, understanding friends of postal employees and their problems, and I hope very much this matter will have the speedy attention of Congress.

Mr. President, I ask unanimous consent to have printed in the RECORD a petition signed by several hundred postal workers of Syracuse, N. Y., and vicinity, bearing upon this subject.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

PETITION FOR PASSAGE OF H. R. 6 AND S. 27

We, the undersigned, feel that there is an overwhelming need for better personnel relations and a decent standard of living for postal employees and other Federal workers.

These conditions will be approached with the passage of H. R. 6 and S. 27. The former referring to personnel relations and the latter

providing an increase in wages for postal employees.

Therefore we urge that these bills be enacted into law.

(Signed by Robert W. Johnson and sundry other citizens of Syracuse, N. Y., and vicinity.)

PROPOSED TRANSFER OF TELEVISION STATION WRGB—RESOLUTION AND LETTERS

Mr. JAVITS. Mr. President, I should like to make a few brief remarks about the proposed transfer of a television channel from the area around Schenectady, N. Y., by an order of the FCC, to Syracuse, N. Y. The people in this area have deep complaint, for considerably more than 100,000 will be deprived of television service through their existing receiving machines, if this transfer shall be effected.

My distinguished colleague, the Senator from Vermont [Mr. AIKEN] spoke about this matter on May 2. I agree with what the Senator from Vermont said, and wish to record my view accordingly. He referred to the fact that there is now pending before the Federal Communications Commission a proposal relating to transferring a television channel from WRGB, Schenectady, to Syracuse, N. Y.

WRGB is a very high frequency television channel, and the suggestion is made to replace it by an ultra-high-frequency channel. I have received a large number of complaints from constituents against this prospect, and they seem to me to state a very sympathetic case. I have been in close touch with the Federal Communications Commission. The Commission has informed me that there is only one VFH station in the large area comprising the Albany, Schenectady, Troy area—channel 6 in Schenectady.

The Commission also stated to me as follows:

After reviewing the comments of all parties in the proceeding, the Commission concluded in its report and order that the public interest would be served by deleting channel 10 from Vail Mills, by shifting channel 6 from Schenectady to Syracuse and by substituting UHF channel 47 for channel 6 at Schenectady. Since the deletion of channel 6 from Schenectady would require a modification of the General Electric Co.'s license for operation of station WRBG on channel 6 at Schenectady, in accordance with section 316 of the Communications Act, the Commission, simultaneously with the issuance of its report and order, issued a show-cause order to the General Electric Co. notifying it of the action proposed and affording it an opportunity to file a response on or before April 15, 1957, indicating any objections that it might have to operate on channel 47 rather than channel 6 and whether a public hearing in the matter is desired.

That case is still pending. The Commission has informed me that the reason for the proposed change stems from the necessity for improving the opportunity for more effective competition among a greater number of stations and that, therefore, the area should be deintermixed by which the Commission means that there should be either all ultra or all very high frequency. Since there are already a number of ultra-high-frequency stations and it is anticipated that more will be authorized under the deintermixture proposal WRGB would be eliminated.

Of course, people who have television sets which are not modified to receive the UHF stations in the Albany-Schenectady area would be completely deprived of television unless they purchased additional electronic equipment costing from $50 to $100. Even so, it is estimated by a number of engineers, that assuming this expensive modification, approximately 120,000 people in the area will be completely deprived of television because the very high frequency carries better to the fringes of the television area than does ultra high frequency.

I ask unanimous consent that the texts of a number of representative letters from New Yorkers be printed in the RECORD to indicate the views which I have been receiving in my office. While there has been no final decision by the Federal Communications Commission, it certainly contemplates the elimination of this station; and I must say in all frankness that I agree with the feeling of the Senator from Vermont that the Federal Communications Commission should review this case with the greatest of care, and should refuse to make any determination which will be detrimental to so many viewers, without assuring that there is adequate prospect for TV coverage of the area.

I ask unanimous consent that there may be printed in the RECORD a resolution adopted by the council of the city of Schenectady; a report of the resolution adopted by the town of Shandaken, N. Y.; a resolution of the Stamford Woman's Club, of Stamford, N. Y.; a resolution of the Stamford Methodist Church, of Stamford, N. Y.; a resolution of the Fort Plain Community Club, Fort Plain, N. Y.; and a very interesting letter commenting on this matter from the superintendent of schools of Schenectady and president of the Mohawk-Hudson Council on Educational Television.

There being no objection, the resolution and letters were ordered to be printed in the RECORD, as follows:

Resolution 5815

Whereas station WRGB has been served with an order to show cause returnable on April 15, 1957, before the Federal Communications Commission, why television station WRGB should not transfer its operation from VHF channel 6 to UHF channel 47; and

Whereas such transfer would not be in the public interest as many television viewers would be forced to purchase new sets or equip their present television sets with costly converters; and

Whereas it is estimated that such a transfer of operations would deprive at least 120,000 television viewers in the capital area, parts of the Adirondacks, Vermont, and Massachusetts of any television service; and

Whereas station WRGB has been a pioneer in telecasting since 1939 and is serving pioneer viewers on channel 6: Now, therefore, be it

Resolved, That in the interest of justice and the public welfare, the council of the city of Schenectady urges the Federal Communications Commission to reconsider its action; and be it further

Resolved, That copies of this resolution be forwarded forthwith by the clerk of the city of Schenectady to the Federal Communications Commission, Representative BERNARD W. KEARNEY, Senator IRVING M. IVES, and Senator JACOB K. JAVITS.

TOWN OF SHANDAKEN,
Shandaken, N. Y., March 9, 1957.

Senator JACOB JAVITS,
Washington, D. C.

DEAR SENATOR JAVITS: At the regular meeting of the Town Board of the Town of Shandaken, held March 9, 1957, it was unanimously moved by the board to ask you to use your influence in the matter of Schenectady Television Station WRGB, channel 6, that it be kept under the very high frequency rather than ultrahigh frequency.

Approximately 75 percent of the television owners in our town would be cut off from reception, as this is the only channel received by these people.

Thanking you,

Very truly yours,

JOSEPH FEITZINGER,
Town Clerk.

STAMFORD WOMAN'S CLUB,
Stamford, N. Y., March 25, 1957.

Hon. JACOB K. JAVITS,
United States Senator, Senate Office Building, Washington, D. C.

DEAR MR. JAVITS: The Federal Communications Commission is contemplating changing the Schenectady Television Station WRGB from very high frequency to ultrahigh frequency. We believe that this change will cause the majority of the residents in this area to be without television as ultrahigh frequency is not obtainable here.

The Stamford Woman's Club is asking for your aid in protesting this change. Your influence in the matter will be appreciated.

Very truly yours,

ELLA M. LAMONT
Mrs. George D. Lamont,
Corresponding Secretary.

STAMFORD, N. Y., *March 22, 1957.*

Senator JACOB K. JAVITS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR JAVITS: I am writing at the request of the Women's Society of Christian Service of the Stamford Methodist Church, a group of about 50 women. They asked me to protest to the Federal Communications Commission in regard to the proposed change of Schenectady TV station WRGB from VHF to UHF, and to ask you to use your influence against this change.

WRGB is the only television station that gives good reception in this whole mountain area, and if the frequency is lowered, we will be able to get nothing on our sets. We will be most grateful for all that you can do.

Cordially,

DAISEY R. DESILVA,
MRS. LEO H. DESILVA,
Vice President, WSCS.

FORT PLAIN COMMUNITY CLUB,
Fort Plain, N. Y., April 8, 1957.

The Honorable JACOB J. JAVITS,
Senate Office Building,
Washington, D. C.

DEAR SIR: A resolution was adopted by this service club opposing the change in channel from No. 6 (VHF), Schenectady, N. Y., to Syracuse, N. Y., while establishing channel No. 47 (UHF) for the Schenectady area, for the following reasons:

A very small percentage of the sets owned by area families are capable of receiving UHF. Therefore, a financial burden would be imposed upon them to replace their sets or purchase converters and new antennas.

WRGB on channel No. 6 is the only station that gives our area residents satisfactory reception, and from the reports UHF, No. 47, would not be able to reach into many sections now covered by VHF No. 6.

This organization and the community it serves will greatly appreciate your expressing our opposition to the Federal Communication Commission and assisting us in opposing this change.

Very truly yours,

LELAND SMITH, *President.*

SCHENECTADY PUBLIC SCHOOLS,
Schenectady, N. Y., March 18, 1957.

The Honorable JACOB K. JAVITS,
United States Senate,
Washington, D. C.

MY DEAR MR. JAVITS: I respectfully call to your attention the proposed change of station WRGB in Schenectady from VHF to UHF channel. I represent several interests in writing this communication. As a citizen of Schenectady, I have a deep interest in the service provided by WRGB. However, my position as superintendent of schools in Schenectady and as president of Mohawk-Hudson Council on Educational Television is the one from which my comments will be directed.

For the last 4 years, WRGB has been giving an hour a day, 5 days a week, of its prime morning time to the Mohawk-Hudson Council. Not only the time but the services of the staff at the station and considerable financial support have been offered by the station. With their support, Mohawk-Hudson Council has provided an educational television service to an extremely receptive television audience within the viewing range of WRGB's VHF broadcast. This past year, the station in Plattsburgh has further extended the activity of the council's program through simultaneous broadcast picked up from WRGB.

This operation involves hundreds of schools, colleges, museums, historical societies, and other cultural organizations of the community. They are paying members of the Mohawk-Hudson Council on Educational Television. In the case of the schools, they have put much effort into not only programing but into the proper reception and use of program offerings of significance to the curriculums of the schools.

The very existence of the council is threatened by this proposed change. Our schools are almost 100 percent equipped for very high frequency reception. Many of them are outside the range of ultrahigh frequency. Their continued membership in our council is dependent on assurances of next year's programing over WRGB. This very outstanding example of educational television supported at the community level merits a better fate than dissolution through precipitous action.

May I urge your most serious consideration of all aspects of this decision to change WRGB from VHF to UHF. We in the schools of this area, public, parochial, and private, strongly urge the retention of very high frequency for WRGB.

Sincerely yours,

ROBERT E. MURRAY.

RESOLUTION OF CITY COUNCIL OF ST. PAUL, MINN.

Mr. THYE. Mr. President, I am in receipt of a letter from the city clerk of the city of St. Paul, Minn., transmitting a resolution adopted by the city council, protesting against the enactment of House bill 6790, to eliminate Federal control of the production and sale of natural gas. I present the resolution, and ask unanimous consent that it be printed in the RECORD, and appropriately referred.

There being no objection, the resolution was referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Whereas the council is informed that the Interstate and Foreign Commerce Committee of the House of Representatives has begun hearings on a bill introduced in Congress on April 10, 1957, by Congressman HARRIS, said bill being designated as H. R. 6790, and which bill, among other things, proposes to change the basis for determination of the production cost of gas paid or charged by interstate pipeline companies through the elimination of the present method of determining cost by the use of the public utility rate base cost of service formula and procedure and substituting in lieu thereof the reasonable market price, to be determined by the Federal Power Commission; and

Whereas the Council of the City of St. Paul is of the opinion that the bill provides no clear and adequate standards for determining the reasonable market price for gas and which, if the bill become law, could result in a determination of a price for gas in excess of that necessary for the adequate compensation to the producers of natural gas, contrary to the best interests of the ultimate consumers of gas; and

Whereas the council is informed and believes that a majority of the natural gas reserves are owned and controlled by a few large corporations, and there is no true competitive market in the sale, transportation, and resale of natural gas in interstate commerce; and

Whereas the price of natural gas to the ultimate consumer in St. Paul is a matter of vital concern for all the citizens in this city, made especially more so by reason of the cold weather which this city has in the winter season, and further by reason of the large number of ultimate consumers which are now using natural gas for domestic purposes in this city; and

Whereas it is the opinion of the city council that if this new Harris bill should become law, it could very well result in substantial increases in the cost of gas allowed to the pipeline carriers serving this city and to the ultimate consumers in this city; and

Whereas the council is firmly convinced that by reason of the facts recited above, this legislation is contrary to the public interest: Now, therefore, be ft

Resolved, That the City Council of the City of St. Paul hereby opposes the passage of the new Harris bill or any other legislation of a similar nature, or any legislation which seeks to eliminate or restrict in any manner the present, legally recognized control by the Federal Government through the Federal Power Commission of the production and sale of natural gas in the field; and be it further

Resolved, That the council requests the Members of Congress from the State of Minnesota to do their utmost to defeat this bill and any legislation of a similar type which might be introduced in Congress; and be it further

Resolved, That the mayor of the city of St. Paul is hereby directed to file a written statement of the opposition of this council to the bill and is hereby directed to present this resolution to the House Interstate and Foreign Commerce Committee on May 13, 1957, and to join with the other mayors of the large gas-consuming cities to present an argument in protest against the so-termed Harris bill; and be it further

Resolved, That the city clerk is directed to send forthwith a copy of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Member of the United States Congress from the State of Minnesota, and to each member of the Interstate and Foreign Commerce Committee of the House of Representatives.

Adopted by the council May 10, 1957.
Approved May 10, 1957.

JOSEPH E. DILLON,
Mayor.

RESOLUTION OF CONNECTICUT PUBLIC UTILITIES COMMISSION

Mr. BUSH. Mr. President, I present, for appropriate reference, and ask unanimous consent to have printed in the RECORD, a resolution adopted by the Public Utilities Commission of the State of Connecticut, relating to Federal safety requirements for natural-gas pipelines.

There being no objection, the resolution was referred to the Committee on Interstate and Foreign Commerce, and order to be printed in the RECORD, as follows:

RESOLUTION OF THE PUBLIC UTILITIES COMMISSION, STATE OF CONNECTICUT, CONCERNING H. R. 2809, FEDERAL SAFETY REQUIREMENTS FOR NATURAL-GAS PIPELINES

It appearing, that H. R. 2809 introduced in the House of Representatives of the 85th Congress 1st session, which has been referred to the Committee on Interstate and Foreign Commerce, proposes the amendment of the Natural Gas Act for the purpose of authorizing the Federal Power Commission to prescribe safety requirements for natural-gas companies; and

It appearing further, that the Public Utilities Commission of the State of Connecticut is authorized by the provisions of chapter 264a of the 1955 supplement to the general statutes of Connecticut to promulgate safety and regulations providing for increased safety in the transportatoin and distribution of natural gas within this State; and

It appearing further, that the Public Utilities Commission has adopted rules and regulations for the aforesaid purpose (Commission Docket No. 8612).

Now, therefore, we the undersigned, comprising the Public Utilities Commission of the State of Connecticut, petition and memorialize the Connecticut Representatives and Senators in Congress that the enactment of H. R. 2809 should be opposed for the reason that the State of Connecticut has adequate and satisfactory safety requirements in effect, and the enactment of said H. R. 2809 would constitute an unnecessary and unreasonable interference with the right and powers of the State of Connecticut to exercise supervision and regulation over natural-gas pipelines within this State.

We hereby direct that a copy of this petition be forwarded by the secretary of this commission to each Connecticut Representative and Senator in Congress.

Dated at Hartford, Conn., this 1st day of May 1957.

EUGENE J. LAUGHLIN,
HENRY B. STRONG,
BASIL P. FITZPATRICK,
Public Utilities Commission,
State of Connecticut.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. FULBRIGHT, from the Committee on Banking and Currency, without amendment:

H. R. 4136. An act to extend the period within which Export-Import Bank of Washington may make loans (Rept. No. 331).

By Mr. BYRD, from the Committee on Finance, with amendments:

H. R. 53. An act to consolidate into one act, and to simplify and make more uniform,

the laws administered by the Veterans' Administration relating to compensation, pension, hospitalization, and burial benefits, and to consolidate into one act the laws pertaining to the administration of the laws administered by the Veterans' Administration (Rept. No. 332).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. GREEN (by request):

S. 2097. A bill to amend the Foreign Service Buildings Act of 1926; and

S. 2098. A bill to amend the act providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization to provide for uniform per diem allowances, and for other purposes; to the Committee on Foreign Relations.

(See the remarks of Mr. GREEN when he introduced the above bills, which appear under separate headings.)

By Mr. ERVIN:

S. 2099. A bill for the relief of Irene B. Moss; to the Committee on the Judiciary.

By Mr. SALTONSTALL:

S. 2100. A bill for the relief of Claire G. Trigiedas; to the Committee on Finance.

By Mr. SALTONSTALL (by request):

S. 2101. A bill for the relief of Mr. Yervant Boulgarian and his wife, Mrs. Haiganouche Boulgarian; and

S. 2102. A bill for the relief of Eugenio Piastino; to the Committee on the Judiciary.

By Mr. KENNEDY:

S. 2103. A bill for the relief of Ernest E. Glasford; to the Committee on the Judiciary.

By Mr. DIRKSEN (by request):

S. 2104. A bill for the relief of Rosina Jonasch;

S. 2105. A bill for the relief of Anna Palinkas; and

S. 2106. A bill for the relief of Gregory J. Kessenich and others (with accompanying papers); to the Committee on the Judiciary.

By Mr. HOLLAND:

S. 2107. A bill to provide for the conveyance to the State of Florida of a certain tract of land in such State owned by the United States; to the Committee on the Judiciary.

By Mr. CHAVEZ:

S. 2108. A bill to amend the Public Buildings Act of 1949, to authorize the Administrator of General Services to name, rename, or otherwise designate any building under the custody and control of the General Services Administration; to the Committee on Public Works.

By Mr. CHAVEZ (by request):

S. 2109. A bill to amend an act extending the authorized taking area for public building construction under the Public Buildings Act of 1926, as amended, to exclude therefrom the area within E and F Streets and 19th Street and Virginia Avenue, Northwest, in the District of Columbia; to the Committee on Public Works.

By Mr. WATKINS:

S. 2110. A bill for the relief of Shirley Leeke Kilpatrick;

S. 2111. A bill for the relief of Yuko Shiba; and

S. 2112. A bill for the relief of Joaquin Gil Carrasco; to the Committee on the Judiciary.

By Mr. MAGNUSON (for himself, Mr. JACKSON, Mr. MANSFIELD, Mr. MORSE, Mr. MURRAY, and Mr. NEUBERGER):

S. 2113. A bill to amend the Federal Power Act, as amended, with respect to allowances in the cost of service and accelerated amortization and liberalized depreciation for income tax purposes; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

NATIONAL COWBOY HALL OF FAME AND MUSEUM

Mr. ANDERSON. Mr. President, on behalf of myself, and Senators BARRETT, BENNETT, BIBLE, CARLSON, CARROLL, CASE of South Dakota, CHURCH, CURTIS, DWORSHAK, GOLDWATER, HAYDEN, HENNINGS, HRUSKA, JACKSON, KERR, KUCHEL, LANGER, MAGNUSON, MALONE, MANSFIELD, MONRONEY, MORSE, MUNDT, MURRAY, NEUBERGER, WATKINS, YARBOROUGH, and YOUNG, I submit, for appropriate reference, a concurrent resolution which has as its purpose the recognition of the National Cowboy Hall of Fame and Museum to be located in Oklahoma City, Okla.

For a number of years stockmen, ranchers, cowboys, and other citizens interested in the history of the development of our great West have given of their time and effort to bring into being an organization that would have national recognition, and whose purpose it would be to preserve something of the story of the development of the cattle industry in this country.

It was Mr. C. A. Reynolds, of Kansas City, Mo., who conceived the idea of the Cowboy Hall of Fame to be dedicated to all cowmen who had a prominent part in the development of the American West.

It was in 1953 and 1954, after he spent his personal funds touring the 17 Western States, talking with governors, prominent livestock men and women, that Mr. Reynolds' idea began to take permanent form leading to organization of the board of trustees for the National Cowboy Hall of Fame and Museum.

Early in 1955 the trustees met in Denver, Colo., and chose a five-man committee to make recommendations for a permanent site for the structure in which men who contributed greatly to the development of the West were to be honored, and where representative evidence of the life and culture of their times was to be preserved.

The site selection committee carefully studied 400 applications from Western States and brought the list down to 10, then to 3. Representatives from those three communities were requested to attend a meeting of the entire board of trustees at Denver, and make their presentations, where, on April 15, 1955, by majority vote, the trustees selected Oklahoma City. On November 11, 1955, the trustees met in Oklahoma City and dedicated the 37-acre, $150,000 site provided alongside 2 major transcontinental highways.

Subsequently, citizens of Oklahoma City raised, by popular subscription, the sum of $750,000, while other Oklahomans added an additional $250,000 to make the first million dollars for construction of the initial expansion-type building to house the hall of fame and museum. Citizens of the other Western States are now engaged in providing more funds in what is planned eventually to be a $5 million structure.

For their contributions to the West, five men have already been voted into the hall of fame; others will follow. The first men are Will Rogers, of Oklahoma; Charles Russell, of Montana; Charles Goodnight, of Texas; Jake McClure, of New Mexico; and Theodore Roosevelt, of New York and the Dakotas.

The National Cowboy Hall of Fame will be constructed and maintained without cost to any governmental agency, which is fitting under the best traditions of the men and the era which it will perpetuate as a part of our great American heritage.

Because of the national interest in the preservation of historical and present-day records of men who have contributed much to the West, and the preservation of personal effects, mementos, relics, equipment and other accoutrements, I believe the National Cowboy Hall of Fame is deserving of congressional recognition. Therefore, I am glad to join in sponsoring this concurrent resolution.

I ask unanimous consent that the resolution of the board of trustees of the National Cowboy Hall of Fame and Museum, together with the list of its signers, and the text of the concurrent resolution which I have today submitted, be printed in the body of the RECORD at this point.

There being no objection, the resolution adopted by the board of trustees, National Cowboy Hall of Fame and Museum, was ordered to be printed in the RECORD, together with the signatures attached, as follows:

RESOLUTION ADOPTED BY THE BOARD OF TRUSTEES OF THE NATIONAL COWBOY HALL OF FAME AND MUSEUM, JANUARY 5, 1957, AT PHOENIX, ARIZ.

Whereas the Board of Trustees of the National Cowboy Hall of Fame and Museum, a nonprofit foundation, having previously completed their organization with two members from each of the 17 Western States, with Governors of those States sitting ex-officio, did after careful investigation on April 15, 1955, select Oklahoma City, Okla., as the site of the permanent structure of the National Cowboy Hall of Fame and Museum; and

Whereas the board of trustees did on November 11, 1955, dedicate at Oklahoma City the 37-acre site, provided by the people of the city of Oklahoma City and the State of Oklahoma; and

Whereas the people of Oklahoma through private subscription raised the equivalent of $1 million as their initial goal toward construction of the first unit of the National Cowboy Hall of Fame and Museum; and

Whereas citizens of the other 16 Western States now are undertaking by private subscription to raise an additional $4 million to complete a fitting shrine to men outstanding in opening and developing the West, with a museum for archives, artifacts, and other evidence of an era that so enriched our American historical heritage; and

Whereas the National Cowboy Hall of Fame and Museum will be a valuable contribution to the folklore of America, of material benefit to all citizens and scholars of the present and future: Therefore be it

Resolved by the board of trustees, That the Congress of the United States be requested by resolution or other parliamentary means to memorialize and/or commend to the people of the United States, the National Cowboy Hall of Fame and Museum as a national shrine, and that a copy of such engrossed resolution be made a part of permanent

archives of the National Cowboy Hall of Fame and Museum.

The board of trustees: C. A. Reynolds, of Missouri, chairman; Albert K. Mitchell, of New Mexico, 1st vice chairman; Fred H. Dressler, of Nevada, 2d vice chairman; A. W. Swenson, of Texas, 3d vice chairman; Nelson P. Crow, of California; Chester Paxton, of Nebraska; Alan Rogers, of Washington; Fred Porter, Jr., of Arizona; R. J. Hofmann, of Wyoming; Ray Schnell, of North Dakota; Burt L. Hall, of South Dakota; P. S. Spencer, of Montana; Rex Bell, of Nevada; A. D. Brownfield, of New Mexico; Lowe P. Howell, of Arizona; Brooks Keogh, of North Dakota; William F. Fencher, of Washington; Hal Cooper, of Oklahoma; Lee Sneed, of Oklahoma; E. H. Shoemaker, Jr., of Nebraska; Victor E. Anderson, of Nebraska, Governor; F. D. Ackerman, of Colorado; E. L. Mechem, of New Mexico, Governor; John D. Lewis, of Utah; J. Hugo Aronson, of Montana, Governor; Fred W. Heine, of Kansas; F. L. Blomquist, of Idaho; Millward L. Simpson, of Wyoming, Governor; John E. Davis, of North Dakota, Governor; Ernest B. Ham, of South Dakota; Joe Foss, of South Dakota, Governor; K. Ross Toole, of Montana; Irwin Mann, of Oregon; Robert D. Holmes, of Oregon, Governor; Harold J. Powers, of California; Charles H. Russell, of Nevada, Governor; Clyde Storr, of Idaho; Raymond Gary, of Oklahoma, Governor; Ernest W. McFarland, of Arizona, Governor; Roy J. Turner, of Oklahoma; George Docking, of Kansas, Governor; Albert D. Rosellini, of Washington, Governor; L. H. Strong, of Utah; Goodwin J. Knight, of California, Governor; Steve McNichols, of Colorado, Governor; Daniel I. J. Thornton, of Colorado; J. W. Jonester, Jr., of Oregon; George D. Clyde, of Utah, Governor.

The concurrent resolution (S. Con. Res. 32), submitted by Mr. ANDERSON (for himself and other Senators), was referred to the Committee on Rules and Administration, and, under the rule, ordered to be printed in the RECORD, as follows:

Whereas citizens of 17 Western States where the cattle trade contributed a colorful chapter to the whole history of the United States and particularly to that of the grasslands on which the cattle trade flourished, have cooperated in the establishment at Oklahoma City, Okla., of the National Cowboy Hall of Fame and Museum; and

Whereas it is the purpose of the National Cowboy Hall of Fame and Museum to honor past and present cowboys, stockmen, and ranchers who have contributed to the initial development of the West; and

Whereas in order to perpetuate the contributions by acts and deeds of these men and women, the National Cowboy Hall of Fame and Museum proposes to erect such buildings or monuments as may be deemed appropriate to be a lasting memorial to those pioneers; and

Whereas the preservation of historical and present day documents, mementos, personal effects and relics of these pioneers is of national interest and will be a valuable contribution to the folklore of America: Be it therefore

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby recognizes the National Cowboy Hall of Fame and Museum as a memorial to individuals who have made outstanding contributions in the opening and development of the West and as a fitting and valuable institution for the collection and preservation of artifacts and other evidences and data relating to the role the West has played in enriching our American historical heritage.

Mr. O'MAHONEY. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. O'MAHONEY. There will be no sense in building a Cowboy Hall of Fame and Museum in Oklahoma, New Mexico, or anywhere else, unless we can meet the situation in which the economic independence of the United States is being undermined by the expansion of national commerce by foreign corporations holding charters issued by foreign governments and by States which have no control over commerce.

Mr. ANDERSON. When I first came to the Congress, in 1941, one of the first tasks I assigned myself was the collection of the reports of the Temporary National Economic Committee, headed by the able Senator from Wyoming. As the years pass, those reports ripen and become more valuable to the people of the country. The studies which the Senator made then and the studies he is now making, are very worthwhile contributions.

Mr. O'MAHONEY. I thank the Senator.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the concurrent resolution be held at the desk until the close of business on Monday, May 20, 1957, for additional cosponsors.

The PRESIDENT pro tempore. Without objection, it is so ordered.

AMENDMENT OF FOREIGN SERVICE BUILDINGS ACT OF 1926

Mr. GREEN. Mr. President, by request, I introduce for appropriate reference a bill to amend the Foreign Service Buildings Act of 1926. The bill authorizes the appropriation of $100 million to finance a 10-year building program for the acquisition of office and housing space by the Department of State overseas; $50 million of this sum will be in the form of foreign currency credits.

This proposed legislation has been requested by the Secretary of State, and I am introducing it in order that there may be a specific bill to which Members of the Senate and the public may direct their attention and comments.

I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered by the Committee on Foreign Relations.

I ask unanimous consent that the bill may be printed at this point in the RECORD, together with the letter from the Secretary of State to the Vice President in regard to it.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and letter will be printed in the RECORD.

The bill (S. 2097) to amend the Foreign Service Buildings Act of 1926, introduced by Mr. GREEN (by request), was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That section 4 of the Foreign Service Buildings Act, 1926, as amended (22 U. S. C., sec. 295), is amended by adding at the end thereof the following new subsection:

"(c) For the purpose of carrying into effect the provisions of this act there is hereby authorized to be appropriated, in addition to amounts previously authorized, an amount not to exceed $100 million, of which $50 million shall be available exclusively for payments representing the value, in whole or in part, of property or credits in accordance with the provisions of the act of July 25, 1946 (60 Stat. 663). Sums appropriated pursuant to this authorization shall remain available until expendable."

The letter presented by Mr. GREEN is as follows:

DEPARTMENT OF STATE,
Washington, May 9, 1957.

The Honorable RICHARD M. NIXON,
President of the Senate.

DEAR MR. VICE PRESIDENT: The Department submits and recommends for your consideration the enclosed proposed legislation amending the Foreign Service Buildings Act, 1926 (22 U. S. C. 292–300).

Authorizations of appropriations to carry out the provisions of the Foreign Service Buildings Act from 1926 to the present total $231,625,000, of which $200 million is authorized to be used exclusively for payments to agencies of the United States Government for foreign credits and currencies. With the appropriation for fiscal year 1957, there remains an unappropriated balance of authorization of $64,595,000 of which $57,234,000 is for the procurement of foreign currencies and $7,361,000 is in dollar authorization. These amounts will be reduced further by the appropriation for fiscal year 1958.

The Department of State has thus far acquired residences, office buildings, and staff housing for the use of diplomatic and consular personnel overseas valued at approximately $148 million. Even so, many of the personnel at overseas posts are working and living in accommodations far below the standards considered minimum in the United States of America. In order to assess the total needs overseas, the Department in July 1955 initiated a post-by-post survey of buildings requirements. As a result of this survey, a program was prepared contemplating an expenditure of approximately $200 million through fiscal year 1965 to meet these basic requirements. A copy of the program is enclosed.

The needs of the United States Information Agency are included with those of the Department of State without specific identification in the attached building program. Any future needs of the Agency for office space or special-purpose facilities space will be included in the plans for the specific building programs for the embassies and consulates concerned. For housing purposes, Public Affairs Officers of the United States Information Service overseas will be regarded as senior officers of the embassies and consulates, and other American staff of the United States Information Service will be regarded as embassy or consular staff.

Acquisitions under the Foreign Service Buildings Act have been financed largely through the use of foreign currency credits. Surplus property and lend-lease credits have provided foreign currencies for a substantial portion of the program. The use of these credits permitted the conversion of a portion of the debts to tangible assets of lasting value. The disposal of surplus agriculture commodities authorized under Public Law 480 is providing foreign currency credits which also are useful in financing the buildings program.

There are, however, certain limitations to the use of foreign currency credits. Substantial sums of these credits are located in countries where the need for building facilities is no longer acute. Under regulations prescribed by the United States Department of the Treasury and placed in effect on December 1, 1953, all agencies of the United States Government needing foreign exchange are required to purchase it from the United States Treasury holdings and they may not purchase from external sources unless the Treasury cannot supply the kind of currency needed. Only a relatively small number of foreign currencies are held by the Treasury in substantial amounts, relative to overall United States needs, and this number is being reduced by exchange conversion of surplus holdings into currencies in demand.

The buildings program funds the maintenance and operating costs for owned and long-term-leased buildings of the Department of State overseas. A number of these buildings are located in areas where no currency credits are available and United States dollars must be expended to meet the obligations under these circumstances. Consequently, the dollar requirements have increased over recent years and probably they will increase further in the future.

The proposed amendment to section 4 will authorize additional appropriations of $100 million of which $50 million is to be in foreign currency credit authorization. A statement reflecting the authorizations and appropriations under the Foreign Service Buildings Act is enclosed.

The Department of State has been informed by the Bureau of the Budget that there is no objection to the presentation to the Congress of the proposed legislation.

A similar letter is being sent to the Speaker of the House of Representatives.

Sincerely yours,

JOHN FOSTER DULLES.

(Enclosure: 1. Copy of draft bill. 2. Copy of Foreign Buildings Requirements 1957–65 inclusive. 3. Copy of Department of State Authorizations and Appropriations for the Foreign Buildings Program.)

UNIFORM PER DIEM ALLOWANCES FOR MEMBERS OF THE UNITED STATES COMMISSION FOR THE UNITED NATIONS EDUCATIONAL, SCIENTIFIC, AND CULTURAL ORGANIZATION

Mr. GREEN. Mr. President, by request, I introduce, for appropriate reference, a bill to amend the act providing for membership and participation of the United States in the United Nations Educational, Scientific, and Cultural Organization, to provide for uniform per diem allowances, and for other purposes.

This proposed legislation has been requested by the Acting Secretary of State, and I am introducing it in order that there may be a specific bill to which the public and Members of the Senate may direct their attention and comments. I reserve my right to support or oppose this bill, as well as any suggested amendments to it, when the matter is considered.

I ask unanimous consent that the bill may be printed at this point in the RECORD, together with the letter from the Acting Secretary of State to the Vice President in regard to it.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill and letter will be printed in the RECORD.

The bill (S. 2098) to amend the act providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization to provide for uniform per diem allowances, and for other purposes, introduced by Mr. GREEN (by request), was received, read twice by its title, referred to the Committee on Foreign Relations, and ordered to be printed in the RECORD, as follows:

A bill to amend the act providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization to provide for uniform per diem allowances, and for other purposes

Be it enacted, etc., That the act of July 30, 1946, providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization (22 U. S. C. 287m–287t) is amended as follows:

(1) By striking the proviso contained in section 2 (22 U. S. C. 287o) and inserting in lieu thereof:

"Provided however, that he may be allowed transportation expenses and per diem in lieu of subsistence, while away from his home or regular place of business in attendance upon authorized meetings or in consultation on request with the Department of State, in accordance with the provisions of section 5 of the Administrative Expenses Act of 1946 (5 U. S. C. 73b–2), as amended."

(2) By striking the last sentence in section 5 (22 U. S. C. 287q) and substituting in lieu thereof:

"Under such regulations as the Secretary of State may prescribe, the travel expenses of experts attending such conferences shall be borne by the Department of State and they may be allowed transportation expenses and per diem in lieu of subsistence for the period of actual attendance and of necessary travel, in accordance with the provisions of section 5 of the Administrative Expenses Act of 1946 (5 U. S. C. 73b–2), as amended."

The letter presented by Mr. GREEN is as follows:

DEPARTMENT OF STATE,
Washington, May 7, 1957.

The Honorable RICHARD M. NIXON,
President of the Senate.

DEAR MR. VICE PRESIDENT: I am transmitting herewith a draft of a proposed amendment to Public Law 565 (79th Cong., 2d sess.), providing for uniform per diem allowances for members of the United States National Commission for the United Nations Educational, Scientific, and Cultural Organization.

At the present time, the members receive a per diem of $10 as prescribed by the act. The purpose of the amendment is to provide for uniform allowances in accordance with current prevailing rates prescribed by Congress for advisory groups serving without compensation. A roster of members of the Commission is enclosed.

(Roster omitted.)

It is recommended that the Congress take favorable action on the enclosed draft bill.

The Department has been informed by the Bureau of the Budget that there is no objection to the transmission of this proposal to the Congress for its consideration.

A similar communication is being forwarded to the Speaker of the House of Representatives.

Sincerely yours,

CHRISTIAN A. HERTER,
Acting Secretary.

(Enclosures: 1. Two copies of amendment to Public Law 565. 2. Membership list of United States National Commission for UNESCO.)

AMENDMENT OF FEDERAL POWER ACT, RELATING TO CERTAIN ALLOWANCES FOR INCOME TAX PURPOSES

Mr. MAGNUSON. Mr. President, on behalf of myself, my colleague, the junior Senator from Washington [Mr. JACKSON], the junior Senator from Montana [Mr. MANSFIELD], the senior Senator from Oregon [Mr. MORSE], the senior Senator from Montana [Mr. MURRAY], and the junior Senator from Oregon [Mr. NEUBERGER], I introduce, for appropriate reference, a bill to amend the Federal Power Act, as amended, with respect to allowances in the cost of service and accelerated amortization and liberalized depreciation for income-tax purposes. I ask unanimous consent that an explanatory statement of the bill be printed in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the explanatory statement will be printed in the RECORD.

The bill (S. 2113) to amend the Federal Power Act, as amended, with respect to allowances in the cost of service and accelerated amortization and liberalized depreciation for income-tax purposes, introduced by Mr. MAGNUSON (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The explanatory statement presented by Mr. MAGNUSON is as follows:

EXPLANATORY STATEMENT—RAPID AMORTIZATION BILL

A bill to amend the Federal Power Act with respect to allowances in the cost of service and accelerated amortization and liberalized depreciation for income-tax purposes.

I. THE PROBLEM

Electric power companies have been collecting large sums of money from their customers by working a maneuver involving the use of different methods of depreciation for rate purposes from the methods used for tax purposes so as to pocket for themselves a major portion of the tax money collected from their customers. This is the way it works:

(a) For rate purposes, a company normally depreciates its plant according to straight-line depreciation methods over the average service life expectancy of the plant. Thus, for example, a dam with a 50-year average service life expectancy would be depreciated 2 percent each year.

(b) But the Internal Revenue Code of 1954 permits such a company, under section 167, to depreciate its plant for tax purposes under two alternative methods which permit it to take more rapid depreciation early in the plant's life, and then less depreciation later. This is known as accelerated depreciation, or liberalized depreciation by accountants. Section 168 of the code permits even more rapid amortization upon receipt of a certificate of defense necessity from the Office of Defense Mobilization.

(c) When a company submits its costs of service for approval for ratemaking purposes by the Commission, it lists only straight-line depreciation costs. It then claims money to pay income taxes, basing its claim on the assumption that the company will show earnings at a level consistent with such low depreciation costs.

1. For example: suppose a dam built since 1954 with a 50-year average service life expectancy costs $100 million. The straight-line depreciation of that dam would be 2 per-

cent per year, of $2 million. The company would be allowed to earn 6 percent return on its $100 million investment, or $6 million. If its costs of operation, property taxes, and other expenses of doing business were $15 million for the year, a simplified version of its cost-of-service asking would look like this:

Cost of operation, maintenance, property taxes, etc	$15,000,000
Depreciation	2,000,000
Return before income taxes	12,500,000
Income taxes (52 percent of return)	6,500,000
Net return	6,000,000
Total cost of service (allowable operating revenues)	29,500,000

(d) But when the company submits its income-tax return, it takes advantage of liberalized depreciation provisions.

1. For example: it may be able to claim twice as much depreciation as it projected for rate purposes under the provisions of section 167 alone. Using the above example, let us say that the company finds that $4,000,000 can be claimed as depreciation for tax purposes. If the company has in fact taken in the $29,500,000 allowed it for operating revenues, its tax return shows the following:

Cost of operation, maintenance, property taxes, etc	$15,000,000
Depreciation	4,000,000
Return before income taxes	10,500,000
Income taxes (52% of return)	5,450,000
Net return	5,050,000
Total cost of service	29,500,000

This makes the net return look like only $5,050,000, but it actually is $7,050,000 for there is an additional $2,000,000 caused by the use of liberalized depreciation. Of that $2,000,000, $950,000 of it is legitimate earnings allowed the company by the Commission, but $1,050,000 of it is tax savings or deferred taxes because of the use of liberalized depreciation. Thus the company has collected from the rate payers $1,050,000 for taxes which in fact it has not paid out as taxes.

(e) This tax saving has been described by the Joint Committee on Internal Revenue Taxation as an interest-free loan to the company.

1. Some companies are treating the tax saving as a reserve for deferred taxes on the theory that if taxes remain the same and their earnings remain the same—sometime, perhaps 25 years from now—the depreciation allowance for tax purposes will have declined to less than the depreciation allowance for rate purposes and the reserve will be needed to prevent a rate increase. In the meantime, the money saved is available for investment.

2. Other companies have openly treated the tax saving as extra earnings. Some have openly distributed it to their stockholders—at least one even claiming that it is returned capital and not subject to income tax. This despite the fact that the money had been collected for taxes from the customers.

(f) The tax saving is not a loan, however. The money may never be paid as taxes. So long as a company has an expanding business—so long as it is investing in new plant and equipment—it can offset any decline in depreciation allowance of old plant and equipment by the high depreciation allowance on its new plant and equipment. Indeed, if its new plant and equipment investments are larger than old plant and equipment retirals, the company can go on indefinitely pocketing ever increasing tax savings. Worse yet, it can accomplish this, in part, by investing the tax savings themselves. Even if plant replacements only equal plant retirements, it will never pay 1 cent of such deferred taxes to the Treasury. Only if the business declines and contracts its plant and equipment might it ever encounter a situation where depreciation allowances for rate purposes might exceed depreciation allowed for taxes.

II. EXPLANATION OF THE PROVISIONS OF THE BILL

(a) Objectives:

1. To prohibit licensees and public utilities from collecting money for income taxes which they are not going to pay out as income taxes.

2. To force licensees and public utilities which have already collected money for income taxes which they have not paid out for income taxes to subtract such money from their net investment.

(b) Effect of the provisions:

1. The prohibition on collecting tax money not paid out will lower the tax allowance in the cost of service, thus lowering rates to the consumer.

2. The requirement that accumulated tax savings be deducted from the net investment will lower the investment base upon which the rate of return is calculated. This will also lower rates to the consumer, but far less than the prohibition on tax allowance. Actually, the rate payer will only be spared from paying interest on the money he has already improperly been forced to give the company.

(c) Provisions in the bill amending the Federal Power Act:

1. Sections 205 and 206 of the Federal Power Act, which deal with rates permitted all electric utility companies, are amended to prohibit any company from collecting money from customers to pay income taxes which the company does not actually pay. The amendment also provides that any such tax savings which have already been collected shall be subtracted from the company's net investment. This appears as section 5 of the bill.

2. Section 20 of the Federal Power Act, which deals with rates permitted hydroelectric licensees, is amended in the same language as sections 205 and 206 to prohibit any company from collecting money from customers to pay income taxes which the company does not actually pay. By amending section 14 (see below), section 20 is also amended in the same language as sections 205 and 206 to provide that any such tax savings which have already been collected shall be subtracted from the company's net investment. The amendment to section 20 appears as section 4 of the bill.

3. Section 3 of the Federal Power Act, which defines terms used in the act, is amended to define tax savings—the money already collected for taxes not paid—as the difference between the taxes which the company would have paid using the depreciation allowance it claimed for cost of service purposes and the taxes it paid using the liberalized depreciation allowances permitted under the Internal Revenue Code. This appears as section 1 of the bill.

4. Section 10d of the Federal Power Act, which provides for a special amortization reserve to be created from surplus earnings after 20 years of operation of a licensed hydroelectric project, is amended to require that in calculating proper costs of service allowed the licensee the Commission shall allow as proper tax costs only the taxes actually paid. This simply makes the amortization reserve section consistent with the changes in section 20. This appears as section 2 of the bill.

5. Section 14 of the Federal Power Act, which deals with the right of the United States to take over a licensed project and establishes the method of determining the net investment remaining in such project which the Government would owe the licensee, is amended to require that any tax savings accumulated by the licensee shall be subtracted from the net investment. This simply makes the takeover section consistent with the changes in section 20. It also makes section 20 consistent with the amendments to section 205 and 206, for section 20 provides that the method prescribed for determining net investment in section 14 shall be used for ratemaking. This appears as section 3 of the bill.

INCREASED MONTHLY RATES OF PENSION PAYABLE TO CERTAIN WIDOWS AND FORMER WIDOWS—AMENDMENTS

Mr. COTTON submitted amendments, intended to be proposed by him, to the bill (H. R. 358) to increase the monthly rates of pension payable to widows and former widows of deceased veterans of the Spanish-American War, including the Boxer Rebellion and the Philippine Insurrection, which were referred to the Committee on Finance and ordered to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MUNDT:

Editorial entitled "Thirty Years of Service," published in the Rapid City (S. Dak.) Journal of May 12, 1957, relating to the service of Rev. Rew Walz, pastor of the First Presbyterian Church of Rapid City.

By Mr. THYE:

Article entitled "William L. McKnight, Realist—Fifty Years as Part of MMM," written by Carl Hennemann, and published in the St. Paul (Minn.) Sunday Pioneer Press of May 12, 1957.

By Mr. DIRKSEN:

Editorial entitled "An Appeal to Reason," published in the Washington Sunday Star of May 12, 1957, relating to the agricultural problem.

By Mr. MANSFIELD:

Editorial entitled "Is It Worth Keeping?" published in the Billings (Mont.) Gazette of Sunday, May 12, 1957.

By Mr. NEUBERGER:

Editorial entitled "Post Office Men Need Their Raise," from the Coos Bay (Oreg.) Times of May 2, 1957.

By Mr. CHURCH:

Excerpts from letters from the colleagues, former students, and acquaintances of Prof. Tom Barclay, of Stanford University's department of political science, upon his forthcoming retirement.

By Mr. BUSH:

Editorial in tribute to Judge Samuel Mellitz.

By Mr. MARTIN of Pennsylvania:

Editorial entitled "A Record Tax Payment," published in the Washington (Pa.) Reporter of May 14, 1957.

Article concerning importance of skill in the use of weapons, published in the Army and Navy Journal of May 11, 1867.

NOTICE OF HEARING ON NOMINATION OF MAURICE AUGUSTUS CREWS TO BE AN ASSISTANT COMMISSIONER OF PATENTS

Mr. O'MAHONEY. Mr. President, on behalf of a subcommittee of the Committee on the Judiciary, I desire to give notice that a public hearing has been

scheduled for Monday, May 20, 1957, at 4 p. m., in room 424, Senate Office Building, on the nomination of Maurice Augustus Crews, of Pennsylvania, to be an Assistant Commissioner of Patents, vice Arthur W. Crocker, elevated.

Prior to the above-mentioned date all persons interested in the above nomination should file with the committee such representations as may be pertinent.

The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Wisconsin [Mr. WILEY], and myself, chairman.

NORWAY'S INDEPENDENCE DAY

Mr. THYE. Mr. President, tomorrow the freedom-loving nations of the world will give recognition to the Independence Day of one of our sister nations of the North Atlantic Treaty Organization—the sturdy Scandinavian kingdom of Norway. This day is known by the people of Norway and Americans of Norwegian descent as the "Syttende Mai," in commemoration of the signing of the Constitution of Norway.

On the 17th of May in 1814, 143 years ago tomorrow, a determined group of Norwegian patriots met at Eidsvold, outside of Oslo, Norway, to promulgate a constitution, which has continued to preserve the democratic principles of that brave nation. With the foresight and understanding which characterized the actions of our American forefathers, the writers of the Norwegian Constitution produced a supreme law of the land which has endured through almost a century and a half of struggles with crises caused by economic difficulties, wars, and enemy occupation. Embodied in this historic document are the principles of human and civil rights, sovereignty of the people, and the supremacy of the rule of law.

The simplicity and durability of the Norwegian Constitution reflects the character of this brave and noble nation. For centuries the people of Norway have struggled for their livelihood against the odds of rugged, mountainous geography and stormy seas. Such an environment has produced a strength of character which has time and again proved to be a valuable contribution to the cause of freedom and security in the world. I am proud to pay tribute today to the country of Norway, to its people, and to the contributions they have made to the preservation of the dignity of all mankind.

In the early days of World War II Norway for a time stood practically alone against the invading force of a totalitarian dictator. After a valiant stand the brave but small Norwegian forces finally were overcome by the overwhelming and cowardly attack. Norway was to be occupied for the remainder of the war, but the love of freedom and independence stayed on in the hearts of her people. After the defeat of Hitler this brave nation again took its rightful place among the free nations of the world.

Against the threat of Soviet communism the nation of the midnight sun has again taken a steadfast position in defiance of intimidation and threats of military aggression. Recently, in a letter to Norway's Premier Einar Gerhardsen, Soviet Premier Bulganin threatened to annihilate any country which permitted stationing of American nuclear weapons within its boundaries. Norway's Premier replied by stating that, as a member of the North Atlantic Treaty Organization, Norway would continue to cooperate with the United States and its other allies in doing whatever is deemed best for its own security. Premier Gerhardsen's reply to Bulganin proved to be an exemplary answer to the massive Soviet campaign of intimidation against the smaller nations belonging to NATO.

Mr. President, the nations of the Western World can have no doubt concerning the position of their Norwegian ally.

Today I point with special pride to my Norwegian ancestry. In humble respect for the memory of my Norwegian parents, and in proud tribute to the country from which they came, I reverently salute the people of Norway, who will tomorrow celebrate their independence day, "The Syttende Mai."

INVESTIGATION OF PUBLIC AFFAIRS IN PORTLAND, OREG., BY SELECT COMMITTEE ON IMPROPER ACTIVITIES IN LABOR OR MANAGEMENT FIELD

Mr. NEUBERGER. Mr. President, a veteran reporter for the New York Times, Lawrence E. Davies, who has covered events on the Pacific coast for that eminent newspaper for many years, recently reported on the reactions in the two metropolitan cities of the Pacific Northwest to current investigations of the activities of top teamster officials, particularly teamster president Dave Beck. His reports from Portland and from Seattle appeared in the Times on May 5 and 6, respectively.

Mr. President, my own hometown of Portland had the doubtful distinction of nationwide publicity as a result of having been chosen as the initial target of investigation by the Senate Select Committee on Improper Activities in Labor or Management Field. In Portland, improper connections were probed between operations of the teamsters union and gambling and other forms of vice. The pursuit of these disclosures led far from questions of labor-management relations, into matters of gambling and law-enforcement in Portland which had first made headlines in Oregon early in 1956, and they made headlines again.

Due to the courtesy of the chairman of the select committee, the senior Senator from Arkansas [Mr. MCCLELLAN], I was privileged to appear before the committee on March 15, 1957, to testify, from my own knowledge and experience, to the true character of Portland as a city of ethical and law-abiding men and women, where such crime and vice as exists is of very petty proportions in relation to the size of the metropolitan area and population. I am indebted to the committee for the interest and patience with which they received my testimony in defense of the chief city in my State.

Thus, Mr. President, I was pleased to read the report of Mr. Davies in the New York Times under the headlines "Pride Returning to Portland, Oreg.," and "—Boasts It Is One of Cleanest Coast Towns." Mr. Davies wrote that "Portlanders are saying once more that the city of roses, homes, and churches is the cleanest place on the coast." The State's own legal processes are continuing with the job of unraveling the facts and charges which temporarily placed Portland in the national spotlight. The beacon of that spotlight itself has moved on to the person of Mr. Beck, the president of the teamsters, and problems which are more directly in the field of possible improper activities in the field of labor-management relations.

This is the subject of Mr. Davies' report from Seattle in the New York Times of May 6. Seattle happens to be Mr. Beck's hometown and longtime base of operations. The complete success of his operations, and that of his union, in Seattle antedates by many years, even decades, the marginal activities in Portland which were recently made the subject of investigation by the select committee. Mr. Beck's effectiveness in the field of labor-management relations in Seattle, in the broad sense of that phrase, has long been such as to make him a leader among conservative businessmen of that city. As Mr. Davies writes:

> For the pink-cheeked, 62-year-old Mr. Beck had become a big man in Seattle, one who was respected and feared. He was looked on not only as a benevolent despot in labor but as a business leader and a vigorous champion of capitalism and of free enterprise. Many of the city's leaders applauded in December 1952, when Emil Sick, a local brewer and baseball club owner, as toastmaster at a testimonial dinner, praised Mr. Beck as the greatest labor leader in the country.

Mr. Beck even became a regent of the University of Washington, helping to preside over the academic community of that important center of learning and education of future leaders of the Pacific Northwest. But now, to quote Mr. Davies again:

> Business and civic leaders who toasted the onetime laundry wagon driver as one of Seattle's outstanding citizens on his election to the teamsters top post less than 5 years ago are surprised or embarrassed or, in some cases, uneasy over developments of recent weeks.

Mr. President, it has been no secret on the west coast how Mr. Beck achieved his rise to power as a labor leader and his unique eminence in Seattle. The history of these developments, as a matter of fact, falls a lot more squarely within the scope of improper activities in the labor or management field than does the petty vice in Portland which has been so predominantly featured in the recent investigation.

Prior to my entrance into public life, I was active for a number of years as a journalist and writer in the region where I was born and raised. As early as 1938, some of my newspaper and magazine assignments involved writing about such practices as the price-fixing arrangements between the teamsters union and certain business and industrial estab-

lishments in the Seattle area. If I am not mistaken, these agreements have had a far more adverse impact upon the consuming public than anything which has occurred in the vicinity of Portland. For example, the phrase "Dave Beck's voluntary NRA" was a common one in Seattle for many years, and it involved highly irregular pacts which raised such things as cleaning prices to exorbitant levels.

That is only one example which I happen to recall. It is unquestionably representative of the general rule, rather than an exception, in the iron grip which Mr. Beck fastened upon his home town through his ruthless control over vehicular transportation. Other examples have already been brought to the attention of the select committee. To a lesser degree, they are surely duplicated in many other cities outside of Seattle.

Mr. President, I am pleased to see Mr. Lawrence Davies report to the New York Times that Portland is recovering its pride and self-confidence after its dismay at having some of its local law-enforcement problems, which are only accidentally within the periphery of the Senate labor-management investigation, serve as the leadoff national attraction in that investigation. And the people of Portland will be glad to see the investigation turn to the more central problems of the corruption of collective bargaining and other economic processes by improper activities of labor or management officials, by which many cities far more than Portland have been brought within the grip of unscrupulous men.

I am voicing these brief remarks on the Senate floor today for one basic purpose. My home city has been severely hurt in national reputation and esteem by the damaging publicity it has suffered as a result of the recent Senate investigation. It is now my hope that the committee will give some fair perspective to this situation by undertaking similarly thorough investigations with respect to other cities where the teamsters union has been infinitely more powerful, aggressive, and dominant than in Portland: Seattle, for example, or San Francisco or New York City, or almost any large industrial city in America.

To date the municipal affairs of only one American community have been thoroughly probed by the committee. That is the municipality of Portland. One possible inference from this is that Portland has the most corrupt municipal government in the Nation, or the local government which is the most dominated by the teamsters union. Such an inference is wholly unwarranted by the facts. For example, the committee published a list of 35 vice and night spots allegedly operating illegally in Portland. I doubt if such operations had anything to do with labor-management relationships, but they were published, nevertheless, with much fanfare. When is the committee going to make a similar compilation of such alleged unlawful night life in San Francisco and Seattle and Chicago? Or is this kind of activity of importance to the United States Senate only when it happens in Portland and nowhere else?

As a native son of Portland, as well as a Senator from Oregon, I merely urge the select committee to give perspective and balance to its investigation, by undertaking exactly the same scrutiny of other communities which it made of Portland. That would not only be fair to the good name of Portland, but it would assure balance to a probe which has been assumed to be national in scope. According to Mr. Davies, of the New York Times, Dave Beck ascended to great heights of dominance and affluence in the civic life of Seattle. No comparable ascendancy by Mr. Beck or any other teamster official was shown in Portland. Yet it was the government and social fabric of Portland which were probed for many weeks by the committee and not that of Seattle.

I am not trying to tell the select committee what to do. Its members are far more experienced in the Senate and in handling investigations than I am, for I am not an investigator in any sense of the word. I realize the committee has had a legitimate duty to probe any corruption in labor-management relationships, but surely the mandate of the committee is not circumscribed geographically so that it applies exclusively to Portland, Oreg. I simply am saying that a committee with an assignment which is nationwide in latitude should not investigate only the government and affairs of one community out of the dozens of great cities in the United States, particularly a community which is essentially as law abiding, home loving, and generally placid as Portland. To confine the investigation only to Portland, and nowhere else, would be a distortion which I am sure does not do justice to the basic purpose and goal of the distinguished chairman of the committee and his able colleagues.

Unless I am totally mistaken, there is less real vice and corruption in Portland than in the majority of large American cities. I feel certain that the same searching examination of other communities as was made of Portland would demonstrate this fact beyond peradventure of a doubt.

ARMED FORCES DAY

Mr. SALTONSTALL. Mr. President, on Saturday, May 18, the Nation will observe Armed Forces Day, under a proclamation issued by President Eisenhower. Throughout the land there will be military parades and appropriate ceremonies and many installations of the Army, Navy, Air Force, Marine Corps, and other agencies will be open to public inspection.

American citizens will have an opportunity to see at first hand some of the tremendous new weapons which have been developed since World War II. They will see some of the highly skilled young men who have been trained to operate these new instruments of modern warfare.

By this observance of Armed Forces Day, we will show our own citizens and those of other lands that the United States is militarily strong and progressive. We can stimulate our people to think about the difficult decisions which have to be made by our military and civilian leaders and the Congress to make sure that we have adequate military capabilities to deter an aggressor from making any attempt to attack us, and to retaliate if an attack should be made.

We must have capable leadership, adequate physical facilities and equipmen and the men to operate them. It is just as important that our citizens remain determined and courageous if our country is to retain the strength which is so necessary until there is a permanent peace in the world.

Mr. MARTIN of Pennsylvania. Mr. President, I should like to associate myself with the remarks of my distinguished colleague from Massachusetts [Mr. SALTONSTALL], relating to Armed Services Day. It is a day in which every American should take an interest. Americans should learn something about the work of our men in uniform, and the various types of equipment which it is necessary for them to learn to use.

A little while ago I placed in the RECORD a statement which was published in the Army and Navy Journal of 90 years ago, to the effect that offense and defense depend more upon the knowledge the individual has of his weapons than upon the weapons themselves.

Personally, I feel that the only way we can all become acquainted with proper military defense is for every boy in America to have basic military training.

I hope that my colleagues will carefully read the statement of the distinguished Senator from Massachusetts.

Mr. SALTONSTALL. Mr. President, I thank the Senator for adding to my statement. I know how much interest he takes in the military, and how much of his life has been spent in the military service, and in thinking about military problems.

NATIONAL AND INTER-AMERICAN MUSIC WEEK

Mr. WILEY. Mr. President, I think it was Shakespeare who said:

> The man that hath no music in himself,
> Nor is not mov'd with concord of sweet sounds,
> Is fit for treasons, stratagems, and spoils.

Mr. President, last week there was held in Washington a very fine luncheon in celebration of National and Inter-American Music Week.

A series of awards were presented to those who have rendered outstanding service to the cause of music, including the famed singer, Miss Marian Anderson.

The awards were presented, appropriately enough, by the Honorable Sherman Adams, Assistant to the President, himself a deeply interested friend of American music.

The principal address was delivered by Mrs. Agnes Meyer, chairman of the District Auditorium Commission. Mrs. Meyer pointed out the magnificent potentialities for service of American culture through the National Auditorium and Civic Center, which will arise in the Foggy Bottom area, some years hence.

I am delighted that Congress has now given the green light toward the commission's acquisition of the necessary

land in this area, so that the commission can then proceed with the national raising on a national scale of voluntary funds for the purpose of construction of the center itself.

Of course, the specific funds for the real estate must still be appropriated, but I am confident this will be done.

I send to the desk several of the features of the program. They include: The order of events on the program itself, the remarks of Mr. Ralph E. Becker, chairman of the luncheon committee, and then the statement by Mrs. Meyer on the American Accropolis.

Mr. Becker's comments, I may say, were very apropos because they pointed out how America's cultural efforts vividly refuted the hostile condemnation which had been made of our culture by Dmitri Shepilov, former Soviet Foreign Minister.

Finally, I include, as an indication of the type of Soviet propaganda which we are constantly encountering and as an illustration of what Mr. Becker had in mind, the text of a New York Times story of April 4. It describes Mr. Shepilov's characteristically unfair and inaccurate statement of American culture.

I ask unanimous consent that this contrasting material which speaks for itself be printed at this point in the body of the CONGRESSIONAL RECORD.

I congratulate those responsible for National and Inter-American Music Week and hope this type occasion will enjoy continued great success.

There being no objection, the program, remarks, and article were ordered to be printed in the RECORD, as follows:

NATIONAL AND INTER-AMERICAN MUSIC WEEK

Honorary chairman: The Honorable Sherman Adams, the assistant to the President.

Honorary vice chairman: The Honorable Robert McLaughlin, President, District of Columbia Commissioners.

Honorary vice chairman: Mrs. Ralph Becker.

Executive committee chairman: Mr. Philip A. Guarino.

Executive secretary: Mr. Clinton Price.

Treasurer: Mrs. Edward Cleaveland Sweeney.

Publicity: Mr. Nathan Lerner.

Tickets: Mr. Richard A. Terrell.

Producer and director of the Gypsy Baron by Johann Strauss: Dr. Frederick Fall.

Willard Hotel, May 6, 1957, sponsored by the Cultural Development Committee of the Washington Board of Trade, the Greater Washington Music Council, and the District of Columbia Recreation Department.

PROGRAM

Invocation: Rev. Gilbert V. Hartke, O. P.

Welcome: Mr. Ralph E. Becker, chairman, luncheon committee.

Toastmaster: Mr. M. Robert Rogers.

Introduction of the head table

The Honorable Sherman Adams, Miss Marian Anderson, Miss Richard Bales, Mr. Ralph E. Becker, Mr. Paul Callaway, Mr. Milo F. Christiansen, Dr. Hobart Corning, Maj. Hugh J. Curry, Mr. E. R. Finkenstaedt, Mr. Lloyd Geisler, Mr. Philip A. Guarino, Mr. Patrick Hayes, Col. George Howard, Mr. Sam Jack Kaufman, Hon. David B. Karrick, Hon. Thomas Lane, Miss Vanett Lawler, Dr. Warner Lawson, Hon. Robert E. McLaughlin, Mr. George Marek, Dr. Howard Mitchell, Mrs. Agnes Meyer, Dr. Jose Mora, Mrs. Merriweather Post, Mr. M. Robert Rogers, Dr. Harold Spivacke, Mr. George Titus, Mr. Pierson Underwood.

Presentation of awards: The Honorable Sherman Adams.

Honorees: Mr. Paul Callaway; Mrs. Merriweather Post; Mrs. George Titus; Dr. Warner Lawson; Mr. Patrick Hayes; National Symphony Orchestra, Dr. Howard Mitchell; men and women of the National Symphony Orchestra, Mr. Lloyd Geisler; Organization of American States, Dr. Jose Mora; Opera Society of Washington, Mr. E. R. Finkenstaedt.

Speakers: Mrs. Agnes Meyer, Mr. George Marek.

Guest artists: Mr. Dean Dittman, tenor (Zcupan of the Gypsy Baron); Miss Joan Harrison, harp soloist; a Barnee Breeskin production, Sheraton Hotel Quartet, leader, Jerry Rodis.

Groups affiliated with National and Inter-American Music Week

American Federation of Musicians, Local 161, Mr. Sam Jack Kaufman.

Alexandria Civic Orchestra, Dr. Wendell Margrave.

American Guild of Organists, Mr. Temple Dunn.

American University, Mr. James McLain.

Campbell Music Co., Mr. Thomas Ikeler.

Catholic University, Mr. John Paul.

Citizens Committee for Music in Public Schools, Mrs. Elmer Klavans.

Composers Club, Miss Mary Howe.

Corcoran Art Gallery, Mr. Henri Dorra.

District of Columbia Music Educators Association, Mr. Hendrik A. Essers.

District of Columbia Public Library, Mr. Melville Osterthe.

District of Columbia Public Schools, Dr. Paul Gable.

District of Columbia Teachers College, Mr. John Wigent.

Friday Morning Music Club, Mrs. Quinta Frey.

Friday Morning Music Foundation, Mrs. Florence Howard.

Georgetown University, Mr. Paul Hume.

George Washington University, Dr. Robert Harmon.

Greater Washington Music Council, Mr. Pierson Underwood.

Howard University, Dean Warner Lawson.

Jewish Community Center, Mr. Edward Rosenblum.

Jordan Music Co., Mr. R. T. Isbell.

Kitt Music Co., Miss Frances Jones.

Library of Congress, Dr. Harold Spivacke.

Montgomery County Light Opera Co., Mr. Thomas Jones.

National Association for Composers and Conductors, Mrs. Virginia R. Collier.

National Federation of Music Clubs, Mr. James Reistrup.

National Gallery of Art, Mr. Richard Bales.

National Opera Guild of Washington, D. C., Inc., Mr. Curt C. Schiffeler.

National Symphony Orchestra Association, Mr. Carson G. Frailey.

Opera Society of Washington, Mr. E. R. Finkenstaedt.

Pan American Union, Mr. Guillermo Espinosa.

Phillips Gallery, Miss Elmira Bier.

Society of Arts and Letters, Mrs. Robert E. Kline.

Society for the Encouragement and Preservation of Barber Shop Quartets, Mr. Demetri Paris.

Super Music Attractions, Mr. Irvin Feld.

The Treble Clef Club, Miss Cecelia Jefferson.

United Community Services, Mr. Philip Amran.

United States Army Band, Maj. Hugh J. Curry.

United States Navy Band, Cmdr. Charles Brendler.

United States Marine Band, Capt. Albert Schoepper.

United States Air Force Band, Col. George Howard.

Washington Board of Trade, Cultural Development Committee, Mr. George Titus.

Washington Cathedral, Mr. Paul Callaway.

Washington Guild National Negro Opera Co., Mrs. Mary Dawson.

Washington Music Teachers Association, Miss Raissa Tselentis.

Women's Committee of the Corcoran Gallery.

Women's Committee for the National Symphony Orchestra, Mrs. Cyrus Ching.

Young Women's Christian Association, Miss Sara McConnell (General luncheon committee).

NATIONAL AND INTER-AMERICAN MUSIC WEEK

(Speech of Ralph E. Becker, May 6, 1957)

Governor Adams, Miss Anderson, members of the committee, and fellow music lovers, on behalf of the cultural development committee of the Washington Board of Trade, the Greater Washington Music Council, and the District of Columbia Recreation Department, I wish to extend a warm welcome to all of you who are here to salute National and Inter-American Music Week. The very fact that this luncheon is being held and that we have in attendance many of those responsible for the great American music of today, musicians, critics, patrons, and friends of our musical culture, is moot refutation of a recent attack on American music by the former Foreign Minister of the Soviet Union, Dmitri Shepilov.

According to the New York Times coverage of Mr. Shepilov's statement, the United States industrial establishment and engineering prowess came in for high praise, while our cultural life was painted as base and devoid of beauty and melody. Rather than counter Mr. Shepilov's assertions by a chapter and verse recitation of the present high state of American music, I want to point up a striking difference in the respective audience participation in good music between the two countries.

While none will deny the eminent caliber of Soviet music in several media such as the Russian ballet, the audience participation in the Soviet Union is limited to the privileged Communist upper crust who can afford the extravagant admission charges. The great mass of Russian people denied access to the several great conservatories and without the benefit of mass electronic communication such as radio and television, never share in the fruits of the work of Soviet musicians. To use only a recent example, some 40 million Americans watched on their television screens a brilliant performance of Beethoven's Fidelio and this year as for the last 17 years, tens of millions of Americans have spent their Saturday afternoons at the Met via the radio broadcasts sponsored by what Mr. Shepilov referred to as "one of the great capitalistic oil monopolies."

Without discussing many other advancements of American musical culture, this one development, mass commercially sponsored fine music, has brought to the individual in the United States more opportunity to participate in fine music than his counterpart in any other country in the world, and it is indeed a tribute to the social and civil consciousness of "our great tyrannical monopolies" that they have taken the lead in bringing good music into every American home.

The speakers who follow me today, wittingly or unwittingly, will refute the bitter and unfounded attack by Mr. Shepilov.

A note of irony appears from Mr. Shepilov's statement in his allusion to American music as consisting of nothing but boogie woogie and rock and roll. While I will not personally comment on the relative merits of this phase of American music, I would like to note in passing that the records most in demand in Leningrad and selling at an almost prohibitive price are those of Elvis Presley.

It is now my distinct pleasure to turn over the luncheon to your distinguished toastmaster, president of Washington's good music station, one of the prime movers on the President's Committee for Arts, Sciences and Education, a composer in his own right who set the President's inauguration prayer to music, and one of those to whom I referred as making fine music readily available to so many Americans—Mr. Robert Rogers.

THE NATION'S CULTURAL CENTER

(Remarks of Agnes E. Meyer)

I am grateful for this opportunity to speak simultaneously to the Washington Board of Trade and the Greater Washington Music Council about the importance to our Nation of the National Cultural Center. For it is only by the combination of these interests, business and the arts, that the District of Columbia Auditorium Commission can successfully carry out the great responsibility assigned to it by the Congress, with the approval of the President, the Vice President, and the Speaker of the House, who appointed the members of the Commission.

My friends, this venture has more than national importance. For it will surely capture the imaginations of all free peoples when it becomes known to them that our political leaders of both parties are determined to build in our Nation's Capital a magnificent complex of buildings, as the focus and inspiration for the arts and sciences, for important national and international gatherings, and for the broadest and deepest education of the American people.

Never was such a project more important than at this crucial period in our Nation's history when our Republic must lead the world in the defense of freedom. "Freedom for what?" the foreign nations are now asking us with passionate concern, since they have been made far more aware of the shortcomings of our society than of its deep and lasting virtues, virtues that are difficult to explain to peoples who have never experienced the subtle educational values of the democratic process. Our allies as well as our enemies accuse us of an obsessive preoccupation with purely material achievements. There is just enough truth in this arraignment to put us on the defensive. Yet we should never be apologetic about our magnificent technological superiority and the high standard of living it has produced. For our high per capita productivity has deeper roots than mere desire for more and more possessions. It could have never come about without a capacity for hard work, whether of mind or body, and a positive devotion to human welfare and progress such as no other nation has ever achieved.

At the same time, we must realize that the test of our democratic society lies in its ability to give leadership to the world in the realm of ideas, and that the freedom of which we boast will not be convincing to other nations unless its finds expression in cultural manifestations of enduring value and thus in the flourishing amongst us of the arts and sciences. We must recognize as clearly as the Greeks who developed the first democracy under Pericles, that the spirit which freedom engenders is a greater power than all our material resources and achievements.

It is obvious, therefore, that the new cultural center we wish to build must reflect by its architectural splendor, by its setting and dignity, the highest ideals of the American people. Just as the Acropolis of Athens still expresses the universal and permanent values of ancient Greece, so our cultural center must convey to our people and to all mankind the most significant and most enduring values of modern democratic civilization.

What, therefore, are the factors that must receive prime consideration if these high purposes assigned our Commission are to be carried out in a worthy manner? Because of its importance to our Nation and to the prestige of our Nation in foreign lands, not only the sheer beauty of this complex of buildings, but its setting, its surroundings, and its visibility from a distance are of major importance. Because our Commission was keenly aware of all these esthetic factors, we were, with the exception of one member, in favor of the only beautiful site left in Washington, in Foggy Bottom, just north of the Lincoln Memorial. The Congress long ago recognized the value of this beautiful piece of property, for it authorized that it should be reserved for public buildings. This noble site also has many practical advantages that are important to the people and to the various business interests of Washington. It is close to the city's population centers, to the hotels, and easily reached by existing transportation facilities. This would improve the income potential of the center and also increase the business of our hotels and shops. The underground parking space of the center—big enough for 2,000 cars—would be helpful to the adjacent offices of the new State Department, to George Washington University, and other public buildings already in existence or planned for this area. This would bring in a steady revenue for the center and revenue is of great importance, for once constructed the center must pay its way.

Ladies and gentlemen, there were great obstacles to be overcome before we could be sure that this site could become available for the Commission's use. But the Commissioners of the District of Columbia, the National Planning Commission, and the businessmen who had in good faith bought some of the property, were so cooperative that there is no longer any doubt that together we shall work out a satisfactory and exciting solution of our problems.

Now let me try to envisage for you how majestic our American Acropolis will look on the rising slopes of the Potomac. Close to the Lincoln Memorial, the White House, and other monumental structures, our building would lend these other public edifices an additional splendor. Visitors will approach the center from the Potomac River side on a broad entrance stairway. Their first impression would be gained by a view of the Court of States, featuring a reflecting pool bordered by colonades. In the center of the pool will be a fountain. High flag staffs, bearing the flags of the 48 States, will surround the pool and be reflected in it. On both sides of the entrance stairway tall colonades will stretch across the entire front of the center. Entering the building, the visitors will see the Tourist Information Center, where trained experts will give them an historical background of the Nation's Capital and the interrelationship of the various Government or other public structures. We shall also develop moving pictures outlining the Nation's history which will make the visits of the millions of Americans and foreigners who come to Washington annually far more vivid, meaningful, and educational.

Directly in front of the main entrance is the auditorium-music hall, seating 3,800 to 4,200 people. Careful study of the acoustics should make it possible to hear even the softest musical notes in every part with the same freshness and distinctness. To the left, a theater seating about 1,400 can be used not only for dramatic performances, but for more intimate musical and dance events. Both the music hall and the beautiful theater are greatly needed in Washington. Foreign visitors have been shocked that the Capital of America has never had proper facilities for the arts, music, dance, and so on. Our American orchestras and theatrical groups have often visited foreign countries, but we have not been able to receive those of other countries in Washington for lack of adequate facilities. We are confident that the music hall and theater will win approval as America's finest examples of theater architecture and for the flexibility of their backstage arrangements.

Of all the various buildings that comprise the National Cultural Center, the great hall will probably dominate the others. It will have an unobstructed floor space of 100,000 square feet, providing ample space for the inaugural ball, civic receptions, conferences of national and international importance, organizational conventions, exhibitions, and other events.

As our Commission was keenly aware that this place of assembly will be the setting for many historical events now that Washington is the capital, not only of the Nation, but of the whole free world, our planning board gave special attention to its dignity, scale, proportions, and design. At one end a hydraulic elevator, the full width of the hall, will raise a floor section to form a stage for ceremonial occasions. Two balconies on either side of the hall will contain rooms for smaller meetings. Movable chairs, stored close by when not in use, will provide seating for over 10,000 persons. Flanking the great hall and visible through its windows will be two landscaped areas that will add to its beauty. The building will contain a restaurant and a coffee shop for visitors to the Center.

How, you will surely wish to know, is so vast a project to be financed—the purchase of the site, the plans for construction, and finally the $36 million needed for the execution of the plans?

Despite the arguments concerning the national budget, the Commission hopes that the Congress will be sufficiently enthusiastic about the prospect of a cultural center for Washington to help us acquire the site during this session. Since drawing the plans will take at least 9 months, this will give our Commission time to raise enough money to begin immediately the construction of the so-called inaugural hall. Once the project gets underway, the Commission will have to work hard to drum up the amount needed for its completion. We cannot succeed in this campaign unless we stimulate interest in the cultural importance of the center throughout the Nation. To help us reach the public, the Commission has already set up a council of sponsors, made up of organizations of the arts and sciences, as well as commercial agencies, that will actually want to make use of the center for their activities. All these various national or State organizations will serve as liaison between us and the public, raise what funds they can, but chiefly put in motion the nationwide impetus needed if we are to get the bulk of our funds from foundations, industrial leaders, and individual donors.

One feature of the Cultural Center, which I have not yet mentioned, is bound to create nationwide enthusiasm. This is a mass communications system which will make it possible to beam all notable events taking place in the Cultural Center throughout the country by means of radio, television, and motion pictures. Each building will be planned to provide camera and microphone installations, together with wiring, lighting, and acoustical arrangements designed to provide the highest quality reproduction. Thus, schoolchildren in their classrooms and people in their own sitting rooms throughout the land will be able to see historical pageantry in the great hall via closed-circuit TV. Music lovers may share distinguished operatic or other artistic performances. As never before, Americans will feel they are participating in that unique event, the President's inaugural ball. In short, the Cultural Center will belong to all the American people and become an important influence in their daily living and thinking, a source of inspiration and the highest happiness.

Now a word to the members of the board of trade. Gentlemen, you will recognize at once that this Cultural Center will benefit the businessmen of Washington in many different ways. But as I have just explained, this Cultural Center will be used to stimulate interest in the arts and in all creative endeavors throughout the country. A new vitality will permeate the whole Nation, a spontaneous zest for living which will be reflected in a new faith in ourselves and our destiny as a people.

Therefore, the Washington Board of Trade could perform a great service to the future of our country, if you will interpret the significance of the Cultural Center to the boards of trade in every major city throughout the country. Gentlemen, our Commission can never raise the $36 million needed for the construction of this modern American acropolis without the active cooperation of the businessmen. And I am sure you will agree with me that we cannot, we must not, fail to carry out this all-important mandate given us by the Congress. With your help we can prove to the world that we Americans are not crass materialists, but a people living on a new continent determined to create a new culture and a new concept of man and his destiny.

SHEPILOV ASSAILS MUSIC OF THE UNITED STATES—CONDEMNS "NERVOUS, INSANE ROCK 'N' ROLL" AND GENERAL LEVEL OF CULTURE

Moscow, April 3.—A gathering of Soviet composers heard today a scathing attack on American music from Dmitri T. Shepilov.

Mr. Shepilov, a secretary of the Soviet Communist Party, also denounced what he described as the general lack of culture in the United States.

While praising the United States engineering genius and its huge industrial establishment, Mr. Shepilov said, "While visiting New York you feel in everything the tyranny of private enterprise."

He said he felt during his only visit to New York last year "this powerful technology created by human beings is turning the workers into cogs of a machine."

Mr. Shepilov said that in the midst of skyscrapers, which he said belonged to oil, steel, and aluminum monopolies, there was "a dirty, old building." That was his description of the Metropolitan Opera House. He said the Metropolitan continued in existence only through contributions and that its talent was largely imported from Italy, West Germany, and France.

DISCUSSES FINE ARTS LINE

Mr. Shepilov was addressing the congress of Soviet composers, which has been meeting in Moscow for a week. Since his removal from the post of Foreign Minister in February and his return to party work, Mr. Shepilov has been active in party propaganda relating to the fine arts.

Mr. Shepilov said that in the United States, "this richest imperialist country," there were "only five opera houses, which barely subsist." He said they were open only 1 to 5 months a year.

The party secretary was bitter in his discussion of modern United States music. He said the music heard in parks, restaurants, and dance halls had nothing in common with the "kind of music we are accustomed to."

"All this nervous and insane boogie woogie and rock 'n' roll are the wild orgies of cavemen," he told the composers. "They are devoid of any elements of beauty and melody. They represent an uncontrolled release of base passions, a burst of the lowest feelings and sexual urges."

[According to word received by the New York Times last February 3, Elvis Presley records are the newest craze in Leningrad. The disks, cut on discarded hospital X-ray plates, sell for 50 rubles a copy. That is $12.50 at the official rate of exchange. Mr. Presley's recordings may be obtained in this country for less than $1.]

UNIFICATION OF DEFENSE PROCUREMENT FACILITIES

Mr. O'MAHONEY. Mr. President, I have just learned that the President, in his press conference yesterday, expressed the opinion that some action should be taken to enforce the so-called O'Mahoney rider to the Defense Appropriation Act of 1952, requiring the unification of the procurement facilities of the various subdivisions of the Department of Defense.

When I was chairman of the Defense Appropriations Subcommittee, I discovered that the Navy, the Army, and the Air Force were buying separately many of the same items, and that great surpluses were being built up and great expenditures were being made which could easily be saved.

After much discussion and research, both in the House and in the Senate, which was carried on by the Bonner, Hardy, and Hébert subcommittees and by the Senate Subcommittee on Defense Appropriations, of which I was chairman, Representative BONNER, of North Carolina, who was very much interested in the problem, entered into an agreement with me, and the so-called O'Mahoney rider was introduced and passed.

It became the law of the land, reading as follows:

(a) Notwithstanding any other provision of law and for the purpose of achieving an efficient, economical, and practical operation of an integrated supply system designed to meet the needs of the military departments without duplicating or overlapping of either operations or functions, no officer or agency in or under the Department of Defense, after the effective date of this section, shall obligate any funds for procurement, production, warehousing, distribution of supplies or equipment or related supply management functions, except in accordance with regulations issued by the Secretary of Defense.

(b) This section shall be effective 60 days after the approval of this act.

I was very much surprised, after a leave of absence from the Senate, to learn, upon returning to Washington as a Member of this body, that the law requiring the unification of the procurement operations of the three subdivisions of the Department of Defense was not being enforced.

I am happy, therefore, to be advised that in his press conference yesterday the President indicated that something now should be done about this problem.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks the comments of the President at this press conference, together with the question which was asked. I may add that the provision which I introduced, and which is now the law has been endorsed by the Hoover Commission on several occasions. The latest of these may well be said to have been the visit of former President Hoover on President Eisenhower yesterday. Mr. Hoover is quoted as having told the President that he estimates the Government could save between $5 and $6 billion by adopting the recommendations of the Commission on Organization of the Executive Branch of the Government. It is interesting to note, by the way, that President Harry Truman called Mr. Hoover from private life to become Chairman of this Commission. My point now is only that one of the recommendation of the Hoover Commission is the enforcement of the provisions of the O'Mahoney rider.

The issue was raised in the President's press conference yesterday when Mr. James Reston, of the New York Times, addressed the President and received the President's answers in the following manner, as reported in the New York Times this morning. The text is as follows:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPPORTER OF UNIFICATION

James Reston, of the New York Times: "Going back to the budget, sir, some observers, some very well experienced men, including your old friend, Vannevar Bush, have said on the budget that the problem is essentially the old question of the unification of the services, the elimination of duplication, the agreement upon a strategic plan, and so on. Could you comment on that, and give us your impression of what progress has been made on that?"

Answer: "Well, as you people, some of you here, you older ones, may know, in 1946 and 1947 I was a great supporter of unification.

"I had come back from a war where I had responsibility of commanding all services, dealt with all services, and I thought the day of the separate services was really gone. And I thought we could bring this about. Well, I encountered a very fierce opposition, but I stuck to my guns.

"Now, there never was produced a law that, I believe, would have been the best, because there was nothing in that law that give—gave anyone, any one official, the specific job of uncovering all of the possible duplications, making certain that we were—all of our logistics and supply problems were met in the most economical manner.

"Now, I think Mr. Bush, Dr. Bush, may be overestimating to some extent the savings that are to be made there. But I still believe they are considerable, and if we could today get rid of service prejudices, to the point of such things as real unification in hospitalization and doctors, in depots where it can be done, and distribution, supply, procurement, a lot of these things, I believe there was—there is a chance to save money.

"Now, this, of course, has its limits. After you are purchasing in a certain amount it doesn't save a great deal to purchase in double that amount except as it eliminates the competitive factor.

"If you and I are both trying to get 5,000 blankets, and there is only one factory making blankets on a very limited scale, we would run the price up against ourselves very hurriedly. That kind of thing could be eliminated.

"But progress is being made, that is the hopeful part about it. Progress is being made, but it is not as fast and it is not as complete, and I certainly hope when I was preaching and praying for unification, which never did take place quite in the form that I thought it should be."

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I note the presence in the Chamber at this time of my distinguished friend the senior Senator from Delaware [Mr. WILLIAMS]. I should like to propound an inquiry to him.

I assume that the Senator from Delaware is aware of the request which I made last evening for consideration of the Commerce Department Appropriation bill tomorrow, when the Senate will convene at 11 o'clock. Is that agreeable to the Senator from Delaware?

Mr. WILLIAMS. It is agreeable to me.

Mr. JOHNSON of Texas. The supplemental appropriation bill is ready, but certain Members on the minority side are unable to be present, and they asked that consideration of that bill be deferred until next week. It is our plan to bring it up on Monday of next week, or the early part of the week. Is that agreeable to the Senator from Delaware?

Mr. WILLIAMS. That is agreeable to me.

Mr. JOHNSON of Texas. I ask these questions because the Senator from Delaware is always very cooperative with the leadership. However, he is a watchdog, and very studious with respect to appropriation bills. He looks for every opportunity to eliminate nonessential items. I wish to be sure that I reciprocate the cooperation which he always extends.

We are hopeful that next week 3 or 4 more appropriation bills will be reported. I serve notice now that they will have the highest priority. It may be necessary for the Senate to adjust its daily meeting schedule, even to the extent of remaining in session into the evening, and perhaps being in session on the weekend. I want all Senators to be on notice of that statement. The leadership will try to avoid night sessions and will also try to avoid Saturday sessions as long as it is possible to avoid them. But the Senate will meet to act on proposed legislation which comes from the committees. I want the RECORD to show that.

Mr. WILLIAMS. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). Does the Senator from Texas yield to the Senator from Delaware?

Mr. JOHNSON of Texas. I yield to my friend from Delaware.

Mr. WILLIAMS. I assure the Senator from Texas that, as one Member of the Senate, I shall be glad to cooperate with him at all times in expediting the consideration of measures before the Senate.

Mr. JOHNSON of Texas. The Senator from Delaware does not need to assure the Senator from Texas of that fact. The Senator from Delaware has demonstrated it repeatedly by his action.

Mr. WILLIAMS. I merely wish to add that some of us feel that bills and reports ought to be available to us at least overnight, so that we may study measures which are to be considered and prepare ourselves before they are debated on the floor of the Senate.

Mr. JOHNSON of Texas. Certainly. The Senator from Texas has given the Senator from Delaware such assurance, and he will repeat the assurance at this time, and he will personally see to it that the Senator has available to him the hearings, the report, and the bill.

DEFERRED GRAZING

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. CARLSON. I appreciate the Senator's yielding to me at this time. I have already asked my question of the Senator from Arizona, the distinguished chairman of the Committee on Appropriations [Mr. HAYDEN]. However, I know the interest of the Senator from Texas in the subject of deferred grazing, covered by Public Law 85-25, which was known as H. R. 2367. That bill contained an authorization, but I understand there are no funds presently available for the program the act contemplated.

Can the Senator from Texas tell us whether a deficiency appropriation bill will contain such an item?

Mr. JOHNSON of Texas. I am sure we will have such appropriation bills from time to time. The great deficiency, as I see it, lies in the administration of the Department of Agriculture. I have appealed to the Secretary personally, which is something I rarely do, to please try to bring about a recommendation from administrative officials of his Department, so as to put some kind of program into effect under the legislative authority which has been provided. If such a program was ever needed, it is needed now.

I have just returned from my home State of Texas, where there have been some terrific rains. In many areas there is not a cover of grass but a cover of weeds, although, under the cover of weeds, there is a little shading of green fuzz, which may in time become grass. However, if we turn goats and sheep and cattle on to that cover, the land will be in the same condition it was before the rains came.

So I appealed to the Secretary last week, and I also talked to one of his assistants—I believe it was Mr. Scott—later in the week. I understand that they are arranging some meetings, and that the Secretary is attempting to get some officials of the Department to make a recommendation, so it will be possible to decide just what kind of program is to be provided.

However, nothing definite has been determined as yet. I believe they have scheduled a meeting in Denver, and perhaps one in Cheyenne, and perhaps one also in Dallas. Such meetings have been scheduled, as I understand, though I may be mistaken about the cities.

Mr. CARLSON. I believe I may be able to help the Senator a little on that point. I, too, have talked with Mr. Scott, of the Department of Agriculture. I talked to him today, and he informed me that the meeting in Dallas has been held; it was held on Tuesday. The State of Kansas, the one State with which I am particularly familiar, is in this position: The State ASC has allocated areas, and a program has been worked out. It has the approval of the Dallas office and also of the Department in Washington, as I understand; but no funds are available. I am also advised—although I do not know whether I am exactly correct in this—that an application has been made for $25 million in a deficiency appropriation bill.

In the light of what I have learned, if anything is to be done about the situation—and certainly something should be done about it—I urge that action be taken promptly to include that sum in a deficiency appropriation bill.

Mr. JOHNSON of Texas. I have discussed the matter with Mr. Scott. I talked to him the day before yesterday. He was not aware then that a meeting had been held in Dallas or that one was going to be held there. I told him that I had been advised the previous week that a meeting was due to be held there either that day or the day after, or that a meeting had been held the day before. He said that perhaps he was in error and he would like to check into the matter. At that time they had not prescribed any standards that are to be used. If they have done so since then, I have not been informed, although I asked him that I be informed.

The Senator from Kansas is the author of the basic legislation. I will say to him that if the Secretary of Agriculture will make a recommendation to us as to the standards which are to be used, and what kind of program is to be established, and will go to the country and let the ranchers know that this program will be available, and then ask for funds to carry the program into effect, the Senator from Texas will be very sympathetic toward such a request. Certainly the Senator from Texas will demonstrate much more aggressiveness than the Department of Agriculture has demonstrated.

Mr. CARLSON. I merely wish to state that so far as Kansas is concerned, we are ready to proceed. The program has been established and has been approved. I know the Senator's interest in the subject, and I want to help him get the money which is necessary. However, it will be up to him, as a member of the Committee on Appropriations, to see to it that the money is provided early enough to do some good. It will be necessary to get it early if it is to be of any avail.

Mr. JOHNSON of Texas. Does the Senator have available the Secretary's request?

Mr. CARLSON. I do not.

Mr. JOHNSON of Texas. Does the Senator know when it was made?

Mr. CARLSON. I believe it was 2 or 3 days ago.

Mr. JOHNSON of Texas. If it has taken the Secretary 30 days to make it, I am sure I can dispose of it in less time than it took the Secretary of Agriculture to make the request.

The PRESIDING OFFICER. Is there any further morning business? If not, morning business is closed.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

DEPARTMENT OF THE INTERIOR

Mr. JOHNSON of Texas. Mr. President, I ask that the clerk state the nomination of Mr. Bennett on the Executive Calendar. Then I shall suggest the absence of a quorum, so that Members may be notified.

The PRESIDING OFFICER. The Secretary will state the first nomination on the Executive Calendar.

The legislative clerk read the nomination of Elmer F. Bennett to be Solicitor for the Department of the Interior.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. My friend, the distinguished junior Senator from Oregon, is present and, I understand, desires to address himself to the nomination now pending. I yield the floor for that purpose.

Mr. NEUBERGER. I thank the Senator from Texas.

Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Oregon will state it.

Mr. NEUBERGER. Do I understand correctly that the Senate is now considering the nomination of Elmer F. Bennett, of Colorado, to be Solicitor for the Department of the Interior?

The PRESIDING OFFICER. The Senator from Oregon is correct.

Mr. NEUBERGER. I have not made a major issue of this nomination. I have not requested a yea and nay vote, nor do I intend to do so. However, I believe the RECORD should indicate what I regard as a very basic policy of discrimination and unfairness against a major region of the United States. Mr. Bennett has been a symbol and a leading advocate of that policy, and I think the RECORD should make clear the facts at issue.

I shall vote against the confirmation of the nomination of Elmer F. Bennett, of Colorado, to be Solicitor for the Department of the Interior, because Mr. Bennett has been actively supporting a policy of total discrimination against the Columbia River Basin with respect to water resources development.

Mr. Bennett is an admitted adherent of the so-called partnership program of the administration. Under that program, the administration is advocating the expenditure of over $800 million in the Colorado Basin but no new Federal authorizations whatsoever on the Columbia River and its main tributaries.

The administration has opposed authorization of the great Hells Canyon project; it has declined to include 1 cent in its record $72 billion budget for the great John Day project. Both of these sites are in the Columbia Basin. By contrast, the Interior Department has just signed the largest dam-building contract in history—$107 million—for Glen Canyon Dam on the Colorado.

The Colorado River carries 17 million acre-feet of water to the sea; the Columbia River carries 180 million acre-feet of water to the sea.

As one of the Senators from the basin of the Columbia River, I shall not vote to confirm the nomination of an official who has supported this policy of outright discrimination against my region—or to place this official in a still more strategic position to perpetuate the inequities and injustices of that policy.

I have nothing against Mr. Bennett as an individual nor against his character—only against the basic public policy here at stake.

I desire the RECORD to show that I shall vote "No."

The PRESIDING OFFICER. The question is, Will the Senate advise and consent to this nomination?

The nomination was confirmed.

Mr. JOHNSON of Texas. Mr. President, I wish to inform my friends of the minority that if they intend to have me get the President's nominations confirmed, they will have to vote a little louder than they did with respect to the last nomination. At least, I appeal to the good judgment of my colleague in the chair. [Laughter.]

I ask that the President be immediately notified that the nomination has been confirmed.

The PRESIDING OFFICER. The President will be notified forthwith of the confirmation of the nomination.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

STUDY OF CRITICAL RAW MATERIALS AND RESOURCES OF THE SOVIET UNION

Mr. JOHNSON of Texas. The morning hour having been completed, I ask that the Chair lay before the Senate the unfinished business.

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A resolution (S. Res. 78) to make a study of critical raw materials and resources of the Soviet Union and certain Eastern Hemisphere countries and the effect upon the United States.

USE OF PUBLIC LANDS FOR THE PURPOSE OF PUBLIC BUILDINGS, STATE OF IDAHO

Mr. JOHNSON of Texas. Mr. President, I move that the unfinished business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 289, S. 1794.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 1794) to amend section 6 of the Act approved July 3, 1890 (26 Stat. 215), relating to the admission into the Union of the State of Idaho by providing for the use of public lands granted therein for the purpose of construction, reconstruction, repair, renovation, furnishings, equipment, or other permanent improvements of public buildings at the capital.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. If my colleagues will indulge me, and if my friend, the distinguished Senator from Montana [Mr. MURRAY] will bear with me for just a few minutes, I shall make brief explanations of a few bills which are scheduled for consideration. Then I shall yield the floor so that my friend from Montana may address the Senate. I am very desirous of hearing the Senator from Montana speak. I wish to follow his address, and I hope he will accommodate me, so that the Senate may proceed to consider 4 or 5 measures which I desire to bring up, and which will take but a short time.

Mr. MURRAY. I shall be happy to accommodate the Senator from Texas.

Mr. JOHNSON of Texas. I thank my friend from Montana for his unfailing courtesy.

By its enabling act, the State of Idaho was granted 50 sections of unappropriated public lands within its borders, the revenues from which were to be used "for the purpose of erecting public buildings at the capital of said State for legislative, executive, and judicial purposes." S. 1794 enumerates the specific purposes which the committee feels were intended to be accomplished by the application of land-grant revenues to public buildings, even though the language of such original grant to the State of Idaho was, unfortunately, restrictive rather than comprehensive.

A similar bill was passed for Wyoming last week; similar bills were passed earlier for Montana, Washington, North Dakota, and South Dakota.

I think the proposed legislation is desirable; there is ample precedent for it. Similar action has been taken with respect to other States. I would not want to see discrimination practiced against the great State of Idaho. I hope the Senate will pass the bill.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 1794) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That section 6 of the act relating to the admission of the State of Idaho into the Union be amended to read as follows: "That 50 sections of the unappropriated public lands within said State, to be selected and located in legal subdivisions as provided in section 4 of the act, shall be, and are hereby, granted to said State for the purpose of erecting public building at the capital of said State for legislative, executive, and judicial purposes, including construction, reconstruction, repair, renovation, furnishings, equipment, and any other permanent improvement of such buildings and the acquisition of necessary land for such build-

ings, and the payment of principal and interest on bonds issued for any of the above purposes."

SEC. 2. This act shall take effect as of July 3, 1890.

TRANSFER OF TITLE TO IRRIGATION DISTRIBUTION SYSTEMS

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar 291, S. 413.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 413) to provide for transfer of title to irrigation distribution systems constructed under the Federal reclamation laws upon completion of repayment of costs thereof.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. S. 413 is identical to S. 2217 reported favorably by the committee in the 84th Congress, 2d session, and passed by the Senate on July 2, 1956. The bill proposes to authorize the Secretary of the Interior to transfer title to distribution systems of Federal reclamation projects under certain circumstances to local water users' organizations upon two specific conditions: (a) That an organization representing the water users concerned shall have requested the transfer; and (b) that the Secretary shall find that the water users or the organization have completed repayment of all construction and other charges, with the exception of operation and maintenance charges not yet due, which are obligations with respect to the distribution system concerned. Under existing reclamation law, no provision is made for the transfer of title to distribution works upon completion of repayment from the United States to any organization until provided by Congress. That statute is 32 Statutes 389.

The bill avoids any reference to the transfer of dams or other supply works as distinguished from irrigation distribution systems. The reason for this omission is that the question of transfer of dams or headworks involves considerations of national policy, as well as interstate considerations and should be taken up in connection with matters of broad national policy affecting water resources and their use.

Mr. President, the bill is strongly recommended by the Department of the Interior. I think it may be well for the Committee on Interior and Insular Affairs to give prompt consideration to the prospects of applying this general policy to the transfer of dams or wherever headworks are involved.

In my own great State of Texas we were actually prevented from constructing, or it was necessary to postpone the construction of, very vital public works in the Panhandle area, largely because of the question of where title would vest.

I call this matter to the attention of my distinguished colleague [Mr. YARBOROUGH], who is in the chair, and who has had a wealth of experience in this field, he having been an original member of one of the great water-conservation agencies of the Southwest, the Lower Colorado River Authority. I express the hope that he, too, will become interested in this general field, because I know of no State in the Union which could benefit more by the reaching of an understanding between the Federal Government and the State government in the field of water conservation than could our own State.

For many years the Federal Government has been active in the field of flood control, water conservation, irrigation, and public power. I hope we may have a coordinated policy which will bring all the strength of the local, county, and State governments to join with the Federal Government in that endeavor.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, upon request of an organization representing the water users of any project or division of a project constructed under the Federal reclamation laws (Act of June 17, 1902, 32 Stat. 688, and acts amendatory thereof or supplementary thereto), the Secretary of the Interior shall, if he finds that said water users or their organizations have completed payment of all construction and other charges, except future operation and maintenance charges, which they or it are obligated to pay under said reclamation laws with respect to their distribution system, transfer to the organization or to any other entity designated by it and capable of receiving the same title to said distribution system or to such portion thereof as is useful solely to said water users. The Secretary shall likewise transfer title to any portion of such a distribution system which is useful to two or more groups of water users or organizations thereof upon their joint request when he finds that payment of all charges, as aforesaid, has been completed. Any such transfer shall be accompanied by the transferee's acceptance of all liabilities, duties, and obligations, which the United States may theretofore have incurred with respect to the distribution system, and the transferee shall agree to save the United States harmless with respect thereto and with respect to all future claims, liabilities, obligations, or duties arising out of the construction, operation, or maintenance of the distribution system transferred. Unless the care, cperation, and maintenance of the system to be transferred has already been turned over to the transferee, any such transfer shall also be accompanied by the transferee's acceptance of such care, operation, and maintenance. As used in this act, the term "distribution system" is inclusive, to the extent to which the Secretary finds the same to be appropriated in any particular case, not only of works and structures for the delivery of water but also of drains, lands, interest in land, equipment, supplies, and records relating to said distribution system: *Provided, however,* That where the distribution system or a portion thereof is located upon lands within a national forest or other lands administered by the Secretary of Agriculture necessary rights-of-way only shall be granted therefor subject to such conditions as the Secretary of Agriculture finds necessary for the adequate protection and utilization of the national forest or other lands.

SEC. 2. The Secretary is authorized to provide in all contracts hereafter negotiated under the Federal reclamation laws for transfer of title to distribution systems in accordance with the terms of section 1 of this act.

SEC. 3. This act shall be a supplement to the Federal reclamation laws.

COMPACT RELATING TO APPORTIONMENT OF WATERS OF THE LITTLE MISSOURI RIVER

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 292, Senate bill 1556, granting the consent of Congress to an interstate compact. My friend the distinguished acting minority leader, the junior Senator from North Dakota [Mr. YOUNG] is very much interested in this measure; and whenever he is interested in a measure, that assures its immediate consideration, insofar as the majority leader is concerned.

Mr. YOUNG. I thank the distinguished Senator from Texas.

The PRESIDING OFFICER. The bill will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 1556) granting the consent of Congress to the States of Montana, North Dakota, South Dakota, and Wyoming to negotiate and enter into a compact relating to their interest in, and the apportionment of, the waters of the Little Missouri River and its tributaries as they affect such States, and for related purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas for the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. Mr. President, I am prepared to make a brief explanation of the bill. However, my friend the Senator from North Dakota probably is better equipped to do so than I am. If he will explain the bill, he probably will be more effective in doing so than I would be.

Mr. YOUNG. I thank the Senator from Texas.

Mr. President, the pending bill will permit the States of Wyoming, Montana, South Dakota, and North Dakota to enter into a compact to resolve the various interests of the States with respect to the Little Missouri River.

A similar bill was passed unanimously last year by the Senate. It has the support of all the Senators from the four affected States, and also that of the Governors of the four affected States.

I believe that is sufficient explanation, unless questions are to be asked by any Members of the Senate.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 1556) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the consent of the Congress is hereby given to the States of Montana, North Dakota, South Dakota, and

Wyoming to negotiate and enter into a compact relating to the interests of such States in the development, protection from pollution, and the use of the water resources of the Little Missouri River and its tributaries, and providing for an equitable apportionment among them of the waters of the Little Missouri River and its tributaries, and for matters incidental thereto, upon the condition that one qualified person appointed by the President of the United States shall participate in such negotiations as chairman, representing the United States, and shall make a report to the President of the United States and the Congress of the proceedings and of any compact entered into. Such compact shall not be binding or obligatory upon any of the parties thereto unless or until the same shall have been ratified by the legislature of each of the respective States, and consented to by the Congress of the United States.

SEC. 2. (a) The Federal representative shall be appointed by the President, and shall report to the President either directly or through such agency or official of the Government as the President may specify.

(b) The Federal representative shall receive compensation and shall be entitled to travel expenses, including per diem in lieu of subsistence, in the same manner as provided for experts and consultants under sections 5 and 15 of the Administrative Expenses Act of 1946 and the Travel Expense Act of 1949, except (1) that his term of service shall be governed by the terms of this act and shall not be affected by the time limitations of said section 15, and (2) his per diem rate of compensation shall be in such amount, not in excess of $100, as the President shall specify, but the total amount of compensation payable in any one calendar year shall not exceed $15,000: *Provided*, That if the Federal representative be an employee of the United States he shall serve without additional compensation: *Provided further*, That a retired military officer, or a retired Federal civilian officer or employee, may be appointed as such representative without prejudice to his retired status, and he shall receive compensation as authorized herein in addition to his retired pay or annuity, but the sum of his retired pay or annuity and such compensation as may be payable hereunder shall not exceed $15,000 in any one calendar year.

(c) The Federal representative shall be provided with office space, consulting, engineering, and stenographic service, and other necessary administrative services.

(d) The compensation of the Federal representative shall be paid from the current appropriation for salaries in the White House Office. Travel and other expenses provided for in subsections (b) and (c) of this section shall be paid from any current appropriation or appropriations selected by the head of such agency or agencies as may be designated by the President to provide for such expenses.

SEC. 3. The right to alter, amend, or repeal this act is hereby expressly reserved.

PRINTING OF ANNUAL REPORT, NATIONAL SOCIETY OF THE DAUGHTERS OF THE AMERICAN REVOLUTION

Mr. YOUNG. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 294, Senate Resolution 136.

The PRESIDING OFFICER. The resolution will be stated, for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 136) to print the 59th annual report of the National Society of the Daughters of the American Revolution.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from North Dakota.

The motion was agreed to; and the Senate proceeded to consider the resolution.

Mr. JOHNSON of Texas. Mr. President, the resolution merely provides that the 59th annual report of the National Society of the Daughters of the American Revolution for the year ending April 1, 1956, be printed, with an illustration, as a Senate document.

Mr. President, I hope we may be able to agree to the resolution without any involved discussion, because I believe no great contribution would be made by our becoming involved in an argument about a matter of this kind.

I deplore the divisions which have been created during the last few days by reviving the Civil War. I think all of us could better occupy our time by devoting ourselves to the problems of today, and certainly to the problems of the future, rather than by attempting to sack the generals who long ago passed on. To attempt to do so might establish a precedent which we would not wish to establish; and in the years to come, even some of the generals might regret the establishment of such a precedent.

Mr. President, pursuant to the act of February 20, 1896, the Daughters of the American Revolution, through the Secretary of the Smithsonian Institution, make an annual report to the Congress. The annual reports have been printed as public documents since the year 1897. The resolution provides for the printing of the most recent report of the Daughters of the American Revolution.

Mr. President, the organization is a very fine one, and it meets with rather general approbation. So I urge that the resolution be agreed to.

The PRESIDING OFFICER. If there be no amendment to be proposed, the question is on agreeing to the resolution.

The resolution (S. Res. 136) was agreed to, as follows:

Resolved, That the 59th annual report of the National Society of the Daughters of the American Revolution for the year ended April 1, 1956, be printed, with an illustration, as a Senate document.

PAYMENT OF GRATUITY TO LULA B. GREEN

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 295, Senate Resolution 135, to pay a gratuity to Lula B. Green.

The PRESIDING OFFICER. The resolution will be stated for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 135) to pay a gratuity to Lula B. Green.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the resolution.

Mr. JOHNSON of Texas. Mr. President, the resolution would provide a gratuity to Lula B. Green, widow of John A. Green, who at the time of his death was a messenger in the office of the Sergeant at Arms. The amount of the gratuity will be approximately $1,790. The action proposed is in line with the ordinary practices of this body.

The PRESIDING OFFICER. If there be no amendment to be submitted, the question is on agreeing to the resolution.

The resolution (S. Res. 135) was agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay from the contingent fund of the Senate, to Lula B. Green, widow of John A. Green, an employee of the Senate at the time of his death, a sum equal to 6 months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

PRINTING AS A SENATE DOCUMENT PROCEEDINGS OF THE INTERNAL SECURITY SUBCOMMITTEE

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 296, Senate Resolution 122.

The PRESIDING OFFICER. The resolution will be stated, for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 122) to print as a Senate document certain proceedings of the Internal Security Subcommittee of the Senate Judiciary Committee.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the resolution.

Mr. JOHNSON of Texas. Mr. President, the resolution provides for printing as a Senate document, with additional copies, certain proceedings of the Internal Security Subcommittee of the Senate Judiciary Committee containing a statement by J. Edgar Hoover relative to the Communist Party. To print as a Senate document, the cost will be $212.90; the 122,000 additional copies will cost $1,194.38.

Mr. President, I am informed that there is great demand for this publication; and I am sure that the very able and wise statement by the respected public servant, J. Edgar Hoover, will be of great interest, and I think it will have a very wholesome effect on our population.

The PRESIDING OFFICER. If there be no amendment to be proposed, the question is on agreeing to the resolution.

The resolution (S. Res. 122) was agreed to, as follows:

Resolved, That the proceedings of the Internal Security Subcommittee of the Senate Committee on the Judiciary on March 12, 1957, wherein the subcommittee received a statement of J. Edgar Hoover, Director of the Federal Bureau of Investigation, analyzing the 16th annual convention of the Communist Party of the United States, be printed as a Senate document.

SEC. 2. There shall be printed 122,000 additional copies of such Senate document for the use of the Subcommittee on Internal Security of the Senate Committee on the Judiciary.

PRINTING OF ADDITIONAL COPIES OF FINAL REPORT OF THE SPECIAL COMMITTEE TO INVESTIGATE POLITICAL ACTIVITIES

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 297, Senate Resolution 130.

The PRESIDING OFFICER. The resolution will be read, for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 130) authorizing the printing of additional copies of the final report of the Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the resolution.

Mr. JOHNSON of Texas. Mr. President, the resolution authorizes the printing of additional copies of the final report of the Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions. (3,000 additional copies cost approximately $1,200.)

The resolution was submitted by the very able and distinguished senior Senator from Arkansas [Mr. MCCLELLAN], and has been reported by the Chairman of the Committee on Rules and Administration, the Senator from Missouri [Mr. HENNINGS].

I hope the resolution will be agreed to.

The PRESIDING OFFICER. If there be no amendment to be proposed, the question is on agreeing to the resolution.

The resolution (S. Res. 130) was agreed to, as follows:

Resolved, That there be printed for the use of the Special Committee To Investigate Political Activities, Lobbying, and Campaign Contributions 3,000 additional copies of the committee's final report to the Senate, made pursuant to Senate Resolution 219, 84th Congress, and Senate Resolutions 47 and 128, 85th Congress.

PRINTING AS SENATE DOCUMENT OF INTERIM REPORT OF COMMISSION ON INCREASED INDUSTRIAL USE OF AGRICULTURAL PRODUCTS

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 299, Senate Resolution 131.

The PRESIDING OFFICER. The resolution will be stated, for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 131) authorizing the printing as a Senate document of the interim report of the Commission on Increased Industrial Use of Agricultural Products.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the resolution, which had been reported from the Committee on Rules and Administration with an amendment in line 5, after the word "document", to insert a comma and "and that 6,500 additional copies be printed for the use of the Committee on Agriculture and Forestry", so as to make the resolution read:

Resolved, That the interim report of the Commission on Increased Industrial Use of Agricultural Products, submitted to the Congress April 17, 1957, pursuant to Public Law 540, 84th Congress, be printed as a Senate document, and that 6,500 additional copies be printed for the use of the Committee on Agriculture and Forestry.

The amendment was agreed to.

Mr. JOHNSON of Texas. Mr. President, the resolution authorizes the printing as a Senate document of the interim report of the Commission on Increased Industrial Use of Agricultural Products. To print as a Senate Document the cost would be $1,730.17. The 6,500 additional copies provided for in the committee amendment will cost approximately $1,200.

Mr. President, I am not in a position to pass judgment on the damage which would be done if we did not provide for the printing of all the additional copies requested. However, I express the hope that the committee involved and the Senators requesting additional copies will be aware of the cost thus incurred; and in this year of economy and savings, I hope they will be as prudent as possible in the requests they make.

The PRESIDING OFFICER. If there be no further amendment to be proposed, the question is on agreeing to the resolution, as amended.

The resolution (S. Res. 131), as amended, was agreed to.

ROCHAMBEAU MEMORIAL BRIDGE

Mr. JOHNSON of Texas. Mr. President, I wish to have the Senate consider a bridge bill, Calendar No. 321, S. 768, to which I am informed there is no objection.

I move that the Senate proceed to the consideration of S. 768.

The PRESIDING OFFICER. The bill will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 768) to designate the east 14th Street highway bridge over the Potomac River in the District of Columbia, as the Rochambeau Memorial Bridge.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. Mr. President, the purpose of the bill is to designate the east 14th Street highway bridge over the Potomac River as the "Rochambeau Memorial Bridge." After the enactment of this proposed legislation, any law, regulation, map, document, record, or other paper of the United States in which such bridge is mentioned shall be held to refer to such bridge as the "Rochambeau Memorial Bridge." I ask that the bill be passed.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill (S. 768) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the east 14th Street highway bridge over the Potomac River from a point near 14th Street in the District of Columbia to a point in Virginia shall be known and designated hereafter as the "Rochambeau Memorial Bridge." Any law, regulation, map, document, record, or other paper of the United States in which such bridge is referred to shall be held to refer to such bridge as the "Rochambeau Memorial Bridge."

CONVEYANCE OF CERTAIN LAND TO THE STATE OF NORTH DAKOTA

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 290, S. 999.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 999) authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs with amendments.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had agreed to the amendment of the Senate to the bill (H. R. 4897) making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1958, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H. R. 1544) to provide for the conveyance of certain real property of the United States situated in Cobb County, Ga., to the trustees of the Methodist Church, Acworth, Ga., and it was signed by the President pro tempore.

APPROPRIATIONS FOR THE TREASURY AND POST OFFICE DEPARTMENTS

Mr. JOHNSON of Texas. Mr. President, I have a very important announcement to make to the Senate. Earlier in the week the Senate passed the Treasury-Post Office Department appropriation bill. It was the first appropriation bill to be passed by the Senate this year. As the result of a motion the senior Senator from Texas made in the Committee on Appropriations, we reduced the bill by $32 million from the

amount reported by the subcommittee. The vote on the motion of the Senator from Texas was conclusive.

The distinguished chairman of the subcommittee, the junior Senator from Virginia [Mr. ROBERTSON], reported the bill to the Senate. After extended debate, the Senate in its wisdom passed that bill without reducing the appropriations recommended or adding a dollar. When the bill was sent back to the House, where it had originated, it contained an amendment that had been added by the Senate committee. It was a flexible amendment which would permit the Treasury Department to exchange 5 percent of its funds by transfers between appropriations, with the approval of the Budget Director, and with the requirement that they report such action to the appropriate committees of Congress. That was the only change that had been made in the bill, a rather unusual situation.

The House considered the amendment which had been placed on the bill by the Senate, and concurred in the amendment, with an amendment of its own, which I shall now read to the Senate. The amendment provides:

Provided, That no transfer made under this authority shall result in increasing any appropriation in excess of the budget estimate as presented in House Document 16, 85th Congress.

That is a further limiting factor.

I may say that the necessity for this amendment arose because substantial reductions had been made in the appropriations of the Treasury Department. The distinguished Secretary of the Treasury was attempting to operate within those appropriations, since the budget estimates had been reduced; but in order to do so, he needed the flexibility which this amendment would give him. In order to create incentive and in order to encourage Cabinet officers to try to follow the will of Congress, the committee attempted to comply with the Secretary's request for flexibility.

The House is willing to go along with the amendment, provided the transfers do not result in spending more money than the Bureau of the Budget had recommended. This is a further limitation, and I think a very wise one.

I am informed by the distinguished Senator from Virginia [Mr. ROBERTSON], the chairman of the subcommittee, that the proposal by the House is agreeable to him.

I think the amendment which the Senate adopted was a good one. In my opinion, the addition made by the House does not materially change it; if anything, it strengthens it. I think it would give the Secretary the flexibility which he needs. I commend the Secretary for his desire to attempt to cooperate, and to operate his Department within the limits given him by Congress.

Mr. President, I move that the Senate concur in the amendment of the House to the amendment of the Senate, in the hope that this, the first departmental appropriation bill for the ensuing fiscal year, can be passed quickly and sent to the White House for the President's approval, so that the good people of the country may know that we have saved $80,364,000 in the first of the 15 appropriation bills to be considered.

The PRESIDING OFFICER (Mr. LAUSCHE in the chair) laid before the Senate a message from the House of Representatives announcing its action on the amendment of the Senate to House bill 4897, which was read as follows:

IN THE HOUSE OF REPRESENTATIVES, U. S.,
May 16, 1957.

Resolved, That the House agree to the amendment of the Senate to the bill (H. R. 4897) entitled "An act making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1958, and for other purposes," with an amendment, as follows:

At the end of the Senate amendment, add the following: ": *Provided*, That no transfer made under this authority shall result in increasing any appropriation in excess of the budget estimate as presented in House Document 16, 85th Congress."

Mr. DIRKSEN. Mr. President, as a member of the subcommittee, I see nothing offensive in the language which was added by the House to the transfer clause which was written into the bill by the Senate. As a matter of fact, that language is quite common; it is not uncommon that a limitation is made, so that in no case can any of the title provisions be increased beyond the estimate for the fiscal year.

Moreover, the language does not interdict the consideration of a supplemental or a deficiency appropriation bill, if after the necessary investigation and exploration by the Post Office Department they present their case to the Budget Bureau for further consideration by Congress, either before Congress adjourns, or when it returns in January.

I anticipate, of course, that the Bureau of the Budget, after making further examinations of the problems of the Post Office Department, will probably send to Congress a supplemental budget which can be considered entirely on its own merits. So the language of the transfer clause will in no way restrict or interdict the consideration of a supplemental bill.

Mr. JOHNSON of Texas. The language of the general provision applies only to the Treasury Department, and was requested by the Secretary of the Treasury.

Mr. DIRKSEN. That is correct.

Mr. JOHNSON of Texas. I concur wholeheartedly in what the distinguished acting minority leader has said, although I would not, by any effort of mine, wish to encourage anyone to think that we would look sympathetically upon any supplemental requests, unless they were absolutely necessary.

Mr. DIRKSEN. I am not trying to convey that impression at all, I assure the distinguished majority leader. I have just heard the language read; I had not seen it. But I wanted to be absolutely certain that while we make it apply, in the first instance, only to the Treasury Department, sometimes it is included in the general provisions, so that it applies to every item in the bill. I merely wanted to make it clear that while I do not anticipate that the Treasury Department will make a request for a supplemental appropriation, since they concurred in the House recommendation in the first instance, in no wise would the case of the Post Office Department be prejudiced at some later date.

Mr. JOHNSON of Texas. That is correct.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to.

Mr. JOHNSON of Texas. Mr. President, I hope the attaches of the Senate will take prompt action in connection with the proposed legislation and that it will be sped to the White House at the earliest possible time.

Mr. President, if my friend the Senator from Montana [Mr. MURRAY] is prepared to address the Senate, I shall yield to him.

HELLS CANYON, HUNGRY HORSE DAM, AND THE COLUMBIA RIVER POWER SYSTEM

Mr. MURRAY. Mr. President, I rise to discuss a matter of very serious importance with regard to the full development, conservation, and wise use of the vast natural resources of the United States.

On April 4 the senior Senator from Utah [Mr. WATKINS] inserted in the RECORD a statement entitled "Comments on Hells Canyon Project." I have so much respect for the judgment and wisdom of my good friend from Utah that, after studying this document, I wonder if he gave it his careful attention before placing it in the RECORD.

The statement constitutes an attack on the entire program of Federal resources development in the Northwest, plus allegations that the program subsidizes various industries in the region. I was surprised and disappointed with my colleague's approach to the problem. His approach, if fully carried out, would divide the Northwest from the rest of the country and treat it as a separate entity, which of course it is not. The Senator from Utah has not heretofore displayed such provincialism in his approach to natural resource development. No such attitude was evident in his excellent work for the great Upper Colorado development, and he will recall that I supported his efforts to get that project underway.

In his statement in the RECORD on April 4, the Senator from Utah spoke of "the loquacious spokesmen" for the Northwest, and predicted that "supporters of Federal power for the Pacific Northwest are going to come out kicking and squealing" at his attack on Northwest development. I can only assume this reference and this prediction must have been leveled at me—along with other Senators—because for over 20 years in this body we have worked, and upon occasion fought, for the full development of the water resources both of the Northwest and the Nation, including hydroelectric power.

This is an age when energy—and today this means electric energy—is increasingly the major controlling factor in the economic development and welfare of the Nation. Under these conditions, I will

never support or condone the underdevelopment of any of the hydroelectric resources which constitute our only truly inexhaustible source of energy. Our fossil fuels may someday be depleted; even atomic power may someday be limited by declining reserves of the proper fuels to activate reactors; but so long as the snows melt in the mountains and the rivers flow to the sea, our hydroelectric plants will continue to pump lifegiving energy into the economic bloodstream of the Nation.

THE MORAL ISSUE AT HELLS CANYON

Any development of such a great water resource to less than its maximum economic potential constitutes a tragic loss to our people and weakens the whole Nation. This is true not only during the 50 years of the pay-out period, but for the whole life of the project, perhaps centuries. Some may find ways to salve their consciences for permitting such a crime against unborn generations, but I cannot, and will not, be a party to it.

This is the moral issue in the case of Hells Canyon, and the sooner the people's representatives recognize this, and stop discussing it as if it were merely a matter of public versus private power, the better the national welfare will be served. To ignore this is to be blinded by prejudice and propaganda, and to turn our backs on the basic fundamentals of what is right and what is wrong in the development of our God-given natural resources.

SENATOR WATKINS' STATISTICS

The Senator from Utah fell into numerous errors of both fact and conclusion in his statement. In pointing some of them out, I have no wish to cast doubt in any way upon his sincerity or good faith, but I believe it is absolutely necessary to demonstrate how terribly mistaken he is, lest his statements stand unchallenged and be accepted as fact.

The Senator stated that the Corps of Engineers had informed him that they had expended some $930 million on flood control and navigation projects in the States of Oregon and Washington, roughly one-seventh of the national total. I am unable to have this figure verified from any official source as the flood control and navigation costs related to the Columbia River program.

FLOOD CONTROL EXPENDITURES

There are flood-control projects and flood-control projects. Some of them, such as levees, provide no benefit but flood control, and can never repay their cost save by the protection they give; they are a permanent, nonreimbursable investment in the general welfare. But there does not appear to be $930 million invested in such works in connection with the whole Columbia Basin program. The Senator's statement itself indicates a much smaller total. At another point it gives us a grand total of $1,866,402,214 invested in the Columbia River power system, of which only $118,538,209 is allocated to flood control and navigation—less than 7 percent of the total. Only this amount, plus the amount allocated to irrigation and a very small amount allocated to recreation, is nonreimbursable in the basin power system; all the rest of the total figure will be repaid with interest within 50 years from power revenues, and after that period those revenues will be almost pure profit to the United States. The Northwest will pay for the system and the whole Nation will retain title. What a gilt-edged investment that is!

The Senator from Utah [Mr. WATKINS] gives $50,590,356 as the total allocation of costs to flood control in the Columbia River Basin. Imagine that—in all the years since we started building flood-control projects we have only built $50 million worth in the Columbia River Basin. A single flood in 1948 inflicted more than $100 million worth of damage there, twice our total investment in protection. Does the Senator from Utah really think this expenditure in the Columbia Basin is exorbitant? Obviously, it is not even adequate. Fifty-two people lost their lives in the flood of 1948. We must invest several hundred million dollars in additional flood-control projects before any repetition of such disasters can be prevented with any assurance, and I intend to continue to work to obtain such funds as long as I am in the Senate of the United States. I sincerely hope the Senator from Utah will reconsider his position and support flood control, on a basis of need, in both the Northwest and Utah.

Even if Washington and Oregon did get 15 percent of the Army engineers' total nationwide expenditures, is it not a grievous mistake to think in terms of individual States as if they were separate countries instead of just areas of one great Nation? Where should we spend our money on water resource projects? In the arid areas where there is no water? Or where the water is?

Money is spent to develop copper in Montana because there is copper in Montana. It is spent to produce salt from the Great Salt Lake because there is salt there and not in Lake Michigan or Lake Erie. It is spent on water developments in the Northwest because our second mightiest river is there.

Mr. NEUBERGER. Mr. President, will the distinguished Senator from Montana yield?

Mr. MURRAY. I am glad to yield to my distinguished friend, the Senator from Oregon.

Mr. NEUBERGER. Mr. President, I should like to inquire if the Senator from Montana is familiar with these dramatic flow figures on the Columbia River:

The Columbia River empties more water into the sea than any other river on the continent except the Mississippi itself. Its annual flow averages 180 million acre-feet of water, more than 10 times the flow of the Colorado River, in which the Senator from Utah is so justly interested. Its maximum flow has been some 9.3 million gallons per second, and only as recently as 1948 it flooded at over 7½ million gallons per second.

Where would the Senator from Utah have funds for flood control and navigation spent, if not in the river basins where flood control is needed and navigation possible? The projects now under construction in the Missouri and Colorado Basins will provide storage to contain approximately 5 times the annual flow of those rivers, yet all projects now under construction or completed in the Columbia Basin will bring the total flood-control storage in that basin to less than 5 percent of 1 year's annual flow. Does this really sound as if the Northwest is getting more than its share of flood control appropriations? I refuse to believe this is what the Senator from Utah really means—storage equal to 500 percent of annual flow for the Colorado and the Missouri Rivers, but only 5 percent for the Columbia.

An absolute minimum of 27 million acre-feet of flood control storage is required for any degree of effective flood control in the Columbia River Basin. Yet the region has only about one-third of the minimum needed. And, I would like to add, little progress is now being made toward achievement of an adequate flood-control goal for the Columbia because of the present administration's hostility to starting construction of new multiple-purpose river projects.

Resource development under sponsorship of the Federal Government must and can occur only where there are resources to develop. The Government does not undertake navigation projects in inland Nevada, nor irrigation works in the rain forests of the Olympic Peninsula where precipitation averages over 120 inches a year. But the Federal Government does develop irrigation projects in the great Western deserts, and navigation projects along our coast and inland waterways. Likewise, the Federal Government has—in the past—provided the impetus for building of power projects in the Columbia Basin, where lurks nearly 40 percent of the water-power potential of the United States. Sound governmental policy calls for expenditure of funds for projects where the power, navigation, and irrigation potential exists. And that is the policy we are fighting today to preserve in the Pacific Northwest.

Mr. President, I wish to express my appreciation to the eminent Senator from Montana for the able and important speech he is making in the Senate. This contribution is characteristic of the Senator's continual leadership in this whole vital realm.

Mr. President, I wish also to state to the Senator from Montana that he occupies the rather unique geographical distinction of having, in part, represented in the United States Senate for many years a great State, which I believe is traversed by the Continental Divide of the majestic Rocky Mountains between the Columbia River Basin and the Missouri River Basin. The entire record of the Senator from Montana shows that he has fought for full development of the Columbia River Basin, the Missouri River Basin, and also the Colorado River Basin.

I note that the senior Senator from Oregon [Mr. MORSE] is now present in the Chamber. If I am not mistaken, the senior Senator from Montana [Mr. MURRAY], the senior Senator from Oregon [Mr. MORSE], and I have all supported the upper Colorado project, in which the Senator from Utah [Mr. WATKINS] has been so rightfully interested. We supported it, even though very few of the benefits will go directly to our own States. We are all interested in the development

of that vital realm of the intermountain West, so we never thought of it on the basis of any local consideration whatsoever. Certainly for that reason I am disappointed that the distinguished senior Senator from Utah, who has advocated pouring nearly a billion dollars of Federal funds into his own region, is so hostile to the development of the Columbia River Basin.

I know—and considering the long career of resource development of the senior Senator from Montana, I am sure he agrees—that if the Western States are to go forward, they must go forward together. For representatives in the Congress from one Western State to lead the fight against the development of another Western State, in the long run, can only lead to the downfall and dismay of all the Western States. That is the reason why I am so appreciative of the broad gage, statesmanlike attitude which the senior Senator from Montana, as chairman of the very strategic Committee on Interior and Insular Affairs, has taken toward the development of all the Western States and all the great river basins within the Western States.

Mr. MURRAY. I thank the Senator from Oregon for his very interesting remarks, and the very valuable points he has raised. During the course of my remarks, I was touching on them, inadequately, and I am very much pleased that the Senator has brought them out so effectively.

Mr. MORSE. Mr. President, will the Senator from Montana yield?

Mr. MURRAY. I yield to the Senator from Oregon.

Mr. MORSE. I rise to join with my colleague in paying my respects to the chairman of the Senate Committee on Interior and Insular Affairs, the distinguished Senator from Montana.

I have said on many platforms of America what I should like to say here about the Senator from Montana. I have said that the people of the United States do not have a more effective or sincere or ardent defender of the people's heritage in their own natural resources than the senior Senator from Montana. Once again today the Senator from Montana is demonstrating that when he feels a wrong has been done, he does not hesitate to do what he can to put the record straight, according to his sights.

I speak with complete respect for the Senator from Utah [Mr. WATKINS]. The Senator from Utah and I simply disagree fundamentally on the whole approach to the basic Northwest natural resources problem. The Senator from Utah and I expressed different points of view in Salt Lake City last Saturday at the conference of Western States on water resources. I shall in my own time, in due course, proceed to set the record straight, as I see the record, with respect to some statistical information which the Senator from Utah used in his Salt Lake City speech last week, statistics identical with information being propagandized by the private utilities, to the effect that Bonneville power, for example, is being sold for less than its cost. I said in Salt Lake City—and I say here today—the facts do not bear out that contention on the part of the Senator from Utah.

But what I wish to address myself to at this moment, by way of interruption, because the Senator has reached that point in his speech, is an observation. The Senator, for example, has just said:

> Money is spent to develop copper in Montana because there is copper in Montana. It is spent to produce salt from the Great Salt Lake, because there is salt there and not in Lake Michigan or in Lake Erie. It is spent on water developments in the Northwest, because our second mightiest river is there.

I wish to enlarge upon that point, if I may, and point out, as a part of the Senator's speech, that when expenditures are related to the proportion of water resources in an area, it is doubtful that the Northwest has had its fair share of the appropriations.

I become a little tired of hearing the charges which are being made by selfish groups in some parts of the country to the effect that we, in the Pacific Northwest, are getting more than our fair share of appropriations. In the first place, we are not. In the second place, whatever appropriations go to the development of the power resources of the Pacific Northwest and the conservation of other natural resources in the Pacific Northwest, help every citizen of the country, no matter where he or she lives, whether it be in Maine, Florida, Pennsylvania, Ohio, California, or any other State, because only to the extent that we conserve our natural resources, and carry out the doctrine of trusteeship preached by Pinchot and Teddy Roosevelt, and leave our natural resources in better condition than that in which we found them, will we keep faith with future generations of American boys and girls. I stress that point as I now place in the RECORD, with the permission of the Senator from Montana, certain figures.

For the information of the Senator from Utah and other like-minded Senators, I should like to have printed in the RECORD at this point a small table. It is taken from Geological Survey Circular 367, entitled "Developed and Potential Water Power of the United States and Other Countries of the World, December 1954." It is very informative.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

State	Available 50 percent of the time	Available 90 percent of the time
	Percent	*Percent*
Washington	20.33	19.44
Oregon	10.51	10.33
Idaho	6.85	6.93
Montana	3.92	4.24
Pacific Northwest	41.61	40.94

Mr. MORSE. The figures given show the percentages of the national potential water power which are located in the four States of the Northwest. The figures are as follows: For Washington, available 50 percent of the time, 20.33 percent; available 90 percent of the time, 19.44 percent. For Oregon, available 50 percent of the time, 10.51 percent; available 90 percent of the time, 10.33 percent.

For Idaho, available 50 percent of the time, 6.85 percent; available 90 percent of the time, 6.93 percent.

For Montana, available 50 percent of the time, 3.92 percent; available 90 percent of the time, 4.24 percent.

The figures show that, for the total Pacific Northwest, encompassed by the States I have mentioned, there is available 50 percent of the time, 41.61 percent; available 90 percent of the time, 40.94 percent.

What do those figures mean? If the Senator from Utah and others will examine the figures, they will notice Oregon and Washington, the two States which he thought were getting such an excessive proportion of national expenditures for water resources development because they get 15 percent of such expenditures, actually have within their boundaries 30 percent of the Nation's total potential water power, the one investment which pays its way in cash, and returns to the Treasury of the United States many times its cost to the taxpayers.

So far as the dams are concerned, the dams of the Columbia River system are ahead of their payout schedule today. Could it be that we are really not giving the Northwest its fair share of the appropriations, rather than giving it more than its fair share, as has been charged?

If the Senator from Montana will permit me, I should like to buttress his speech by stressing again what the Senator has heard me stress so many times, but which cannot be repeated too often.

What is our problem in regard to natural resource conservation? Fundamentally, it is a problem of conserving water. If I were asked to name what I think is the greatest domestic need of the American people today, my answer would be that the American people should wake up, before it is too late, to the great need of conserving America's water supply. America's water table is going down; and with that table going down, America's civilization will go down, not in our lifetime, but it is inescapable if we do not stop the falling water table.

All I have to do is to send the reader to the library to read the sorry tale of history. When nations do not protect their water supply, they cease to climb the ladder of civilization. Consider the cases of China, Persia, and the Middle East. Believe it or not, the fallen civilizations in the history of mankind happen to be the civilizations in which there are always one common element, namely, the failure of the people to conserve their natural resources, and particularly their water supply.

In the Middle East today, there is under vegetation a little less than one-fourth the land area which was under vegetation when that area was the home of great civilizations.

In China there are thousands of square miles of eroded topsoil and deforested mountains, and a falling water table. There are physical facts. I plead with the American people to remember those facts as the Senator from Montana leads the Senate, as he has done for so many years, in the great fight for the conserva-

tion and protection of our natural resources, in the tradition of Gifford Pinchot and Teddy Roosevelt, and of George Norris, Hiram Johnson, Clarence Dill, and other great Senators who preceded the Senator from Montana in this body.

The Senator from Montana, as chairman of the Senate Committee on Interior and Insular Affairs, is warning the American people once again, in answer to the claims of the Senator from Utah, that now is the time to protect the natural resources of the United States.

As I said in Salt Lake City last Saturday, and repeat here today—and my colleague has made reference to it—I made a fight on the floor of the Senate for the upper Colorado River project, against strong opposition in my State. Senators should read the mail which I received. I was asked, "Why are you fighting for the upper Colorado project, when some Western Senators are blocking Hells Canyon Dam?"

I do not serve in the Senate on the basis of any theory of blocking something that is good merely because I am unable to obtain support for something else which is likewise good. I do not believe in that kind of legislative process.

I fought for the upper Colorado project because I think it is a sound project from the standpoint of conserving our water supply. I went there and inspected the area. I noted, for example, that large segments of that region were already water disaster areas. In Denver, Colo., there is water rationing for several weeks in the year, because of a falling water table. I knew the time had come to take action on the upper Colorado project, and I supported it.

I would be less than honest if I did not express keen disappointment that the Senator from Utah and some other Western Senators from the opposition party have been helping to block Hells Canyon Dam, which is just as sound and just as much needed for the future use of American boys and girls as the upper Colorado River project. But I will not take the position that I will join in any so-called disciplinary procedure to prevent some other good project from developing, just because the Senators interested in it are too narrow in their vision or too provincial in their view to support a magnificent project like Hells Canyon. Such a position would simply contribute to the anarchy in western development which is being fostered by the views of the senior Senator from Utah in fighting against full development of the water resources of the Columbia Basin, and I will have no part in it.

Mr. MURRAY. I thank the able Senator from Oregon. He has made a very valuable contribution to this discussion. His statements cannot be questioned. They are on the record, and no one can dispute them.

On April 20, 1955, during the upper Colorado debate, the Senator from Utah [Mr. WATKINS] knew that expenditures depend on the location of the resources to be developed. The Senator from Oregon [Mr. MORSE] has discussed that in some detail, and has made it very clear. The Senator from Utah told the Senate then:

> Navigation, flood control, and hydroelectric generation are similarly located where there is water—not in the desert.

SOME STATEMENTS CORRECTED

Having listed the allegedly tremendous expenditures for flood control and navigation projects in the Northwest, the Senator from Utah says:

> These expenditures, furthermore, were first costs only. No estimate was provided on the planning and operation and maintenance costs for those projects. This continuing overhead expense, largely assumed by the Federal Government under these two programs, could amount to hundreds of millions of dollars during the lifetime of these projects.

I am almost embarrassed to have to answer such statements. My good friend from Utah knows better if he will only consider a bit. For instance, I am sure he is really aware that planning costs of these projects are included in what he calls first costs—the initial investment in the project.

He must be aware that the cost of operation and maintenance of the great power projects he is talking about—Bonneville, The Dalles, McNary, Chief Joseph, and the rest—are not an additional expense to the Government. The distinguished Senator's own statement says at one point:

> A total additional payment of $170 million has gone into the Treasury, but it has gone toward payment of operation and maintenance and interest.

The Senator from Utah would be more accurate if he told how well our projects are paying their own way, instead of accusing them of being a load on the Federal Treasury. All flood control and navigation projects anywhere in the Nation are nonreimbursable. Power projects repay their costs. They are not a cost to the taxpayers. Besides returning the investment in their construction with interest, they stimulate the economy of the area, stimulate industry, and tremendously increase tax collections from the corporations and newly employed workers.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. MORSE. I believe a quotation from the remarks of the Senator from Utah should be inserted at this point. He was speaking of the Colorado River storage project on the Senate floor on August 19, 1954, when he said:

> The resulting productivity of the area served by the project, besides providing the money to repay all the reimbursable project costs, also will furnish tax revenue estimated to be far in excess of the total cost of the project every 50 years.

Let me say that that is likewise true of such great projects as we are fighting for in the Pacific Northwest, like the Hells Canyon Dam.

Mr. MURRAY. I thank the Senator for his statement.

People who oppose Federal investment in resources development preach a philosophy that would keep America perpetually in the pre-McKinley, horse-and-buggy days. If we are going to accept the philosophy behind criticism of the great projects that have stimulated the economy of the Pacific Northwest, then we ought to rescind authorization of the upper Colorado project right away. And if we cannot afford to invest in self-liquidating public works, we ought to stop building highways and ride bareback as of old, for we cannot afford nonreimbursable public works either!

NO FEDERAL GRATUITIES INVOLVED

It is impossible to stand idly by while the Senator from the upper Colorado refers to Federal gratuities involved in Northwest projects and the size of the outstanding indebtedness. An investment which will be repaid with interest, including the full amounts required for operation and maintenance, is surely not a gratuity.

The Senator from Utah [Mr. WATKINS] says that "during the first 15 years of operation the Columbia Basin has paid off only $170,409,916 on its total net capital investment." He fails to point out that exactly 2 years before the end of the period he mentions, at the end of fiscal 1952, there were in operation in that entire basin only 2 projects which could pay anything back to the Government: Grand Coulee and Bonneville Dams. How can projects begin to pay for themselves when they are not even completed?

Mr. MORSE. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. MORSE. I should like to place in the RECORD at this point another quotation from the Senator from Utah.

I quote from the hearings on the Colorado River storage project of Wednesday, June 30, 1954, page 312. He said:

> If the income from the project overall is enough to repay the costs to the United States and leave something for the people themselves, then it ought to be built.

He is right. I think that is equally applicable to some of the Pacific Northwest projects such as Hells Canyon, which he is now opposing.

Mr. MURRAY. I thank the Senator for his valuable interposition at this point.

Why were not up-to-date figures used by the Senator from Utah? Total capital repayment at the end of fiscal 1956, as shown in schedule 3 of the 1956 report of the Bonneville Power Administration, was $202,178,224, which places the entire program some $77.1 million ahead of schedule on repayments. Imagine that—a Government spending program which not only pays for itself, but is actually over 60 percent ahead of its repayment schedule, in addition to paying, as the Senator from Utah points out, the full costs of operation and maintenance and of interest charges on the unpaid balance. Before this $202 million was credited to repayment, the Bonneville Power Administration had turned over $247 million to pay for operation, maintenance, and interest.

I should like to say to the Senator from Utah that if the upper Colorado project ever gets 60 percent ahead of its repayment schedule and matches the record of

the Northwest projects, he will be justified in feeling proud of his part in bringing the upper Colorado into being, just as we who have worked for the Columbia River System development feel proud when we view its achievements.

Mr. CHURCH. Mr. President, I wish to commend the distinguished Senator from Montana, our esteemed chairman of the Committee on Interior and Insular Affairs, for the address he is now making. I may say, in this connection, that I think it is a public service to point out that these dams are not impositions upon the taxpayers, as they are so often made out to be by their critics, but, in fact, they are investments in the country and in the future; investments which represent a borrowing from the Treasury, and which will be repaid, with interest, by the dams themselves.

In that respect, I think it noteworthy that the Senator from Utah [Mr. WATKINS] himself made the following statement as recently as April 20, 1955, in the course of the Senate debate on the upper Colorado project:

> So, Mr. President, by means of this project, we shall accomplish two purposes. First, we shall be able to develop the necessary water; and, second, from the same program we shall be able to develop power at no extra cost to the people of the United States, who will loan us the money, to be repaid over a period of 50 years, for each of the projects.

So it is with the Hells Canyon project: It will be an investment of the public money in the future of the country, and will be repaid, with interest, to the Treasury.

In pointing this out, and in pointing up the fiscal validity of the Bonneville Power System, I say to the distinguished Senator from Montana that, in my opinion, he has rendered worthy public service.

Mr. MURRAY. I thank the able Senator from Idaho. I welcome these interjections. I am certain that if we were to search the records, we could fill the RECORD for many days with quotations from the Senator from Utah which would support the position we have been taking with reference to these projects in the West.

The benefits of the Columbia Basin Power System and the Tennessee Valley Authority to the people of this Nation cannot be measured entirely in dollars and cents, as we have been discussing them.

Without elaborating on the subject, let me remind the Senator from Utah that these two areas made outstanding contributions to winning the last great war. Availability of abundant power in those areas saves tens and hundreds of thousands of young men's lives.

It is not impossible that this Nation may again have to defend itself and the Free World. If that day comes and we find our country harnessed with little, private-owner-company dams, wasting half the energy potential of our great rivers, as at Hells Canyon, those who today are battling for such underdevelopment of our potential power will inevitably have a heavy load upon their consciences.

We should never forget that it is energy—abundant energy—which wins wars with a minimum of human sacrifice. We must not waste our power resources.

ALLOCATION OF AT-SITE POWER FROM HUNGRY HORSE TO MONTANA

The Senator from Utah has tried to cause dissension among States by alluding to the reservation of at-site power generated at the Hungry Horse project for the State of Montana. The Hells Canyon Dam bill reserves 500,000 kilowatts of power for the State of Idaho, and the Senator bemoans the fate of the poor citizens of Idaho who are thus discriminated against.

At pages 274 and 275 of the hearings held last year by the Interior Committee and a subcommittee of the Foreign Relations Committee on the problems of upper Columbia River development, there are facts which the Senator, in fairness, should have added to his statement about these power reservations.

The power produced at site by the Hungry Horse Dam is 197,000 kilowatts of prime power. Water storage at Hungry Horse adds 613,000 kilowatts capacity to existing downstream dams. Montana actually gets less than 25 percent of the total power attributable to this project.

Mr. MORSE. Mr. President, will the Senator from Montana yield to me?

Mr. MURRAY. I yield.

Mr. MORSE. I note that when the Senator from Utah referred to the Hungry Horse Dam, he used only at-site figures in calculating the cost of Hungry Horse power. I am sure the Senator from Montana agrees with me that we must consider the problem of basin-wide integration in connection with these dams and the control of river flow.

It is interesting to recall that, in times past, the Senator from Utah [Mr. WATKINS] himself has recognized that; and in that connection I should like to quote from what he said in debate on the floor of the Senate on August 19, 1954. The Senator from Utah at that time asked this question:

> Is it not true that the large dams have to be integrated so that the maximum amount of firm power can be produced and the best job can be done in regulating the river and saving water when the water comes down during floods?

Does not the Senator from Montana agree with me that on that occasion the Senator from Utah was correct?

Mr. MURRAY. Yes; that is correct.

Mr. MORSE. But when it comes to calculating the cost of the Hungry Horse Dam, the Senator from Utah does not take into account anything except the at-site power, and he fails to take into account the integrated power; is not that true?

Mr. MURRAY. That is true. In the course of my remarks I shall dwell on that point to some extent; but I very much appreciate the remarks of the Senator from Oregon, who has stated the matter in so clear a fashion.

Mr. President, I regret very much that the Senator from Utah [Mr. WATKINS] is not present at this time to hear these remarks. This morning his office was advised of my intention to allude this afternoon to his April 4 statement. I am sure he will be interested in reading the RECORD which is made today, and that at a subsequent time he will have something to say.

What does the next page of the upper Columbia hearings show about Hells Canyon? At-site power produced by Hells Canyon will be 686,000 kilowatts of year-round prime power. Storage of water there will add 187,000 kilowatts of prime power production at downstream dams existing and under construction, including Ice Harbor, McNary, the Dalles, and Bonneville. So the Idaho reservation of 500,000 kilowatts is over 56 percent of new generating capacity attributable to Hells Canyon Dam. Actually, the total production created immediately by Hells Canyon Dam at other dams in the system, including Chief Joseph upstream on the Columbia, will be 274,000 kilowatts for a total of 960,000. Even this larger figure leaves Idaho with 52 percent of the total power production attributable to Hells Canyon.

Twenty-five percent for Montana and 52 percent for Idaho! This is not discrimination against Idaho, and no inflammatory use of half the facts is going to turn the people of the two States against each other.

Mr. CHURCH. Mr. President, will the Senator from Montana yield to me?

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). Does the Senator from Montana yield to the Senator from Idaho?

Mr. MURRAY. I yield.

Mr. CHURCH. I would feel remiss, Mr. President, in the performance of my duties as a Senator from the State of Idaho if I did not point out at this time, in connection with the excellent address now being delivered by the distinguished Senator from Montana, my belief that the interests of Idaho are not only fairly dealt with under the provisions of the Hells Canyon bill, but also that the benefits which will be derived by my State from enactment of the Hells Canyon bill will constitute a bonanza for Idaho and an economic stimulus which will contribute tremendously to the future growth and development of Idaho. If it were not for my belief that Idaho's interests are not only adequately safeguarded but also are generously promoted by the bill, I could not in good conscience support it.

I desire to commend the Senator from Montana for the statements he is making in respect to the allocation of power, under the Hells Canyon proposal, for the use of Idaho.

Mr. MURRAY. Mr. President, I thank the Senator from Idaho. His remarks are very much in point, and I am glad he has made them at this time.

Mr. President, it is an old technique to try to get people divided along man-made lines on the map. But the only way to make sense in dealing with a river basin is to treat the entire basin as a single entity and develop it accordingly with comprehensive planning. This benefits the whole area, and also the Nation, as well. The people know this, and they are not going to fall for the fight-each-other technique.

Mr. MORSE. Mr. President, will the Senator from Montana yield again to me?

Mr. MURRAY. I yield.

Mr. MORSE. Mr. President, I am glad the Senator from Montana has brought out the single-entity theory. It is true, is it not, that the Hungry Horse Dam is only one segment of a particularly comprehensive river-development program? It is not at all an entity, of itself, is it?

Mr. MURRAY. It is not. It benefits the whole area downstream; and it benefits not only the State of Montana, but also the Nation.

Mr. MORSE. Is it not true that when we speak of full development, as compared with partial development, of the river basin, we have in mind the benefits which will accrue from building dams such as Hungry Horse or Grand Coulee or Hells Canyon or McNary or any of the other dams in a total basin development area; and if we are to consider the economic benefits, we cannot limit our statistical analysis to the cost ratio of a given dam, but we must also consider the benefits which will flow from the dam from the standpoint of its effects upon the entire river basin. Is that not true?

Mr. MURRAY. That is absolutely correct, and it is coming to be understood generally by the people of the country, and especially by the people of the West.

Mr. MORSE. Mr. President, it seems to me that the Senator from Utah understood that fairly well when the Senate was debating the upper Colorado River project.

Mr. MURRAY. Indeed, he did.

Mr. MORSE. He was entirely in favor of that project.

At this point I should like to refer to the CONGRESSIONAL RECORD and the Senate proceedings on January 11, 1954.

On January 11, 1954, the Senator from Utah [Mr. WATKINS] requested consent to have printed in the CONGRESSIONAL RECORD a letter to the editor of the New York Times, written by Ernest H. Linford, editorial writer of the Salt Lake Tribune. Endorsing Mr. Linford's letter as excellent the Senator from Utah explained that Mr. Linford enjoyed a distinguished reputation for his courageous editorials. The letter, as printed in the CONGRESSIONAL RECORD, volume 100, part 1, page 111, reads in part as follows—and I shall now read from the letter which the Senator from Utah so heartily approves:

> The upper Colorado River Basin program must be considered as an entity. It is carefully integrated and balanced—as to storage, power links, other use of water and as to repayment to the Government. Eliminating or radically changing one element in the coordinated plan could throw the overall program out of balance, making it economically or otherwise unfeasible.

Mr. President, let me say to the Senator from Montana that I completely agree with Mr. Linford's observation. I am glad that at that time the Senator from Utah agreed with it, although the discussion on that occasion was in connection with the upper Colorado River project, of which the Senator from Utah was the author.

Let me say, for the benefit of the Senator from Utah, that exactly the same observation applies to the Columbia River Basin; and the Hungry Horse Dam, which the Senator from Montana has been discussing, is a very vital link in the whole development of the basin of this river in the Pacific Northwest.

I would say to the Senator from Utah that the same observation applies to the Hells Canyon Dam, which he is opposing. The Hells Canyon Dam is a vital link in the full development of the Columbia River Basin. That is why I am taking such an adamant position in opposition to one Dwight D. Eisenhower's proposal for underdevelopment of the Columbia River Basin and for giving away to the private utilities the people's heritage in the full development of that river.

I have said on the floor of the Senate before, and I repeat today, Dwight D. Eisenhower is guilty of a shocking betrayal of a public trust to future generations of American boys and girls by his giveaway policy in regard to the Columbia River Basin, and by his refusal to go along with the Hells Canyon proposal which will provide full development of that section of the Columbia River Basin.

The time has come to draw this issue in language which the American people will understand. When we have a President of the United States who, for example, takes out of the pockets of the American taxpayers thousands, and, yes, millions, of dollars of interest money and gives it free to the Idaho Power Co., it is time that someone says, as I have been saying, that that is political immorality; and it rests squarely on the shoulders of Dwight D. Eisenhower. The time has come to call his tactics what they are.

I want to say that in the Hells Canyon Dam historic debate, which is to open in the Senate of the United States in the next few days, I intend to carry the fight to one Dwight D. Eisenhower, because he is the stumbling block. He is the man who last year had the calls made to colleagues in the Senate to halt Hells Canyon Dam.

There has been an election since. The people of my State made clear what they think of his tactics. The President ought to read the mail I am getting in regard to this unconscionable act of recent days for which he has to take responsibility, when his own ODM, under Mr. Gray, has granted to the Idaho Power Co. something which will cost the American taxpayers millions of dollars.

I do not like to talk quite so roughly as this about a President of the United States, because I have great respect for the Office. But when any occupant of that Office follows the course of action Mr. Eisenhower has followed, representing a betrayal of the public trust, giving away the heritage of future generations of Americans in their own natural resources and letting private utilities dominate his administration, the time has come for someone to use language the people can understand about the man in the White House. I say the time has come for Congress to reverse the shocking betrayal of a public trust of which the President is guilty.

Mr. O'MAHONEY. Mr. President, will the Senator yield?

Mr. MURRAY. I thank the Senator from Oregon for his observations. I think the facts we have developed entirely justify his vigorous remarks. There is no question that the President owes a duty to the country to state the problem facing us, and to act upon it with fairness and justice to the people.

I yield now to the Senator from Wyoming.

Mr. O'MAHONEY. Mr. President, I asked to interrupt the Senator from Montana because I think it is most important to call the attention of the people of the United States to the fact that the policy we have been following in recent years with respect to the development of natural resources is fundamentally unsound.

I share the feelings of the Senator from Montana and the Senator from Oregon with respect to Hells Canyon, and I supported the Hells Canyon bill in the committee. I shall support it on the floor. However, I wish to call attention to the fact that there is more than water involved. A little later this afternoon, when the opportunity shall be afforded to me, I shall talk about our failure to develop oil shale and coal resources.

I do not know whether it is understood, but the fact is that in the modern world, wars are becoming more frequent and longer, and the periods of peace are becoming shorter.

With the indulgence of the Senator, I should like to call attention to some facts I discovered by consulting the World Almanac the other day. Napoleon captured Moscow on the 14th of September 1812. Three years later he was overwhelmingly defeated, on June 18, 1815, at Waterloo, and he was captured and made a prisoner for life.

The Napoleonic Wars, this record shows, terminated in 1815. There was no additional war in Europe until 55 years had passed. The Franco-Prussian War broke out in 1870. After that war was ended by the triumph of the Kaiser and of Bismarck, Europe had peace for 44 years. That interval of peace was 11 years shorter than that which occurred between the defeat of Napoleon and the beginning of the Franco-Prussian War.

World War I raged from 1914 to 1918 but the interval between the outbreak of that war and the close of the Franco-Prussian War was 11 years shorter than the interval between the Napoleonic Wars and the Franco-Prussian War.

Twenty-one years passed—half the time between the Franco-Prussian War and World War I—and the world found itself involved in World War II. That began in 1939. It terminated in 1945.

We have been on the brink of war ever since. All the peace treaties have not been written. We do not know yet what the fate of Europe is to be, or, indeed, the fate of the world, but we are manufacturing atomic weapons.

We have lost the armaments race. We are not as far ahead of Soviet Russia today as we were in 1945, 12 years ago. Soviet Russia has built a new fleet of submarines. That fleet is greater than the fleet of submarines which Hitler had,

and Hitler's fleet of submarines sank the oil which was being imported into the United States from South America.

Mr. MURRAY. And manganese, too.

Mr. O'MAHONEY. And manganese too, as the Senator properly suggests.

We have neglected our own resources. We have spent for the peace of the world the resources we had in great volume. The Mesabi range was exhausted because we made weapons of war of the iron ore in that range—weapons which were sunk in every sea across the world, and which were destroyed on every continent of the world except our own.

We must see now that if there should be a third world war, the fight would be here, or else we are blind. So it behooves us—we who have used our resources with a free and generous hand to win the wars of this century—so to use our water resources, mineral resources, coal, and oil shale as to make certain that our country will not be dependent upon foreign sources of supply for the industrial equipment and the industrial energy which are so essential to our preservation.

It gives me a great deal of pleasure, Mr. President, to note that the Senator from Montana, the chairman of the Committee on Interior and Insular Affairs, is laying these facts before the people of the United States this afternoon. When he has finished I hope to take the floor to talk about a bill which my colleague, the senior Senator from Wyoming [Mr. BARRETT], and I introduced 2 days ago to reestablish the Bureau of Mines as an entity in the testing of coal and oil shale for the manufacture of liquid fuels so as to make the United States independent of foreign sources of supply.

Mr. MURRAY. I thank the Senator from Wyoming for the very fine remarks he has made, which should shock the Nation into a realization of the serious condition that confronts us. I thank him very gratefully.

Mr. DWORSHAK. Mr. President, will the Senator yield?

Mr. MURRAY. I yield to the Senator from Idaho.

Mr. DWORSHAK. The Senator from Idaho is very much interested in water resource development in the Northwest and is in accord with the views expressed by the Senator from Montana concerning the need for arousing the people, so that we may have made a very careful and thorough study and survey of the future development of the great Columbia River Basin. That is why the people of Idaho are particularly concerned about the development of the so-called Hells Canyon area of the middle Snake River.

The Senator from Idaho would be remiss in his duty if he did not express his appreciation to the Senators from the Northwest for the solicitude which they are displaying in regard to this water resource development in Idaho. I should like, if the Senator will yield, to invite attention to the acreage in the Snake River drainage basin, which totals 69,760,000 acres.

There are seven States in the Columbia River Basin. The Senator's State of Montana is in that basin, but unfortunately does not have any acreage in the Snake River drainage basin.

Oregon has 12,922,000 acres, Washington has 3,392,000 acres, Idaho has 46,297,600 acres, Wyoming has 3,270,400 acres, Nevada has 3,577,600 acres, and Utah has only 230,400 acres in the Snake River drainage basin. These figures were compiled by the Chief of Army Engineers and published in House Document 531, 81st Congress.

The Senator from Idaho merely wishes to stress the important fact, in connection with the total acreage in the Snake River drainage basin, that Idaho has exactly two-thirds of the total acreage. So it is peculiar that the Senators from the other States in the Columbia River Basin are so solicitous about safeguarding the interests of Idaho so far as water resource development is concerned. Surely, if Idaho has two-thirds of the total acreage in the drainage area, and provides most of the water, following the suggestion made by the Senator from Montana, that the people ought to become aroused, I can assure him that the people of Idaho are being alerted to the need for conserving and using wisely the water resources of the Snake River Basin under priorities which the State claims.

Mr. MURRAY. I thank the Senator from Idaho for his observations. I am sure what he says will be very carefully studied and considered.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. MURRAY. I yield to the Senator from Oregon.

Mr. NEUBERGER. Is it not a fact that the two distinguished Senators from the State of Montana [Mr. MURRAY and Mr. MANSFIELD], the Senators from the State of Washington [Mr. MAGNUSON and Mr. JACKSON], the Senators from the State of Oregon [Mr. MORSE and Mr. NEUBERGER], and now the junior Senator from the State of Idaho [Mr. CHURCH], in their approach to river basin development, have not looked to see how many particular acres in their State or somebody else's State were within the confines of some certain river valley? Instead, the Senators whom I have enumerated have felt that all the great river basins of the West and of the Nation should be wisely developed and prudently conserved.

For example, the 2 Senators from Montana, the 2 Senators from Washington, the 2 Senators from Oregon, and the junior Senator from Idaho come from States which are either completely outside the Colorado River Basin, or only inside of it fragmentarily, yet they all have supported wholeheartedly, either as Members of the Senate or as citizens, if they were not in the Senate, the full development, at a very high cost and very great expense, of the Colorado River Basin.

They have not taken the position of the senior Senator from Utah [Mr. WATKINS], for example, that he favors nearly $1 billion worth of development in his own basin, but is leading the fight against any new Federal authorizations or starts in the Columbia River Basin. No. They have taken the broad gage view, as distinguished and characterized by the position of the senior Senator from Montana.

To my knowledge, in the slightly less than 2½ years I have been a Member of the Senate, and in the considerably longer period of time in which I have observed these developments as a writer and journalist in the Pacific Northwest, I have never seen the Senator from Montana distinguish one river basin from another on the basis of how many acres in his own State happened to be inside a given basin. The senior Senator from Montana has made his judgment on the measurement of the resources which a generous Creator put in a certain place. If those resources were there, not through any act of some human being but because of the beneficence of the Almighty, and they could be developed for the benefit of America and of mankind, the senior Senator from Montana has favored their development. He has never tried to "Balkanize" our country by pitting one region against another, as has possibly been done by the senior Senator from Utah, as pointed out in the outstanding speech being delivered today by the senior Senator from Montana.

I wish to say to the able senior Senator from Idaho [Mr. DWORSHAK], speaking for myself as one Member of the Senate and one member of the Committee on Interior and Insular Affairs, that it is a privilege for me to serve as a member of the Committee on Interior and Insular Affairs under the chairmanship of the Senator from Montana [Mr. MURRAY]. I go to him with problems from the State of Oregon, and the Senator from Idaho goes to him with problems from the State of Idaho, just as the Senator's junior colleague goes to him with problems from the State of Idaho, and other Senators go to him with problems affecting the States of Washington, California, Wyoming, Colorado, or whatever the States may be. I have never seen the Senator from Montana [Mr. MURRAY] in his consideration of those problems distinguish as to whether or not they affected or benefited his State. He has taken the same attitude, without discrimination and with complete fairness, pertaining to the entire West. I think this is one reason that all of us, regardless of political partisanship, regard the Senator from Montana as a great chairman of the Senate Committee on Interior and Insular Affairs.

Mr. MURRAY. I wish to thank the able Senator from Oregon for his very generous remarks. I do not feel that I am entitled to such commendation, but I have always tried to cooperate with the Senators from all sections of the country in the consideration of their problems and programs. I am sure that all know my heart is in the right place, and I always wish to cooperate in efforts to solve these problems in the interest of the welfare of the people.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. MANSFIELD. Mr. President, I wish to join my distinguished colleague from Oregon in commending the senior Senator from Montana, the chairman of the Committee on Interior and In-

sular Affairs. I agree with every word said by the Senator from Oregon, because I know from firsthand experience over a good many years how much the interests of the people have always been in the heart of my distinguished colleague, the senior Senator from my State.

I may say, also, in looking after the interests of the people of the United States generally, the senior Senator from Montana has never neglected the interests of the people of Montana in particular. This morning in his office he was visited by about 16 members of the various Indian tribes from the State of Montana, to discuss problems affecting their interest. I think he has been a distinct asset and honor, not only to the Senate of the United States, but to the United States as a whole, and most particularly to the State of Montana. I think we owe him a great debt of gratitude for the fine humanitarian work he has done down through the years.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. NEUBERGER. I should like to comment briefly on the remarks made by the distinguished junior Senator from Montana [Mr. MANSFIELD]. I think the statesmanship demonstrated by both Senators from Montana in their successful advocacy of the Hungry Horse Dam and in their work for that project, when the senior Senator from Montana was in the Senate and the present junior Senator from Montana was in the House of Representatives, symbolizes the fact that all the West can be benefited by a project which may be located in a single State. The Hungry Horse Dam, which happens to be a project within the borders of Montana, has strengthened the entire Pacific Northwest. It has helped to firm up the flow of the great Columbia River. It has taken the crest off some potential floods. It has increased downstream power production in the States of Washington and Oregon. This great project would have have been built had it not been for the active and successful promotion of it by the present senior Senator from Montana in the Senate, and the present junior Senator from Montana when he was a Member of the House of Representatives.

It seems to me that the Hungry Horse Dam, which stands as an upstream development in the Columbia Basin, is an example of what could be accomplished if the still larger and greater Hells Canyon project were constructed, not only with benefits to that part of Oregon and Idaho where the project would be located, but with benefits all the way downstream—the benefit of jobs made possible by low-cost power; the benefit of increased economic activity, increased payrolls, and increased tax base, and increased consumption of locally grown farm products all over the Pacific Northwest.

Mr. MANSFIELD. Mr. President, will my senior colleague yield to me?

Mr. MURRAY. I yield.

Mr. MANSFIELD. I am delighted that the Senator from Oregon has brought up the question of Hungry Horse Dam. I think we know that the leader in the fight during the years we were fighting for it was the distinguished senior Senator from Montana.

I think it should be brought out that when we advocate multipurpose projects, we are not advocating giveaways. For illustration, Hungry Horse Dam has broadened the tax base. It has furnished 700 jobs in the Flathead Valley, where chronic unemployment used to be the norm every winter. It has brought security, new hope, and new industry.

Furthermore, every dime the Federal Government has put into Hungry Horse Dam and all the other multipurpose projects is repayable with interest.

In addition, I would be willing to wager that every multipurpose project built in the Columbia River Basin will be repaid fully long before the period originally agreed upon.

Mr. NEUBERGER. They are ahead of schedule, so far as payments are concerned.

Mr. MANSFIELD. These are developments in the interest of the people of America. I think we should begin looking after our own people for a change, and give them some consideration. We should develop our resources and give our people some security. We should give our youngsters an opportunity to develop and grow in one of the most important parts of this great Nation.

Mr. MURRAY. I thank my colleague for his kind remarks and for the eloquent illustrations he has given of the benefits of these programs.

Mr. DWORSHAK. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. DWORSHAK. The Senator from Idaho has had the pleasure of serving for more than 6 years as a member of the Senate Committee on Interior and Insular Affairs, during a part of which time the distinguished senior Senator from Montana has served as chairman. The remarks of the senior Senator from Idaho a few minutes ago in no way reflect any criticism of the chairman of the committee, because everyone recognizes his fairness, and his judicial approach to all the problems affecting the States of the West.

Mr. MURRAY. I thank the Senator for his observations. I assure him that I have always tried to cooperate with the Republican Members of the committee, and to give them a full and fair opportunity to present their views in every case that has ever come before our committee.

Mr. DWORSHAK. The Senator from Idaho is in accord with that expression of sentiment, and can frankly say that, so far as the deliberations of the Committee on Interior and Insular Affairs are concerned, partisanship has usually been avoided as the basis for legislative action.

Mr. MURRAY. I agree with the Senator. I think the Republicans on that committee have cooperated with me. I have great respect for them. I recognize the contributions they have made to the success of the deliberations of the committee.

Mr. DWORSHAK. Mr. President, will the Senator further yield?

Mr. MURRAY. I yield.

Mr. DWORSHAK. A few years ago, when the late Senator Hugh Butler of Nebraska served as chairman of that committee, I am sure that he had the cooperation of the Democratic members of that group in trying to promote some of the programs and solve some of the problems affecting the West.

Mr. MURRAY. He certainly did.

Mr. DWORSHAK. The junior Senator from Oregon has just stated that we should approach resource development not on a regional or State basis, but rather, on an overall basin basis. He referred to the support which was forthcoming at the time the Hungry Horse project was authorized, and during the years when appropriations were made available to complete that fine water resource development.

At this point the Senator from Idaho would like to emphasize the desirability of continuing that spirit of cooperation. The Senator from Oregon refers to the Hungry Horse project as having been of unusual value and importance to the people of Montana. I am sure that if the Senator from Oregon were to be consistent he would agree to support the Bruces Eddy project on the north fork of the Clearwater River, which is also a very vital project, and important to the State of Idaho. It certainly fits into the same category as does the Hungry Horse project. I am sure that the junior Senator from Oregon, if he applies the formula which he has just outlined, will find himself in complete accord with the efforts to have the Bruces Eddy project authorized.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. NEUBERGER. I should like to comment on the statement of the Senator from Idaho, inasmuch as he has discussed my statement.

I will say to the distinguished senior Senator from Idaho, because he has brought up the question of the Bruces Eddy project, that Bruces Eddy is quite different from the Hells Canyon project. The Hells Canyon project is infinitely greater in scope, far greater in the flood-control storage which would be provided, and infinitely more productive in the amount of hydroelectricity which would be generated, than is the Bruces Eddy project.

In addition, the Hells Canyon project would not have an adverse effect on fisheries, wildlife, or wilderness areas that encompass and safeguard scenic grandeur. Virtually every outdoor and wildlife organization in the United States has gone on record as opposed the Bruces Eddy project and supported the Hells Canyon project.

I myself do not understand the position of the distinguished senior Senator from Idaho. In his own State he has consistently advocated the Bruces Eddy project, and yet has opposed the far more productive, far more valuable Hells Canyon project. I may be entirely mistaken in my understanding of his position, but I do not comprehend it.

Let me conclude by adding one further observation in connection with the very able address of the senior Senator from Montana. I am pleased that he has

emphasized the full development of our great rivers, like the Snake River and the Columbia River. Today, as we stand on the floor of the Senate, our potential foes in the Soviet Union are building some of the largest river development projects ever undertaken. These projects involve the Yenesei, the Ob, the Lena, and the Volga Rivers. It is my information that there is a greater quantity of potential hydroelectric power within the borders of the Soviet Union than within the borders of the United States.

Today we are far ahead of the Soviet Union in production of energy, but they are going forward with projects which I understand, in some instances, will be even bigger than Grand Coulee, which now stands as the largest hydroelectric undertaking ever built in any country. How can we, in our country, sacrifice our rivers, which are a God-given resource, to anything less than full development, if our potential enemies in Russia are using still mightier rivers, such as the Yenesei, the Ob, the Lena, and the Volga to the utmost of their capacity in kilowatts?

It seems to me that it is folly, from the standpoint of national defense, for us not to obtain every single kilowatt lurking in rivers like the Columbia and its tributaries, when this power can be tapped without imperiling wildlife.

Mr. MURRAY. I thank the Senator from Oregon [Mr. NEUBERGER] for his very clear explanation of the situation. I am sure that the people of this country are aware of the importance of this problem of developing our American resources to their highest potential.

I thank the Senator from Idaho [Mr. DWORSHAK] for his remarks. I assure him that Montana and the Senate and the Congress want to see Idaho prosper. That is why the two Senators from Montana and its Representatives are fighting for Hells Canyon. We think it will be a great benefit to Idaho.

The Senator from Utah [Mr. WATKINS] also expresses a belief that the reservation of power to Idaho is subordinate to the general preference clause of the Bonneville Project Act, so that Idaho could lose all its rights to this power reserved. Counsel advises me to the contrary. The statutory reservation to Idaho comes first. Within Idaho, public and cooperative distribution systems will have first call on the 500,000 kilowatts of power. But preference outside Idaho cannot defeat the express reservation of the 500,000 kilowatts for use in Idaho and other small parts of the Snake River Basin lying outside Idaho.

HOW WILL IDAHO'S INTERESTS BE BEST SERVED?

Another effort to stir dissension between Idaho and Montana is the charge that Idaho suffered great injury when the Victor Chemical Works built its new plant in Butte, Mont., instead of in Idaho.

Idaho lost this plant because it did not not have the necessary low-cost power to offer Victor. Montana did. If my colleague from Utah would really like to help the people of Idaho, the logical way to do it is to help them develop their low-cost power. I invite the Senator from Utah, earnestly and sincerely, to join me in helping Idaho get the real solution for its development problems by backing Hells Canyon Dam. It is the only project which can provide for Idaho the large block of low-cost power it needs for its industrial development. And it will do the job. There are industries lined up waiting for low-cost energy—aluminum and light metals, chemical and others. Low-cost power would unlock a tremendous phosphate fertilizer development in Idaho, lowering costs of this vital material to farmers from California to Ohio.

This is Idaho's great chance. Even the Federal Power Commission examiner who found against the high dam at Hells Canyon admitted that it could produce power at 2.7 mills. This is in contrast to the 7.6-mill power he found would be produced at the Brownlee project of the Idaho Power Co. What a tragedy for the people of Idaho if they are prevented from obtaining this great block of 2- to 3-mill power—half a million kilowatts of it. That is more than all the power presently used in the entire State of Idaho. It would get them a dozen plants or more equal to Victor Chemical. It would create thousands of jobs. It would swell tax collections. It would make Idaho really blossom like the rose, stimulating the economy of the whole Nation.

Instead of shedding copious crocodile tears about Idaho—and then voting to saddle her with high-cost power which no industry can afford—we are supporting 2- to 3-mill power for the citizens of Idaho.

We want our neighbor on the West to develop and grow.

We will not publicly shed crocodile tears about her fate and then vote to keep her the exploited, captive province of an eastern power company.

THE CHARGE OF SUBSIDY

A great part of the statement of my friend from Utah was devoted to a charge that big business is being subsidized by power from Hungry Horse and other projects on the Columbia Basin. He says that Anaconda Aluminum Co. is receiving half of the power from Hungry Horse at the "at-site" Bonneville rate of 1.72 mills.

This at-site rate was established to encourage some industries to locate in the immediate area of these great projects. Construction of these projects floods large blocks of land which are taken out of the tax base, and displaces many people. New property values and new opportunities are needed to offset this economic upset. The rate, therefore, is wisely designed. It is justified because transmission costs are avoided. The customer must take his power from the bus bar. There is no subsidy.

Absolutely nothing scandalous can be made of this when all the facts are revealed and considered. I am surprised that my learned colleague from Utah did not put all these facts in his statement, because I have always respected him as a very fair man.

It is regrettable when the pressure of work makes it impossible for a Senator to do the research and the careful checking which should be done on every statement made on this Senate floor.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MURRAY. I am glad to yield to my colleague from Montana.

Mr. MANSFIELD. It ought to be brought out, also, that the power guaranteed to Montana from Hungry Horse, which amounts to approximately 200,000 kilowatts of prime power, is for use in the State of Montana, and that every REA in the Bonneville area within the State of Montana has had its power rates reduced from 8 and 9 mills a kilowatt down to the Bonneville rate of somewhere in the vicinity of 3 and 4 mills a kilowatt. It ought to be brought out also that because of Hungry Horse we did get a big aluminum plant located in the Flathead Valley of northwestern Montana, and that we also got a phosphate plant located in the region between Butte and Anaconda.

It should be remembered also that the tax base has been broadened considerably because of these projects. Furthermore, the total cost, something in the neighborhood of $101 million, will be repaid to the Federal Government within 30 years, with interest. On the assumption that these projects have an average life of 100 years, it would be indicated that for the last 70 years practically all the revenues derived from this project would flow into the Federal Treasury.

In other words, Hungry Horse, Hells Canyon, Yellowtail, Libby, and other projects of that kind are assets to the people, to the Government, and to the economy of our country.

I believe that those who live in a part of the United States which has a potential exceeding 40 percent of the possible hydroelectric power of the country, and in the 10 western counties of Montana which have 10 percent of the entire potential—and this has been pointed out by the junior Senator from Oregon, who has advocated it time and time again—should harness these rivers and develop these sites on a multipurpose basis, so that we can irrigate and reclaim our lands, and at the same time furnish cheap electricity to the people, bring in new industries, broaden our tax base, give people jobs, and give our youngsters opportunities.

Hungry Horse is the greatest development, economically, that has ever happened in the State of Montana. Nobody has been hurt. Everyone has been benefited by it. The same comment would be applicable to Hells Canyon on the Idaho-Oregon border.

Mr. MURRAY. I thank my colleague for his very able and eloquent remarks. There is no question that everything he said can be justified by recourse to the RECORD.

THE TRUE COST OF HUNGRY HORSE POWER

The Senator from Utah quoted a letter from someone in the Interior Department to the effect that the power from Hungry Horse Dam, which Anaconda was buying for 1.72 mills, cost 3.76 mills to produce in 1955.

The 1956 annual report of the Bonneville Power Administration, which has

up-to-date figures, shows that Hungry Horse Dam power was produced at a cost of 2.84 mills per kilowatt-hour for at-site power.

The salable prime at-site power from Hungry Horse Dam is only one-fourth of the total attributable to it when the downstream benefits at the 10 existing dams between Hungry Horse and the sea are included. The Senator from Utah made mention of these downstream benefits but unfortunately passed lightly over them in his discussion.

The credit which should be given at-site costs for these downstream benefits from Hungry Horse Dam has not been calculated, but it is obviously great. The downstream benefits are three times the at-site output, so the whole cost of Hungry Horse cannot properly be charged to at-site power sales.

In this case the facts again show that there is absolutely nothing to criticize where all facts are considered. It also demonstrates how fruitless it is to deal with a great system by considering its separate parts individually.

I am glad the point about separating costs has been raised. It demonstrates clearly the futility of considering an integrated system as merely the sum of its parts taken separately and independently.

On such a basis, we all ought to have our stomachs removed. They constitute an expense, requiring food. Our earnings come from the work of our minds, our hands, arms, and legs.

Fractionalizing the Columbia Basin is exactly what the Senator from Utah and others are now urging at Hells Canyon. Perhaps the reason for their position is a lack of understanding of the necessity of considering the whole human body, or a river basin, as a unit. If this is the cause of their error, I would urge them to study carefully the words of two great Republican Presidents of our country who understood these problems better.

It was President Theodore Roosevelt, the father of comprehensive development and conservation in this country, who said in 1908 in his message transmitting to Congress the preliminary report of the Inland Waterways Commission:

> Every stream should be used to its utmost. No stream can be so used unless such use is planned in advance. When such plans are made, we shall find that, instead of interfering, one use can often be made to assist another. Each river system, from its headwaters in the forest to its mouth on the coast, is a single unit and should be treated as such.

And President William Howard Taft, in his White River veto message in 1912, said, in language which could be applied to the Hells Canyon development without changing a single word:

> The lower river is being improved by a series of dams belonging to the Federal Government. This dam, situated in the upper reaches of the river, is, according to the report of the engineers, capable of becoming part of this general Federal improvement of navigation. To introduce a diversity of title into a series of dams which may all become eventually a part of a single improvement directed at the same end would, in my opinion, be highly objectionable.

These are principles which have been honored and acted upon for the last half-century, and we betray future generations when we fail to abide by them.

It is extremely difficult for me to understand why some of our modern Republicans are unable to grasp facts which Republicans in 1908 and 1912 grasped and expounded with ease.

It is even more difficult for me to understand why the Senator from Utah was unable to grasp the fallacy of separating projects in his statement about the Northwest projects when, during the upper Colorado hearings in 1955, he knew that it is the overall picture which is important.

At page 439 of the Senate hearings on the upper Colorado, held in 1955, I find the Senator from Utah told a witness, criticizing pooling of income:

> It is sound economics if the overall income is sufficient to do the job.

Has the Senator let this fact slip from his mind in the 2 years since those hearings were held? There can be no other explanation.

NO SUBSIDY INVOLVED

There is no sound basis for any charge of subsidy in the Pacific Northwest power rates. Benefits they do bring—tremendous benefits both to the people and the industries involved. Hungry Horse Dam is a great project in a great system which is paying for itself while bringing tremendous benefits to the Northwest and to the whole Nation. Why should we try to besmirch such a proud picture with vague charges of subsidy which cannot withstand the true facts?

At one point in this statement, the Senator from Utah indicated that Bonneville Power Administration, overall, is charging less than cost for its power.

This is what the statement said:

> The BPA could come up with an estimated cost per kilowatt-hour of only 2.5 mills for the entire system. However, in spite of these cost estimates, the Bonneville system sells the bulk of its power for $17.50 a kilowatt-year, which averages out roughly 2.1 mills per kilowatt-hour.

That statement would have been technically correct if the Senator had added on the end of the phrase "at 100 percent load factor." Unfortunately, he did not, so it is not even technically an accurate representation of the facts. But even if the statement had been technically complete, it would have left a misleading impression in the public mind that Bonneville does not even get cost for its power.

The fact is that few customers of Bonneville Power Administration, or any other, take their power 24 hours a day, 365 days a year, which is 100 percent load factor. At Bonneville, the average load factor is 75 percent. The customers' average use is 18 hours a day—not 24 hours.

This means that for every 100 kilowatts of firm, 24-hour power Bonneville can generate, it can contract to deliver 133 kilowatts to different customers. When the load goes off in one area, or one plant, it shifts its power to another area or customer who needs it. This is the tremendous advantage of having a large, regionwide power-grid system. It is neither dishonest nor tricky. It occurs in every major power network in the country. It explains why a $17.50 rate per kilowatt-year for power is ample in the Bonneville situation. Because 4 kilowatts can be sold on an annual basis for every 3 of firm capacity, a 2.1-mill rate is adequate.

The Senator from Utah, I fear, has been victimized by someone who did not know the facts about power operations and ratemaking, or for some other reason gave him only part of the facts. Otherwise, I am sure that he would not have made the misleading statement that he did.

A MAGIC ECONOMIC DEVICE

Mr. President, if one were to accept as completely accurate the picture of the Columbia River Basin power system which the Senator from Utah has painted, then we have found an almost magic economic device.

Consider the picture with which his statement leaves us. Here is a great provider of energy which does these things: First, it provides its customers with power at the lowest rates in the world. Second, it pays its operating and maintenance expense. Third, it repays its original cost over 50 years with interest and then remains the property of the people of the United States—a tremendous windfall at no net expense.

During the upper Colorado hearings, at page 176 of the hearing record, Senator WATKINS recognized how these projects pay out and expressed the opinion, which I quote:

> The people who have paid for them should own them.

The Columbia Basin is not asking transfer of title to these great projects. After they pay for themselves they belong to the Nation.

Fourth, at the same time—and this is according to the text of the Senator from Utah—it provides hundreds of millions of dollars in subsidies for industries. According to the Senator, Hungry Horse Dam, which will repay all its costs, will provide $100 million subsidy for an aluminum industry that gets half of its output. The Dalles Dam, besides repaying all its $270 million costs, will provide $300 million subsidies for industrial customers.

As we all know, these new industries create jobs. This increases purchasing power, and stimulates more new business, more tax payments, and a healthier economy.

This is a very accurate picture, as a matter of fact, with a single exception. The benefits which power consumers receive—including the industries—are not subsidies. They are savings resulting from direct performance by Government of one of its utility responsibilities instead of turning the job over to affiliates of the Electric Bond & Share Co., headquartered in Wall Street, who exploit the West through high power rates which cover up padded operating expenses including unnecessary management fees, propaganda and lobbying charges.

Examination of the statement which the distinguished Senator from Utah

placed in the RECORD could continue in this same way indefinitely. I am surprised and feel very sad that my associate and colleague has apparently been victimized with so much misinformation.

I am saddened that the distinguished Senator from Utah has taken an attitude toward the Northwest which he criticized in opponents of the upper Colorado 2 years ago. When a California witness was criticizing that project, the Senator from Utah told the witness:

> When we are in the game, when our turn to go to bat comes up, you want to call the game, you want to stop us now.

Today it is the Senator from Utah who wants to call the game. He has had his time at bat, so the Senator from Utah wants to stop the development of the Pacific Northwest.

The Senate of the United States is going to be deluged with growing quantities of misinformation about the Columbia Basin power system in the next few weeks.

A vote on the Hells Canyon Dam bill is approaching.

Some of us are battling to see that the Government does not throw away a half-million kilowatts of hydroelectric power capacity at Hells Canyon, by letting the Idaho Power Co. clutter the site with little, inadequate dams.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. MURRAY. I yield.

Mr. MORSE. I again express my appreciation to the Senator from Montana, as I did earlier this afternoon, for the excellent analysis he is presenting in the field of the power problems in the Pacific Northwest. There are two questions I wish to raise, as to which I shall be glad to have his observations.

The Senator has just finished pointing out that the proposed Hells Canyon Dam raises the question whether or not the full power resources of the Snake River at Hells Canyon will be developed, or whether we are to go along with the underdevelopment of the power resources by the Idaho Power Co. through its low-head dam. I think that question needs to be pointed up, because the Senator from Utah [Mr. WATKINS], in Salt Lake City, last Saturday, created the impression that the Idaho Power Co. program would produce as much power as would the Hells Canyon Dam project.

Does not the Senator from Montana agree with me that it is unanswerably clear from the official reports of the examiner of the Federal Power Commission himself that the Hells Canyon Dam program, taking into account the benefits of downstream dams, would produce approximately 50 percent more power than would the Idaho Power Co.'s program?

Mr. MURRAY. The Senator from Oregon is absolutely correct; I do not think there can be any question about it.

Mr. MORSE. I think that point needs to be stressed. I have discovered that when the people realize what an astounding giveaway this program of the Eisenhower administration is, in opposition to the Hells Canyon Dam, they are as shocked as I am. But the people have been fed the private utility propaganda line for so long, and they have read the high-priced advertisements in the national magazines, which are paid for by the electric-power users in their electric-power rates, that it is not surprising to learn the number of persons who are of the opinion that about the same amount of power would be produced by either project. So I build up to the question again: Is it not true that the Hells Canyon Dam project, considering the downstream benefits, would produce, in round numbers, about 50 percent more power than the Idaho Power Co.'s program would produce?

Mr. MURRAY. The Senator is absolutely correct; there can be no question about it. I do not think that fact can be disputed by anyone who wants to be guided by the record.

Mr. MORSE. One other point. The Senator earlier in his speech spoke about the claims which are being made by some persons that the Hells Canyon Dam project will discriminate against the State of Idaho. The Senator well knows that in speech after speech over the years, as I have spoken on this subject, I have brought out, time and time again, the benefits from Hells Canyon Dam which will accrue to the people of Idaho themselves. I am pleased to note that increasing numbers of people in the State of Idaho—and I am happy to say this when the new Senator from Idaho [Mr. CHURCH] is occupying the chair of the Presiding Officer—are beginning to see the soundness of the position taken by the Senator from Montana, the Senator from Oregon and others who have been joining with us in this fight, over the years, for Hells Canyon Dam.

But I want the Senator from Montana to comment on this one point, because we find it in the speeches of the Senator from Utah and in the propaganda of the private utilities, namely, that the Hells Canyon Dam will in some way, somehow, injure the farmers of the State of Idaho, in that it will take away their water rights. The Senator from Montana has been the chairman of the committee and has heard the testimony. He has heard the Senator from Oregon speak on the subject. He knows that I have insisted upon placing in the bill language which will make it perfectly clear that the people of Idaho who have existing water rights, or who may in the future legitimately acquire such rights, will not have their water rights affected one iota by the building of Hells Canyon Dam, but their priority water rights, whether existing now or acquired in the future, will be continued in effect by the Hells Canyon Dam. The Hells Canyon bill could not be clearer or more explicit on this point than it is. I would be the first to insist upon it. Does the Senator from Montana agree with me about that?

Mr. MURRAY. I absolutely agree. I do not think there can be any question about the correctness of the observation the Senator from Oregon has made.

Mr. MORSE. Does the Senator from Montana also agree that my insistence that the bill provide for the reservation of 500,000 kilowatts for the use of the people of that area, which includes some eastern counties of Oregon, as well as all the counties in Idaho, is rather clear proof of our honest intention to see to it that the people of Idaho and of eastern Oregon are not discriminated against as the result of the building of the dam, but, to the contrary, that they will be greatly benefited by the reservation of this tremendously large block of power, amounting to 500,000 kilowatts—more than is presently used in the entire State of Idaho?

Mr. MURRAY. The Senator from Oregon is absolutely correct. I do not think anyone can question that; I do not think there can be any argument about it, when the actual facts are considered.

Mr. MORSE. The able Senator from Montana has already presented the matter very well, but I thought it might be well for me to submit these additional points. I thank the Senator from Montana very much for permitting me to make the numerous interruptions I have made in the course of his speech.

Mr. MURRAY. Mr. President, I have been glad to yield, because I think the Senator from Oregon has contributed to the understanding of the people regarding this matter.

Mr. President, some of us are battling to get Idaho the low-cost power supply she needs and deserves.

The road runners for the power companies will be delivering misinformation by the truckloads—just as they do in their deceitful advertising programs—in an effort to block Hells Canyon Dam. They will dress it up in all kinds of plausible garb and will try to foist it off on busy Senators. We must be on guard.

The fact is that, if Hells Canyon Dam is not built, we shall have wasted for all time a half million kilowatts of low-cost energy. We shall have committed a criminal act—the waste of resources which belong to the people of the United States, whom we represent. We are their trustees. Congress alone can prevent the proposed waste of resources. The Secretary of the Interior has come too late with his half hearted plan for a high Pleasant Valley Dam. We shall betray our trust if we in Congress permit the administration to throw away such an enormous public asset.

Over and above a betrayal of our trust over physical resources of the people of the United States, we would betray democracy itself.

The charge is made by our enemies abroad that powerful private interests control our supposedly democratic government; that it is not in reality democratic. The proposed waste of resources at Hells Canyon has been cited as an example and a measure of the power of these vested interests over our Government.

In the approaching Hells Canyon vote we shall have an opportunity to disprove that charge. We shall have an opportunity to show the world that multimillion-dollar advertising campaigns, distortion of truth, half truths, and all the other tricks in the Power Trust arsenal were unable in the final showdown to cause the people's representatives in the Senate to betray the people's interest.

Mr. MORSE. Mr. President, if the Senator from Montana will yield further to me, let me say that on last Saturday I made a speech at Salt Lake City, as I stated earlier this afternoon, before the Western States Water and Power Conference. My subject on that occasion was Natural Resources: God's Gifts Are Man's Challenge.

It so happened that the Senator from Utah [Mr. WATKINS] also spoke at the conference, although I did not know what his subject matter was to be. But it so happens that parts of the speech I made are themselves an answer to the position taken by the Senator from Utah.

Therefore I wonder whether the Senator from Montana will be willing to grant the courtesy of permitting me to ask unanimous consent to have my speech inserted in the RECORD immediately following his speech, without my taking the time to read it this afternoon in the Senate.

Mr. MURRAY. I shall be very glad to have that done.

Mr. MORSE. I thank the Senator from Montana.

Then, Mr. President, I ask unanimous consent that the address I made at Salt Lake City on May 11 may be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. CHURCH in the chair). Is there objection?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NATURAL RESOURCES: GOD'S GIFTS ARE MAN'S CHALLENGE

(Address by Hon. WAYNE MORSE, of Oregon, Western States Water and Power Conference, Salt Lake City, May 11, 1957)

At the very outset I wish to commend the groups that have joined together for this conference. It is a great pleasure to join with you in paying tribute and expressing our western appreciation to Congressman MIKE KIRWAN. He has been a great benefactor of the Western States in the field of natural resource development. In fact, he has a better and wider understanding of the natural resource programs of Teddy Roosevelt and Gifford Pinchot—two great liberal Republicans—than do some of our western Republicans now sitting in the Congress.

Teddy Roosevelt and Gifford Pinchot taught the great truth that each generation is but the trustee of God's gifts of natural resources to the people of our country.

The Eisenhower administration has betrayed that ideal time and time again. It must be held to an accounting for its wasteful program of underdevelopment of our river basins.

The American people must recognize before it is too late that water is our most precious natural resource. Civilizations go down as water tables go down. The water table of America has started to go down. We can stop it only by adopting a sound water conservation program. Full development of our river basins, not under-development, is essential if we are to protect the economic and moral rights of future generations of Americans boys and girls in their rightful heritage to the maximum water potential of America. It is time for the American people to demand of their Government that it place the welfare of our boys and girls of the future ahead of the selfish privateering interests of monopolies, such as the Idaho Power Co. and the Utah Power & Light Co. and other private utility monopolies, which would place their profit interest above the public interest.

Water supplies and power are the indispensable elements for the development of both industry and agriculture in our even more complex society. Nowhere are they needed more urgently than in the West and nowhere is their development more difficult.

During Easter week of 1955, I flew over most of the Western States with the Senate Interior Committee. I sat with the committee during its hearings on Hells Canyon in Idaho, Washington, and Oregon. We went by plane to California to view the great Central Valley project and then up the Colorado Basin, stopping in Salt Lake City.

On that trip I resolved all of my doubts about the upper Colorado project. No one could see what I saw on that trip and fail to recognize the desperate need for the water storage that the upper Colorado project alone could make available for the expanding communities of the basin. States, cities, and towns, industry and agriculture would stagnate without the harnessing of the scarce water supplies of the Colorado and its tributaries.

It is a fact of western life that in all but a few communities the availability of water is the indispensable condition of progress. In most parts of the West water is scarce. In the Columbia Basin water is plentiful. Throughout the area we are blessed with great mineral, forest, and land resources. They depend upon water and power to make them useful.

Water is where you find it. In this century we have learned from the great conservationists like Pinchot that water cannot only be conserved with wisdom and will, but man can increase water supply by watershed development. Water conservation and forestry go together—each assists the other. Beyond that, water flow can be regulated and channeled so that it can be taken from where it is to where it is needed and the tyranny of the seasons—of alternate flood and drought can be controlled and moderated.

Pinchot and Theodore Roosevelt learned and taught a great lesson: That the development and use of God-given natural resources must be undertaken on a basinwide scale.

The upper Colorado project is expensive. Those of you who battled it through to success will remember the propaganda against it. Cost was the chief problem. The Council of State Chambers of Commerce made up an impressive chart of how much money the project would supposedly cost every State in the country. The chart and chambers failed to say how much the Nation would benefit from more economic farming, expanding industry, and commerce in the basin States which will benefit our whole national economy.

Hundreds of letters came to me from Oregon, and many from elsewhere, demanding to know how this expense to taxpayers in non-basin States could be justified. There was no political profit in it for me, I assure you, to reply as I did that sound resource development in any area, assistance in developing it to its maximum potential, was a sound investment in a stronger America.

And it will be remembered that the conservation groups throughout the country launched what was possibly their greatest campaign against the building of Echo Park Dam. Their arguments were appealing; their sincerity indisputable. There was another side to the story. Several Senators from this area presented the case for Echo Park. That great chairman of the Senate Irrigation and Reclamation Subcommittee, CLINTON ANDERSON, of New Mexico, Democrat, was one. Senator ARTHUR WATKINS, of Utah, a Republican, was another. I listened to them as I listened to the opponents. I remembered ARTHUR WATKINS sent me a copy of a speech he made. It was a long speech—and coming from me, that means it was a very long speech indeed.

I read it; I studied it. I was convinced by it, though it came from a member of the opposite party on behalf of a project supported by the same administration that fought projects so vital to my region.

So I supported the overall project and supported Echo Park Dam as well. In doing so, I ran great political risks a year before my own reelection campaign, the hottest my State has ever seen.

I do not recount any of this to seek credit. Other Senators and Representatives did as much and more. What, for example, what benefit could the Democratic leader of the House, JOHN MCCORMACK, expect from his action in support of upper Colorado? His constituents in Massachusetts had no great regard for the project; conservation groups were against it; his own State and region were suffering and still suffer from grave unemployment problems and all their attendant distress. To JOHN MCCORMACK's great credit, he opened the debate in the House and made a plea for nonpartisan action to authorize the upper Colorado project in order to build a better West and a stronger Nation. To his great credit, he did this in the face of great discontent among Democrats caused by the Republican administration's opposition to Hells Canyon and TVA, which the Democrats look upon as presenting the same issues. Indeed, they are less costly and produce greater benefits.

With bipartisan unity, the upper Colorado authorization prevailed. This is the way of progress for the West. Democrats and Republicans joined together in a common purpose to build the water storage projects and power so desperately needed in Utah and its neighboring States.

We do not ask for gratitude. Those who joined the basin State Representatives in Congress did only what we believed was right, and for this we deserve no thanks.

All that we ask is equal treatment—a fair hearing on the merits. All Americans have a stake in preventing the devastation of New England floods, the destruction and suffering of the drought in the Great Plains. All Americans have a stake in water and power development in California at Trinity and throughout the Central Valley project. We all have a stake in bringing desperately needed water to a vast portion of Colorado through the Fryingpan-Arkansas project.

We will need the food from newly irrigated acres in a decade or so. We have an interest in helping farmers, workers, and businessmen lead productive lives—as fellow Americans, as producers of new wealth in which we all can share, as consumers of the products the rest of us produce.

In achieving this development, the Nation has a right to expect that the benefits of these national projects will be widely shared. People in the East and South have a right to expect that water for irrigation will not be monopolized by a few large landholders, but will help preserve and build family farms which are so vital to the continuation of our social and political tradition.

That is what is involved in strict adherence to the excess lands provision, the antimonopoly policy, embedded in the reclamation acts since 1903.

It is not fair to expect the Government of all the people to use the people's substance to benefit a few, to aid monopoly which is the natural economic and political enemy of democracy.

That is why a handful of us have fought against the whittling away of the 160-acre limitation in Federal reclamation project legislation. That is why we are fighting to put back the 160-acre limitation in the $100 million Small Projects Act. I warn that if only a few are permitted to benefit, the public at large will rebel against having their funds used for reclamation.

WHAT IS GOOD FOR THE UPPER COLORADO IS GOOD FOR THE COLUMBIA BASIN

And we ask, if $800 million can be authorized for the upper Colorado project, why should far less be denied for a superlative project like high Hells Canyon Dam, which is a more economic project?

Why do so many of the upper Colorado partisans who received such a sympathetic hearing turn a deaf ear to those who helped them, when the same principles are involved?

If Federal dams are good for Utah, Colorado, and Arizona, why are they socialism—creeping, galloping, or static—in Idaho, Oregon, and Washington?

Why is Glen Canyon a symbol of sound progress and Hells Canyon to be shunned as unworthy?

Surely the answer cannot be that Hells Canyon would store more water, or has more flood control, or more power and cheaper power.

Part of the answer is to be found in the fact that the upper Colorado project was not attractive to private utilities. Utah, for example, has no rural electric co-ops. Most of the publicly generated power will go to Utah Power & Light, which apparently will not thus be tainted by socialistic kilowatts. In contrast, Hells Canyon would be in the heart of the Idaho Power Co. monopoly area, fringed by rural electric co-ops, where public body competition is a factor. Further, the Hells Canyon site is so good that the power company wanted it for itself.

But it has not wanted it badly enough to consider full development. It is an incontrovertible fact that the Idaho Power Co. scheme will not develop the full power or flood-control potential of the magnificent Hells Canyon area. But the Federal high dam would and, in addition, contribute to power output at many other dams downstream.

Is it moral to waste the best remaining dam site in the United States with such underdevelopment when full flood control is so desperately needed, when a power shortage lies immediately ahead? Can it be said that the resources which God's bounty has made possible is man's to waste?

The thundering answer of the people of the Northwest has been "No." They have shown as clearly as possible that they want full development as part of a basinwide, comprehensive program. They want and deserve only what has been authorized for the Upper Colorado Basin.

But Hells Canyon is controversial, it is said. The simple answer is: So was upper Colorado. Indeed the same State chamber of commerce argument has been leveled at both; the same misleading propaganda has besmirched both. Why is it more true for one than the other?

But, Hells Canyon is political, it is said. Who made it so. Most Democrats refused to make upper Colorado political, when it would have been so easy and profitable to take the easy course of opposition. Who has made Hells Canyon political?—the very Republicans who were staunchest for upper Colorado.

I may say there are fewer of them in Congress today. These political victories are not an end in themselves. In our democratic system, they must be honored as the registered will of the voters of a great region—a region with desperate problems of periodically too much water and too little energy, much land and too little irrigation, a great river system and too little navigation control.

HELLS CANYON THE SYMBOL

In a few weeks, the United States Senate will vote on Hells Canyon. That vote probably will be the last chance there is to save this dam site for full development in the public interest. Upon that full development depends the future integrity of the Columbia Basin plan so painstakingly blueprinted by the Bureau of Reclamation and Army Corps of Engineers.

Upon that note will depend the future of irrigation in Idaho and eastern Oregon—and much more, the principle that power revenues be devoted in part to the reclamation of arid land.

So long as Hells Canyon has remained alive it has been the symbol of a people's determination to resist underdevelopment for quick profit and the perpetration of monopoly. If that symbol is destroyed, the forces of profit plunder will know no bounds.

The loss of Hells Canyon to profit plunder will be a blow not only to my region, but at every place where the same issue exists or comes into controversy. The issue is: Will a national resource be surrendered to underdevelopment for the profit of a few or be developed fully for the greatest good for the greatest number in the long run?

THE NATIONAL STAKE

The Columbia Basin contains 60 percent of the Nation's potential hydroelectric power—the least expensive power possible in the foreseeable future. Water is the only renewable energy source. Others, like oil and gas, are presently plentiful but expanding use threatens depletion while new discoveries are not keeping pace. It seems prudent to husband scarce and more expensive fuel and develop the fuel supply—waterpower—that is inexhaustible if conservation principles are followed. But this is not being done today.

To the contrary, the present administration gave away its conservation control over vast offshore oil reserves and at the very same time aided and encouraged underdevelopment of water storage and power output at Hells Canyon. It has encouraged the same kind of private underdevelopment at the site at Paradise where private exploitation would result in an infinitesimal fraction of potential power development. The administration has stalled the Yellow Tail Dam project and delayed Libby Dam, considering even its deauthorization. It has failed to press for some arrangement with Canada to harness the prodigious power and flood-control potential of the upper Columbia Basin—possibly because downstream benefits would be bestowed on public power projects.

This administration has been pious, but powerless. It has tried to twist and turn in every conceivable fashion to avoid building John Day Dam as a Federal project, despite its authorization in 1950 and the crying need for its power.

PRIVATE ENTERPRISE AND POWER

All this has been done in the name of protecting private enterprise. The trouble is that this administration doesn't seem to know the difference between the tollgate keeper and the vehicles of industry and commerce.

High-cost private power benefits only a handful of stockholders—the biggest of them financial houses in the East. High-cost power prevents industrial and commercial growth, which is so badly needed in the West, and especially my region. Every winter Idaho and Oregon have the highest rates of unemployment in the Nation because our principal sources of income—agriculture, timber, and mining—are seasonal. Low-cost power can change that to the benefit of the whole Nation.

One example will suffice. Southern Idaho and northern Utah contain the largest undeveloped phosphate beds in the country. With low-cost power an entire industry can be born in that area for the production of phosphate fertilizer. It would be a boon to farmers as far east as Ohio who would receive fertilizer, now scarce, at savings of $8 to $20 a ton. Farmers desperately need reduction of operating costs and lower unit costs. Hells Canyon would make that possible.

And Idaho and Utah would have a new profit producing, job making industry. Without Hells Canyon a far more expensive, less extensive operation will be forced upon the farm co-ops which have had such promising plans.

Without Hells Canyon, full Columbia Basin development will not be possible—either for industry or agriculture. Vast new purchasing power will not be created and potential markets for the products of factories and mills throughout the country will be lost.

Economic development and defense strength will be sacrificed—all in the name of protecting the Idaho Power tollgate keeper.

PAYING THE DESPOILER

The administration and private utility propaganda has hammered away at the theme that the low, wasteful dams would save the taxpayers' money and be built without expense to the Treasury.

You have all seen the slick magazine ads costing thousands of dollars dinning that theme into the unsuspecting public. Administration apologists have hammered away at it too.

Yet, as many of us predicted, the taxpayers would end up paying for a large part of the pygmy dams. Last month the Office of Defense Mobilization announced the granting of too quick tax writeoff certificates for $65 million of the cost—at least.

That means millions of dollars of lost tax revenues for the Federal Treasury during the first 5 years of the projects. In turn, the rest of the country's taxpayers have to shoulder that burden. Literally billions of dollars of certificates have been granted the utilities in the past few years. At the same time the administration opposed $20 individual tax cuts. Further, the administration opposed any new dam starts outside the upper Colorado project as being beyond the Nation's financial capability, despite the fact that multipurpose dams pay for themselves with interest.

The hypocrisy of this administration's program staggers the imagination. It is so crass, that many have not been able to believe it. But, the facts are too clear, the evidence too conclusive. The crusade has been a vast glittering generality distracting the public while their pockets are picked. And the people are getting wise to it.

I urge each of you to go to your home communities and spread the alarm before it is too late. The West is being plundered. The public's resources handed over to monopoly.

There is an historic battle being waged for a principle—that the people's resources are to be dedicated and developed for the people's use. The battle has been going on for many years. It is reaching a climax at Hells Canyon.

Let us here resolve that the giveaways shall not be suffered to go on. Draw the line at Hells Canyon.

Mr. MURRAY. Mr. President, I yield the floor.

STUDY OF CRITICAL RAW MATERIALS AND RESOURCES OF THE SOVIET UNION

During the delivery of Mr. MURRAY's speech,

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A resolution (S. Res. 78) to make a study of critical

raw materials and resources of the Soviet Union and certain Eastern Hemisphere countries and the effect upon the United States.

CONVEYANCE OF CERTAIN LAND TO THE STATE OF NORTH DAKOTA

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of Calendar No. 290, Senate bill 999, authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science.

The motion was agreed to; and the Senate resumed the consideration of the bill (S. 999) authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science, which had been reported from the Committee on Interior and Insular Affairs with amendments on page 1, line 9, after the word "thereon", to strike out "The southwest quarter of the northwest quarter; the northwest quarter of the northwest quarter; and the west 19 rods of the northeast quarter of the northwest quarter of section 5, township 132 north, range 47 west, fifth principal meridian, comprising 80.0637 acres more or less" and insert "The southwest quarter of the northwest quarter, lot 3 and the west 19 rods of lot 2 of section 5 in township 132 north of range 47 west of the fifth principal meridian; the said description also being known as the southwest quarter of the northwest quarter the northwest quarter of the northwest quarter and the west 19 rods of the northeast quarter of the northwest quarter of section 5 in township 132 north of range 47 west of the fifth principal meridian, containing 80.0637 acres more or less according to the United States Government survey thereof after allowing a deduction of 5.61 acres now occupied by the Chicago, Milwaukee, St. Paul & Pacific Railroad Co. as a right-of-way, formerly known as the Chicago, Milwaukee & St. Paul Railway Co., being that portion of said land conveyed to the Fargo Southern Railroad Co. in a certain warranty deed recorded in book J of deeds on page 171 in the office of the register of deeds of Richland County, N. Dak.: *Provided*, That title to the land described in this section shall revert to the United States if, at any time within 25 years after conveyance by the Secretary of the Interior, the land is used for other than educational purposes.", and, on page 3, after line 15, to insert:

SEC. 3. The Secretary of the Interior shall reserve to the United States all mineral interests in land conveyed under this act, and the right to mine and remove the same under applicable laws and regulations to be established by him.

So as to make the bill read:

Be it enacted, etc., That the Secretary of the Interior is authorized and directed to convey by quitclaim deed to the State of North Dakota, for the use and benefit of the North Dakota State School of Science, all right, title, and interest of the United States to the following described land, located in Richland County, N. Dak., together with any buildings or other improvements thereon: The southwest quarter of the northwest quarter, lot 3 and the west 19 rods of lot 2 of section 5 in township 132 north of range 47 west of the fifth principal meridian; the said description also being known as the southwest quarter of the northwest quarter the northwest quarter of the northwest quarter and the west 19 rods of the northeast quarter of the northwest quarter of section 5 in township 132 north of range 47 west of the fifth principal meridian, containing 80.0637 acres more or less according to the United States Government survey thereof after allowing a deduction of 5.61 acres now occupied by the Chicago, Milwaukee, St. Paul and Pacific Railroad Co. as a right-of-way, formerly known as the Chicago, Milwaukee and St. Paul Railway Co., being that portion of said land conveyed to the Fargo Southern Railroad Co. in a certain warranty deed recorded in book J of deeds on page 171 in the office of the register of deeds of Richland County, N. Dak.: *Provided*, That title to the land described in this section shall revert to the United States if, at any time within 25 years after conveyance by the Secretary of the Interior, the land is used for other than educational purposes.

SEC. 2. (a) As consideration for the transfer of the property referred to in the first section of this act, the North Dakota State School of Science shall make available for each of its school years, for a period of 10 school years, free tuition to 10 qualified Indians who wish to attend such school during such school year.

(b) To qualify for free tuition under this act any such prospective student shall (1) be 17 years of age or over, (2) be a high-school graduate, (3) be recommended by the Bureau of Indian Affairs, and (4) meet the entrance standards of the North Dakota State School of Science.

(c) The period of 10 school years during which free tuition shall be made available under this act shall commence not later than 2 years after the date of the enactment of this act.

SEC. 3. The Secretary of the Interior shall reserve to the United States all mineral interests in land conveyed under this act, and the right to mine and remove the same under applicable laws and regulations to be established by him.

Mr. O'MAHONEY. Mr. President, I desire to secure the floor, to discuss another matter. However, I am glad to have the Senate consider Senate bill 999 at this time, for I believe there is no objection to it.

Mr. YOUNG. That is also my position, Mr. President. I do not believe consideration of the bill will require more than 3 or 4 minutes, at the most.

Mr. MORSE. Mr. President, I should like to ask some questions about the bill, for purposes of future reference, so there will be no question as to whether I permitted the bill to be passed without raising an objection on the basis of the MORSE formula, if it should appear that the bill would violate the MORSE formula.

Therefore, will the Senator from North Dakota be willing to answer several questions which I wish to ask?

Mr. YOUNG. I shall be very happy to do so.

Mr. MORSE. First of all, let me ask what the approximate value of the property is.

Mr. YOUNG. The Indian Bureau sold some land very close to this land a year ago for $150 an acre and that land was better suited for the purposes of the expansion of the city than is this land. For some strange reason the Indian Bureau placed a value of $250 an acre on the particular piece of land covered by the pending bill, whereas the Indian Bureau sold the other land on a very favorable long-term contract, only a year ago, for only $150 an acre.

Mr. MORSE. The RECORD should show that the Senator from North Dakota and the Senator from Oregon have discussed this matter and that the Senator from North Dakota has pointed out to the Senator from Oregon that probably the value of the land covered by the pending bill is somewhere between $15,000 and $20,000, but in no event more than $20,000.

Mr. YOUNG. That is correct.

Mr. MORSE. In view of the sale, last year, for $150 an acre, of better land which is adjacent to the land covered by the pending bill, is it accurate to state that the correct estimate of the total value of the land covered by the pending bill probably is approximately $15,000?

Mr. YOUNG. That is correct.

Mr. MORSE. Is it not true that the bill provides for 10 annual tuitions for the benefit of Indian children, to enable them to go to the school which will be located on the land involved?

Mr. YOUNG. That is correct; and over a period of 10 years, they will have a total value of approximately $10,000.

Mr. MORSE. So the Senator from North Dakota assures the Senate, does he not, that, in effect, the Federal Government has adequately protected the Federal interest in this matter, insofar as the Indians are concerned, and that the Federal Government will be getting a return for the land of approximately $10,000, which will be at least 50 percent of its appraised fair market value, and possibly more; and that therefore the Morse formula is fully complied with?

Mr. YOUNG. That is correct; the bill fully complies with the Morse formula. Furthermore, it will make possible the expansion of the Washington School of Science which will benefit Indian children who are badly in need of education.

Mr. MORSE. I thank the Senator from North Dakota.

Mr. President, I have no objection to the bill. I desire to thank the Senator from North Dakota for taking it up with me. I wish to state that his record has been one of supporting the Morse formula ever since I have applied it from time to time, beginning in 1946. I know I can always count on the Senator from North Dakota to join me in seeing to it that the Morse formula is complied with.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

DEPARTMENT OF COMMERCE APPROPRIATIONS, 1958

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar

No. 309, H. R. 6700, making appropriations for the Department of Commerce and related agencies, for the fiscal year ending June 30, 1958, and for other purposes.

The PRESIDING OFFICER (Mr. CHURCH in the chair). Is there objection?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Appropriations with amendments.

SHALE OIL IN A NEW AGE OF ENERGY

Mr. O'MAHONEY obtained the floor.

Mr. MORSE. Mr. President, will the Senator from Wyoming yield to me?

Mr. O'MAHONEY. I yield.

Mr. MORSE. I should like to state that I intend to hear as much of the speech the Senator from Wyoming will make this afternoon as time will permit.

At this time I desire to state what I said about the Senator from Wyoming when I was at Chicago, about a week ago, namely, that I think the most important investigatory work being done by the Congress at this session is that being done by the Senator from Wyoming in connection with the investigation of the oil situation. The Senator from Wyoming is being ably assisted by his colleagues on the committee, particularly by the junior Senator from Colorado [Mr. CARROLL].

I hope the warning the Senator from Wyoming and his colleagues are giving the American people will be heeded, because the oil situation the Senator from Wyoming and his colleagues are investigating is, in my opinion, one of the most shocking matters in our entire body politic. I say that because time and time again we find—as the Senator from Wyoming has already pointed out in his preliminary reports on this matter—that it involves a problem which needs early attention by the Congress. As one Member of the Senate, I desire to thank the Senator from Wyoming for the fine leadership he is giving us in connection with this matter.

Mr. O'MAHONEY. Mr. President, I wish to thank the Senator from Oregon for the undeserved compliment he has just paid me.

In connection with this matter, I have developed some facts which I wish to lay before the Senate this afternoon, so they will appear in the RECORD which will be available in the morning.

Mr. President, it is now 10 minutes after 3. The business of the Senate for the day has been completed. Several of the committees of the Senate, I am advised—and certainly it is true of the Appropriations Committee—are busily at work on measures which will be presented to the Senate later on. I do not want those who are occupying the galleries to believe that because the Chamber is almost empty the Members of the Senate are not at work. They are at work in the committee rooms and in their own offices, where they have to deal, day by day, with the problems which are presented to them by mail from their own constituencies, and from all over the United States, and presented also by the personal visits of those who are interested in proposed legislation that comes before the Congress.

Mr. President, I wish to talk to the Senate for the purpose of making a record on the question of the importance of developing the mineral resources of the United States, and particularly those resources which are concerned with the manufacture of liquid fuel.

As the Senator from Oregon has stated, I have presided over a study of the problem of oil, particularly as it was raised by the shutting of the Suez Canal.

I have had brought into the Chamber a chart, made up of a map taken from the recent issue of the monthly magazine of the Standard Oil Company of New Jersey, known as the Lamp. This magazine was issued in recognition of the 75th anniversary of Standard Oil of New Jersey.

JERSEY'S WORLDWIDE OPERATIONS

I want Members of the Senate to note that I have taken from this issue a map prepared by Standard Oil of New Jersey to show its worldwide operations. The top map represents Jersey Standard in the Eastern Hemisphere. On the map are symbols representing the refineries which Standard Oil of New Jersey owns in Britain; in France; in The Netherlands; in Norway; in Sweden; in Italy; at Trieste; at Tripoli; down through the Middle East; in Saudi Arabia; a refinery at Bombay, India; at Palembang, in Sumatra; two in Australia; and two in Japan.

All over the lower portion of this map of the Eastern Hemisphere are shown symbols of wells from which Standard Oil of New Jersey produces some of its crude oil.

There are shown also the symbols of the engineers who are surveying the Sahara Desert, who are surveying Sicily, who are surveying in the southeast area of Europe, who are surveying in India—all parts of India, east and west—who are suveying throughout the Dutch East Indies, who are surveying in Australia, and who are surveying in New Guinea.

The operations are illustrated by the appearance on the map of a list of the principal operating interests of Standard Oil of New Jersey in the Eastern Hemisphere. One, the Arabian-American Oil Co., the famous Aramco, which we know as a result of the evidence presented at our hearing, pays a huge sum in taxes to Saudi Arabia, and not a nickel to the United States, on its profits from its foreign operations, because it receives credit by way of depletion allowance for the production of petroleum abroad, and credit on its tax bill in the United States by reason of whatever taxes are paid to Saudi Arabia.

Then there is the A/S Norske Esso; Dansk Esso A/S; Esso A. G.; Esso Afrique Occidentale S. A. F.; Esso-Nederland N. V.; Esso Petroleum Co., Ltd.; Esso Standard Algerie S. A.; Esso Standard (Austria); Esso Standard (Belgium) S. A.; Esso Standard Espanola, and so forth.

Mr. President, I shall not read the list now. I ask unanimous consent that the entire list be printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

PRINCIPAL OPERATING INTERESTS—EASTERN HEMISPHERE

1. Arabian-American Oil Co.[1]
2. A/S Norske Esso.
3. Dansk Esso A/S.[2]
4. Esso A. G.
5. Esso Afrique Occidentale S. A. F.
6. Esso Nederland N. V.[2]
7. Esso Petroleum Co., Ltd.[2]
8. Esso Standard Algerie S. A.
9. Esso Standard (Austria).
10. Esso Standard (Belgium) S. A.[2]
11. Esso Standard Espanola, S. A.
12. Esso Standard Italiana—S. p. A.
13. Essa Standard (Libya), Inc.
14. Esso Standard (Luxembourg) S. A.
15. Esso Standard (Malta), Ltd.
16. Esso Standard Maroc S. A.
17. Essa Standard (Near East), Inc.
18. Esso Standard Portugal, Inc.
19. Esso Standard Refinery.
20. Esso Standard S. A. F.[2]
21. Esso Standard (Sicily), Inc.[2]
22. Esso Standard (Switzerland).
23. Esso Standard Tunisie S. A.
24. Esso Standard (Turkey), Inc.
25. Esso Tankschiff Reederei G. m. b. H.
26. Esso Transportation Co., Ltd.
27. Esso West Africa, Inc.
28. Gewerkschaft Brigitta.[1]
29. Iranian Oil Participants, Ltd.[1 2]
30. Iraq Petroleum Co., Ltd.[1 2]
31. *La Columbia* Soc. Marittima per Azioni.
32. N. V. Nederlandse Aardolie Mij.[1]
33. oy Esso AB.
34. Standard-Vacuum Oil Co.[1 2]
35. Stanic-Industria Petrolifera-S. p. A.[1]
36. Svenska Esso A/B.
37. Trans-Arabian Pipe Line Co.[1]

Mr. O'MAHONEY. Mr. President, I want those who are present and who hear my voice to know that Mr. Rathbone, the president of Standard Oil Company of New Jersey, testifying before the Subcommittee on Antitrust and Monopoly of the Judiciary Committee, said that Esso has about 250 corporations.

I asked him how many of these were "paper corporations," by that meaning corporations which were defined by charter but which were not actually engaged in business. He answered, "About 75." The meaning of the answer is plain.

This procedure is not at all untypical. Standard Oil of New Jersey is ready, with charters issued by governments, to take advantage of any opportunity that may present itself throughout the world.

CORPORATE CHARTERS

We are so used to talking about corporations and corporate charters that we do not stop to think what a charter is. A corporation cannot exist without the action of some government. The constitution of the State of Wyoming says, in simple words, "A corporation is the creature of the State and is subject at all times to the regulation of the State."

That is true with respect to the Federal Government also. When the Constitution of the United States was drafted, Mr. President, the gentlemen who were members of the Constitutional Convention were thinking of only one thing, the establishment of a government of the people. They said so in the preamble, when they declared the purposes of the

[1] Jersey interest 50 percent or less.
[2] And associated companies.

document they were framing. With respect to interstate and foreign commerce they declared simply, in article I, section 8, of the Constitution:

> The Congress shall have the power • • • to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

The power to regulate corporations, which are the instruments by which foreign and domestic commerce is carried on, was lodged by the drafters of the Constitution in the Congress of the United States.

When the Constitution was drafted there were only three industrial corporations in the United States. There were a few banking corporations, in addition. Most of the business in those days was carried on by people in their individual capacities, or in partnerships, associations, or joint ventures, in which the entire property of the individual involved would be liable to support every debt made by the partnership or by the individual. The basic idea of the corporation was to relieve the persons who entered into business in the corporate form of personal liability for what the corporation did.

That is why in Britain the small letters "ltd." always follow after the name of a particular corporation. If the Standard Oil Company of New Jersey were a British corporation it would have a name reading "The Standard Oil Company of New Jersey, Limited," meaning "limited liability."

We have now come to a time when the States, from which the jurisdiction to regulate commerce among the States was withdrawn, are empowered to create corporations by the granting of charters which corporations are the instruments that carry on the commerce.

LIMITING CONGRESSIONAL POWER

The list of corporations of the Standard Oil Company of New Jersey, printed on the map which is exhibited to the Senate, shows that many of the subsidiary corporations of this gigantic organization, the second wealthiest American corporation, second only to General Motors, have corporate charters issued by foreign governments. Does it not stand to reason that Congress cannot properly regulate foreign commerce when it exercises no authority over the power, the duties, and the responsibilities of the corporations which carry on such commerce?

A simple illustration is this: The Constitution provides that no State may enter into any compact with any other State or with any foreign government without the consent of the Congress. Is it possible that a State which is forbidden by the Constitution to enter into a compact with another country can create a corporation which can do that which the creator of the corporation is forbidden to do? That is what happens.

Here is the story. All through the Arabian peninsula, all through the Middle Eastern oil area we are talking about, there are apparent the results of negotiations, in the form of agreements between American oil corporations—some of them created by the States of the United States, and others created by foreign countries—and foreign countries. There are agreements with the King of Saudi Arabia, and agreements with one of the British petroleum companies, in which the British Government is a partner. There are agreements with the Dutch companies and the French companies.

Here we have the story of a corporation, created by a state which has no power to regulate commerce in the public interest, doing that which the creator of the corporation is prohibited from doing.

We are inclined to listen to the explanation of those who defend the corporation by saying, "Well, is it not wonderful that an American corporation can go abroad, make so much money, and bring profits back to the people of the United States?"

In one sense it is, if money is what we are after. But was the making of money the objective of those who drafted the Constitution of the United States? Not at all. Their objective was to establish a government which would make it possible for people to attend to their own business without being supervised by government or by aggregations of great wealth. They wanted individual persons to be free. Today, individual persons are not economically free, and many domestic corporations engaged in the oil business in the United States are not free, because they are afraid of the huge economic power of the Standard Oil Company of New Jersey and other great oil companies, which are in the market for the oil which is produced.

JERSEY'S TANKERS

Let me give the Senate a much more interesting picture, drawn from this exhibit of the Standard Oil Company of New Jersey. In the lower part of each map—one showing the Eastern Hemisphere and one showing the Western Hemisphere—there are symbols to indicate the number of tankers the company owns. Each symbol represents a tanker in existence or a tanker which is being developed.

The Standard Oil Company of New Jersey tells us it has 28 tankers already built and sailing under the British flag.

Eighteen tankers are now being built under the British flag.

Under the German flag 6 are already built and 10 are being built.

Under the French flag 7 are already built and 14 are being built.

Under the Danish flag 3 are already built and 2 are being built.

So it goes, all through the list. The total number of tankers under the British flag is 18, in addition to those which I have already cited.

Under the United States flag 38 have already been built, and 9 are being built. Under the Panamanian flag 33 tankers have already been built, and 16 are being built.

An interesting thing about the building and operation of these tankers which ply the ocean and carry on the commerce of the United States on the oceans of the world is that, under United States law, the people of the United States pay for the construction of the tankers. I understand from the chairman of the Committee on Interstate and Foreign Commerce, the Senator from Washington [Mr. MAGNUSON], that an application is now pending before the Maritime Commission and the Department of Commerce for a subsidy to build huge tankers to be added to the fleet of vessels engaged in oceanborne oil commerce conducted by American companies. The application for the subsidy asks that the operators be permitted to build the new tankers with subsidies paid by the Government of the United States, while at the same time they are given the right to sell their old tankers to operators under foreign flags.

I invite attention to the map showing the operations of the Standard Oil Company of New Jersey in the Western Hemisphere. I shall not take the time to describe it in detail, but it will be observed that Standard Oil of New Jersey operates not only in continental United States, but in Canada. It operates in the gulf. It operates in Cuba, and in South America. It operates 11 refineries in South America.

I have before me a list of 28 principal operating interests of the Standard Oil Company of New Jersey in the Western Hemisphere. I ask unanimous consent that the list of names of the corporations be printed in the RECORD at this point as a part of my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

PRINCIPAL OPERATING INTERESTS—WESTERN HEMISPHERE

1. The Carter Oil Co.
2. Creole Petroleum Corp.[1]
3. Esso Mexicana, S. A. de C. V.
4. Esso S. A. Petrolera Argentina.
5. Esso Shipping Co.
6. Esso Standard do Brasil Inc.
7. Esso Standard (Guatemala) Inc.
8. Esso Standard (Inter-America).
9. Esso Standard Oil Co.[1]
10. Esso Standard Oil Co. (Chile) S. A. C.
11. Esso Standard Oil Co. (Uruguay) S. A.
12. Esso Standard Oil, S. A.
13. Ethyl Corp.[2]
14. Gilbert & Barker Mfg. Co.[1]
15. Humble Oil & Refining Co.[1]
16. Imperial Oil Ltd.[1]
17. International Petroleum Co., Ltd.[1]
18. Interprovincial Pipe Line Co.—Jersey investment by Imperial Oil.[1 2]
19. Interstate Oil Pipe Line Co.
20. Lago Oil & Transport Co., Ltd.
21. Oklahoma Oil Co.
22. Panama Transport Co.
23. Pate Oil Co.
24. Perfect Power Corp.
25. Plantation Pipe Line Co.[2]
26. Standard-Vacuum Oil Co.[1 2]
27. Trans Mountain Oil Pipe Line Co.—Jersey investment by Imperial Oil.[2]
28. Yellowstone Pipe Line Co.—Jersey investment by Interstate Pipe Line.[2]

Mr. O'MAHONEY. The map which I have been exhibiting illustrates very clearly how correct I was when, at the beginning of the hearings on the oil lift, I said that the problem was just as close to every family in the United States as the nearest filling station; and, more important than that, as near as the nearest draft board.

---

[1] And associated companies.
[2] Jersey interest 50 percent or less.

OIL, NOT FREEDOM

A glance at this map will show that our concern in the Middle East is oil, rather than freedom. We talk of freedom, but I venture to say that no one would be talking about sending our Sixth Fleet to the eastern area of the Mediterranean Sea, or talking about drafting our soldiers for military activity, if it were not for the fear that unless we did so this oil area would fall into the hands of our potential enemy, Soviet Russia.

I say potential enemy because I know what history teaches. Throughout the written history of mankind, when there was so much concentration of political power that the known world was divided between the areas of influence of two great powers, they inevitably locked in war. That has been the history of warfare in the world, since the Trojan War. It was true as between Greece and Persia. It was true as between Napoleon and Great Britain. It is true in our time. We have had two world wars; and, as I pointed out earlier this afternoon, the period of wars has been growing longer, and the period of peace between wars has been growing steadily shorter. We now stand upon the brink of war; and no one in the Congress or in the executive department—either in the State Department or in the White House—is able to predict what may be the next pitfall into which we may be dragged.

OIL FROM SHALE

It was back in 1943 that I began to realize what oil meant to the United States. It was on October 6, 1943, that I reported from the Committee on Public Lands and Surveys a bill which was designated S. 1243, "authorizing the construction and operation of demonstration plants to produce synthetic liquid fuels from coal and other substances, in order to aid the prosecution of the war, to conserve and increase the oil resources of the Nation, and for other purposes."

In the report I pointed out that the bill might well be termed a bill to assure the United States a continuous supply of domestically produced motor fuel and aviation gasoline. The military demands for petroleum and its products during the war have been so great that we are now burning up liquid fuel at the rate of approximately 1½ billion barrels of crude oil every year.

That was the report upon the bill which eventually became known as the O'Mahoney-Randolph synthetic fuel law. It was signed by the President on October 5, 1944, and became known as Public Law 290 of the 78th Congress.

Under that law, the Bureau of Mines began research to determine the possibility of producing economically liquid fuel from coal and oil shale.

I have before me a chart prepared by the Department of the Navy, which is in charge of the naval shale reserve near Rifle, Colo. The Navy has custody of that reserve. It was set aside by Executive order of the President on December 6, 1916, for just such a situation as that with which we are now confronted.

This chart shows the crude production in the United States. That is shown by the lower green line. It will be observed that in 1943, when my bill for making liquid fuel from coal and oil shale was passed, the production in the United States was about 4½ million barrels a day. It gradually increased and then fell back, increased again, and fell again; but there was a gradual increase. So that almost 11 years later production had reached about 6,750,000 barrels of crude oil a day.

The unfortunate fact, however, is that the demand had been constantly growing greater, as the upper line on the graph shows. While the production in the United States increased, the demand was steadily increasing at a greater rate. Production for 1956 and 1957 is shown on the chart. The rest is a projection.

Because production in the United States does not meet the demand for our own people for their own personal use and of our Defense Department for our soldiers, sailors, marines, and fliers, oil must be imported.

The estimate of the best experts on geology who can be found show that by the year 1965, less than 10 years from today, the production in the United States will have leveled off and will then begin to decline. That is not surprising, because the search for oil began in the United States long before it began anywhere else in the world. The great companies which are now seeking for oil throughout the world, got their experience here. They developed their skills and their know-how. I would be the last to deprecate those skills in the search for oil and in producing it.

Naturally they are interested in bringing it into the United States, which is the great market for oil. The more oil they bring into the United States, the more serious becomes the problem for our own production, because we have drilled the surface of the United States for so long a time that we must now drill deeper and at a higher cost than ever before.

During the past few years we have allowed inflation to take us by the throat, economically speaking. The price of steel has been steadily rising. During the past 10 years it has risen constantly. There is another increase in the price of steel coming. The price charged by the great steel companies will be a tax upon every trade and industry in the United States. It will be a tax on drilling for oil because it will be more costly for the crude oil production companies to sink the deep wells.

The situation has become so serious that under section 7 of the extension of the Trade Agreements Act, passed in 1955, Congress provided that it shall be the duty of the President, when he finds that the defense of the United States is threatened to be impaired by reason of increased imports of any commodity, to impose restrictions on such imports.

That finding has been made. In 1955 that law was passed. An attempt was made to secure a limitation of imports by voluntary agreements among the importing oil companies. However, the importing oil companies are the large integrated companies which produce in foreign lands as well as in the United States. They transport the oil in tankers. They refine it in their refineries. They sell it in their own filling stations. They operate throughout the whole span of the industry from the production of the crude to the sale of the gasoline and the lubricant in the corner filling station. There are many American companies which have not grown so great. Some are engaged only in refining. Some are engaged only in drilling for crude. Some companies are engaged only in retail selling. But the small companies cannot begin to compete with the huge, integrated units which import great quantities of oil.

THREAT OF IMPORTS

Recently there was a change of Directors in the Office of Defense Mobilization. Dr. Arthur S. Flemming, the retiring Director, had held some hearings on the question of determining whether the national security was being impaired, and he seemed to be about ready to ask for a curtailment. A demand arose from many Members of the Senate, on both sides of the aisle, that steps be taken by Mr. Gordon Gray, the new head of the Office of Defense Mobilization. Mr. Gray took the matter under advisement. On April 23, 1957, he issued a memorandum for the President and was kind enough to send me a copy. It reads as follows:

Section 7 of the Trade Agreements Extension Act of 1955 requires the Director of the Office of Defense Mobilization to advise the President whenever he has reason to believe that any article is being imported into the United States in such quantities as to threaten to impair the national security.

Under authority of this law and under authority of your assigning to a committee of Cabinet members consideration of energy supplies and resources policy, quite extensive investigation has been made of the effect upon national security of crude oil imports into the United States. The investigation clearly established that the rate of imports could reach a point at which the incentive for exploration and development in this country would be so reduced as to make us dependent upon overseas oil supplies to meet our national energy requirement.

Nothing can be more important than that statement by Mr. Gray. It is just about as clear as a statement can be. He says:

The investigation clearly established that the rate of imports could reach a point at which the incentive for exploration and development in this country would be so reduced as to make us dependent upon overseas oil supplies to meet our national energy requirement.

Let me read a statement from Platt's Oilgram, New York edition, Wednesday, May 15, 1957, under the heading "Increased Suez Transits Put Focus on Crude-Oil Prices in Persian Gulf."

The dispatch reads:

NEW YORK, May 14.—Resumed use of Suez Canal by British tonnage today, plus depression in spot tanker rates, leaves United States "wide open" for increased Middle East imports, according to trade sources here.

Crude-oil prices in Middle East have not—as yet—followed the upward trend started this year in the United States, Venezuela, and Canada. Barring early price changes in that area, prospect is that Middle East oils will undersell United States oils by substantial margin on both east, west, and gulf coasts of United States.

RATE OF IMPORTS

The Government figures on the imports of crude oil into the United States are as follows:

For the third quarter of 1956, 1,043,000 barrels daily.

For the fourth quarter of 1956, 916,000 barrels daily.

For the first quarter of 1957, 811,000 barrels daily.

Those declines were due to the fact that because of the European oil lift some Venezuelan and other South American oil was diverted to Western Europe.

For the 4 weeks ending May 3, 1957, the total amount of crude-oil imports into the United States was 901,000 barrels a day. The scheduled amount of imports for the last half of 1957 is estimated at 1,261,000 barrels daily.

Thus, the best authority that one can find in the oil industry indicates that the imports will continue to rise; and, as Mr. Gray said in his memorandum to the President, that will have a deleterious effect upon the operation of the United States oil industry and will make us dependent upon overseas oil supplies to meet our national energy requirements.

What does that mean? I have talked a long time before reaching this chart, but I think it is the most important chart I can call to the attention of the Senate. The chart represents the proven reserves in billions of barrels.

The world petroleum reserves amount to 200 billion barrels of oil.

Of that amount, 93,265,000,000 are in the Middle East—46 percent of the entire world reserves of petroleum.

What proportion does the United States have? Our proven reserves now are only 40 billion barrels. We have less than half of the proven reserves of petroleum which are in the Middle East alone.

We know we are talking about war and the preparation for war. What does the record in the United States show? The potential reserves of liquid fuel from the oil shale of the United States, which extends throughout the United States, is put down by the Navy Department as 1 trillion barrels of shale oil. What is a trillion? A trillion is a thousand billion.

The petroleum reserves are listed in terms of billions of barrels of oil. There are 200 billion barrels of oil in the world, with 40 billion in the United States. But the United States need not be dependent upon these foreign reserves for its defense, for its business, for its daily living, for the use of pleasure automobiles and other motor vehicles, because we have in the United States shale which will produce five times as much as the total petroleum reserves of the world.

FUEL YIELDS OF SHALE OIL

This chart shows that the average barrel of petroleum produces 9 percent of liquefied gas, 45 percent of gasoline, and 6 percent of jet fuel. If we are talking about airplanes and jet planes to defend the United States, we are interested in jet fuel. We cannot get as much jet fuel from petroleum—only 40 billion barrels—as we can get from a trillion barrels of oil shale.

Crude petroleum produces: diesel fuel, 16 percent; burner fuel, 16 percent; asphalt and lubricants and losses, and so forth, 8 percent.

Now let us examine the chart showing what a barrel of crude oil made from shale will produce: 10 percent of liquefied gas, 5 percent of gasoline, 38 percent of jet fuel—the fuel we need more than any other fuel for the expensive airplanes we are building for defense—33 percent of diesel fuel, only 4 percent in coke and losses.

In shale oil we have 71 percent of the defense fuels upon which the country depends.

I am happy to see on the floor the Senator from Utah [Mr. WATKINS], because his State of Utah, like the State of Wyoming and the State of Colorado, is rich in deposits of shale.

Mr. WATKINS. Mr. President, will the Senator from Wyoming yield to me?

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). Does the Senator from Wyoming yield to the Senator from Utah?

Mr. O'MAHONEY. I yield.

Mr. WATKINS. I am very happy the Senator from Wyoming is making this speech in regard to the reserves in the United States. The reserves in the three States, of which Utah is one, constitute one of the greatest reserves known in the world.

Mr. O'MAHONEY. That is correct; there can be no question about it.

Mr. WATKINS. Will the Senator from Wyoming return to the exhibit he displayed to the Senate a moment ago?

Mr. O'MAHONEY. Certainly.

Mr. WATKINS. It has to do with the refining of petroleum and the yield from it. I wish to ask a question about what can be obtained from a barrel of petroleum, as compared with a barrel of shale.

Mr. O'MAHONEY. The chart shows that a barrel of crude petroleum yields 6 percent of jet fuel, as compared with 38 percent in the case of oil.

Mr. WATKINS. That is because of the difference in the chemical makeup of the shale oil, as compared with that of crude petroleum, is it not?

Mr. O'MAHONEY. That is correct. A barrel of crude petroleum produces 45 percent of gasoline, whereas a barrel of shale oil produces only 5 percent of gasoline. But the companies of the United States are constructing better engines which are able to obtain more mileage per gallon of gasoline, when used in pleasure vehicles.

Mr. WATKINS. I also am interested in the production of diesel fuel.

Mr. O'MAHONEY. A barrel of crude petroleum will produce 60 percent of diesel fuel, and a barrel of shale will produce 33 percent of diesel fuel. In other words, the shale deposits in Utah are of very great value to the Navy, which uses diesel fuel for the propulsion of naval craft; and they are also of very great importance to the Army, which uses diesel fuel to propel many of its vehicles.

Mr. WATKINS. If the Navy does not desire to use for transportation purposes the oil shale which is available in these States, it can make use of the uranium which can be used to develop atomic power.

Mr. O'MAHONEY. That is correct.

Mr. WATKINS. In those three States and in New Mexico is probably the overwhelming proportion of the uranium which is produced in the United States.

Mr. O'MAHONEY. The Senator from Utah is quite correct.

Mr. MORSE. Mr. President, will the Senator from Wyoming return to one of the other charts he has displayed to the Senate?

Mr. O'MAHONEY. Certainly. As I have previously stated, the chart to which I now refer shows the comparison between United States production, which is indicated by the green line, and United States demand. The gaps between the two must be filled by increasing imports and by synthetics. The increase in production in the United States will come to a stop in 1965—in just 8 years.

Because of the importance of this matter, I introduced on Monday, on behalf of my colleague, the senior Senator from Wyoming [Mr. BARRETT] and myself, a bill to enable the Bureau of Mines to reestablish its operations.

AREA OF OIL SHALE

However, before referring to that bill, I wish to say to the Senator from Utah that I have made a computation of the area of oil shale in the Green River Basin, which includes the States of Colorado, Utah, and Wyoming, and I list them in alphabetical order:

Colorado has 2,592 square miles of oil shale; Utah has 4,680 square miles of oil shale; Wyoming has 9,192 square miles of oil shale. The total in the case of those three States alone is 16,464 square miles.

Mr. MORSE. Mr. President, will the Senator from Wyoming yield further to me?

Mr. O'MAHONEY. I yield.

Mr. MORSE. Will the Senator from Wyoming repeat his observations about 1965? Did I correctly understand him to say that by 1965, the United States will have reached the maximum of its production of crude oil?

Mr. O'MAHONEY. That is correct; by that time the United States will have been explored so thoroughly that there will be no prospect of gaining additional reserves. As a matter of fact, the proportion of crude oil going into reserves, as compared with the proportion which is consumed daily, has been steadily declining during the past few years, so that today there is being discovered in the United States not more than 1,225,000 barrels of oil as compared with the demand of 1 million barrels, so that only one-quarter of a million barrels go into the reserves.

Mr. MORSE. The Senator from Wyoming now is referring to the chart entitled "The United States Petroleum Supply and Demand"; is he not?

Mr. O'MAHONEY. Yes; and the Senator from Oregon has before him a photostatic copy of the large chart I am displaying to the Senate.

Mr. MORSE. The chart means that at the present time the United States is not producing sufficient crude oil to

meet the public demand in this country. Is that correct?

Mr. O'MAHONEY. That is correct. The demand in the United States has been steadily increasing; our population is increasing; our business is increasing. Unless we make certain that we have a sure and certain supply, we shall be hard put to it.

I point out to the Senator from Oregon that during World War II, Hitler's submarines sank 114 United States-flag ships carrying crude oil from Venezuela to the east coast of the United States, there to be refined. But today the Russian submarine fleet is far better and more modern than Hitler's was. So it would be folly for the United States to expect that the necessary supplies of fuel for war could be obtained from the Middle East.

Mr. MORSE. I should like to ask another question, although probably the Senator from Wyoming has covered the point I have in mind. It was necessary for me to leave the Chamber for a few minutes, although I wished to hear as much of the speech of the Senator from Wyoming as I could. Of course, I shall read all of it tomorrow in the CONGRESSIONAL RECORD.

My recollection is that the United States had in operation 1, and perhaps 2, experimental laboratories for the production of crude oil from shale. It is my recollection that those laboratories were discontinued a year or two ago. Does the Senator from Wyoming have the facts regarding that matter?

CLOSING SHALE OIL PLANTS

Mr. O'MAHONEY. I am very happy that the Senator has raised that question. I was just about to come to it.

I have in my hand a copy of the hearing before the Antitrust Subcommittee, Subcommittee No. 5, of the Committee on the Judiciary of the House of Representatives, 84th Congress, containing the record for July 26, 1956. It is entitled "WOC's and Government Advisory Groups." This record was developed when the House committee was trying to discover the regular business affiliations and activities of those who constituted advisory groups of government.

On page 2581 I find a letter from Mr. Felix E. Wormser, Assistant Secretary for Mineral Resources, in the Department of the Interior. The letter was dated July 30, 1954. I shall not read the whole letter, but it was addressed to Mr. Walter Hallanan, president of the National Petroleum Council, at Pittsburgh, Pa. The letter reads, in part:

DEAR WALTER: One of the recommendations made to the Secretary of the Interior by a committee appointed to survey the operations of the Bureau of Mines related to the continued operation of the Government's oil-shale plant at Rifle, Colo.

The recommendation made by the committee and found on page 23 of the enclosed report, was as follows:

It is recommended (17) that the experimental work done solely by the Bureau on the production of oil shale and oil from shale at Rifle, Colo., should cease, and that no further work be done with the new retort unless there is a substantial contribution by industry under a cooperative agreement.

If industry feels that no further experimental work is necessary, then the facilities will have served the purpose for which they were developed and constructed, and disposition should be made in accordance with established procedures.

On page 2590 of the same record to which I have made reference we find the list of the names of those who participated in the Committee on Oil Shale Policy.

I ask unanimous consent that the list of names be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

COMMITTEE ON SHALE OIL POLICY

B. A. Hardy, Shreveport, La., chairman.
Hines H. Baker, Humble Oil & Refining Co., Houston, Tex.
Russell B. Brown, Independent Petroleum Association of America, Washington, D. C.
J. C. Donnell II, the Ohio Oil Co., Findlay, Ohio.
Fayette B. Dow, National Petroleum Association, Washington, D. C.
Warwick M. Downing, Denver, Colo.
Paul Endacott, Phillips Petroleum Co., Bartlesville, Okla.
W. W. Flenniken, Rocky Mountain Oil & Gas Association, Denver, Colo.
R. G. Follis, Standard Oil Company of California, San Francisco, Calif.
Clyde T. Foster, The Standard Oil Co. (Ohio), Cleveland, Ohio.
Eugene Holman, Standard Oil Co. (New Jersey), New York, N. Y.
A. Jacobsen, Amerada Petroleum Corp., New York, N. Y.
Paul Kayser, El Paso Natural Gas Co., El Paso, Tex.
J. Sayles Leach, the Texas Co., New York, N. Y.
Frank M. Porter, American Petroleum Institute, New York, N. Y.
M. H. Robineau, the Frontier Refining Co., Denver, Colo.
Roland V. Rodman, Anderson-Prichard Oil Corp., Oklahoma City, Okla.
P. C. Spencer, Sinclair Oil Corp., New York, N. Y.
D. T. Staples, Tide Water Associated Oil Co., San Francisco, Calif.
Henderson Supplee, Jr., the Atlantic Refining Co., Philadelphia, Pa.
Sidney A. Swensrud, Gulf Oil Corp., Pittsburgh, Pa.
Reese H. Taylor, Union Oil Company of California, Los Angeles, Calif.
Robert E. Wilson, Standard Oil Co. (Indiana), Chicago, Ill.

Mr. O'MAHONEY. Mr. President, the list is studded with the names of representatives of the Standard Oil Company of Indiana, Union Oil Company of California, Gulf Oil Corp., Atlantic Refining, Tide Water Associated Oil, Sinclair Oil Corp., American Petroleum Institute, the Texas Co., El Paso Natural Gas Co., Amerada Petroleum Corp., Standard Oil of New Jersey, Standard Oil of Ohio, and so on.

This is the group that rendered the report suggesting that the experimental operation of the Bureau of Mines should cease. I am happy, however, to read the names of the three who signed the dissenting report:

The committee, therefore, concurs in the recommendation of the Interior Department Committee to the Secretary of the Interior to the effect that the experimental work done solely by the Bureau of Mines on the production of oil shale and oil from shale at Rifle, Colo., should be discontinued for the present and that the facilities now on the site be maintained in standby condition.

Action: On motion made by Mr. Hardey, and duly seconded, the report of the committee on shale-oil policy was adopted with the following members voting in the negative:

Mr. Warwick M. Downing.
Mr. B. L. Majewski.
Mr. M. H. Robineau.

Mr. Majewski and Mr. Robineau are independent refiners who are not engaged in the production of oil, and Mr. Downing is a lifelong, well-known oil expert, and a practicing attorney of Denver, Colo.

Mr. MORSE. Mr. President, will the Senator yield for a couple more questions?

Mr. O'MAHONEY. Yes.

Mr. MORSE. I have a recollection that, in addition to the plant at Rifle, Colo., there was another experimental plant in Missouri, as I recall.

Mr. O'MAHONEY. Yes. A Government plant at Louisiana, Mo., which was built by the Government during the war for the production of ammonium, was ideally situated and ideally equipped for testing coal. Coal was tested there, but that coal operation was also abandoned.

It is absurd to think that in a critical situation such as we have now the Government should allow itself to be persuaded by the oil industry to stop research on what may be a competitive source of supply. I do not blame the oil companies for trying to hold to petroleum, except that I do not believe they have taken into consideration the critical posture in which the Nation stands.

Mr. MORSE. Mr. President, will the Senator yield further?

Mr. O'MAHONEY. Yes.

Mr. MORSE. It has been about 3 years since I have made any study of this question, but I think I read in my previous study of it that the Rifle, Colo., plant had clearly demonstrated, No. 1, the scientific capability of producing oil from shale economically. Am I correct in that statement?

Mr. O'MAHONEY. I do not think it went quite that far. The scientific possibility of refining liquid fuel from oil shale was demonstrated, but not that it could be produced at a competitive price as yet, but almost at a competitive price.

Mr. MORSE. But that it could be produced, and in view of increasing shortages, it would necessarily become more economical.

Mr. O'MAHONEY. The outlook was excellent. More than that, may I say to the Senator, Hitler fought World War II with synthetic fuel.

Mr. MORSE. My next question is this: Is there a considerable amount of shale on federally owned land?

Mr. O'MAHONEY. There is.

Mr. MORSE. Does it not then follow that the expenditure of taxpayers' dollars for completion of research on this matter, to the end of trying to work it out to the point where oil may be economically produced, is definitely in the broad public interest, and definitely in the narrow public interest, in the sense that we would be spending the money there for the benefit of the people themselves, in increasing the value of their land in their own public interest?

Mr. O'MAHONEY. The best answer I can give to that question is to read what the Honorable CARL VINSON, chairman

of the House Committee on Military Affairs, said, when I testified before the committee, on March 20, 1957. At the conclusion of that testimony he made this remark:

I was here when we started off in synthetic rubber. Millions and millions of dollars were wasted because it was a crash program. Plan after plan had to be changed because we didn't have the know-how. But after spending millions and millions and hundreds of millions of dollars, we found out how to do it. We just merely want to carry on a small, little pilot plant, not get into the business. But we don't want the shale to be in the capacious bosom of Mother Earth and no effort being made to extract the oil.

Mr. WATKINS. Mr. President, will the Senator yield?

Mr. O'MAHONEY. I yield.

Mr. WATKINS. I think probably more progress has been made in the recovery of oil produced from oil shale than we realize at this time. Only recently a very distinguished former colleague of ours, Ed Johnson, of Colorado, called on me. He is vitally interested in this matter. I think his home originally was in Craig, Colo., not far from where I used to live. He told me that one of the oil companies had gone ahead with this experimentation, based largely upon the discoveries which had been made.

UNION OIL'S PLANT

Mr. O'MAHONEY. The Union Oil Company of California has acquired some of the oil-shale land in and around the naval reserve. It is very anxious to undertake some research work. The president of that company, Mr. Rubel, told me only this morning that they have already expended about $15 million in research, but they have not made the rapid progress they had hoped to make when they started back in 1955. They are asking now to have a depletion allowance of 27½ percent, as an incentive to the research. I am perfectly willing that they should have such a depletion allowance and such a stimulus. I think this whole program must be developed by stimulating it and providing incentive for the expenditure of funds. However, I do not believe that sufficient private funds will be available to do the work as it ought to be done.

The Union Oil Co. is intent only upon shale. Coal is another mineral, of which there is a great amount in Utah, as there is in Wyoming and in Colorado, from which chemical products and liquid fuel can be made.

Mr. WATKINS. Mr. President, will the Senator yield further?

Mr. O'MAHONEY. I yield.

Mr. WATKINS. As I recall, former Senator Johnson advised me that the same company of which the Senator speaks, the Union Oil Co., had gone so far that they could envision a successful venture in extracting oil from shale.

Mr. O'MAHONEY. I believe that is the way they feel.

Mr. WATKINS. He said they were within sight of doing it, and they were interested in getting the same treatment as that accorded to other oil producers; that is, the 27½ percent depletion allowance. He said that was one of the things they needed now. I received the impression from him that they would be ready in the very near future to go into production with one of these plants.

I wish to point out that I think we ought to give every encouragement to the oil companies of the United States, or to any other people who are interested in making investments, to invest money in ventures of this kind.

Mr. O'MAHONEY. Yes.

Mr. WATKINS. I think, as the Senator has stated, this allowance ought to be given. I was very much encouraged by what former Senator Johnson told me about the progress already made. It might relieve to that extent the heavily overburdened budget we now have, if we can get the other people to carry on the necessary research and investigation.

Mr. O'MAHONEY. I am afraid they cannot do enough.

I wish to read from the testimony given before the VINSON committee on March 20, 1957, the same day that I testified. This testimony was given by Mr. Fred Hartley, the vice president of the Union Oil Company of California. He is the scientist in charge of the investigation. Representative GAVIN had asked him to supply some information, and he said:

Our recent progress report and what we have done to date.

Now, as to your question, what I stated yesterday was that retorting was difficult.

Retorting, of course, is the scientific operation by which the shale is put into a retort, the heat applied to it, and the oil obtained.

We have devised one scheme of doing the job. We have created that scheme by scientific thought, and originality.

In our process we push rock up through the retort and we bring combustion gases down, vertically. As a result of doing that we bring hot combustion gases in contact with the rising cold rock. This causes the rock to rise to the temperature at which retorting commences, which is in the temperature range of 700 to 1,000 degrees Fahrenheit. At that point, oil is released. It flows downward through the retort and is carried out and we end up with two products.

Product No. 1 is what we call raw shale oil.

Product No. 2 is off-gas; we call it retort product gas. It has a Btu value of about 100 Btu's per cubic foot. That compares to Texas natural gas of about 1,000 Btu's per cubic foot. Both materials represent vast sources of energy. The problem is to take that source of energy by having a proper retort.

Now, the Bureau's original thinking—and I understand from what was said, they have the basic patents so they must be the originators of the process, assuming the Patent Office did its job.

They (the Bureau of Mines) went the other way. They said that the rock should flow down, and the combustion gases should flow up—just exactly the opposite of our retort. And I wouldn't be a bit surprised that they think that the idea of pushing rock up is about as crazy as we think the idea of making the oil flow up.

But nevertheless, they might be right, and we might be right.

Mr. WATKINS. Mr. President, will the Senator yield?

Mr. O'MAHONEY. I yield.

Mr. WATKINS. Whose testimony is the Senator reading?

Mr. O'MAHONEY. The testimony of Mr. Hartley, the vice president of the Union Oil Co. of California, an expert in the process.

Mr. WATKINS. When was the hearing held?

Mr. O'MAHONEY. March 20.

Mr. WATKINS. This year?

Mr. O'MAHONEY. This year.

Mr. WATKINS. I thank the Senator.

Mr. O'MAHONEY. Mr. President, I am very grateful to the Senators who have listened to my speech this afternoon. I made this talk about the problem because I thought it was very necessary, particularly since there is now before the ODM and the President the necessity for a decision as to what action is to be taken.

ODM REPORTS THREAT

Mr. Gray reported to the President on April 23d, as I recall, that the national security would be impaired by the continued increase of imports, and the President 2 days later issued another statement in which he announced he accepted that judgment, that there was an impairment of security, thus bringing the matter under section 7 of the Reciprocal Trade Extension Act of 1955. The President may now fix the rule by which imports may be prorated. He has asked ODM to look into the possibility of a voluntary agreement.

I do not believe a voluntary agreement will work, because no voluntary agreement has been made in the past 2 years. A voluntary agreement requires that some of the importing companies surrender a part of the commodity which they are now bringing into the United States. I think the ODM should exercise the authority which Congress delegated, suggest the ratio—and the 1954 ratio would be a good ratio—impose it upon all the companies, and let them all share in a proper ratio.

Mr. WATKINS. Mr. President, will the Senator yield?

Mr. O'MAHONEY. I yield.

Mr. WATKINS. Was that situation brought on partly by the blockade of the Suez Canal?

Mr. O'MAHONEY. This was before the blockade, in 1955, when an amendment was offered by a group of Senators.

Mr. WATKINS. I refer to the recent action of the President and the ODM.

Mr. O'MAHONEY. Yes; as a result of that, because the imports continue to come in.

At the beginning of my talk this afternoon I read into the RECORD a statement of the facts showing that the estimates now on file with ODM show a substantial increase in the imports. This is the time to save our domestic capacity to produce petroleum, and it is the time to move forward with the testing of oil shale.

Mr. WATKINS. The local companies engaged in production in the United States do not object to imports, do they?

Mr. O'MAHONEY. Yes, the companies are objecting; certainly.

Mr. WATKINS. At the present time?

Mr. O'MAHONEY. Yes. Positively. Vigorously. Emphatically.

Mr. WATKINS. I am sorry, but I got the impression at the start that it was a matter of prorating imports to possible customers in the United States. That is why I asked the question about the blockade.

Mr. O'MAHONEY. No. The point is that the imports undermine our own capacity to produce. The Senator will find that statement a little earlier in my remarks.

Mr. WATKINS. I am sorry I did not hear all the Senator's speech.

Mr. O'MAHONEY. We cannot always have a full attendance. I am happy that the Senator entered the Chamber when he did.

Mr. WATKINS. Other appointments kept me from the Chamber during most of the afternoon.

Mr. O'MAHONEY. Mr. President, I yield the floor.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONVEYANCE OF CERTAIN LAND TO THE STATE OF WYOMING

Mr. BARRETT. Mr. President, I ask unanimous consent for the present consideration of Calendar No. 312, Senate bill 358.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 358) to authorize the conveyance to the State of Wyoming of about 37 75/100 acres of land comprising a part of Francis E. Warren Air Force Base.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. BARRETT. Mr. President, the bill was reported unanimously from the Armed Services Committee. I have been in contact with the majority leader and minority leader, and both are in accord with the objectives of the bill.

The bill provides that 37 and a fraction acres of land now in the Francis E. Warren Air Force Base, near Cheyenne, shall be sold to the State of Wyoming at the appraised value. I anticipate that the property will be sold at an estimated value of $19,000, which is a respectable sum for land in Wyoming.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. BARRETT. I yield.

Mr. CARROLL. Is this land to be sold to the State of Wyoming?

Mr. BARRETT. It is.

Mr. CARROLL. The distinguished Senator from Wyoming has stated, as I recall, that this matter has been cleared with the majority leader. Is that correct?

Mr. BARRETT. With the majority leader; that is correct. I might also say that the Senator from Oregon [Mr. MORSE] has no objection to the bill.

Mr. CARROLL. I thank the Senator.

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the Secretary of the Air Force is authorized and directed to convey to the State of Wyoming, at the fair market value, all the right, title, and interest of the United States in and to about thirty-seven and seventy-five one-hundredths acres of land comprising a part of Francis E. Warren Air Force Base, Wyo., and more particularly described as follows:

Beginning at a point which is 303.4 feet north 73 degrees 55 minutes west from monument numbered 28, thence south 7 degrees 33 minutes west, 1,320.0 feet more or less, to the point of 1 degree 54 minutes curve to the left, the radius of which is 3,015.0 feet, thence along said curve through an angle of 21 degrees 05 minutes, a distance of 1,110.0 feet more or less, to a point on the old boundary of Francis E. Warren Military Reservation, thence north 89 degrees 48 minutes west, 660.0 feet more or less, to a point on the present boundary of Francis E. Warren Air Force Base Reservation, thence north 00 degrees 03 minutes east, 2,629.0 feet, more or less, to monument numbered 27, thence south 73 degrees 55 minutes east, 813.0 feet, more or less, to the point of beginning. Said parcel of land containing 37.75 acres, more or less.

Monument numbered 28 is located at a point 832.32 feet, north 73 degrees 55 minutes west of point which is 2,224.38 feet, south 70 degrees 9 minutes west of the east quarter corner of section 24, township 14 north, range 67 west.

SEC. 2. The Secretary of the Air Force may include in the deed of conveyance authorized under this act such terms as he considers to be in the public interest.

CITING OF EDWARD A. HINTZ FOR CONTEMPT OF THE SENATE

Mr. FULBRIGHT. Mr. President, I have just consulted with the acting majority leader, and I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 232, Senate Resolution 124.

The PRESIDING OFFICER. The resolution will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (S. Res. 124) citing Edward A. Hintz for contempt of the Senate.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. FULBRIGHT. Mr. President, in September and October 1956, the Banking and Currency Committee held hearings in Washington and Chicago on the Illinois banking situation. One of the principal problems which the committee sought to explore was how the Illinois auditor of public accounts, the supervisor of the State banking system, was able to use a State bank, deposits in which were insured by the Federal Deposit Insurance Corporation, in his thefts of State funds running into the millions. The hearings in Washington disclosed that the bank in question had been the subject of repeated criticism by FDIC, because of bad management, but no improvements were effected. Instead the bank went from bad to worse. The committee wished to explore the relationship, if any, between the bank's bad management and the bank's participation in the thefts.

One of the principal witnesses the committee wished to question in Chicago was Edward A. Hintz, executive vice president, later president of the bank. Hintz was the man who personally handled the fraudulent State warrants, and kept the secret account of stolen money. He had been questioned, not under oath, by the staff in the course of its preliminary inquiries, and obviously had a great deal of information of importance to the investigation.

Accordingly, the committee had Hintz brought before it in Chicago, from Joliet where he was serving under concurrent Federal and State sentences for his part in these thefts.

Hintz objected to the manner in which the hearings were conducted by the committee. He refused to be sworn or to testify except under the following conditions:

While he was in the hearing room, television cameras must be turned off entirely; while he was testifying, moving-picture cameras, radio and other recording equipment must not be operated, and still photographs must not be taken in the room.

A number of reasons were given for these demands. The only reason which even had any appearance of validity was that the witness might be confused and unable to testify correctly under the circumstances.

After recessing to consider the matter carefully, these demands were rejected. The committee offered to have the live television cameras turned away from the witness during his testimony, as had been done at the request of a previous witness.

The argument relating to confusion was based on the *Kleinman* case (107 F. Supp. 407) where a witness was excused for refusing to testify because of confusion. In the Chicago hearings, however, the situation was, in my judgment, completely different. The hearing room, though full, had been extremely orderly during the previous testimony, and the representatives of the press, radio, and television had conducted themselves entirely satisfactorily during the previous testimony. And a brief colloquy with the witness on the subject of his many previous experiences as a professional prize fight judge under live television left no question of his ability to testify correctly under the circumstances.

Accordingly, when Hintz persisted in his refusal to be sworn or to answer any questions under the arrangements prescribed for the hearing, in spite of being warned of the consequences, he was taken from the hearing room and the hearing proceeded with other witnesses, but without the benefit of the testimony which would have been obtained from this key witness.

This refusal was considered by the Banking and Currency Committee, which reported out, and recommends that the Senate adopt, Senate Resolution 124, providing for the prosecution of Edward A. Hintz for this refusal.

I ask that an excerpt from the report of the Banking and Currency Commit-

tee—Report No. 232—be printed in the RECORD at this point in my remarks.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The Committee on Banking and Currency met on July 27, 1956, and approved a resolution authorizing an investigation of the Illinois banking situation and other matters in the committee's jurisdiction, and further authorizing the holding of hearings on the subject outside the District of Columbia.

The Committee on Banking and Currency, under rule XXV, paragraph (d), of the Standing Rules of the Senate, has jurisdiction over all proposed legislation and other matters pertaining to the following subjects:

1. Banking and currency generally.

* * * * *

3. Deposit insurance.

* * * * *

The investigation of the Illinois banking situation was based, among other factors, on disclosure of the fact that Edward A. Hintz, the executive vice president (later president) of the Southmoor Bank & Trust Co., of Chicago, Ill., a State bank, deposits in which were insured by the Federal Deposit Insurance Corporation under the Federal Deposit Insurance Act (64 Stat. 873; 12 U. S. C. 1811), and which the Federal Deposit Insurance Corporation had charged with unsafe and unsound banking practices, had participated with the auditor of public accounts of Illinois, whose responsibilities included chartering and supervising State banks, in cashing at that bank fictitious and fraudulent State warrants in large amounts.

Following an investigation by the committee's staff in Washington and Chicago, the committee held hearings on September 21 and 25, 1956, at which representatives of the Federal Deposit Insurance Corporation testified, among other things, concerning their actions in connection with the situation at the Southmoor Bank & Trust Co., and concerning the adequacy of the Federal Deposit Insurance Act to protect the interests of the United States and the insured depositors. It was thereafter determined to hold public hearings in Chicago, Ill., at which testimony could be obtained from witnesses having knowledge of the administration of the Federal Deposit Insurance Act, including particularly Edward A. Hintz.

As Edward A. Hintz was at that time confined at the Illinois State Penitentiary at Stateville-Joliet, Ill., in the custody of the warden of that institution, the chairman, after communicating with the Governor of the State of Illinois and the director of public safety of Illinois, petitioned the United States District Court for the Northern District of Illinois, Eastern Division, for the issuance out of that court of a writ of habeas corpus ad testificandum to the warden of the Illinois State Penitentiary at Stateville-Joliet, Ill., to bring Edward A. Hintz, and others, before the committee to testify at its hearings. This petition was approved and the writ requested was granted on October 4, 1956.

In accordance with this writ of habeas corpus ad testificandum, Edward A. Hintz was brought by the said warden to the United States Courthouse at Chicago, Ill., and was held there subject to the direction of the committee.

On October 9, 1956, the committee, having concluded taking testimony from previous witnesses, was ready to take the testimony of Edward A. Hintz. Before calling him to the witness stand, the committee, at the request of Edward A. Hintz, permitted John M. Leonard, Jr., Esq., attorney for Edward A. Hintz, to address it. Mr. Leonard, on behalf of his client, objected to the presence in the hearing room of television and moving picture cameras, radio equipment, and still cameras, and stated he would advise Edward A. Hintz not to testify except under the following conditions:

While Edward A. Hintz was in the hearing room, television cameras must be turned off; and, while Edward A. Hintz was testifying, moving-picture cameras, radio, and other recording equipment must not be operated and still photographs must not be taken anywhere in the room.

The chairman ruled that these conditions were unacceptable, and that the hearing would proceed in accordance with the procedures previously established at the hearing; namely, the live television cameras would not be directed at a witness while he was testifying if he so requested, and still photographers would remain behind the witness' table while he was testifying.

Edward A. Hintz, having been called to the witness stand, thereupon refused to be sworn as a witness, and refused to answer one or more questions pertinent to the matter under inquiry, as appears in the record of such hearings on October 9, 1956, which record is made a part of this report. Excerpts from the record of these hearings are annexed and designated as "Exhibit No. 1."

As a result of the refusal of the said Edward A. Hintz to be sworn as a witness or to answer pursuant to such inquiry those questions put to him, as appears in the record, the committee was prevented from receiving testimony concerning the matter under inquiry by the committee.

The Committee on Banking and Currency of the United States Senate met on April 11, 1957, and, after reviewing the facts in this matter set forth in this report, resolved to present to the United States Senate, for its action, a resolution requiring the United States attorney for the northern district of Illinois to proceed against the said Edward A. Hintz in the manner and in the form prescribed by law.

Mr. FULBRIGHT. Mr. President, attached to the report is a copy of relevant parts of the testimony at the hearing. I should point out, for the sake of completeness, that Mr. Hintz' appearance—the proceedings beginning on page 11 of the report after the asterisks—occurred on October 9, 1956, the second day of the hearings. I ask unanimous consent that the following excerpt from page 359 of the transcript of the hearings on the Illinois banking situation showing the formal opening of the hearings on October 9, 1956, be inserted in the RECORD at this point, and included with the report certified to the United States Attorney, to show that the material beginning after the asterisks on page 11 of the report is an excerpt from the committee's proceedings on October 9, 1956.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE COMMITTEE ON BANKING AND CURRENCY,
Chicago, Ill., October 9, 1956.

The committee met, pursuant to recess, in room 209, Federal Court Building, at 9:45 a. m., Senator J. W. FULBRIGHT (chairman of the committee) presiding.

Present: Senator FULBRIGHT.

Also present: Robert A. Wallace, staff director; Donald L. Rogers, counsel; Matthew Hale, counsel; J. H. Yingling, chief clerk; and James B. Cash, Jr., staff member.

The CHAIRMAN. The committee will come to order. Will you bring in the witness, please.

Mr. FULBRIGHT. Mr. President, there has been much discussion on the subject of publicity for congressional hearings, including particularly the matter of radio, television, and newsreel coverage. Congressional hearings must be conducted in an atmosphere and under circumstances which will enable a committee to obtain truthful, accurate, and complete testimony. If coverage of hearings by any media of communications prevents obtaining such testimony, the communications media must yield to the more important objective. But where arrangements can be made for providing full coverage for all communications media, without interfering with the orderly conduct of a hearing, under circumstances permitting truthful, accurate, and complete testimony, I am convinced that it is entirely proper, and highly desirable, to permit all media of communications to have full and equal opportunity to bring information to the public.

I urge the adoption of Senate Resolution 124.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 124) was agreed to, as follows:

Resolved, That the President of the Senate certify the report of the Committee on Banking and Currency of the United States Senate as to the refusal of Edward A. Hintz to answer questions before the Committee on Banking and Currency, said questions being pertinent to the question under inquiry, together with all the facts in connection therewith, under the seal of the United States Senate to the United States attorney for the northern district of Illinois, to the end that the said Edward A. Hintz may be proceeded against in the manner and form provided by law.

LENDING OPERATIONS OF THE RECONSTRUCTION FINANCE CORPORATION

Mr. FULBRIGHT. Mr. President, in 1953, at the time of the abolition of the Reconstruction Finance Corporation, Secretary Humphrey and others contended that the lending operations of the Reconstruction Finance Corporation would result in a loss to the Government.

I ask unanimous consent that there be printed in the RECORD at this point an excerpt from the testimony of Secretary Humphrey before the Senate Banking and Currency Committee on May 21, 1953.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT FROM HEARINGS BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY, 83D CONGRESS, 1ST SESSION, THURSDAY, MAY 21, 1953, ON THE SUBJECT OF GOVERNMENT LENDING AGENCIES—TESTIMONY OF SECRETARY OF THE TREASURY HUMPHREY

Senator FULBRIGHT. Is it your contention that the RFC has been an extravagant and wasteful organization?

Secretary HUMPHREY. I think it has been in the past.

Senator FULBRIGHT. You do?

Secretary HUMPHREY. Yes.

Senator FULBRIGHT. Has it cost the taxpayers anything?

Secretary HUMPHREY. I think it is going to cost the taxpayers a good deal of money.

Senator FULBRIGHT. I say has it up to now?

Secretary HUMPHREY. Well, it all depends on how you keep your books.

Senator FULBRIGHT. Do you think that it has?

Secretary HUMPHREY. Yes, I think it will cost——

Senator FULBRIGHT. Not "will." Nobody knows what is going to happen under the new administration. Up to now, do you allege that it has cost the taxpayers anything?

Secretary HUMPHREY. I think, Senator, if you estimate it, you will find the RFC has cost you money, particularly——

Senator FULBRIGHT. You are not willing to say it has, in your opinion?

Secretary HUMPHREY. Well, I cannot say it, because I have not actually figured it out. But, if you allow interest at what it costs for the money that RFC used and loaned out, and if——

Senator FULBRIGHT. You know under the law that was not provided.

Secretary HUMPHREY. I know, but that is just part of it. When the Treasury has to pay interest out to the public for a lot of money here, you cannot say you are making money.

Mr. FULBRIGHT. Mr. President, this question has recurred from time to time since then and I asked Assistant Secretary of the Treasury Robbins to furnish me a statement on this subject. I ask unanimous consent that there be printed in the RECORD at this point Mr. Robbins' letter of May 7, 1957 and the enclosure thereto which is a Consolidated Statement of Net Income From Lending Activities from the RFC.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

TREASURY DEPARTMENT,
Washington, May 7, 1957.

The Honorable J. WILLIAM FULBRIGHT,
Chairman, Banking and Currency Committee, United States Senate, Washington, D. C.

DEAR SENATOR FULBRIGHT: In compliance with a telephone request from Mr. Yingling a few days ago, I take pleasure in handing you two copies of a consolidated statement of net income from lending activities of the Reconstruction Finance Corporation. Because of the interest expressed by you on previous occasions, we began sometime ago to compile and consolidate these figures and the work has just now been completed.

The statement shows actual figures from the date of incorporation to March 31, 1957, and estimated figures to the date of the proposed abolition of the Corporation, June 30, 1957. The figure headed "Net Income (per RFC Records)" is what the books show after deducting various categories of expense, including interest actually paid. The final figure headed "Adjusted Net Income," which is explained in the footnote, is more realistic.

I hope you will find this statement satisfactory.

Sincerely yours,

LAURENCE B. ROBBINS,
Assistant Secretary of the Treasury.

Reconstruction Finance Corporation—Consolidated statement of net income from lending activities

	For the cumulative period from date of incorporation to—	
	Mar. 31, 1957	June 30, 1957 (estimated)
INCOME		
Interest and dividends on loans and securities (includes approximately $135,000,000 received from other U. S. Government agencies	$1,441,960,215	$1,442,709,657
Premiums realized and discounts collected on loans and securities, principally premiums on sales of public agency bonds, FHA insured mortgages and railroad securities	56,726,936	56,726,936
Commitment and other fees, principally from RFC subsidiary corporations, RFCMC and FNMA	12,305,141	12,305,141
Participation fees earned	10,439,460	10,439,460
Other income	695,810	695,981
Total income	1,522,127,562	1,522,877,175
INTEREST AND OTHER EXPENSES		
Interest on funds:		
Borrowed from U. S. Treasury	279,415,299	279,415,299
Borrowed from the public	86,481,808	86,481,808
Held for U. S. Treasury and others (derived principally from the World War II programs, including War Damage Corporation, temporarily utilized in the lending program)	61,377,562	61,377,562
Total interest paid	427,274,669	427,274,669
Administrative expense	264,073,462	264,298,468
INTEREST AND OTHER EXPENSES—con.		
Fees paid for servicing mortgages, etc	$18,402,217	$18,402,217
Other expenses, including depreciation on administrative property and administrative property transferred to other U. S. Government agencies without reimbursement	914,838	939,500
Total expenses	710,665,186	710,914,854
Net income before losses and reserve provisions	811,462,376	811,962,321
LOSSES AND RESERVE PROVISIONS		
Loans, securities and other receivables charged off, less income and profits from acquired assets	106,474,248	106,536,970
Provision for losses on loans, securities and other receivables not yet liquidated	20,393,843	15,631,441
Total	126,868,091	122,168,411
Net income (per RFC records)—Note	684,594,285	689,793,910
Deduct: Increase in interest expense to reflect the average rate paid by the Treasury applicable to RFC's borrowings, capital stock and accumulated earnings	355,611,852	356,326,227
Adjusted net income	328,982,433	333,467,683

NOTE.—The net income as reported by RFC was computed after deducting operating expenses and the actual amount of interest paid on funds borrowed from the U. S. Treasury and others, and represents net earnings as shown on the books of the Corporation. Had the Corporation paid interest to the Treasury on all funds advanced by the Treasury, plus accumulated earnings of the Corporation, at a rate representing the average cost of those funds to the Treasury, net earnings of the Corporation would have been as shown above under "Adjusted net income."

Mr. FULBRIGHT. Mr. President, it will be noted from this statement that for the period from the date of incorporation in 1932 to March 31, 1957, the adjusted net income of the RFC from lending activities was $328,982,433. It is estimated that for the period ending June 30, 1957 this figure will reach $333,467,683.

This is after deducting an amount for increase in interest expense to reflect the average rate paid by the Treasury applicable to RFC's borrowings, capital stock and accumulated earnings. I agree with the note on the statement that this deduction is a proper one.

Secretary Humphrey's testimony states that question of whether or not RFC lending activities cost money "depends on how you keep your books." Senators will be interested that according to the way Mr. Humphrey's Treasury Department keeps the books the RFC will have earned $333,467,683 as of June 30, 1957.

ADJOURNMENT TO 11 A. M. TOMORROW

Mr. CARROLL. Mr. President, in accordance with the order previously entered, I move that the Senate now stand adjourned until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 4 o'clock and 45 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, until tomorrow, Friday, May 17, 1957, at 11 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate May 16, 1957:

UNITED STATES ATTORNEY

Hartwell Davis, of Alabama, to be United States attorney for the middle district of Alabama for a term of 4 years. He is now serving in this office under an appointment which expires June 9, 1957.

UNITED STATES MARSHAL

Darrell O. Holmes, of Washington, to be United States marshal for the eastern district of Washington for a term of 4 years. He is now serving in this office under an appointment which expires June 3, 1957.

IN THE AIR FORCE

The following persons for appointment in the Regular Air Force, in the grades indicated, under section 8294 of title 10, United States Code, as modified by section 1 of the act of April 30, 1956, chapter 223 (70 Stat. 119), with a view to designation, under section 8067 of title 10, United States Code, to perform the duties indicated, and with dates of rank to be prescribed by the Secretary of the Air Force:

To be captains, USAF (Medical)

James D. Boyle, AO3041916.
Earl H. Cramer, AO3002433.
Roy J. Kelly, AO864261.

To be captains, USAF (Dental)

Russell W. Combs, AO2241410.
Robert E. Furr, AO3000413.

To be first lieutenants, USAF (Medical)

Donald D. Baker
John A. Dotterer
Edward B. Edrington, AO2245505.
Richard F. Hench, AO3045950.
Frederick L. Jones, Jr., AO3074766.
Gordon C. MacLeod, AO3045973.
Donald M. Moore, AO3074758.
Robert C. Pfeiler, O2208262.
James R. Rasch, AO2246056.
Austin R. Sawvell
Glen D. Sockwell, AO2246190.
Claude A. Taylor, Jr.
James R. Wamsley, AO3045975.

To be first lieutenants, USAF (Dental)

Harvey T. Best, Jr.
Bernard M. Carr, AO3001255.
Billy M. Harrison, AO3042533.
Richard A. Henry, Jr., AO3042615.

The following-named persons for appointment in the Regular Air Force, in the grades indicated, with dates of rank to be determined by the Secretary of the Air Force, under the provisions of title II, Public Law 737, 84th Congress (Armed Forces Regular Officer Augmentation Act of 1956), with a view to designation, under section 8067 of title 10, United States Code, to perform the duties indicated:

To be captains, USAF (Judge Advocate)

Wilbur C. Bentley, AO2236183.
Everett Caselman, Jr., AO2095365.
Archie L. Henson, AO1864582.
Merrill Q. Horton, AO2216287.
William C. Knopke, AO1865940.
Grosvenor H. Letarte, AO2253184.
Joseph R. Lowry, AO2251230.
Joseph B. McMullin, AO1313768.
Alexander L. Rogers, AO2248879.
William E. Skinner, AO2216309.
Claude T. Slagle, Jr., AO941254.
John C. Wasson, AO795001.
Allan L. Zbar, AO2216153.

To be captains, USAF (Chaplain)

George S. Bieber, AO2218386.
Thomas M. Campbell, Jr., AO2255007.
Sudderth A. Harms, AO1858319.
Harold D. Jester, AO2253182.
Robert M. Moore, AO2249314.
Joseph W. Pridgen, AO2233789.
Fredrick D. Sundloff, AO2240497.
Frank L. Yashkas, AO2253125.

To be first lieutenants, USAF (Judge Advocate)

George F. Boney, AO3011280.
Paul A. Gross, AO1865345.
William A. Martin, AO3046469.
James D. Mazza, AO1854236.
Joseph W. Morrow, Jr., AO3008508.
George O. Wilson III, AO3020514.

To be first lieutenants, USAF (Chaplain)

Starke S. Dillard, Jr., AO2255164.
Ervin D. Ellison III, AO2068534.
Nicholas T. Kiryluk, AO2255907.
Neunert F. Lang, AO2255107.
John J. McGowan, AO2255305.
David E. Rathjen, AO2261883.
Charles H. Wilkens, AO2255038.

The following-named person for reappointment to the active list of the Regular Air Force, in the grade indicated, from the temporary disability retired list, under the provisions of section 1211, title 10, United States Code:

To be captain

George E. Webster, 14662A.

The following-named persons for appointment in the Regular Air Force, in the grade of first lieutenant, with dates of rank to be determined by the Secretary of the Air Force, under the provisions of title II, Public Law 737, 84th Congress (Armed Forces Regular Officer Augmentation Act of 1956):

Billy J. Athey, AO3019789.
Robert R. Basham, AO2220438.
Derwin L. Bohne, AO3019264.
William D. Borgen, AO3025951.
Robert D. Bromley, AO3016962.
Thomas A. Burris, AO3026024.
Edward F. Burt, AO3026190.
Francis J. Clark, Jr., AO3026340.
Jesse K. Corder, AO3033696.
James P. Daley, AO3016757.
Raymond E. Deane, Jr., AO3018851.
Robert H. Dixon, AO3020046.
Robert T. Dobson, AO3021461.
Ronald E. Droste, AO3026053.

WITHDRAWAL

Executive nomination withdrawn from the Senate, May 16, 1957:

POSTMASTER

ILLINOIS

William M. Johnson, Granite City.

HOUSE OF REPRESENTATIVES

THURSDAY, MAY 16, 1957

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

Eternal God, our Heavenly Father, Thou knowest the duties that lie before us this day, the decisions that we will be called upon to make, and the danger and difficulties that may confront us.

We commend and commit ourselves to Thy divine providence, beseeching Thee that Thy gracious spirit may govern our minds and guide them in ways of wisdom and righteousness.

With a humble spirit and a contrite heart we penitently confess that again and again we live too much without Thee, forsaking Thy precepts and commandments and following our own desires and devices.

Grant that daily we may live and labor to strengthen the weak and confirm the strong in their search and struggle to find a larger measure of happiness and blessedness.

Hear us in Christ's name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Tribbe, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and

a joint resolution of the House of the following titles:

On May 14, 1957:

H. R. 4803. An act to permit articles imported from foreign countries for the purpose of exhibition at the Chicagoland Commerce and Industry Exposition, to be held at Chicago, Ill., to be admitted without payment of tariff, and for other purposes; and

H. R. 6304. An act to extend for a period of 2 years the privilege of free importation of gifts from members of the Armed Forces of the United States on duty abroad.

On May 16, 1957:

H. R. 1757. An act for the relief of Nicola Marcello;

H. R. 2723. An act for the relief of Shigeko Kimura and her minor child; and

H. J. Res. 287. Joint resolution permitting the Secretary of the Interior to continue to deliver water to lands in the Heart Mountain division, Shoshone Federal reclamation project, Wyoming.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McBride, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H. R. 6871. An act making appropriations for the Departments of State and Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. JOHNSON of Texas, Mr. ELLENDER, Mr. MCCLELLAN, Mr. MANSFIELD, Mr. BRIDGES, Mr. SALTONSTALL, and Mr. HICKENLOOPER to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 4813) entitled "An act to extend the life of the District of Columbia Auditorium Commission, and for other purposes."

LEGISLATIVE APPROPRIATION BILL, 1958

Mr. NORRELL, from the Committee on Appropriations, reported the bill (H. R. 7599) making appropriations for the legislative branch for the fiscal year ending June 30, 1958, and for other purposes (Rept. No. 455), which was read a first and second time and, together with the accompanying papers, referred to the Committee of the Whole House on the State of the Union and ordered to be printed.

Mr. BOW reserved all points of order on the bill.

CONVEYANCE OF CERTAIN REAL PROPERTY OF THE UNITED STATES SITUATED IN COBB COUNTY, GA.—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States, which was read:

To the House of Representatives:

In compliance with the request contained in the resolution of the House of Representatives (the Senate concurring therein), I return herewith H. R. 1544, an act to provide for the conveyance of certain real property of the United States situated in Cobb County, Ga., to the trustees of the Methodist Church, Acworth, Ga.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 16, 1957.*

TREASURY AND POST OFFICE DEPARTMENTS AND THE TAX COURT OF THE UNITED STATES APPROPRIATION BILL, 1958

Mr. GARY. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 4897) making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1958, and for other purposes, with a Senate amendment thereto, and concur in the Senate amendment with an amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Page 9, after line 10, insert:

"GENERAL PROVISIONS—TREASURY DEPARTMENT

"SEC. 102. Not to exceed 5 percent of any appropriation herein made to the Treasury Department for the current fiscal year, except for the appropriations made to the United States Coast Guard, may be transferred, with the approval of the Bureau of the Budget, to any other appropriation of the Treasury Department, but no appropriation shall be increased by more than 5 percent by any such transfers, and any such transfers shall be reported promptly to the Committees on Appropriations of the Senate and House of Representatives."

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. GARY. Mr. Speaker, I move that the House concur in the amendment of the Senate with an amendment.

The Clerk read as follows:

Mr. GARY moves that the House concur in the amendment of the Senate to the bill H. R. 4897, with an amendment as follows: At the end of the Senate amendment add the following: *"Provided*, That no transfer under this authority shall result in increasing any appropriation in excess of the budget estimate as presented in House Document 16, 85th Congress."

Mr. CANFIELD. Mr. Speaker, will the gentleman yield?

Mr. GARY. I yield to the gentleman from New Jersey.

Mr. CANFIELD. Mr. Speaker, will the gentleman from Virginia [Mr. GARY] be kind enough to explain the amendment to the House?

Mr. GARY. Mr. Speaker, the House will recall that in its action on H. R. 4897, which is the bill making appropriations for the Treasury and Post Office Departments for the fiscal year 1958, the House cut the appropriation request for the Treasury Department $22,364,000. We cut the request of the Post Office Department $58 million, making a total of $80,364,000 which the House cut from the President's request. The Senate did not change a single figure in the bill. It accepted the amounts fixed by the House, in their entirety. They did, however, insert a provision in the bill, which appears at page 9, which permits the Treasury Department to transfer from one of its appropriation items to another not exceeding 5 percent of the item. It also provides that they may not increase any item to which the transfer is made by more than 5 percent. In addition to that, it provides that any such transfers must be reported promptly to the Committees on Appropriations of the House and Senate.

Mr. CANFIELD. Mr. Speaker, will the gentleman yield?

Mr. GARY. I yield to the gentleman.

Mr. CANFIELD. There is an exception, however, so far as the Coast Guard item is concerned, which includes the appropriation for the Coast Guard Reserve.

Mr. GARY. Yes. I am glad the gentleman pointed that out. I might say that our subcommittee heard that the Treasury Department had asked for this transfer of funds. We were fearful that they might interfere with the Coast Guard appropriations in which there is an item for the Coast Guard Reserve. We did not want those funds molested and we, therefore, let it be known that we would vigorously oppose any invasion of the Coast Guard funds. So they excepted the Coast Guard, including the Reserve, from their amendment.

Mr. Speaker, frankly, our committee does not like the amendment in principle. We feel that to some extent it is giving up the authority of the House. When we study departmental requests and make a specific determination as to each item, we are to some extent delegating our authority if we give the department a right to change the items by a transfer of funds. But it has been done before. As a matter of fact, there is a general transfer authority given the Post Office Department in this bill. What the Senate did in effect was to extend that authority to the Treasury Department appropriation. There is also general authority of this nature given to the Department of Agriculture. Foreign operations have rights of transfer which are given to them under the basic law. The Veterans' Administration has certain limited authority of that nature and so does the General Services Administration.

We do not agree with the provision, and we want it distinctly understood that we are not setting a precedent for the future and that this does not mean that the Treasury Department is going to have this authority in the future. The language is restricted entirely to the year 1958. However, we have determined to accept it with this proviso, which the committee has added:

That no transfer under this authority shall result in increasing any appropriation in excess of the budget estimate as presented in House Document 16, 85th Congress.

In other words, we are limiting the transfer to the Department's original request, and under no circumstances can

the Department spend more than it originally requested for any item of its appropriation.

Mr. CANFIELD. Mr. Speaker, that is agreeable to this side.

Mr. GARY. I think that with that limitation we can accept the Senate amendment, and I ask the adoption of the motion.

The SPEAKER. The question is on the motion.

The motion was agreed to.

A motion to reconsider was laid on the table.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I offer a privileged resolution (H. Res. 239) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That effective May 1, 1957, the Committee on Interstate and Foreign Commerce is authorized, until otherwise provided by law, to employ two additional employees to be paid from the contingent fund of the House at rates of compensation to be fixed by the chairman in accordance with section 202 (c) of the Legislative Reorganization Act of 1946.

With the following committee amendment:

Line 4, strike out "to be paid from the contingent fund of the House."

The committee amendment was agreed to.

The resolution was agreed to.

A motion to reconsider was laid on the table.

OFFICIAL OFFICE EXPENSES OF MEMBERS OF CONGRESS

Mr. FRIEDEL. Mr. Speaker, by direction of the Committee on House Administration, I ask unanimous consent for the immediate consideration of the bill (H. R. 790) to amend the Legislative Appropriations Act, 1955, with reference to official office expenses of Members of Congress.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That title I of the Legislative Appropriation Act of 1955 (Public Law 470 of the 83d Cong.), section entitled "Contingent Expenses of the House", is amended to read as follows:

"The Clerk of the House is authorized and directed to reimburse each Member from the contingent fund in an amount not to exceed $150 quarterly, upon certification of the Member, for official office expenses incurred outside of the District of Columbia."

With the following committee amendment:

Strike out all after the enacting clause and insert the following: "That the 19th paragraph under the subheading 'Contingent Expenses of the House' under the heading 'House of Representatives' in the Legislative Appropriation Act, 1955 (2 U. S. C., sec. 122a; Public Law 470, 83d Cong.), is amended to read as follows:

" 'The Clerk of the House is authorized and directed to reimburse each Member from the contingent fund in an amount not to exceed $150 quarterly, upon certification of a Member, for official office expenses incurred outside the District of Columbia.' "

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, and was read the third time, and passed.

The title was amended so as to read: "A bill to amend the Legislative Appropriation Act, 1955, with reference to official office expenses of Members of Congress."

A motion to reconsider was laid on the table.

DISTRICT OF COLUMBIA AUDITORIUM COMMISSION

Mr. MORRISON submitted a conference report and statement on the bill (H. R. 4813) to extend the life of the District of Columbia Auditorium Commission, and for other purposes.

ONE HUNDRED AND FORTY-SECOND ANNIVERSARY OF THE INDEPENDENCE OF NORWAY

Mr. ROONEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROONEY. Mr. Speaker, I am indeed happy upon the occasion of the 142d anniversary of Norway's independence, which is tomorrow, May 17, 1957, to join in tribute to the people of Norway and the indomitable spirit which they have long demonstrated.

I always feel that I have been most fortunate in having had the opportunity to visit beautiful Norway over the years. Because of these experiences I have a profound appreciation for the Norwegian people. I was particularly impressed with Norway's stable and democratic government in a world faced in many areas with strife and misunderstanding, particularly those unfortunate nations behind the Iron Curtain.

Today in Norway there is a great spirit of fraternity and celebration. For the Norwegians take just pride in celebrating the day on which their country first adopted its constitution. In April of 1814 a constitutional assembly gathered at the capitol for the purpose of drawing up a constitution that would be based upon the sovereign will of the people. Within a few weeks after the first meeting of this assembly, a new constitution was adopted and a new Storting elected. This constitution of 1814 was fully based on the firm principles of civil liberties and human rights.

Since May 17, 1814, the day when the constitution of Norway was finally signed and became the law of the land, Norway has not had an easy time. Only 17 years ago the Norwegians were brutally assaulted by Hitler and his Nazi gang. These were dark and seemingly hopeless days for the Norwegian people.

There are few countries that could match the bravery shown by the Norwegian people during the dark hours of occupation. We in the United States shall long remember their determined and courageous stand, in combat and in the unrelenting underground struggle in the years that followed. Since, they have consistently defied Communist Russia despite the fact that they are under the guns of a tremendous Red army lurking in close proximity to them.

Since World War II, Norway has been concerned with reconstruction, financial recovery, social reforms, and economic gains for her people. With the characteristic determination and enthusiasm of the Norwegian people these reforms have been accomplished.

I have many close friends and constituents in my Congressional district who are Americans of Norwegian birth or descent. They have played a great part in the enrichment of our lives through their culture, their music, their achievements in the field of science and numerous other noteworthy pursuits.

Thus, as we tomorrow join in celebrating Norwegian Independence Day here in the United States we do so with the knowledge that our two great nations are firmly united for mutual assistance in war and in peace. I not only extend my congratulations to the people of Norway on this occasion but also to my friends of Norwegian birth or descent in Brooklyn, N. Y.

COMMITTEE ON RULES

Mr. THORNBERRY. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE ON THE JUDICIARY

Mr. CELLER. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may sit during general debate during the week of May 20.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

FORTY-FOURTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. BROOKS of Louisiana. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. BROOKS of Louisiana. Mr. Speaker, the 44th national convention of the National Rivers and Harbors Congress convened this morning in the city

of Washington at the Mayflower Hotel. It will run through Saturday. The highlight of the program, perhaps, will be the meeting which occurs tomorrow morning at the Mayflower in the Williamsburg Room going through the luncheon and into tomorrow afternoon. We have a reception tonight at 6:30 p. m. to 8:30 p. m. I am making this announcement because every Member of the House and the Senate is invited to be present for any one of the features or any part of the program of the National Rivers and Harbors Congress. You will all be welcome there. You will hear some very fine speeches and some very interesting speeches on flood control, water utilization and the general development of the United States of America.

I thank you, Mr. Speaker.

PROGRAM FOR NEXT WEEK

Mr. MARTIN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. MARTIN. Mr. Speaker, I have asked for this time in order to inquire as to the legislative program for next week.

Mr. McCORMACK. Mr. Speaker, in response to the inquiry I will say:

On Monday, the Consent Calendar will be called. The bill H. R. 6952, which authorizes the sale or loan of certain vessels to friendly foreign nations, is scheduled.

On Tuesday, the Private Calendar will be called. Then there is the legislative appropriation bill for 1958, H. R. 7599. The resolution, House Concurrent Resolution 172, relating to the growth and expansion of the District of Columbia in certain respects.

If there should be any rollcalls on Tuesday, they will go over to Wednesday because of the primary in the State of Pennsylvania.

For Wednesday, Thursday, Friday, and Saturday there is the bill H. R. 2, the water diversion bill, Lake Michigan. Then there is the bill H. R. 985, relating to the Office of the Chief Judge of Federel Court; also the bill, H. R. 7143, relating to the suspension of troop ceilings, armed services.

There is the usual reservation that any further program will be announced later.

Of course, conference reports may be called up any time.

Mr. MARTIN. I thank the gentleman.

COMMITTEE ON BANKING AND CURRENCY

Mr. ADDONIZIO. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

MAY 17—UNITED STATES SUPREME COURT DECISION TO END SEGREGATION IN PUBLIC SCHOOLS

Mr. ADDONIZIO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. ADDONIZIO. Mr. Speaker, in the past, we Americans have had little or no cause to celebrate May 17, other than the fact that the first Daylight Saving Act was passed on that day, in the year 1916. However, since May 17, 1954, we have had reason to pause and consider May 17 a day to be remembered, for it marked the sharp definition of a new pattern of social thinking for millions of Americans. It also gave to the world a new and greater conception of America. This definition, this new and greater conception of ourselves was brought about by the United States Supreme Court decision to end segregation in our public schols. Today we commemorate the third anniversary of this legal action.

This historic decision of the United States Supreme Court was not an abrupt or entirely new innovation in the pattern of American social thought. Let us say rather that it was a culmination of inevitable social progress, particularly in the years since World War II. It is all a part of social progress of which we can be justly proud.

In defining this pattern of our social thinking, it is my opinion that the greatest achievement of the Supreme Court decision was to extend one of the principles of American citizenship to a greater number of Americans. This citizenship is based on certain inalienable rights, one of which is freedom of choice in his private life. We Americans are free to chose in all of those things that constitute a type of living that is our very own. We are free to choose our occupations, our place of residence, a public school for our children. To deprive an American citizen of the right to choose where his personal rights are concerned is to deprive him of some of the essence of citizenship.

In extending the principle of American citizenship, the Supreme Court of the United States has been severely criticized from many quarters. But in this land of ours, the judiciary powers of our Government uphold the guaranties of the Constitution where the individual person is concerned. In so exercising this power, it not only gives the American a feeling of security, but gives to the world a new and greater concept of American freedom. It means that we are proving to the world that American equality under law is a right given to all Americans, and that some 15 million American Negroes are not to be deprived of it.

America has achieved much greatness in military strength, in industrial might, in moral and spiritual values. Her achievements can be made greater still by those Americans who will accept this new pattern of social thinking. It is not easy for a people to change a way of life that has served them for generations. It is my belief that, in time, all America will come to see the good that will be derived from this decision to end segregation in our schools, this decision to extend the principles of citizenship to all of our people. Let us work together to make America worthy of her many blessings of freedom.

POSTAL PAY RAISE

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include a letter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, yesterday I signed discharge petition No. 2, filed by the Honorable T. ASHTON THOMPSON, to afford the means of bringing to the House floor H. R. 2474, providing for an increase in postal pay. I did so because I had seen the following brief submitted by Conrad Andrecht, legislative chairman, and Ted Healy, president of Los Angeles branch 24, NALC. Upon investigation I have found the statements contained therein to be true.

Since this appears to be the only way we will have an opportunity to vote on H. R. 2474, I want to urge all my colleagues to sign the discharge petition in order that this important legislation be given the consideration it merits.

Congressman JAMES ROOSEVELT.

DEAR CONGRESSMAN: We respectfully request your support of H. R. 2474 (Morrison bill to increase postal salaries) which we believe will remedy many adverse conditions which exist in the Los Angeles postal area.

EXCESSIVE TURNOVER

1. In Los Angeles last year, the turnover according to the postmaster, amounted to 21.9 percent (over 2,000 employees for just 1 year). We believe this turnover is excessive, because we consider postal jobs as career jobs, and turnover should be very low.

2. Since the first of this year there has been even greater exodus of employees from the Los Angeles office—over 30 percent (1,100) in the first 4 months. Many postal career men are taking examinations for city and county jobs because of the better pay. The latest example was when over 200 postal employees took city truck-driver exam for rubbish collection now being put in effect. The starting salary for this job beginning June 1, will be $350, and increasing to $440 monthly in 4 years.

3. In this turnover the Los Angeles Post Office is losing good men, the caliber of which cannot be replaced by the present low-salary scale.

ALLOTMENT LOSSES

1. This large turnover lost the Los Angeles Post Office as much as $1 million in replacements, processing, and training last year. This money was wasted. It could easily have been used for pay raises.

Two thousand employees times estimated processing and training, $500, equals loss to post office, $1 million.

2. A huge loss is also incurred because of increased cost of handling the mail today due to the frequent replacements and the decline in the abilities of the replacements.

PUBLIC COMPLAINTS

1. Many patrons are dismayed at the frequency with which their letter carriers are

replaced by new faces. Complaints of misdelivered letters and late delivery by these inefficient replacements are many. One station superintendent estimates that he has received more complaints in the last year than in 40 previous years. A reason for these low-quality employees is because the Los Angeles Post Office, in their desperation to secure help, has now waived all educational requirements.

The Los Angeles career postal employees are doing a herculean job of mail moving but they are being plagued by—

1. A salary that is inadequate to meet the higher rents, medical and dental cost, clothing for family, food, transportation, auto insurance, bus fares, property taxes, sales tax, interest charges, and utility bills. This is the composition of the cost of living which has reached an alltime peak and is continuously rising.

2. Loss of normal family life because of having to take a part-time job or have the wife work in an attempt to attain an average American standard of living.

3. Low morale due to loss of respect for postal jobs by the local patrons. One reason is because of the low pay. Rubbish collectors receive more than letter carriers.

The Los Angeles area is a competitive labor section. The city has trouble securing policemen and firemen. For your information a comparative list of their wages, postal employees' wages, and city rubbish collectors' wages are listed below:

	Monthly pay starting	Maximum
Firemen and policemen	$417	[1] $489
Rubbish-truck drivers	350	[1] 440
Letter carriers	305	[2] 367

[1] 4 years.
[2] 7 years.

The above chart shows the inadequate salary of the letter carriers and why the turnover is so great. We believe if H. R. 2474 is made into law the Post Office Department will save money through the mediums of securing more efficient employees, elimination of turnover, and the increasing of morale and production of the present career employees.

FARM LEGISLATION

Mr. COAD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. COAD. Mr. Speaker, it was with a great deal of astonishment that I learned from a newspaper reporter that the kindly appearing gentleman from Colorado [Mr. HILL] had personally taken me to task in a speech last Monday by inserting a statement in the RECORD without first notifying me personally or by actually delivering the charges openly.

In this attack my colleague stated that I have not voted in the best interests of my farmers. Of course, any charge of this kind is simply playing politics of confusion. But I say this—that my friend, the gentleman from Colorado [Mr. HILL], is barking up the wrong tree in this obvious attempt to confuse the people of Iowa because the farmers of my district know the truth of my entire record in Congress and they know that I have been for them all the way. For anyone from another State to do as has been done appears to be the work of a political hatchet man.

I have been awake to the farm situation all my life because my father was "Hoovered" off a farm in 1932, and I well remember that terrible experience.

The record shows that on March 13, 1957, I voted for, and not against, a bill offered by the gentleman from Nebraska [Mr. HARRISON], a Republican, which would have increased the commercial corn acreage from 37.3 million acres to 51 million acres and enabled corn farmers to place acreages equal to 15 percent of their allotment in the soil bank.

However, the Cooley bill, which was the committee bill, could have helped more because it would have expanded the soil bank to take feed grain acres out of production which compete with corn. Everybody seems to admit that feed grains are causing the serious trouble corn is in but because of the possibility of a Presidential veto, those on the Republican side of the aisle opposed the Cooley bill which would have reduced feed grain production.

Now the corn farmer is in serious trouble because grain sorghum has been increased 5 million acres this year, and corn acreage is decreased 4 million acres.

I simply wanted to face the problem and work out a solution and not run and hide under the skirts of a Presidential veto. I still seek to solve the problem.

THE SOIL-BANK PROGRAM

Mr. SHEEHAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SHEEHAN. Mr. Speaker, yesterday when the House voted on the Department of Agriculture and Farm Credit Administration appropriation bill, H. R. 7441, the Harrison amendment was agreed upon. This amendment suspends operation of the soil-bank program at the end of the fiscal year 1957 and deletes money for the 1958 program. The Democrat Members, practically to a man, voted to end the soil-bank program.

The Democrats stated their position on the soil-bank program as follows:

> We pledge to support continued improvements in the soil-bank program passed by the Democratic 84th Congress and originally opposed by President Eisenhower and Secretary Ezra Taft Benson.

This is proof positive that the Democrat platforms and the Democrat campaign promises bear very little relationship to actual practice.

As the above quotation indicates, the Democrats took credit for the soil-bank program and pledged continued improvements in it. Their action yesterday shows that their idea of continued improvements is to scuttle the program because they feel that it has brought some benefit to the Republican President and to the Republican Party.

This is but one of many instances wherein the Democrats have promised the people a certain course of action and have not followed through.

To cite but a few other instances of Democrat Party and platform promises, such as repeal of the Taft-Hartley Act, amend the Walter-McCarran Immigration Act, pass a civil-rights program and many others, all of which are designed only to garner votes, yet not bring forth any performance. The lack of a constructive program in the present Democrat-led Congress is sure to be harmful to the American public.

It should be brought to the attention of the people that the author of the amendment to limit the soil-bank program called attention to the fact that it is up to the Committee on Agriculture to make a study to determine whether or not the soil bank should continue for another year. If they feel that it should continue, then the author points out that a deficiency bill could supply the necessary money, and it could go right ahead.

What this statement means is simply that a lot of the Democrat Members will go to the people and tell them they have voted for economy to cut this farm program by cutting the soil-bank program; whereas the odds are about 100 to 1 that it will be continued and a deficiency appropriation bill will be brought in next year to pay out what looks like a savings today.

In my opinion, the Democrats have sold the midwestern farmers down the river in the hope of making political gains.

THE SOIL BANK PROGRAM

Mr. HALLECK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. HALLECK. Mr. Speaker, I am indeed pleased that the gentleman from Illinois [Mr. SHEEHAN], has brought to the attention of the House the provisions of the 1956 Democratic platform which pledged the party to continue support of the soil bank program. It is quite interesting to note that they claim credit for it.

This Congress having defeated the effort that was made by some of us to help the commercial corn growers of the Middle West with the same sort of assistance farmers in other parts of the country have had, and having staged an about-face yesterday to destroy the soil bank program, again leads me to say that I do not believe the Democrats can play fast and loose with the farmers of this country in that fashion and get away with it.

Moreover, now that these programs have been wrecked by Democratic opposition, I think it is up to the Democratic majority of this Democratic Congress to come up with a farm program and to stop this business of trying to pin the blame on somebody else, Secretary Benson, or the President, or any group of Members, but to come up with their program, because we all recognize—they recognize—that the farmer is in a cost-price squeeze. Something needs to be done about it.

Now it is their move. If they do not like what has been suggested, if they do not like that part of the program they boasted about last year, then let us see what kind of program they can come up with.

Mr. MARSHALL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MARSHALL. Mr. Speaker, I listened with a great deal of amusement to my good friend from Indiana, and I would like to say to my good friend from Indiana that I as one Democrat attempted to deal with that problem, unsuccessfully last fall.

Also I have had the opportunity, of course, of watching farm legislation upon the floor of this House. We proposed a farm act last year which was vetoed by the President. After vetoing the act that we proposed he proceeded to put into effect many of the things he objected to.

I would like to say to the gentleman from Indiana that a good share of my district is in the Corn Belt; a good many of the farmers in my district rely upon the income which they can expect to receive from their farming operations which has continually gone down during the last four years.

I can also say that as far as my farmers are concerned—and I can say this at first hand because we have had very close contact with these farmers in the very few weeks just passed—that almost without exception they are opposed to the acreage reserve part of the soil bank.

It seems to me there is a bit of a mistake made about the soil bank. The soil bank consists of two parts: The conservation reserve and the acreage reserve. I think the conservation reserve part of the soil bank is a great deal more effective than the acreage reserve. I think the conservation reserve can be made effective.

I can say to the gentleman from Indiana that it was my privilege to introduce soil bank legislation which I felt would be necessary to help control the surpluses of this country. Your Secretary of Agriculture objected to my approach. He said it was too costly; he said it would cost in the neighborhood of $490 million. Compare that with the figures that we have at the present time and the ineffectiveness of the acreage reserve part of the soil bank which most people admit.

I think the Committee on Appropriations was most generous when they went along with the program as requested for the 1957 crop. I think it was very desirable that we did provide some stopgap measure in order that public funds should not be further dissipated on a program which is proving so worthless from a production control standpoint.

Mr. GARY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. GARY. Mr. Speaker, I asked for this time in order to ask the gentleman from Minnesota if the action of the House on yesterday was not based upon the report of the Appropriations Committee which had discovered a great many abuses of the present acreage-reserve program, and that it was because of the abuses that had developed under this administration that the Democrats voted as they did. According to the report of the committee, the acreage-reserve program has developed into a racket and a national scandal.

Mr. MARSHALL. I may say to the gentleman from Virginia that the action of the subcommittee in reporting the bill was a unanimous action, it was not a partisan action. It was reported by Members on both sides of the aisle. We were in agreement because of the findings that our investigators had made that there had been lax, and I may say, disappointing performance in the administration of the program.

Discussion on the floor indicated the need of further legislative action. Also the letter of the Secretary of Agriculture to the chairman of our committee, Mr. WHITTEN, further proved that the program was not working. Because of this I suggested the Harrison amendment.

THE SOIL BANK

Mr. McGOVERN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from South Dakota?

There was no objection.

Mr. McGOVERN. Mr. Speaker, I have no desire to get into a debate with the distinguished gentleman from Indiana [Mr. HALLECK], but I think the record should be set straight on one point, when the gentleman charges the Democratic Party with not keeping faith with its election pledges.

It was in my State in October of 1952 that the Republican presidential candidate made the pledge that he and his party would continue the 90-per-cent-of-parity program that had been in operation under the previous Democratic administrations. It is the failure of the President and his administration and his party to keep faith with that election pledge that was made in Brookings, S. Dak., and again in Kasson, Minn., that is responsible for most of the agricultural difficulty in which we find ourselves today.

I want to say in connection with the vote yesterday that I stated as long as a year and a half ago that the soil bank was not the answer to our farm difficulties; nevertheless, I did vote against repeal of funds for the soil-bank acreage reserve for 1958 because we do not yet have another program on the drawing board. I am not satisfied with the soil bank, and I hope that the Committee on Agriculture and members of both political parties will now pull together in establishing a workable farm program.

FEDERAL ESTATE TAXES

Mr. BAKER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BAKER. Mr. Speaker, today I am introducing a bill to prevent small businesses from being destroyed by Federal estate taxes. It would provide relief from the double taxation—income and estate taxes—on individuals, and make it possible for family businesses to survive the death of a principal stockholder or partner without the necessity of a forced sale to large national corporations to provide funds for estate-tax payments.

My bill would allow individuals to set aside a reserve fund, represented by noninterest-bearing Treasury certificates, with which to pay estate taxes. A deduction from income tax, not to exceed 10 percent of taxable income in any one year, would be allowed to an individual, or a family corporation, to create such a reserve fund. The fund would be subject to estate taxes, but would have been accumulated free of income tax during the taxpayer's life.

My bill also includes the President's Cabinet Committee on Small Business recommendation which would permit such estates 10 years within which to make Federal estate-tax payments.

I respectfully urge the Congress to give this small-business measure prompt and careful consideration. Small business must be protected and encouraged now if we expect it to survive today's merger-minded economy. A more detailed explanation of my bill is presented in the following statement:

ANALYSIS OF THE LEGISLATION

I. THE PROBLEM

This legislation is designed to provide some relief from the double taxation resulting from the imposition of both income and estate taxes on individuals and to mitigate the burden and impact of the Federal estate tax. The particular purpose is to make it possible for family businesses to survive the death of the principal stockholder without the necessity of forced sales to large national corporations in order to provide funds for payment of estate taxes. There are a great many owners of private or family businesses who are unable effectively to set aside sufficient liquid assets after the income taxes have been paid on their income, and after estate taxes which will be paid on these liquid assets at their death, to provide for the payment of estate taxes on their present holdings. The result of this is that many such owners are selling their businesses to large national corporations in order to be in a position to have liquid assets to sustain the estate-tax impact.

The proposed legislation is premised on the theory that it is desirable to encourage the preservation of private or small businesses, and that it is unwise of the Federal Government to in effect force the liquidation of small businesses and the merger of small businesses into large corporations.

2. THE SOLUTION

The basic theory of this proposed legislation is to allow individuals to set aside a reserve fund, represented by certificates of indebtedness of the United States, with which to pay estate taxes. Under the proposed legislation a deduction from income tax, not to exceed 10 percent of taxable income in any one year, would be allowed to any individual or any family corporation for the purpose of creating such a reserve fund. The assets or fund would be subject to estate taxes, but would have been accumulated free of income tax during the taxpayer's life.

3. OUTLINE OF THE PROPOSED LEGISLATION

(a) Estate tax anticipation certificates would be issued by the Government for sale to individuals and corporations. The certificates would pay no interest. They would be redeemable at 100 percent of their face value for payment of estate taxes up to the amount of $500,000 on any one estate. They would be redeemable at not less than 90 percent of their face value when redeemed by an estate, but not in payment of estate taxes, or when redeemed by an estate in payment of estate taxes in excess of $500,000. They would be redeemable at not less than 75 percent of their face value when presented by any other owners.

(b) The purchase of estate tax anticipation certificates from the United States by an individual would entitle the purchaser to a deduction from taxable income in the year of purchase in the amount of the face value of the certificates but not to exceed 10 percent of the taxable income computed without the deduction. Purchase of these certificates by a family corporation from the United States would entitle the corporation to a deduction in the same manner, not exceeding 10 percent of its taxable income. A family business is defined as one more than 50 percent of which is owned by not more than 10 individuals, and a corporation which is engaged in an active business.

(c) Except for a transfer by a corporation to a stockholder in exchange for its stock, or when redeemed by an executor, transfers, or redemptions of the certificates result in the face value of the certificate becoming taxable income to the transferor or person redeeming the certificate. A further provision requires that if the tax benefit at the time of acquisition of the certificate is greater than the tax consequence of the transfer or redemption, the difference is added to the tax of the individual or corporation transferring or redeeming the certificates, so that there will have been no income-tax benefit where the certificates are not used for their intended purpose of paying estate taxes.

(d) Where certificates are transferred to a stockholder by a corporation in redemption of part or all of the stockholder's holdings of stock in the corporation, the transaction is treated as a sale or exchange—thus avoiding the question of whether the transfer is equivalent to the payment of a dividend—if the stockholder has held his stock for at least 10 years.

4. EXAMPLES OF HOW THE PROPOSED LEGISLATION WILL WORK

This legislation is designed to alleviate the double taxation of income taxes and estate taxes on funds being accumulated by a taxpayer in anticipation of the payment of estate taxes at the time of his death. Therefore, we are dealing primarily with the problem of individuals whose estates are large enough that estate taxes are a substantial factor. To illustrate the manner in which the proposed legislation would operate, we will assume three different types of situations which we believe to be typical. These will involve hypothetical situations in which the individual's top income tax bracket and top estate tax bracket are as follows:

Income and estate tax brackets	Effect under present law		Effect under proposed legislation	
Income tax 50 percent. Estate tax 30 percent.	Item of gross income	$1,000	Item of gross income used to purchase estate tax anticipation certificate	$1,000
	Less 50 percent income tax	500	Less no income tax	0
	Balance saved for payment of estate tax	500	Fund held in certificates against payment of estate tax	1,000
	30 percent estate tax on this fund	150	Less 30 percent estate tax	300
	Balance available for payment of estate tax on present holdings	350	Balance of certificates available to pay estate tax on present holdings	700
Income tax 62 percent. Estate tax 39 percent.	Item of gross income	1,000	Item of gross income used to purchase estate tax anticipation certificate	1,000
	Less 62 percent income tax	620	Less no income tax	0
	Balance saved for payment of estate tax	380	Fund held in certificates against payment of estate tax	1,000
	39 percent estate tax on this fund	148	Less 39 percent estate tax	390
	Balance available for payment of estate tax on present holdings	232	Balance of certificates available to pay estate tax on present holdings	610
Income tax 72 percent. Estate tax 49 percent.	Item of gross income	1,000	Item of gross income used to purchase estate tax anticipation certificate	1,000
	Less 72 percent income tax	720	Less no income tax	0
	Balance saved for payment of estate tax	280	Fund held in certificates against payment of estate tax	1,000
	49 percent estate tax on this fund	137	Less 49 percent estate tax	490
	Balance available for payment of estate tax on present holdings	143	Balance of certificates available to pay estate tax on present holdings	510

It will be observed that under the first illustration above the individual under present law can effectively retain only 35 percent of an item of current gross income which he wishes to set aside for payment of estate taxes on his present holdings. Under the proposed legislation he would be able to retain 70 percent of such an item of gross income for liquidation of estate taxes on his present holdings. The comparable figures for the second illustration are that under present law he can retain only 23.2 percent, whereas under the proposed law he would be able to retain 61 percent of an item of gross income to liquidate estate taxes. Under the third illustration under present law the taxpayer can only retain 14.3 percent of an item of gross income to pay estate taxes, whereas under the proposal he would be able to retain 51 percent for that purpose.

This legislation would also allow up to 10 years in which to complete payment of certain estate tax obligations.

WHAT'S HAPPENING IN SCHOOL INTEGRATION?

The SPEAKER. Under previous order of the House, the gentleman from New York [Mr. POWELL] is recognized for 60 minutes.

Mr. POWELL. Mr. Speaker, I rise today to commemorate the third anniversary of the Supreme Court decision.

WHAT'S HAPPENING IN SCHOOL INTEGRATION?

This is based on several studies recently conducted by the Southern Regional Council, an organization of many years' standing made up of white and Negro southerners. Harold Fleming is the assistant director of the council in charge of information, and John Constable is editor of the New South, its monthly publication.

On May 17, 1954, the United States Supreme Court spoke the decisive words in a legal debate that had stretched over 100 years of American history. For a unanimous Court, Chief Justice Earl Warren declared:

> We conclude that in the field of public education the doctrine of "separate but equal" has no place. Separate educational facilities are inherently unequal.

The decision was rightly termed "historic." It overturned the 58-year-old Plessy ruling, under which 17 States and the District of Columbia had maintained separate and usually inferior school systems for Negroes. It also foretold the doom of legal segregation in such other public facilities as parks, playgrounds, and local buses. Moreover, it brought into sharper focus the extra-legal segregation in northern and western cities with large Negro populations.

In short, the Supreme Court's school decision set the stage in law for a major revision of racial practices in this country. Yet, for all its far-reaching impli-

cations, the decision was not an abrupt departure from current trends. In the years immediately preceeding the decision, and particularly since World War II, segregation had been steadily crumbling. Through court action, southern Negroes had won the right to cast their ballots in the all-important Democratic primaries, to serve on juries, to enroll in the graduate schools of State universities, and to ride unsegregated on interstate trains. In parts of the South Negroes had sought public office for the first time since reconstruction—and some of them had won, with the support of white as well as Negro voters. Whites and Negroes in the Armed Forces had served side by side for several years, many of them at southern military posts.

Not all of the Negro's advances were the result of court rulings or Executive orders. Many private and church-related colleges in the South had voluntarily opened their doors to Negro students. Professional associations had begun accepting into membership Negro doctors, nurses, lawyers, ministers, and the like. Sixty-odd southern cities had opened the doors of their main public libraries to patrons of both races. Professional baseball teams in many a Deep South town included one or more Negro players on their rosters.

The school decision, then, did not mark a sudden change of direction. But it did extend the principle of equal citizenship farther than ever before. Potentially, it could affect the daily experiences of millions of schoolchildren, and it challenged a way of life in the South traditionally based on subordination of the Negro.

AFTERMATH OF THE DECISION

All things considered, the initial reactions to the school decision were surprisingly favorable. In the North and West, the general view was that the Supreme Court had righted an old wrong. It was also widely recognized that the moral position of the United States had been strengthened throughout the world, particularly among Asians and Africans.

Even in the South, the reaction was milder than most people expected. A few political figures breathed defiance, but most public comment was restrained. Newspapers, with few exceptions, greeted the decision as inevitable and expressed confidence that the South could work out a gradual adjustment. All of the major religious groups active in the South endorsed the ruling as being in harmony with Christian and Judaic principles.

This restraint was explained in part by the way in which the Supreme Court dealt with the school issue. The decision of May 17, 1954, ruled out the doctrine of "separate but equal" facilities. But it was not until a year later, after further hearings, that the Court spelled out the process by which integration must be achieved. This implementation ruling of May 31, 1955, was both moderate and flexible. The high tribunal charged Federal district judges to see that the defendant school authorities made a "prompt and reasonable start" toward desegregation. The district judges were empowered to take local conditions into account in considering plans for compliance formulated in good faith.

At this point, the 17 States and the District of Columbia, where school segregation had previously been compulsory, adopted varying courses. The Nation's Capital and several of the border States proceeded promptly with statewide desegregation of their public schools. Other border States experienced greater doubts and problems, but in all of them delay was clearly only temporary. At the other extreme, the Deep South States assumed defiant postures which grew increasingly rigid as the months passed. The States in between took a cautious wait-and-see position; by the summer of 1956, however, most of them had moved gradually into the resistance column.

DESEGREGATION STATES

Five States—Kentucky, Maryland, Missouri, Oklahoma, and West Virginia—and the District of Columbia have undertaken school integration as a matter of official policy. Together, they account for more than a quarter of a million Negro children newly attending classes in integrated schools. Although each of them has areas where prosegregation sentiment is strong, firm State direction has assured the outcome. It should be noted that these are States with relatively small overall percentages of Negroes in their populations. Maryland, with 17 percent in 1950, ranks highest. In this, as in other respects, however, the District of Columbia is an exception.

DISTRICT OF COLUMBIA

The seat of the Nation's Capital is under the direct control of the Federal Government. For several years prior to the school decision, the Government's policies had been aimed at the elimination of segregation in Washington. Long-standing racial barriers were lowered by hotels, restaurants, parks, and public housing projects, as well as in Federal operations themselves. A number of voluntary organizations were working to prepare the city for desegregated schooling. Immediately after the 1954 ruling, the District Board of Education ordered "complete desegregation" with the least possible delay. By the 1955–56 school year, 147 of the District's 169 public schools had racially integrated classes, and a majority of the schools had both white and Negro teachers.

Unlike most cities of comparable size, Washington has a high proportion of Negro residents—about 43 percent—and an even higher proportion of Negro pupils—now approximately 68 percent. Moreover, the housing pattern does not provide the kind of "natural" segregation that is common in other big urban centers. For these reasons, Washington's swift compliance with the Supreme Court edict has had sweeping effects.

Segregationist critics have sought to discredit the Washington experience as an abject failure. They have spotlighted the relatively few unpleasant incidents involving white and Negro children. They have also emphasized the drop in scholastic levels in newly desegregated schools. But school authorities maintain that behavior problems have showed no abnormal increase and are generally of the same variety as those found in any metropolitan school system.

No one contests the fact that integration has sharpened academic problems. But educators deny that these problems are fundamentally racial in origin. Rather, the lower achievement records of most Negroes reflect their inadequate schooling under the old dual system, and to some extent the poorer socio-economic setting from which many of them come. Thus Washington's schools are confronted by an acute educational problem which is chronic in most large public school systems; that is, how to give children with underprivileged backgrounds the special attention they need without penalizing the more advanced pupils.

Washington has recently instituted a remedy for this problem called the "four-track" plan of education. On the basis of present ability and achievement, children are assigned to one of four curricula, ranging from an honors course to a "basic" course in the elementary skills of reading, writing, and arithmetic. The aim is to give the individual child, white or Negro, the chance to learn at the level for which he is equipped. If a pupil's performance warrants, he may move from one "track" to another.

THE STATES

The five desegregating States have moved at varying rates of speeds toward the official goal of a single school system. West Virginia, for example, has gone forward with phenomenal rapidity. By the summer of 1956, out of a total of 44 counties with Negro school-age population, all but a handful had desegregated completely or partially. As school opened for the 1956 term, only three far eastern counties retained segregated schools, and they are small compared to counties where integration is well under way. As the Charleston Gazette stated:

Segregation is about over in the Mountain State.

Though affirming its intent to comply from the beginning, Kentucky has moved more deliberately. Kentucky took its first step toward integrated education in 1948 when the law was changed to permit white and Negro medical and nursing students to be trained in the same institutions. Since that beginning, all higher education facilities have been opened to Negro students. As school opened in September 1956, trouble hit 3 of Kentucky's desegregating communities. Mobs harassed Negro students in Clay and Sturgis, and a school at Henderson was subjected to a boycott. White mobsters temporarily won out in Clay and Sturgis, and the schools were reopened on a segregated basis. But court action in these two places seems inevitable. The interracial Henderson Ministerial Association valiantly fought the prosegregationist Citizens Councils with a truth campaign and broke the school boycott in that community.

With Louisville beginning a free-choice system this fall and integration going smoothly in other schools, the State now has 92 integrated districts while 17 others have formulated plans to open their schools to all students.

Kentucky now has 125,665 white and 8,114 Negro pupils attending mixed classes in 232 public schools.

Racial barriers have been tumbling in Missouri for several years. Catholic schools in St. Louis were desegregated as long ago as 1948, and court rulings opened swimming pools in St. Louis and Kansas City in subsequent years. Moreover, planning and preparation for school desegregation by religious, civic, labor, and educational groups had been underway for some time prior to the 1954 decision.

Nearly 85 percent of Missouri's Negro schoolchildren attended desegregated schools in 1955–56. This large-scale changeover is explained mainly by the desegregation of school systems in St. Louis, Kansas City, Springfield, and other cities, where most of the Negro population is concentrated. In the fall of 1956, out of 172 high-school districts in Missouri, 166 were integrated.

Oklahoma's outlook, once markedly southern, has shifted westward in recent years. This, plus court-ordered desegregation of higher education in the late forties, prepared the State for calm acceptance of the Supreme Court's decree. The State decided to defer any action until after the court had detailed its policy in 1955. Once that ruling was issued, Oklahoma officials not only sanctioned local school desegregation, but used financial inducements to speed it up. School boards were advised that, beginning with the 1956–57 term, State funds would not be paid for the extra expenses of maintaining separate Negro schools. In 1955–56, about half of Oklahoma's Negro enrollment was in desegregated schools. Or, as reported in other terms by the New York Times, 47 counties had desegregated some portions of their school systems, 15 counties had postponed desegregation, and 15 counties had no school-age Negroes. As school opened in 1956, 2 more schools in Tulsa and 1 more district in the State integrated.

Of the States in the "desegregating" category, Maryland has had one of the most challenging transitions to make. Some of its rural communities, by virtue of economy and racial pattern, have had a strong identification with the traditional South. Yet, under the leadership of its Governor, Maryland has maintained its unity. Baltimore and 8 out of the 23 counties in the State had mixed classes in 1955–56; three others said that requests of Negoes to transfer to white schools would be considered. Only 12 percent of the State's Negro enrollment was in desegregated schools, but the proportion rose in September 1956. Now the State has approximately 200 desegregated schools.

The impact of desegregation has been cushioned in Maryland by the use of the free-choice method. Pupils are permitted but not required to transfer to schools formerly closed to them. This has led there—as it has elsewhere—to a markedly gradual transition. Baltimore, which granted unrestricted choice in September 1954, enrolled only 1,576, or 3 percent, of its Negro school children in formerly white schools during the first year. In the 1955–56 term, the figure rose to 4,601, and an additional 2,701 were attending formerly all-Negro schools in which white pupils had enrolled.

The important point is that Baltimore has displayed a steady determination to comply in good faith with the Supreme Court's decision—despite the fact that its 41.3 percent Negro population is greater than that of many Deep South cities. In the first weeks of desegregation, demonstrations touched off by prosegregation organizers were halted abruptly by firm official action. By every present indication, Maryland is moving slowly but steadily toward full desegregation.

STATES DIVIDED

It is generally recognized that the effects of the school decision fell unevenly on the 17 States directly involved. There never has been a truly "solid" South of race relations, and the differences have increased in recent years. We are used to thinking of such differences in State-by-State terms. But geographical, economic, and cultural diversity is no respecter of State lines. The contrasts to be found within a single State are often extreme. That is the case with the 4 States—Arkansas, Delaware, Tennessee, and Texas—here called "divided."

Of course, all of the 17 States have their internal variations in racial attitudes—between urban and rural areas, industrial and nonindustrial cities, counties with many Negro residents and counties with few or none at all. Most of the State governments, however, have settled on racial policies that can be imposed statewide, at least for the time being. The "divided" States are exceptions. The differing areas within their boundaries have moved in opposite directions, while State leadership has leaned first one way and then another.

Delaware is literally divided by a canal which separates the northern, industrial county of New Castle from the southern, agricultural counties of Kent and Sussex. In the northern third, Wilmington partially integrated its schools between 1954 and 1956 and laid plans for complete integration of its 3,829 Negro pupils in the 1956–57 term; full integration of the remaining 5,500 Negro pupils in New Castle County is expected soon. By contrast, in the two southern counties only the State capital, Dover, has gingerly approached desegregation. There 15 Negroes attended formerly white schools in the 1955–56 school year.

The prospects for Statewide desegregation of Delaware's schools were dimmed by the widely publicized disorders in Milford during 1954. In September of that year, the Milford board of education unexpectedly opened the doors of the white high school to 11 Negro students. Ten days later disgruntled white parents and segregationists from elsewhere gathered under the leadership of Bryant Bowles and his self-styled National Association for the Advancement of White People. After several days of demonstrations and near violence, the board of education was replaced and the Negroes were withdrawn.

The Milford experience had a pronounced effect on the political leaders of Delaware. Fearful of explosive reactions to a pro-integration policy, they have adopted an uneasy middle ground between the northern and southern areas of the State. There have been no official attempts to impose school desegregation through State authority. But despite resistance in the State, Delaware opened the 1956–57 school year with at least 4,100 Negro children, out of a total of about 11,000 such children, in school districts with varying patterns of desegregation.

Arkansas' experience in several respects closely parallels that of Delaware. There, too, school desegregation in one community was countered by prosegregation demonstrations, spurred and assisted by outsiders. And Arkansas has also seen its political leadership vacillate between acceptance and rejection of the Supreme Court's ruling. One difference—and an important one—is that Arkansas' embattled community of Hoxie has not yielded to the segregationsts, but has maintained its desegregated schools. Two other communities in the State, Fayetteville and Charleston, have enrolled Negroes in formerly white schools since August 1954. Unlike Hoxie, both of them are in the northwestern part of the State, where the Negro population is sparse and race consciousness is relatively slight. Little Rock and Hot Springs have announced plans for very gradual integration within the next 2 years.

Texas is split along similar lines. Its eastern counties are really an extension of the Deep South. Their rich cotton-growing soil made them a part of the plantation economy. The large Negro population in this area is still subject to the restraints which replaced slavery. The strong prosegregation attitudes held by most east Texas whites are reflected in the politics of the State. The Governor and the legislature have advocated continued segregation of the schools.

The western segment of Texas, on the other hand, has little in common with the cotton-growing section. Its economy is western rather than southern, and the Negro population is small and scattered. By the 1956–57 term, 100 school districts in this part of the State had begun school desegregation, with little difficulty except in Mansfield. The State now has an estimated 500,000 white and 25,000 Negro students in integrated schools. But the large majority of Texas Negroes will remain unaffected until barriers begin to fall in the eastern counties.

With the Appalachian peaks on the east, the Mississippi on the west, and the rolling bluegrass country in between, Tennessee has a broad range of racial attitudes. In general, resistance to desegregation is greatest in the western area and least marked in the highlands at the other end of the State. Because of this, few people expected the flareup in Clinton when it followed the example of neighboring Oak Ridge and integrated its schools in the fall of 1956. However, outsiders, chiefly Citizens' Council leaders from north Alabama and Washington, D. C., came into the Clinton area in a last-ditch stand to keep Tennessee's schools segregated. State officials who

had steadily refused to yield to the pressure of prosegregation groups held firm in this instance, too, and Clinton now is integrated. There are reasonably good prospects for desegregation in other mountain counties with sparse Negro population. Nashville, in the central part of the State, appears to be moving toward a gradual adjustment to the Supreme Court decision.

STATES RESISTING

Florida, North Carolina, and Virginia have shown a stiffening resistance to desegregation. For some time following the school decision, they were commonly described as wait-and-see States. But political developments in the past year have moved them steadily closer to the defiant position of their Deep South neighbors.

Florida, for example, filed a temperate brief with the Supreme Court, during 1955, urging that the Court allow time for gradual adjustment and permit local conditions to be taken into account. The ruling later handed down by the Court was widely hailed as a victory for this viewpoint. Yet, when fiercely prosegregation candidates began campaigning for State office, Florida's officials modified their stand. In the summer of 1956, the Governor called a special session of the legislature to enact legislation aimed at preventing desegregation. A Negro student's attempt to enroll at the University of Florida was also being strongly resisted by the State's legal department.

This pattern, with variations in timing and method, has also prevailed in North Carolina. Virginia earlier and more completely than the other two States gave the leadership to its "black belt" counties, which wield great political power in the State.

There is good reason to distinguish these States, despite their official positions, from the hard-core States which are listed next. In all three many people are opposed to the doctrine of die-hard resistance. And enough of the dissenters are sufficiently influential and vocal to keep the debate alive. It would not be surprising if, during the coming months, some of the less race-conscious communities asserted their independence from State segregation policies. This is particularly likely as additional rulings are issued by the Federal courts. For it is not the States, but the communities, which must decide whether to obey or openly defy decrees of the courts.

STATES DEFYING

Stretching through the South from southeast Virginia to western Texas is the irregular band of counties commonly called the Black Belt. The belt is broadest across the Deep South States of South Carolina, Georgia, Alabama, Mississippi, and Louisiana. Here the proportion of Negroes in county populations ranges from 40 percent to as much as 80 percent.

In the rich, dark soil which gave the Black Belt its name, the plantation system of the last century put down its deepest roots. This was the heartland of the Old South, whose planter aristocracy led the region into the Civil War. Much of the rest of the South—particularly the mountainous sections—felt little loyalty to the cotton-and-slave society. But the plantation South used its vast political and economic power to forge the Solid South of the Confederacy.

The South has undergone many major changes since 1865—almost 100 years ago. Industries have sprung up in the Piedmont area which borders the Black Belt. Modern cities have claimed an increasing flow of migrants from the land. In the rural areas, cotton has given way to diversified crops and pastures for beef and dairy cattle. The old plantation counties have lost heavily in population and in economic control.

But, in spite of these changes, the Black Belt has kept its hold on the politics of the Deep South. The distribution of seats in the State legislatures remains virtually unchanged since the turn of the century. Devices like Georgia's county-unit system serve to keep the center of political power in those areas where the aftereffects of slavery are most strongly felt. Thus in South Carolina, Georgia, Alabama, Mississippi, and Louisiana, the State governments have committed themselves to a last-ditch defense of segregation, and prosegregation groups like the White Citizens Councils have mushroomed.

LEGISLATION

The five defiant States moved swiftly in the wake of the Supreme Court decision to buttress school segregation with new laws and constitutional amendments. These measures are both large in number and varied in approach. Most of them are of one or another of the following types:

First. Abolition of public schools: Most of the defiant States have followed South Carolina's early lead (1952) by paving the way in law for an end to operation of public schools. In most cases, this legislative step has been coupled with provisions for some form of private-school plan. Generally, the States have been empowered to make tuition grants for the education of children deprived of public-school facilities.

Second. Nonsupport of integrated schools: Legislation requires the automatic cessation of State funds to school systems that desegregate in any degree.

Third. Pupil-assignment laws: Local school authorities are granted broad powers to determine the school a child may attend. Such intangible factors as character, health, and welfare replace race as the basis for exclusion.

Fourth. Coercive measures: Georgia has made it a felony for a school official to spend public funds on a desegregated school. South Carolina and Mississippi have forbidden teachers and other State employees to belong to the National Association for the Advancement of Colored People. Alabama and Louisiana have acted under existing statutes to prohibit the operation of the National Association for the Advancement of Colored People. Mississippi has established a system of paid informers and secret police to ferret out integrationists. These and similar measures have been enacted in the Deep South to enforce the segregation orthodoxy.

Fifth. Interposition and nullification: Five State legislatures have adopted resolutions which declare the Supreme Court's segregation rulings of no effect. This doctrine of interposition has a long and complicated history. It originated in the 19th century on the theory that a State had the sovereign right to challenge a court decision which it felt violated the constitutional division of powers. Most students of constitutional law, however, have held that interposition has no legal force or value, except as a protest.

All told, approximately 95 State segregation laws had been passed, as of the fall of 1956, since the Supreme Court's decision.

RESISTANCE MOVEMENTS

Immediately following the decision, resistance to the decree was slight; but during the year between the two school rulings the prosegregation movement rapidly gained momentum.

Initial resistance came from the National Association for the Advancement of White People—(NAAWP)—organized in Delaware by Bryant Bowles. Bowles and the NAAWP were successful in Milford, Del., where their tactics were largely responsible for restoring segregation, but Bowles failed in other places, notably in Baltimore and Washington. Although the NAAWP success in Milford undoubtedly gave impetus to the resistance movement in the Deep South, Bowle's career has since been anticlimactic, and at one point he momentarily resigned leadership in the NAAWP, laying the blame on apathy of white citizens.

The Ku Klux Klan also was revived soon after the Court decision, but its career has followed a pattern opposite to that of the NAAWP. Since the old Klan had largely been repudiated, new Klan leaders found it tough sledding in the revival attempt. A South Carolina sheriff spoke out against the group and that State refused to grant its leader, Eldon Edwards, a charter for the organization. However, as resistance grew, Klan activity increased. The group now holds a charter in Georgia, and its meetings are drawing larger audiences.

Although fringe organizations are attracting an increasing number of followers, resistance is centered largely in the self-styled citizens' councils, of which the Mississippi group is the strongest and most influential in the region. The movement is now organized into an Association of Citizens' Councils of America with "national" headquarters in Greenwood, Miss., also the headquarters for the State group.

Councils have been organized in Louisiana, Texas, Alabama, Arkansas, Florida, Georgia, South Carolina, Tennessee, and Virginia; and 15 other States have similar organizations.

The councils' membership claims exceed the half-million mark. Studies of the groups, however, put their combined membership at closer to 300,000. It is estimated that the councils collect well over $2 million each year in membership fees alone.

The main object of the Citizens' Councils' official pronouncements appears to be to create an aura of respectability around the entire movement. But

though the movement attempts to embrace all sufficiently "respectable" groups, regional leaders strive to free the central organization of responsibility for utterances and actions of the local groups.

This decentralization enables the main council movement to disclaim credit for any violence which may be undertaken by individual Citizens' Councils or individual members. A case in point was the recent repudiation of the North Alabama Citizens' Council following an attack by some of its members on the Negro singer Nat King Cole.

The councils, according to published statements, are officially dedicated to "the maintenance of peace, good order, and domestic tranquility in our communities and in our State and to the preservation of our States rights." And as mentioned, they publicly decry resort to violence. But if, as the councils claim, the "best" people of the community make up their leadership and lend respectability to flouting the law, it is not surprising that cruder elements in the South are encouraged to try mob action.

ECONOMIC PRESSURE AND BOYCOTTS

Initially, the councils made no secret of the fact that their chief weapon would be the use of economic pressure; but after this method was condemned by newspapers and met by counterpressure from Negro groups, the councils disavowed organizational responsibility for economic reprisals.

Whatever degree of direct responsibility may be attributed to the councils, both economic and social pressures have been widely used against advocates of desegregation. Negro farmers and business men have been denied credit, Negro merchants have been boycotted by wholesale distributors, and Negro teachers and other employees have been discharged.

White persons who favor a more democratic way of life are not immune to the economic threat. White persons have been ordered to move by angry groups of their neighbors. An attempt was made to cut off the earned retirement pension of a former president of a white Georgia college because he advocated that white and Negro people sit down together and seek local agreement.

In most cases economic pressure is imposed quietly, without publicity, and all too often no weapon is available to fight such tactics. However, in Orangeburg, S. C., merchants and food distributors who cooperated in the Citizens' Council's economic squeeze found it to be a two-edged weapon. The merchants were boycotted in turn by Negro students of two colleges in the area and by other Negro citizens of Orangeburg. Negroes in Montgomery, Ala., and Tallahassee, Fla., have also employed the boycott to protest unfair treatment on city buses.

The outcome of this economic tug-of-war cannot yet be determined, but it is clear that Negroes will not be the only ones to suffer.

VIOLENCE

Although most of the prosegregation groups publicly deplore violence, it has been increasing steadily since the May 17, 1954, decision. Nearly 50 cases of violence or threats of violence were reported in 1955 in the 12 Southern States most directly concerned with desegregation of schools. These cases included the murder of at least three Negroes in Mississippi, the wounding of at least one other, the burning of a Negro church in South Carolina, and several bombings. In these cases, no person has yet been convicted.

Violence has continued in 1956, with such cases as the Autherine Lucy and the Nat King Cole incidents gaining national attention. Incidents receiving less publicity included the bombings of homes of leaders of the Montgomery, Ala., bus boycott and the bombing of a store on an interracial farm in Georgia.

Prospects of further violence seem to be increasing rather than lessening. Following the Clinton, Tenn., rioting, John Kasper, the man most directly responsible for the disorders there, told a group of citizens' council members that they must "seize control of local governments." "We want trouble," he said. And a "new" Klan, launched recently in Alabama, described the "new" as meaning that the organization would be an "action" group in contrast to the existing prosegregation units.

PROPAGANDA

Literature of the resistance movements varies greatly. It ranges from vulgar diatribes distributed as handbills to articles in national magazines. Underlying most of this literature is a foundation of half-truths and distortion, and some of the prosegregation exhibits of the Citizens' Councils have been revealed as outright frauds.

Recent examples of the latter were copies of a tape-recorded speech dealing with sex relations, allegedly made by a Negro professor, and a picture which was supposed to depict white women and Negro men at an Armed Forces base in Alabama. Both propaganda pieces were exposed as fakes by the Columbus (Ga.) Ledger.

CHURCHES

The overwhelming majority of religious leaders and official church bodies have spoken out strongly concerning the school decisions. Most of the church statements are in the spirit of the one issued by the Southern Baptist Christian Life Commission:

> We urge Christian statesmen and leaders to use their leadership in positive thought and planning to the end that this crisis in our national history shall not be made the occasion for new and bitter prejudices, but a movement toward a united Nation embodying and proclaiming a democracy that will commend freedom to all peoples.

Despite increased efforts of intimidation, there is growing evidence that local pastors and lay leaders are accepting the obligation expressed in statements by their governing bodies. A few formerly all-white churches in the South are now open on an integrated basis, and ministerial associations scattered throughout the South are integrating their memberships. Here and there, religious groups are holding integrated meetings.

But while many church leaders are assuming positive leadership against segregation as contrary to Christian principles, other forthright men are not so successful.

It has become increasingly difficult in much of the South for individuals to express liberal racial views without suffering heavy penalties. A growing number of courageous ministers have been forced from their pulpits. Some of them did not even advocate integration but merely calm and Christian discussion of the issue.

PRESSURE ON NONCONFORMISTS

Ministers are not the only victims of the segregationist demand for conformity. Some newspaper editors have been persecuted, and educators have been forced to give up their jobs rather than surrender their principles. In Florida, a white teacher was fired because she expressed sympathy for a white woman doctor who was dismissed from her job as a health officer after lunching with a Negro nurse on the staff of the Florida State Board of Health.

To many persons, the dangers inherent in these violations of the basic freedoms of thought, speech, and association overshadow the segregation controversy itself.

DESEGREGATION SINCE THE COURT DECISION

Ona more positive note, a recent survey by the Southern Regional Council confirms the conviction that the South is moving with seeming inevitability toward an increasingly integrated society.

The survey was concerned with examples of desegregation in all fields that had occurred in the 17 Southern and border States and the District of Columbia between May 1954 and May 1956. The common notion that integration will not work in the South is directly contradicted by the finding that some 1,100 instances of desegregation had taken place in the 2-year span. At last count some 666 school districts out of approximately 3,700 having both white and Negro pupils had desegregated. Altogether some 320,000 Negro and white pupils were in integrated situations. Examples were not limited to the border States, but were spread throughout the South. And while court decisions and other legal rulings prompted desegregation in certain fields, many changes were the result of voluntary decisions. Few instances of desegregation were highly publicized and little tension accompanied most of the transitions.

Clearly, the South has a greater capacity for racial change than either its friends or critics commonly suppose.

THE NORTH AND WEST

What meaning does the Supreme Court school decision have for the non-South? Legally, the decision applied only to the 17 States in and adjoining the South which enforced segregation by law in 1954. But the spirit of the decision applied equally to many places outside the South where segregation exists by custom and practice rather than law. What is happening in these areas?

First. Education: Segregation in education in the non-South has been accomplished in three ways: first, by overtly racial policies; second, by gerrymandering school zones; and third, by segregated housing. Of the three, segregated

housing is by far the biggest obstacle to integrated schools in the non-South; as barriers fall there, they automatically fall in the schools. According to a Fund for the Republic survey by David Loth, segregation has been broken down in all three of the above categories since the May 17, 1954, decision. Although many northern cities have made strenuous efforts to achieve integration in their schools, the existence of vast areas of segregated housing such as Harlem in New York, has imposed great difficulties and slowed down the program. New York City reported in the fall of 1956 that a score of schools in Brooklyn had been made interracial by redistricting since the opening of the fall term. Integration had not yet been achieved, however, in all the Brooklyn schools nor in central Harlem where the majority of New York's Negroes live.

Second. Housing: Segregated neighborhoods are still much in evidence in the non-South; but in recent years, some progress toward integration can be noted. New Jersey, Indiana, and Illinois have taken steps to root out segregation where it has been practiced in disregard of State laws. In other areas, public housing has been newly integrated, and some private housing developments have acquired their first Negro residents. As the Fund survey points out, most instances of desegregation in housing in the North and West since the Court decision were accomplished without bitterness or incident. New York has taken the lead in the use of State legislation and administrative action against segregation in housing.

Third. Employment: Both private and public employment opportunities for Negroes in the non-South have increased since the Supreme Court's school decision. To what extent this is as a result of the decision is not known. But the recent fund for the Republic survey indicates that there have been many new openings for Negro workers in the past 2½ years. It was feared in some areas of the North that Negro teachers would lose their jobs as school segregation was ended, but the reverse seems to be the case. Negro teachers have been employed in areas where they were not hired before, and some have been employed in schools with no Negro children. Although discrimination in employment is far from eliminated outside the South, many firms are moving toward a better employment policy. One agency that has helped bring about these changes is the President's Committee on Government Contracts, set up to enforce fair-employment practices in firms doing business with the Federal Government. Many States also established commissions to eliminate discrimination in employment.

The trend toward integration is the result of various forces: The war-inspired concern for minority rights which has been enhanced by a growing awareness of the effect of our racial policies on world opinion; action by Negroes themselves, human relations agencies, church and civil groups, enlightened school administrators and public officials; the growing realization that it is often cheaper to integrate than to provide new or improved facilities for Negro pupils; and last but not least, the spirit of the Supreme Court's decision.

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks at this point in the RECORD and that I may be permitted to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. REUSS. Mr. Speaker, 3 years have passed since the decision of the United States Supreme Court declaring segregation in the public schools to be unconstitutional.

I believe May 17, 1954, will be remembered by future generations as one of the truly memorable dates in American history. The issue then determined by the Court was itself of the utmost importance, but the decision has come to have an even wider significance. All over the world the Supreme Court's action has immeasurably strengthened the cause of the rights of man. It has been America's historic role to lead the way toward the fulfillment of the age-old human yearning for liberty and equality. The Declaration of Independence, the Emancipation Proclamation, the welcome we have always given to those fleeing oppression and tyranny—these are at the very heart of the American tradition. To this list must now be added the May 17 decision.

On this third anniversary we are aware, of course, that the Supreme Court's words have yet to bear tangible fruit in some parts of our Nation. We are aware of bitterness and violence and of unconcealed defiance of the supreme law of the land. We cannot, and must not, ignore these manifestations of resistance, for the denial of his rights to even one of our citizens must be of concern to all. But neither, Mr. Speaker, should we be plunged into despair. Whatever the roadblocks, there can be no question in which direction we are moving. We are moving ahead.

May 17, 1954, was truly a landmark in the history of human freedom. Let us salute this anniversary with pride and with renewed determination that its promise will surely be realized in our own land and throughout the world.

ON GERMAN PROVINCES EAST OF ODER-NEISSE LINE, AND ECONOMIC, HISTORICAL, LEGAL, AND POLITICAL ASPECTS INVOLVED

The SPEAKER. Under previous order of the House, the gentleman from Tennessee [Mr. REECE] is recognized for 60 minutes.

Mr. REECE of Tennessee. Mr. Speaker, for some years I have been seriously concerned about a situation that has been existing in East Central Europe and forces which brought it about. I believe that many of my colleagues are sharing this concern.

I

GENERAL REVIEW

Twelve years ago, one of the greatest tragedies in history took place in that part of Europe, almost before our eyes and certainly with our knowledge, though many of us were hardly aware of it at the time, since we all were engulfed in a life-and-death struggle with some of the totalitarian rulers. I refer to the expulsion from their ancient homes in the German provinces east of the Oder-Neisse line and in other parts of East Central Europe of more than 16 million Germans resulting in the death of far more than 3 million of them and of untold numbers being forced into slave labor.

We had once read in our schooldays of wars in the ancient age of barbarism, when cities were sacked, people were slaughtered or driven into slavery. All this was far away and in a distant, unreal age and surely, so we thought, it could not happen today. Yet, it did happen.

The expulsion established a wrong, a situation in gross violation of the rules of international law, of the laws of humanity, of the principles of international morality.

The situation has often been glossed over, as if it were not quite proper to speak of it or as if, by belittling, we could diminish its true dimension and proportion. But it cannot be brushed aside, it cannot be silenced, and it cannot last forever. With ever-increasing insistence, it demands restitution. As Immanuel Kant wrote in his famous essay On Eternal Peace:

> Nature irresistibly wills that the right shall ultimately prevail.

I have given a great deal of attention and time to studying this situation in its economic, historical, legal, and political aspects and I wish to submit my finding in a statement which of necessity is rather comprehensive. The forthcoming visit to this Government of the German Federal Chancellor may be an appropriate time to present my findings in the matter.

Dr. Konrad Adenauer is an old and trusted friend of our Nation. Being not only the recognized spokesman of the people of the West German Federal Republic, but the guardian of the interests of the German nation in its entirety, he is well aware of the outrageous wrong of the illegal occupation by the two Communist powers, Poland and Russia, of the German provinces east of the Oder-Neisse line.

We, ourselves, are equally well aware of the maxim of Rudolph von Ihering, one of the great European legal minds of the last century: "The surest test of character is a man's or a people's reaction when facing the violation of right."

In wishing to strengthen the bonds of friendship between our two peoples, we might also remember this word of Ihering: "A nation cannot guard and cherish a more precious possession than its instinct for right and justice."

DIVIDED GERMANY

The problem of a divided world is largely the problem of a divided Europe. The problem of a divided Europe is almost entirely the problem of a divided Germany.

This divided Germany, then, being the problem of our day, is the Germany as of 1937. The territory now under the

rule of the Communist puppet regime, styling itself "Government of the German Democratic Republic," is often mistakenly referred to as East Germany. In reality it is but the central area or middle Germany, while East Germany comprises the part east of the rivers Oder and Neisse, that is, roughly speaking, the Provinces of East Prussia, Pomerania, Silesia, and part of Brandebourg.

This Eastern Germany constituted in 1945 an integral part of the Soviet-occupied zone of the Reich. Poland's right to administer the area of Germany which it now occupies arises from a unilateral act of the Soviet Union, the conquering occupant, permitting it to occupy this area until a peace treaty eventually determines the status thereof. This agreement was formally approved by the military commanders of the other conquering powers in the Potsdam Declaration, issued at the Tripartite Conference at Berlin, July 17 to August 2, 1945.

The part east of the Oder-Neisse line was known as a food basket of the German people. Its present separation from the German economy mostly accounts for the pressure exerted on the world markets by the German export drive. Like the British and the Japanese, the Germans today must export or face starvation. The fact that West Germany is now Great Britain's keenest trade rival is but one of the subsequent results of Germany's present separation from her food-producing region east of the Oder-Neisse line.

THE FACTS OF THE EXPULSION

The people of these eastern provinces of Germany, altogether 10½ million, were summarily expelled and, in 1945 and 1946, were forced to leave the land which had been their and their ancestors' homes since the early Middle Ages, or, as many of them were descendants of the indigenous tribes, since pre-historic days.

Of these 10½ million human beings, more than 7 million reached West and Middle Germany, surviving shocking experiences of mass murder, rape, and cruelties of every sort inflicted on them by Soviet Russian and Communist Polish sadists.

About 1 million people were able to remain on the soil of their fathers. Having been stripped of their possessions, turned out of their homes, they barely exist, usually somewhere near their homesteads. Stubbornly they refuse to believe that the outrageous wrong will last forever.

GENOCIDE

But 2.2 million human beings is the heavy toll of those who did not survive the process of what was at the time presented to the American public as the orderly removal of the population. Factual evidence that has since been submitted shows that they and the other 7 million were victims of the crime of genocide.

At the Nuremberg trials the Nazi leaders were rightfully convicted of that dastardly crime against humanity. However, the Soviet prosecutors, then so eagerly pressing the charge, came into court with "unclean hands" in disregard of that rule of equity. Refugee treks had been machine-gunned by, and flattened under, Soviet tanks. Other people were just led aside and murdered in cold blood. Still others drowned in the icy waters of the Baltic when bombs and torpedoes sent their boats to the bottom of the sea.

One ship alone, the *Wilhelm Gustloff*, took more than 6,000 refugees—mostly elderly people, women and children—from East Prussia to their grave, a catastrophe in comparison to which the disaster of the sinking of the *Titanic* with the loss of 1,500 lives pales into insignificance.

Many others were left to die of starvation and disease. For instance, the population of Königsberg, venerable city of Immanuel Kant, which at the end of hostilities still numbered above 100,000, was thus reduced, within 2 gruesome years, to 25,000. This is the so-called administration of the Soviets. We would more appropriately call it mass murder. Other people did not survive the cruelties perpetrated in Communist Polish and Soviet Russian prisons or the mere rigor of captivity in Red slave labor camps.

In addition to those millions, which I just mentioned, at least 5 million Germans were being driven out of their homes in central, eastern and southeast Europe, among them 3.5 million Germans from Czechoslovakia and a million Germans from Poland proper. By 1950, about 12 million German refugees had reached western and middle Germany. By last year the number, according to an official statement had reached the 13 million mark.

You might surmise from all of this that the people who did survive those bestialities and did reach the free West would sulk in feelings of bitterness and deep enmity against those responsible for the decisions that led to the loss of their possessions and to the present separation from their homeland.

To be sure, on dumping these millions of dispossessed into a densely populated West, it was the Kremlin's plan to create a huge proletariat, to make for economic confusion, and thus to build a reservoir of malcontents from which they might recruit an avant guard of communism.

Moreover, the present illegal occupation by the Poles of German soil and property—so the Kremlin schemed—would chain Poland safely to the Kremlin walls; because only with Soviet military support can Poland hope to hold on to the German Provinces while, on the other hand, the bridges between the German and the Polish people would be out of commission as long as the wrong continues.

THE CHARTER OF THE EXPELLEES

It is all the more noteworthy, then, that on August 5, 1950, the delegates of these German expellees assembled in Stuttgart, West Germany, and signed a declaration, known as the Charter of the Expellees, which is certain to go down in history as a great human document. Nothing like it has come from any other similar group, similarly mistreated.

"After careful and conscientious deliberation," so this charter reads, "the elected representatives of millions of expellees" resolve to make public before the entire world "a solemn declaration" which they consider their basic law and which begins with the following paragraph:

> We, the expellees, renounce all thought of revenge and retaliation. This is a solemn and sacred resolution, in memory of the infinite suffering of mankind, particularly during the past decade.

After stating that "to separate a man from his native land by force is to kill his soul," the text of the charter continues:

> We have suffered and experienced this fate. We feel qualified, therefore, to demand that the right to the native land be recognized and that it be realized as one of the basic human rights, granted to man by the grace of God.

The German expellees then go on record to support every endeavor toward a united Europe in which the nations may live in freedom from fear and coercion. They went on to call upon all nations and men of good will to join them in this task.

Today, we should remember that these East German expellees were the first large group of people in Germany to declare their support of a united Europe, long before the Schumann plan and other efforts toward European integration came to the fore.

The expellees have steadfastly continued the policy of their early advocacy of a united Europe to which their representatives subscribed in 1950. Appeals to narrow nationalism, communism, and neutralism have had no effect on them. They have supported Chancellor Adenauer's European policy, because their own tragic fate had placed them in the vanguard for a united Europe. It is within the frame of a united Europe that they hope to regain their homelands in peace and freedom, and to return to their native soil.

We should leave no doubt that the German provinces east of the Oder-Neisse line, since 1945 under provisional foreign administration, are to this day, and continue to be, legally and lawfully a part of Germany, militarily occupied and now under quasi-wartime administration of the two Communist powers.

UNCONDITIONAL SURRENDER OF THE ARMED FORCES WAS NOT A SUBJUGATION OF THE NATION

The occupation did not effectuate a territorial change of title because, according to international law, the "unconditional surrender" in 1945 of Germany was a military surrender. It was not a subjugation.

The documents signed by the commanders of the German armed forces in May 1945 defined the surrender of the Wehrmacht. They did not authorize the annexation, much less the cession, of any part of the defeated nation. The German generals would not have had legal power of attorney to sign away any German territory. The final act of unconditional surrender expressly stated that the signatories were acting "by authority of the German high command." It is a generally accepted rule of international law that a military commander has no power to "agree to terms of a political

nature or such as will take effect after the termination of hostilities."

This rule has been incorporated in the Hague Convention of 1907 which the Soviet Government has expressly recognized and upon the enforcement of which it has repeatedly insisted. No effort was made to accept a surrender from Admiral Doenitz or any other possible representative of the German Government or the German people. Incidentally, it may be argued that the German signatories of the unconditional surrender documents were already in custody as prisoners of war and, therefore, had no right to represent unsurrendered forces.

Thus, Germany was neither then nor at any later time subjugated. Only subjugation would have given a pretext for annexation. International law holds conquest to be the basis for annexation. However, conquest is not completed until after a formal act of subjugation, and Germany has not been subjugated.

Furthermore, the final phase of conquest exceeds the limits of authority granted to an occupying power by article 43 of the Hague Convention IV—on land warfare. It violates international law.

Moreover, the expulsion from their native homelands east of the Oder-Neisse line of ten and a half million Germans—a population equal in size to the combined population of Sweden and Norway—is a violation of the principle of self-determination of peoples. It thus constitutes a violation of human rights as also of present-day international law. Furthermore, the expulsion is a violation of solemn covenants, freely entered into, such as the Atlantic Charter and a violation by the Soviet Union of obligations expressly assumed toward her wartime allies.

A considerable amount of literature is being issued with respect to the German provinces east of the Oder-Neisse line. The obvious purpose of most of it seems to be the attempt to assure an English-reading public of the validity of the Polish claims. Some of the propaganda material is even reflected in encyclopedias, publications which one would normally consult for reference and would not easily suspect of lacking in scholarship.

II

ECONOMIC FACTS

ECONOMIC FACTS OF GERMAN PROVINCES EAST OF ODER-NEISSE LINE

What, then, is the economic importance of the German provinces east of the Oder-Neisse line? The argument has been advanced that the region was of no particular value as a food-producing area of Germany. Since there is hardly any thesis which a so-called intellectual will not expound at one time or another, a German professor, Wilhelm Volz, was found arguing in the 1920's that the East German provinces are not the food base of the Reich. His thesis is now greatly welcomed by Polish sources and spun out to prove the low value of the land.

However, the hard economic facts are these: The German provinces east of the Oder-Neisse line comprise 25 percent, or one-fourth, of the effective agricultural land of all Germany. The grain production of the region equaled that of Australia, the potato production equaled that of France, the butterfat production equaled that of Denmark. The notion that this area of farmland had been owned by a small upper crust of Prussian junkers is just as often repeated as it is false. Instead, in Pomerania 65 percent, in East Prussia 69 percent, and in Silesia 74 percent of the agricultural soil was in the hands of peasant farmers whose individual land holdings did not exceed 250 acres.

The hard-coal production of the industrial part of the region, i. e., in Silesia, went to meet the requirements which Western European countries had in addition to their own production. Today the coal from German Upper Silesia would suffice to offset West Europe's present deficiency of hard coal.

Official sources of Communist Poland boastfully declared with regard to their total production that in the German Provinces—they speak of the "regained" area—they would produce 25 percent of the pig iron, 34 percent of the coal, 34 percent of the coke; their production of steel would be increased by 39 percent; that of agricultural machinery almost tripled.

In view of all this it seems somewhat startling to learn that a Communist trade delegation from Warsaw, which was recently in Washington, wished to get from this Government a fat loan with which to purchase grains, fats, oils, farm machinery, and other equipment.

The question may well be asked, How do these facts fit together? Is the Polish satellite being drained by Soviet Russia? Is the American taxpayer now being asked to help directly in supporting a Communist regime and indirectly to help the Kremlin overcome its own economic troubles? Is Poland not making any use of the German Provinces? Did the Warsaw regime not move millions of Poles into the area?

POLISH POPULATION FIGURES

Let us pause here to take a glance at the population figures: Prewar Poland of 1938 had 34.85 million inhabitants. About 11 million of these were living in eastern Poland, the part now taken over by the Soviet Union. Of the 11 million in eastern Poland, only a minority, that is 2.5 million, or 23 percent, were actually of Polish stock; 5.8 million, almost 53 percent, were Ukrainians, another 2.5 million were Byelorussians, while the rest was made up of Lithuanians, Germans, Jews, and so forth. The Jews were considered in East Europe as of a distinct nationality. The Soviets once organized an autonomous republic for them—many are today citizens of Israel. Exaggerated territorial claims of Polish nationalists had stimulated the largesse of the Versailles mapmakers, resulting in a Poland which comprised, within its boundaries, the highest percentage of foreign nationalities of any European country.

Official Polish figures show that in the years after the Second World War 1.5 million Poles have been transferred from eastern Poland, now in Soviet hands to the present territory of Poland. The Polish Government, at the same time, removed from its territory about half a million Ukrainians, Byelorussians, and Lithuanians to the Soviet Union and about 1 million Germans to the West. These Germans had lived in the area of Poland of 1938, that is, mainly in the districts that had been taken from Germany by the Versailles Treaty provisions and turned over to Poland. Incidentally, the 1 million Germans left behind nearly 100,000 individual farms with a total acreage of 2.28 million acres.

The figure of 1.5 million Germans, Ukrainians, Byelorussians, and Lithuanians, removed from Poland, almost exactly tallies with the figure of 1.5 million Poles taken in from eastern Poland. Thus, no particular reason can be advanced to show a necessity for settling the 1.5 million Poles from eastern Poland in the occupied German Provinces. It is not surprising, therefore, to learn that only a minor part of the people that were brought into the German Provinces were actually displaced Poles from eastern Poland.

Take, for instance, the Polish-administered part of East Prussia: It has about 550,000 inhabitants. But only 122,000 of them, or 27 percent, are from eastern Poland. The total population in the Polish-administered German Provinces numbers 6.7 million. Roughly 1 million of these are Germans. The Polish Communists are giving them in official statistics the designation "autochthons"—a curious admission of their priority right to the land. A certain percentage of the others are Ukrainians who preferred not to be removed to the Soviet Ukraine.

WHAT USE DOES POLAND MAKE OF GERMAN PROVINCES?

Under the prodding of the Kremlin the Communist Warsaw regime exactly copied the Nazi policy: In much the same way as in 1940 the Nazis wheedled into then Nazi-occupied Poland various groups of ethnic Germans, settling them in towns and on farms on property illegally taken from Polish citizens, so the Communist regime in Warsaw has wheedled into the Polish-occupied German Provinces Poles and Ukrainians, settling them on property illegally taken from German citizens.

In much the same way as in the 1940's the misled ethnic Germans felt unhappy over holding what they learned was stolen property to which they could never acquire legal title, so these Poles and Ukrainians learned that they were settled on stolen property. It thus became increasingly difficult for the Communist rulers in Warsaw to induce the misguided people to stay in the German Provinces. What was, at first, a trickling beeline leading back to Poland proper is gradually taking the proportion of a rising tide. Unspoiled people seem to have an innate sense of distinguishing between right and wrong.

The Communist rulers in Warsaw are getting deeply concerned about the irrepressible move away from stolen property, especially since the problem can no longer be hushed up. According to figures in a recent report printed in Zycie Gospodarcze, a Warsaw economic paper, tens of thousands have been leaving the land again. Glos Szczecinski, the Communist paper in Stettin, describing the

present situation along the shores of the Baltic Sea between Stettin and Danzig—a shoreline formerly teeming with activity—aptly called it a deserted coast.

A few weeks ago, Zycie Gospodarcze, in a series of reports on the German Provinces under Polish administration made some startling revelations: Though official Polish figures had freely admitted that farm production of the region had reached a level of only 40 to 50 percent of its prewar standard, when the land was in the hands of its German owners, it now appears that even these figures had been heavily padded and exaggerated by nearly 100 percent. Wasteland in the region has increased by 3.7 million acres. Still more recently the same Warsaw paper published a "confession" from the three economists who wrote the series. They publicly apologized, in a way which would have done honor to Moscow's show trials, for spreading objectionably misleading information. Comparing the acreage of tilled farmland in 1939 with that of today, the confession curiously verifies the earlier statement. In what the paper describes as a huge area scores of villages and small towns are depopulated and now are ghost towns. As the Warsaw paper puts it, the region is apparently a no-man's land that is not liked by anybody of the Polish people. From East Prussia the same paper reported these facts: Though Roessel, a county seat, had suffered little damage from the last war, a large part of the town is being torn down and the brick collected and shipped for reuse to central Poland. Goldap, another county seat, announced that it planned the construction of a residential dwelling—the first new building since the end of World War II. Goldap had 12,500 inhabitants in 1939 but only a population of 5,000 today. East Prussia has now less than 44 percent of its normal prewar population density. From this you may roughly conclude that more than 56 percent of East Prussia's farmland lies waste today. The situation in Pomerania and Lower Silesia does not much differ, the density of population there having decreased by 45 percent and 40 percent respectively, of its prewar figure.

The argument is sometimes advanced that the newly settled Poles and Ukrainians, in the years since they have been brought in, have struck roots in the German Provinces and can no longer just be turned out. Of course, there has never been any suggestion of that kind by any group of German expellees.

In their 1950 charter, the expellees have renounced, without mental reservations, all thought of revenge and retaliation. Moreover, they clearly indicated to seek a solution within a European frame. On the other hand, it may be well not to exaggerate difficulties that will have to be faced. Strange as it seems, communism might here prove a blessing in disguise:

The Communist doctrine of collectivization degrades peasants to the status of slave laborers on state-owned and state-managed farms. Attachment to the soil is contrary to Marxian ideology.

The widespread return since last October to individual farming in Poland should not be taken as a final and irrevocable step. It should be rather remembered that Gomulka's policy is loyally following the Communist precedent of Lenin's NEP—new economic policy—in Russia in the early 1920's. It is an exact parallel move. To keep his communism going, Lenin needed bread, which only the Russian peasants could give him. He needed foreign capitalist help and found enough "suckers," too. The Communist policy of liquidating the kulaks as a class followed in due course later.

However, regardless of those considerations the economic problem is this: Before World War II Germany imported only 17 percent of her food requirements. Today, the Federal Republic is obliged to import roughly 40 percent of her food requirements from abroad. The Federal Republic has to export in the world's markets in order to buy this 40 percent of her food.

It means that Germany today, by keenest competition, is beating Britain and other European nations in the world's markets and is even making her competition felt in this country. This is one of the most obvious economic consequences of the present separation from Germany of her provinces east of the Oder-Neisse line and the result of the expulsion of the many millions of Germans from their native soil.

The Communists in Red Poland invented the term, "regained" territories, which for lack of imagination and foresight has been echoed by some Polish people in the West, people who would not like to be caught in the role of fellow travelers of the Communist breed in Warsaw.

What, then, are the historic facts about these territories which the Polish Communists claim to have regained?

III

SURVEY OF HISTORY

POMERANIA

First, let us take Pomerania. Yes, it was inhabited by the Slavic tribe of Pomeranians. During the 10th century, these Pomeranians—"defending their liberty," as the earliest Polish source records it—waged many battles against their neighboring Slavic tribe, the Poles, who wanted to subjugate them. All this ended in 1181, at the time of the German emperor Frederick Barbarossa, when the dukes of Pomerania became princes of the Empire.

Since then, Pomerania constituted an integral part of the Reich, that is, the Holy Roman Empire of the Middle Ages. There was an exception of a duchy in eastern Pomerania. This latter region was purchased, in 1309, by the Order of the German Knights; the treaty of purchase was formally recognized by Casimir, the King of Poland, in 1343.

In the course of the following 600 years, Pomerania was thoroughly integrated with the rest of Germany. Not even after Germany's defeat in 1918, when Polish claims, often under flimsy pretext, were pressed against the vanquished, and readily accepted by Versailles peacemakers, not even then did it occur to Poland to concoct an historical claim to Pomerania, although Dmowski, the Polish agent, demanded part of it.

SILESIA

Second a look at Silesia. Its western corner, the Lausitz, had been a Polish fief from 1002 to 1031, that is, for 29 years, 9 centuries ago. Then the region reverted to Germany and has been a part of her ever since. Silesia derives its name from the Germanic tribe of the Silingi. Germanic people lived there—as all over eastern Germany—for a thousand years before West Slavic tribes began pushing into the region from the east about the seventh century. East Germany, that is, the part east of the Oder-Neisse line, is neither the original home of the Poles, nor even of the Slavs.

In the seventh century, the Poles were just one of the several west Slavic tribes. In particular, the Poles inhabited the region of the Warthe and upper Weichsel—Vistula—Rivers; but they did not inhabit Silesia. Recent political writers of Polish nationality are fond of building a romantic Polish national myth, claiming all west Slavic tribes for Poland. But the facts of history do not support this notion.

Incidentally, such pan-Slavic claims for Poland differ in no way from earlier pan-German claims, advanced by some Nazi historians who liked to dream of including the Scandinavian countries, Switzerland, the Netherlands, and even Great Britain into a greater Germanic Reich.

In the 10th and 11th centuries, Moravians, Bohemians, and Poles contended for mastery over Silesia. The feudal system had led to the development of numerous principalities. Silesia had a score of duchies, counties, and the like. Temporarily Polish rule dominated. But the local rulers, the Piasts, sought independence from Polish rule and won it in 1163.

Throughout this period many German pioneers found their way to Silesia. Often called in by the Piasts, they built up the country and intermarried with the indigenous Slavic people. The Piasts themselves were rapidly germanized through intermarriage. Before the arrival of German pioneers, eight towns were known to exist in all of Silesia. By 1300, Silesia had 150 towns and 1,200 villages.

By the Treaty of Trentschin in 1335, King Casimir of Poland ultimately renounced all claims to overlordship over the Silesian principalities in favor of the King of Bohemia, John, who was the father of famous German Emperor Charles IV.

For 400 years the people of Silesia upheld allegiance to the Crown of Bohemia, at first under the Luxemburgs, from 1526 under the Hapsburgs until, in 1742, Frederick the Great claimed through the law of succession Silesia by inheritance and joined it to his Prussian domains. However, all throughout these centuries it remained an integral part of the German Empire.

DRANG NACH OSTEN?

The Treaty of Trentschin is of more than passing interest today. It was by that treaty that the boundary between the realm of the Polish King and the realm of the German Emperor, in other words, the German-Polish boundary

line was defined as far as it concerned Silesia.

This Silesian-Polish, or German-Polish, boundary has remained unaltered since 1335, that is to say, since more than 6 centuries. It constitutes one of the oldest boundary lines in all of Europe. It may dismiss from some people's mind the hazy notion of that often repeated phrase, the German Drang nach Osten—drive to the East.

You may think of the Drang nach Osten as the crusades in the early Middle Ages against the then pagan west Slavic tribes. It was an effort of spreading the Gospel of Christ, undertaken by the Germans with the active help of other West European nations.

The crusade against the Wends, one of these west Slavic tribes, was initiated by a French monk, Saint Bernard of Clairvaux, founder of the great Monastic Order bearing his name. The land of the Wends was actually conquered. But Pomerania and Silesia were regained in a peaceful way; the people accepted Christianity and intermarried with the Christian German settlers, while the local princes, likewise intermarrying with West German princely families, were being connected with the German empire by feudal ties.

The Hanseatic League, that great trade association of cities, and the municipal codes of Magdeburg and Lubeck, were the two factors that most notably contributed to the eastward advance of European or, if you will, German civilization in the Middle Ages. The Hanseatic League spread along the Baltic, while the two codes served as models for city charters in many a distant town of Poland and even Russia. All this brought part of eastern Europe within the sphere of the Church of Rome and staked it off against the Greek Orthodox sphere farther to the east.

EAST PRUSSIA

But, thirdly, let us have a look at East Prussia. Since the dawn of history this country was inhabited by the Prussians, a Baltic people, closely akin in race and language to the Lithuanians and Latvians.

Since 1230 the German Knights of St. Mary's Hospital at Jerusalem, one of the great orders of knighthood emerging from the crusades to the Holy Land, took up the conquest and Christianization of the Prussians and then the settlement of this country. Acting by the direction, and with the consent, of Emperor and Pope, mediaeval Christendom's two highest authorities, they succeeded in developing in Prussia a state the administration of which is still recognized by students of history as the most modern of any in the Middle Ages.

The charge that the ancient Prussians were annihilated by the German knights is one of those loose notions favorably mentioned by some political writers. The facts tell a different story. Up to the year of 1400, the German knights in Prussia had founded and given charters to 94 towns and had incorporated 1,400 villages. But in spite of this development of communities, the indigenous Prussian inhabitants in these settled parts of Prussia, in the year of 1400, amounted to from 30 to 40 percent of the total population.

The age of nationalism, though, was still in a distant future. The international language of the literary people of the time was Latin. The people were divided in states and estates, that is, by their status in life. They were organized in guilds and leagues and bargained with their territorial lord, or flirted with his neighboring rival, in order to improve their liberties and privileges.

The Poles allied with the Lithuanians invaded Prussia in 1410, and the German knights went down in crushing defeat in the first battle of Tannenberg. In 1422, a boundary treaty was signed at Lake Melno, defining the dividing line between the state of the German knights on the one side and Lithuania and Poland on the other. This boundary of what is today East Prussia's boundary, was drawn up by a treaty between the victorious Poles and Lithuanians and the defeated German knights. Surely the delimitation will not be suspected as having been partial in favor of the Germans.

However, this East Prussian boundary has stood unchanged for 500 years showing the absurdity of that malicious phrase of a German Drang nach Osten.

The conflict between the German knights and the Polish King continued, and when a league of Prussian towns and a group of the nobility began bargaining with the Polish King to seek more privileges than the Knights' Order would grant them, the Poles again invaded Prussia. The outcome after a long war was the treaty of Thorn in 1466 bringing about the partition of Prussia. The western part of the State of the German Knights, or West Prussia, was joined with the Polish crown in personal union. The defeated knights were able to hold on to East Prussia, though the Polish King assumed a position of suzerainty. The grand master of the knights did not become a Polish "vassal"; that word is not contained in the text of the treaty.

A century thereafter, West Prussia was illegally incorporated into Poland by a coup d'etat performed at the Lublin diet of 1569. But the tie of the Polish King with East Prussia ended 90 years later. The Prince Elector of Brandebourg, who had inherited the late State of the German Knights as Duke in Prussia, won for his duchy the complete independence from any Polish claims by the treaty of Oliva in 1660. Since that time, that is, more than a century before the American Declaration of Independence, East Prussia has never ceased to be a German land.

The Red Polish and Soviet publicity machine, however, continues to grind out stories repeating in a monotonous way the phrase of the "regained" territory. The absurdity of it might be shown by an imaginary parallel situation in this country. Suppose that the British Queen would this year set sail for Jamestown, Va., not to commemorate with us the establishment in this hemisphere of the first colony of English-speaking people, but, instead, to regain her crown colony because of a position of overlordship dating back to the late Middle Ages.

PARTITIONS OF POLAND AND RUSSIAN AGGRANDIZEMENT

To bring the historical account of that part of Europe up to the present: The partitioning of Poland had been in the making for more than a century before it actually took place in 1772. King Carl X Gustav of Sweden discussed it in 1662. It was fostered by groups of the Polish nobility allying and negotiating with neighboring rulers in order to squeeze political privileges from their own government. There was nothing unusual about this which in an age of nationalism would smack of treason.

However, history showed one of its ironic twists: In 1454, Hans von Baysen, heading a group of Prussian noblemen, who had joined under the name of League of Lizards, asked the Polish King to protect them in their privileges against the grand master of the knights. The Polish King responded by opening war against the German knights which ended as we have seen, in the defeat of the latter and the partitioning of Prussia in 1466.

In 1792, a substantial part of the Polish nobility, headed by such powerful families as the Czartoryski, Potocki and Branicki, joined under the name of Confederation of Targowica and invited the Russian Empress, Catharina II, to protect them in their liberties against reformist and revolutionary tendencies—the ideas of the French Revolution—making themselves felt in Poland. The Russian Empress responded and the result was the second and third partitioning of Poland in 1793 and 1795.

Prussia, by the first partitioning of Poland in 1772, merely regained the lands conquered by Poland in the 15th and 16th centuries. Her acquisitions were seen as repairing the partitioning of Prussia in 1466. They were duly ratified by the Polish Diet in contrast to gains made by Austria and Russia, which were violently opposed. In 1795, however, Prussia did take a considerable part of Poland. But Prussia's action should be seen in the light of Russian expansionism of that period. It was largely a question of preventing Russia from grabbing all of it. In the end, that is, at the Congress of Vienna, Prussia actually had gained 8 percent of the prepartition Poland—more than a third of it was regained land originally taken by Poland from the German knights—while Russia took 82 percent and Austria 10 percent of Poland. Thus, the partitioning of Poland in its final outcome proved to be a part of Russia's aggrandizement toward the West.

The danger of Russia's expansionist policies was much in the mind of European statesmen of the period. At the time of the Congress of Vienna, the British military plenipotentiary in the Czar's headquarters, General Wilson, wrote to his government:

> Think of Danzig. If by means of a convention this city is not won for Prussia, it will fall into Russian hands. Then the Russians will be master not only in the old parts of Prussia, in the Duchy of Warsaw and in Galicia, but they also will make all their plans concerning Hungary and the Baltic country.

A timely observation, indeed.

The Congress of Vienna affirmed Prussia's eastern boundaries, a part of which was the ancient East Prussian boundary of 1422 and that of Silesia of 1335. The whole line became Germany's eastern boundary and remained unchallenged until the end of the First World War. Incidentally, the Vienna Congress also delimited the western boundaries, essentially valid to this day, toward Belgium, Luxembourg, and France.

It might be worth while to remember that the Congress of Vienna reestablished a European community of nations after Napoleonic France—very much like Hitler's Germany 130 years later—had overrun Europe, had partitioned and dismembered nations, had brought untold misery to millions of people, until she was finally crushed. Yet the victorious European allies at the Vienna Congress left France within her pre-Napoleonic boundaries, with her territory undisputed, including Alsace-Lorraine.

It seems somewhat incongruous that the German boundary toward Belgium and France should be regarded as sacrosanct, while the German-Polish boundary, going back many hundreds of years and surely equally sacrosanct, should be subjected by some people to a sort of seesaw game.

JOHN QUINCY ADAMS ON SILESIA

As to the inhabitants of Silesia in pre-Napoleonic days we have an eloquent witness in the person of John Quincy Adams, the sixth President of the United States. At the turn of the 18th century, John Quincy Adams was American minister in Berlin and traveled in Silesia. In his Letters on Silesia, published in 1804, we find this observation on the inhabitants:

Among them I found men of agreeable manners and of considerable information, but none of them spoke any other language than German. * * * The manners of the people in the towns have more of a republican than of a monarchical cast; and the general equality among the people give them a social turn, which I have seldom seen in other parts of Germany.

This comment of our sixth President, written long before the Napoleonic wars ushered in the age of nationalism, will easily dismiss the legend of a Prussian policy, during the 19th century, of enforced Germanization of an originally Polish population. These people were German.

Napoleon III of France was an adventurous man, as we know from his attempt at foisting the Austrian Grand Duke Maximilian as emperor upon the people of Mexico. Twenty years earlier he wanted to lead the Polish troops in an uprising against Russia. In 1848 he demanded in the French chamber a declaration of war against Russia in order to liberate Poland. In 1854 he inaugurated a plan for reorganizing Eastern Europe. It provided for a separation from Russia of Poland—until the German armies drove out the Russians in the first World War, most of that country was under Russian rule—and her union with Prussia.

RUSSIAN AND POLISH TYPE OF PAN-SLAVISM

In an age of nationalism Panslavist notions were taking hold of the mind of quite a few people in Russia, Poland, and other Slavic nations. Blue-sky laws did not limit dreams of national grandeur. Stalin might have taken a leaf from the teachings of Michael P. Pogodin, a Moscow history professor in the 1850's. He proposed a Russian-Polish boundary along the present Soviet-Polish line and suggested that the Poles conquer the East German provinces. When the scheme failed to rouse enthusiastic approval among the Poles, the irate professor advocated, instead, the summary expulsion of the Poles, "with their priests and all," from what he regarded as Western Russia.

Panslavism found in time its apologists in Poland, too. Polish expansionism toward the west was foremost in the mind of Roman Dmowski, the Polish political agent in the United States during the First World War and later the leader in Poland of the Nationalist Democratic party. His memorandums, written during the war years, bear eloquent witness of Poland's aggressive aims at the expense of her neighbors: "Today Danzig is German; but under conditions of normal economic development it will definitely become a Polish city." And as to Königsberg and East Prussia the spokesman for Poland proclaimed:

Königsberg, that is, the part of East Prussia whose people speak German, must be attached to Poland. * * * Economic measures are then expected to destroy the position of the Germans so that the Königsberg region will * * * in time become thoroughly Polish territory.

The situation was realized by President Wilson, who commented early in April 1919:

The only real interest of France in Poland is in weakening Germany by giving Poland territory to which she has no right. (R. S. Baker, Woodrow Wilson and World Settlement, vol. II, p. 60.)

GENERAL SMUTS ISSUES A WARNING

The dangerous consequences of Poland's aggrandizement were even more clearly seen by Gen. Jan C. Smuts, for many years Prime Minister of the Union of South Africa, today recognized as one of the great statesmen of this century. On May 22, 1919, General Smuts wrote to Mr. Lloyd George, the British Prime Minister:

I am convinced that in the undue enlargement of Poland we are not only reversing the verdict of history, but committing a cardinal error in policy which history will yet avenge.

The new Poland will include millions of Germans (and Russians), territories which have a German (or Russian) population, or which have for very long periods been part of Germany (or Russia). It is reasonably certain that both Germany and Russia will again be great powers, and that sandwiched between them the new Poland could only be a success with their good will. How, under these circumstances, can we expect Poland to be other than failure, even if she had that ruling and administrative capacity which history has proved she has not? * * *

I think we are building a house of sand. And in view of these and many other considerations, I would revise the boundaries of Poland as provisionally settled in the treaty, leave Upper Silesia and all real German territory to Germany, contract the boundaries of the free city of Danzig, and instead of placing her under the suzerainty of Poland, as we propose doing, leave her under the suzerainty of Germany with an administration under the League of Nations. * * *

I think the two cardinal errors in policy of this treaty are [the long occupation of the Rhineland and] the enlargement of Poland beyond anything which we had contemplated during the war. These two errors are full of menace for the future peace of Europe, and I urge that every means be taken to remove them before it is too late. (R. S. Baker, Woodrow Wilson and World Settlement, vol. III, p. 461.)

POLAND'S CLAIMS AND GAINS

The Treaty of Versailles, which this Government refused to ratify, imposed upon several regions of East Germany plebiscites. The leaders of Poland had claimed that a majority of the inhabitants of those border regions were Poles who wanted to be united with reborn Poland. The Allied statesmen obliged. The plebiscite areas were accordingly occupied by Allied troops and the several plebiscites were then conducted under the control of Inter-Allied Commissions, in 1920 in part of East Prussia and several districts of West Prussia, in 1921 in Upper Silesia.

PLEBISCITES AND VOTES

The outcome of the plebiscites showed that the Polish claims were not based on facts; as to East and West Prussia they were wholly absurd. These were the results:

In East Prussia: for Poland 2.1 percent; for Germany 97.8 percent. In West Prussia: for Poland 7.57 percent; for Germany 92.28 percent. In Upper Silesia: for Poland 40.0 percent; for Germany 60.0 percent. It should be noted that the plebiscite in Upper Silesia took place under the pressure of Polish-managed uprisings, benevolently tolerated by Allied authorities.

In spite of the proved German majority in Upper Silesia the Allies decided to partition the area. One-third of it was handed over to Poland. It was the most valuable part of the area, containing the entire zinc deposits, 85 percent of the coal, and 75 percent of the industrial output of the area. It included the principal cities of Kattowitz and Königshutte. The citizens of Kattowitz had just recorded a majority of 85.4 percent, the citizens of Königshütte a majority of 74.7 percent in favor of remaining with Germany. This is but one case of flagrant violation of the solemnly proclaimed principle of self-determination of people.

In the part of Upper Silesia which was left to remain with Germany the Polish vote showed up in the next Reichstag elections—the German electoral law of proportional representation permitting the count of even the slightest shade of dissenting opinion—there was a 1.6 percent Polish vote.

The part of West Prussia, which later became known as the Polish Corridor, was separated from Germany and by decision of the Versailles treaty handed over to Poland outright. However, before the Poles took possession in 1920, the elections to the Weimar Constitutional Convention had already taken place in 1919. Though the Poles had urged their compatriots to boycott the elections and stay away from the polls, the results on the basis of exact population statistics

revealed the presence in this region of 368,000 German as against 267,000 Polish persons of voting age, that is a clear 58 percent German majority. However, no plebiscite was permitted in that area to determine the will of the people. It should be emphasized that this is the outcome of the vote strictly of that part of West Prussia, later known as the Polish Corridor. It did neither include the previously mentioned plebiscite area of West Prussia nor the district of the city of Danzig.

Danzig was also separated from the Reich and by verdict of the Versailles treaty and given the status of a free city under Polish suzerainty. In the first elections to the Danzig diet Polish candidates won 5 seats out of a total of 120. They were never able to better this score because the citizens of Danzig were German as they always had been; and they had never wished to be separated from the Reich.

Because the hinterland State of Lithuania clamored for an outlet to the sea, the mapmakers of Versailles, lacking both imagination and foresight, could think of nothing better than to detach the Memel district from northern East Prussia, placing it under Allied military rule and making plans for another free city scheme like Danzig. Plans were cut short in 1923 by an invasion of armed detachments from Lithuania. The French occupation troops willingly capitulated and the Allied Governments acquiesced in the illegal seizure, though Memel is a German city, founded in 1252.

In the first elections to the Memel diet, in 1925, Lithuanian candidates won 2 seats out of a total of 29. The other 27 seats went to the German parties. The citizens of the Memel district were German as they always had been, and they had never wished to be separated from the Reich.

The Lithuanian Government in Kaunas, greatly disturbed over hearing the voice of the people, found no better answer than to impose in the following year, 1926, martial law upon the people of Memel. In the meantime, immigrants from Lithuania were frantically pumped into the district. Not until 10 years later, in 1935, did the alien rulers concede another diet election; the popular demand could no longer be disregarded. The outcome gave the Lithuanians 5 seats, the Germans 24 seats in the diet; still a four-fifth majority of the Germans. The Lithuanians continued to rule by martial law nearly to the last day. They could do no better. The district was returned to Germany by treaty of March 22, 1939. The British Government extended de jure recognition of the reunification of the Memel district with Germany and, by a note of May 15, 1939, informed the German Government of its decision. The unique instance of a legal and peaceful restitution of a wrong committed at Versailles does credit to the statesmanship of the Lithuanian Government after all.

GENERAL SMUTS AGAIN WARNS OF FATEFUL CONSEQUENCES

But before all these blunders were made, the warning voice of South Africa's Grand Old Man, General Smuts, was once more heard appealing to Western statesmen. On May 30, 1919, he addressed himself to our President:

DEAR PRESIDENT WILSON: Even at the risk of wearying you I venture to address you once more. * * * This war began with a breach of a solemn international undertaking, and it has been one of our most important war aims to vindicate international law and sanctity of international engagements. If the Allies end the war by following the example of Germany at the beginning, and also confront the world with a "scrap of paper," the discredit on us will be so great that I shudder to think of its ultimate effect on public opinion. * * *

There will be a terrible disillusion if the peoples come to think that we are not concluding a Wilson peace, that we are not keeping our promises to the world or faith with the public. But if in so doing we appear also to break the formal agreement deliberately entered into (as I think we do), we shall be overwhelmed with the gravest discredit, and this peace may well become an even greater disaster to the world than the war was. Forgive me for troubling you with this matter, but I believe it goes to the root of our whole case.

POLISH AGGRANDIZEMENT

The principle of self-determination of peoples has been solemnly proclaimed by President Wilson to be the guiding rule for the settlement of claims for disputed areas. However, this principle was unabashedly disregarded and openly violated. Poland was enlarged to such an extent that 33 percent of her population were people of foreign nationality. Thirty-three percent is the figure given by A. J. Toynbee in the World After the Peace Conference, London, 1925. The official Polish census concedes merely 30.9 percent. The territorial aggrandizement of Poland was politically unsound and led to her undoing.

Poland's western boundaries after the First World War coincided almost exactly with her western boundaries during the time of her greatest expansion in the 15th century. However, the Poles were far from being satisfied. As Roman Dmowski explained it in 1923, Poland had received from the Allies "just a small downpayment" on a really big Greater Poland. In the Warsaw Institute of Military Geography, a large mural showing a medieval Polish king staking off a legendary boundary along the Saale River in central Germany—intimated the direction in which Polish mentally unbalanced nationalists visualized a realization of their dreams of aggrandizement.

Such schemes were no mere dreams; they came close to realization. No sooner had the Poles, in 1945, reached the Oder-Neisse line when they proceeded to clamor for more. Their agent, F. Stojanowski, demanded in 1946 the Elbe line with three bridgeheads west of the Elbe at Hamburg, Magdeburg, and Dresden. Schleswig-Holstein, Mecklenburg, and the northern part of Brandenburg was to be lumped together into an Elbe State, and the rest into a Lausitz State, but all of it forming an integral part of Greater Poland.

Mr. Speaker, I wish to draw attention to a map prepared in 1947 by the Civil Administration Division of our Military Government in Germany, showing precisely Polish claims on German territory and carefully registering the German territory demanded by Stojanowski in 1946. Francis Lieber, author of the famous Instructions for the Conduct of the Union Armies in the Field and a century ago one of our eminent political and legal scholars, diagnosed cases like that as "political gluttony"—compare Francis Lieber, On Civil Liberty and Self-Government, volume II, page 49.

The fateful blunders left sores on other European nations, sores which festered and became ugly. They poisoned the mind of a then rising generation in Germany. Shaken in their trust in right and justice, many of these young people turned, disillusioned, to scepticism and cynicism. Harping time and again on examples of injustice, the Pied Piper from Austria then preached his crooked ideology and gathered in Bavaria the hard core of his storm troopers. It would be a tragic mistake, indeed, were we ever willing to compromise with injustice and wrong, instead of reaffirming, time and again, that the rule of international law be upheld so that right and justice will prevail.

In bringing this historical survey to a close, I wish to add the answer to one more question. After Poland, by virtue of the Versailles Treaty, gained all these lands were there still any Polish people left within the remaining territorial boundaries of the German Reich and, if so, how many were left?

As we know, the Weimar Republic had adopted the electoral system of proportional representation. The Germans were at that time encouraging the registration of even the slightest shade of dissenting opinion. We have since learned that this led to an atomization of their political parties and ultimately to the doom of the Weimar Republic. For our specific query, however, it proves valuable because it revealed with great accuracy the Polish minority in pre-Hitler Germany.

In the Reichstag elections of September 14, 1930, a total of 35,225,800 votes were registered. Out of this grand total, 75,431 votes—0.2 percent—were cast for national minorities, that is, Danes, Poles, and so forth. Out of the 75,431 votes for national minority groups, a total of 42,902 Polish votes were counted in the areas east of the present Oder-Neisse line. This is approximately one-tenth of one percent. Surely it gives Poland no basis for any claim whatsoever.

IV

POLISH AND SOVIET STATEMENTS

COMMUNIST POLISH ARGUMENTS VIS-A-VIS NAZI ARGUMENTS

The Red regimes in Moscow and Warsaw and their fellow travelers on this side of the Atlantic—though they would not wish to be seen as fellow travelers of a Communist organization—have urged the acceptance of a Greater Poland by repeating: "It is too late to question now the validity—the changes wrought by the decision have a finality which might be regretted by some but should be accepted by all." In other words, the free world should meekly surrender to the policy of all aggressors that might goes before right.

These arguments have a familiar ring. Have we not heard them before? Indeed, in the heyday of nazism, these same arguments, almost with the same wording, were used by Hitler and his henchmen advocating that "the strong have the right over the weak and have the right to demand that the weak give way to them, that they relinquish land where the strong can settle and provide for their descendants"—H. Nicolai, Rassengesetzliche Rechtslehre, Textbook on Racial Law, page 20, Munich, 1934.

It may be interesting to probe deeper into the curiously analogous argumentation. However, let us rather be reminded of the fact that there were and are responsible men among Polish leaders-in-exile who refuse to be goaded by far-scheming Soviet and some short-sighted Western politicians along the dangerous road which can only make the enslavement of the people of Poland permanent and final.

SOUND POLISH VOICES

The late Polish Prime Minister-in-exile, Tomasz Arciczewski, opposed the extension of Poland's boundaries to the West so that they would include Breslau and Stettin and eight or ten million Germans.

Shortly after the publication of the Yalta declarations in February 1945 the Polish government-in-exile at London protested against the agreement reached by the representatives of the three powers with regard to Polish territory. The Polish Government called attention to the fact that prior to the Crimea Conference it had submitted to the Governments of the United States and Great Britain memoranda expressing the hope that without previous consultation of and consent by the Polish Government no decisions concerning Poland would be made. It went on to say:

The method adopted in the case of Poland is a contradiction of the elementary principles binding the Allies and constitutes a violation of the letter and spirit of the Atlantic Charter and of the right of every nation to defend its own interests.

The Polish Government then declared that the decisions concerning Poland taken by the third conference at Yalta cannot bind the Polish nation. The Polish Government considers the separation, by erection of a Polish-Soviet boundary along the Curzon line, of the eastern half of its country as the fifth partitioning of Poland now brought about by her own allies.

Jedrzej Giertych, the Polish publicist, perhaps realized the danger of the road along which Poland was being pushed when in his The Question of the Regained Territories From an Ethical Point of View he rejected the so-called compensation policy suggested to the Poles. Giertych wrote:

We have not the slightest intention to give up all claim to Lwow and Vilna.

He refused to accept the idea of a Soviet Russian compensation at other peoples' expense.

A statesmanlike attitude was shown by the Polish Ambassador in Washington, Jan Ciechanowski. At the time of his resignation on July 6, 1945, he declared:

How can one explain to the Polish nation that their country is but a home on wheels to be pushed eastward and westward as may suit the imperialist aims of its mighty neighbors in defiance of the principle of self-determination of peoples for which they fought? Some day, answers to these questions will have to be found if justice is to survive.

Poland, represented by her legal government, was never admitted to participate in discussions of Polish-Soviet relations. The Conferences at Teheran and Yalta are examples in point. The decisions concerning Poland must, therefore, be regarded by the Polish nation as verdicts "in absentia." No nation, no government truly representative of its people, could ever accept decisions about their territory or system of government being taken without their participation.

No scathing denunciation will equal this indictment of the map makers of Teheran, Yalta, and Potsdam.

General Wladyslaw Anders, the gallant Polish military leader in World War II, declared in an interview on December 14, 1946:

Poland has neither the human nor the material means of digesting the German territory up to the Oder River. These territories are a gift fraught with danger. This can only be a temporary solution which will end on the day when Poland will have regained her liberty. * * * We do not want anything to which we are not entitled and which can only damage the case for our nation. Under no circumstances shall we renounce the right to the eastern territories now annexed by Soviet Russia.

Roman Umiastowski, the Polish author, writes in his book, Poland, Russia, and Great Britain, 1941–1945, London, 1946, page 218:

The Kremlin's proposal of compensation was not so much in order to justify the Russian annexation of eastern Poland as to extend their (own Soviet) rule to the banks of the Oder.

The Kremlin's dangerous trap was perhaps clearly seen by the distinguished Polish historian, Oskar Halecki, when he referred in the April 1945 and 1946 issues of The Review of Politics to the danger of an extravagant extension of Poland's boundaries toward Germany and wrote:

The same people who now urge the Poles to accept the Russian offer, will blame them in the future for having created, through their imperialism, a new problem which will trouble the peace of Europe.

It seems indeed tragic that in spite of sane voices crying out in the wilderness there are others who are apparently in a quandary trying to vie with the Communist oppressors of their kinsfolk at home echoing Communist Polish slogans in the vain hope of winning the favor of the captive people of Poland.

THE SOVIET LAW ON ANNEXATION AND SELF-DETERMINATION

It will be appropriate at this point to look into Soviet statements on conquest and annexation in general and on their aims with regard to Germany in particular.

Soviet international law defines annexation as "the complete combination with another state of a territory against the will of the population" and then denounces such annexation. This is expressly stated in the leading Soviet treatise, Mezdunarodnoe Pravo—International Law—Moscow, 1947, page 156.

The denunciation in Soviet international law of conquest and annexation is based upon statements made in 1916 and 1917 by Lenin and Stalin. According to volume 19, page 304, of his Collected Works, Lenin declared in 1916:

Annexation is the violation of a nation's right of self-determination. It is a delimitation of state boundaries against the will of the population.

On May 12, 1917, Stalin proclaimed:

If Poland, if the Ukraine break away from Russia there is nothing bad about that. * * * No nation can be free if it oppresses other nations. * * * In Russia we must stress the right of separation for subject nations.

In the Decree on Peace of November 8—October 26—1917, Lenin stated:

If contrary to a nation's expressed desire, regardless of whether this desire has been voiced in newspapers, at public meetings, through party resolutions, or by revolts and uprisings against a condition of national suppression—and while the army of the annexing, or more powerful, nation completely withdraws and no pressure of any kind is exerted over institutions and the political existence of this nation—if the right to a free vote is withheld, then an affiliation of this nation is considered an annexation, that is, a taking possession by violent means.

Based upon these writings of Lenin, the tenet for the abolition of wars of conquest was considered to be one of the foremost appeals of the Communist Third International.

Quite in line with these pronouncements is the constitutional definition in both the international law treatise of Durdenevski-Krylov and a similar volume by Korovin of the nature of the Soviet Union:

The Socialist State—the Union of Soviet Socialist Republics—is a voluntary union of peoples who aspire to no territorial conquests and reject the annexation of territories against the will of the people thereof.

Incidentally the two mentioned volumes are today considered by the Soviet Academy to be authoritative textbooks.

This can only mean that any attempted annexation by the Soviets and their puppets in Warsaw of the German provinces east of the Oder and Neisse Rivers, and including the northern part of East Prussia, is null and void—or else, that the rulers in the Kremlin must stand indicted before the world as brazen, double-faced liars.

SOVIET WORDS AND SOVIET DEEDS

Let us look at the record of Soviet policy as compared with the professed tenets of Soviet international law.

In December 1941 Stalin in his negotiations with Anthony Eden, then British Foreign Secretary, was the first of the wartime Big Three to propose the dismemberment of Germany.

On February 23, 1942, Stalin, in a proclamatoin on the 24th anniversary of the Red Army, calls idiotic any press reports according to which the Red Army

were aiming at dismembering the German nation.

The experience of history proves—

so Stalin proclaimed—

that the Hitlers come and go again, but that the German people, the German nation will remain.

On November 6, 1943, Stalin speaking at the 26th aniversary of the Communist revolution enumerated Soviet war aims and listed on second place:

The policy of our Government remains unchanged. In common with our allies we must restore to the liberated nations of Europe the undiminished right and freedom of self-determination as to their political organization.

On November 28, 1943, on the opening day of the Teheran Conference, Stalin was again the first of the Big Three to demand the Oder River line as Germany's eastern boundary. On the closing day of the same conference he emphasized that Poland should be restored and aggrandized mainly at the expense of Germany.

On April 8, 1945, when this Government formally notified the Soviet Government of press and radio reports to the effect that certain Soviet-occupied territory, including the free city of Danzig, had been formally incorporated into Poland, and when this Government requested to be informed regarding the actual status of the territory in question, the Soviet Government, on April 17, 1945, replied that the departure of the German population in the wake of retreating German troops had left behind only a Polish population for the government of which a Polish civil administration had been set up locally. The Soviet note asserted that this action had no relation to the question of boundaries.

In other words, the Soviet Government on April 17, 1945, expressly denied that an annexation by Poland of German territory had taken place.

On May 9, 1945, Stalin in a proclamation to the world, announcing the surrender of the German Wehrmacht, declared:

Three years ago, Hitler announced the dismemberment of the Soviet Union, the separation of the Caucasus, the Ukraine, the Baltic Nations. * * * What now actually happened is the contrary. * * * The Soviet Union celebrates this victory, though she does not go about to destroy or dismember Germany.

In May 1945 Harry Hopkins, visiting Stalin in Moscow, told the Soviet dictator that the latter's pronouncement—that is, of May 9—against a dismemberment of Germany conflicted with his previous position as taken in Teheran and Yalta. Stalin replied that statements of Anthony Eden and William Strang had given him the impression that Great Britain and the United States likewise considered dismemberment only as an ultima ratio, an ultimate.

On June 5, 1945, the governments of the four powers declared their "intention, concerning the zones of occupation of Germany, to consult with the governments of other United Nations in connection with the exercise of this authority." Without the consent of the other three powers, and without previous consultation with the governments of other United Nations, the Soviet Government had no authority to organize, or permit to be organized, two special administrations within their zone of occupation.

At the Potsdam conference, therefore, Stalin admitted, when questioned about the area under Polish administration, that none of the powers was authorized to organize a new zone. He pretended that the Soviet Government had to provide for law and order in the rear area of the Red army. Note here the Soviet words for wholesale murder and mass rape: In Soviet language it is called "law and order."

At the time of the Potsdam conference, a proposal of the Soviet Government was considered with regard to parts of East Prussia that would be given to the Soviet Union. The proposal was accepted in principle and provided that the final determination of the territorial questions shall be reserved to a peace settlement.

Incidentally, neither Stalin nor Molotov attempted to advance any faked historical claims. They motivated their snatch of Königsberg pure and simple with the aim to have an ice-free harbor—though the Soviet Union has several ice-free harbors—and with the desire for strategic security, a well-worn phrase, which all aggressors have long been using for a screen behind which to hide their avaricious intentions.

On August 18, 1945, a Polish-Soviet boundary agreement was signed, article 3 of which states:

Until the final decisions about the territorial questions at the conclusion of a peace treaty, the * * * boundary line shall be.* * *

On April 7, 1946, a decree of the praesidium of the Supreme Soviet of the U. S. S. R. ordered the incorporation of the Königsberg region of East Prussia as an oblast into the Russian Soviet Republic—R. S. F. S. R.—and another decree of July 4, 1946, ordered to change the name of that city into Kaliningrad, after a Russian Bolshevik of that name.

Let me repeat here a previous comment: That Königsberg, the city where Immanuel Kant was born, lived and died, where he wrote his Critique of Pure Reason and his essay On Eternal Peace, should be called by the Communists and their fellow travelers, Kaliningrad, constitutes a blasphemy on civilization. The Free World cannot and should not reconcile itself to such disgrace.

On July 10, 1946—6 days after the Soviet act of changing the name of Königsberg—Molotov, addressing the conference of Foreign Ministers at Paris, unabashedly declared:

It has recently become the fashion to speak of a dismemberment of Germany into several autonomous states, * * * of partitioning off from Germany the Ruhr district. All these suggestions derive from the same aim to destroy Germany. * * * As I have already stated, the destruction of Germany cannot be our task, if we really value the interests of peace and order.

On February 25, 1947, article 22 of a Soviet law of that date changed a provision of the constitution of the U. S. S. R.: The region—oblast—of Königsberg—Kaliningrad—is declared to have the status of a Province—rayon.

On April 11, 1947, Molotov, addressing the conference of Foreign Ministers at Moscow, declared:

I should like to remind you of the well-known proclamation on May 9, 1945, of the head of the Soviet Government, J. V. Stalin, immediately upon the surrender of Germany. According to it Stalin stated already several months before the Potsdam meeting that the Soviet Union does not proceed to destroy or dismember Germany.

Statements by responsible Soviet leaders, disavowing any aims of annexation and territorial aggrandizement can be counted by the score. Here is one of recent date. In an address before the United National General Assembly in New York on November 22, 1956, Dimitri T. Shepilov, then Soviet Foreign Minister, explained Soviet foreign policy as follows:

Any expansionist aspirations are alien to the Soviet state.

Since the Soviet Union, according to the definition in her own constitutional law, is "a voluntary union of peoples who aspire to no territorial conquests and reject the annexation of territories against the will of the people thereof"; and since, in accordance with the doctrine of Lenin as followed up by numerous statements of Soviet policy, "any expansionist aspirations are alien to the Soviet state"; very well, let us accept these solemn pronouncements in good faith and request the government in the Kremlin to act accordingly.

V

LEGAL DEVELOPMENT

TOWARD A RULE TO HOLD CONQUEST AND ANNEXATION A VIOLATION OF INTERNATIONAL LAW

I shall now proceed with a further review of the legal aspects of the case. What does western law say on conquest and annexation? What does it say concerning the right of self-determination of peoples? What is the declared policy of this Government of ours as to both questions?

A legal maxime which has its roots in the great codes of ancient Roman law, remained valid and is incorporated into modern law says: "Ex injuria non oritur jus"—no right can come out of a wrong.

Even if the historical facts should not suffice to throw out of court any claim advanced by the two Communist countries, Poland and Soviet Russia, to the German Provinces east of the Oder and Neisse Rivers, the legal facts show beyond doubt that both Communist countries are in the wrong and no right can come out of it.

It was in 1795—at the time of Washington's administration—that the world-renowned philosopher, Immanuel Kant of Königsberg, East Prussia, wrote in his essay On Eternal Peace the line already quoted:

Nature irresistibly wills that right shall ultimately prevail.

The trend in international law toward outlawing conquest and annexation has had a steady growth. Let us view the steady growth, the "irresistible will of nature," to use the language of Kant.

At the time of Hugo Grotius, the father of international law, state territory was still identified, as in the middle ages, with the property of the monarch of the state. Grotius applied therefore to acquisition of territory by states the rules of Roman law concerning the acquisition of private property. Though this procedure is no longer followed, and acquisition of territory by a state meant, in modern times, the acquisition of sovereignty of such territory, the rules of Roman law left traces which have not been obliterated. They are evident in the leading British international law treatise of Lassa F. L. Oppenheim.

Thus, the maxim of Titus Pomponius remains valid to this day: "Id quod nostrum est, sine facto nostro ad alium transferri non potest"—What is ours, cannot be transferred into other hands without our doing it. It would follow from this that conquest cannot in itself confer legal title to occupied territory of another state.

Emmerich de Vattel, August of Saxony's ambassador and a great Swiss authority on international law, who wrote Le Droit des Gens 200 years ago, held that conquest did confer legal title. His view greatly influenced subsequent writings, particularly in Great Britain and the United States. However, Vattel already noticed that sovereignty does not arise until the process of conquest is completed, by treaty of cession or otherwise.

Great French authorities on international law, such as Audinet, Mérignhac and Despagnet, denounced as early as 60 years ago conquest and annexation as a mode of territorial aggrandizement.

Eugene Audinet, for instance, writing on La Prescription Acquisitive in the Revue Général de Droit International Public, volume III, page 320, published in Paris in 1896: "Dans le cas de la conquête, il est vrai, le titre d'acquisition n'est pas seulement vicié; il n'existe pas"—In the case of conquest, the title of acquisition is not only invalidated, it just does not exist.

Professor Audinet is not alone in his judgment. Other French scholars are equally definite in their findings. Alexandre Mérignhac, writing in the second volume of his Traité de Droit International Public, Paris, 1905–12, page 411, condemns conquest as contrary to the principle of sovereignty and independence of states and does not regard it as a valid mode of gaining title to territory.

Frantz C. R. Despagnet, in his Cours de Droit International Public, Paris, 1910, sections 396–398, denies that strategic areas may be seized under the right of self-defense and rejects the legitimacy of conquest undertaken in behalf of the principle of nationality.

Ernest Nys, the eminent Belgian jurist, an Associate Justice of the Hague Permanent Court of Arbitration, stated in 1911 in the American Journal of International Law, volume 5, page 84:

> The right of conquest is a thing of the past, annexation of territory and transfer of sovereignty no longer take place as the invading army advances; a more equitable idea has been imposed in the form of military occupation.
>
> The idea of the occupation—

Added Nys—

> was formed when the right of conquest was rejected as too brutal. (By virtue of the right of conquest the invaded territory was immediately subject to the sovereignty of the victor and its inhabitants became subjects of the victor.)
>
> When such results appeared to be a monstrous abuse of force—

Continued Professor Nys—

> a de facto situation was presented which could not be ended until the conclusion of peace. In this intermediate status, the invaded country, occupied by the army, did not cease to belong in law to its sovereign; but in reality it was under the actual domination of the victor.

The outstanding Italian scholars, Hildebrando Accioly and Pasquale Fiore, in their several treatises, published half a century ago, did not list conquest as a valid mode by which a state may acquire territory. On the contrary, they denied altogether that conquest and annexation renders a legal title under international law.

Pasquale Fiore, in his International Law Codified and Its Legal Sanction—translated from the 5th Italian edition by E. M. Borchard, New York, 1918—stated:

> Conquest cannot per se be considered a legally valid title to the occupied territory—

Of another state when it is accomplished by the use of force.

> It must always be considered as illegal according to modern international law, whatever its purpose may be. * * * It cannot be justified by the military occupation of a part of the enemy territory and by its forced cession, imposed upon the vanquished people as a condition of peace (secs. 1083, 1084).

Fiore, in section 1085, then enunciated the rule:

> The appropriation of the territory of another state by force and its incorporation must be considered illegitimate under the principles of law.

Reflecting the age of imperialism which 50 years ago was drawing to a close, Fiore in his next paragraph, section 1086, still visualized a situation where new conditions have been gradually accepted by the population, and where the fact, illegal in its origin, had been legalized, thus conquest resulting in the acquisition of conquered territory.

Some British authorities on international law have also declared as illegal the annexation of territory of another state. Coleman Phillipson, in his Termination of War and Treaties of Peace, London, 1916, page 29 and following, holds:

> Encroachment on a nation's territory is not sanctioned by international law. International law, for its entire edifice, has been built up on the assumption of the autonomy and independence of sovereign states. * * * No matter how great a particular nation's need of additional territory may be, it cannot justify the seizure of another nation's land.

Prof. W. E. Hall likewise omitted conquest as a mode of acquisition among valid methods of acquiring territory. His treatise, International Law, was published in Oxford in 1917. Lassa Oppenheim in his International Law, volume I, section 237, emphasized that—

> Conquered enemy territory, although actually in possession and under the sway of the conqueror, remains legally under the sovereignty of the enemy until through annexation it comes under the sovereignty of the conqueror.

While some British scholars, as Oppenheim, at their time still admitted the possibility of legalizing annexation and conquest, the eminent South American authority, Epitacio Pessoa of Brazil, as early as 1911 declared in article 43 of his Projecto de Codigo de Direito Internacional Publico, Rio de Janeiro, 1911, that territory cannot be acquired by conquest or by cession made under the threat of war or pressure of armed force.

Incidentally, Pessoa's code was one of the first efforts toward codification of American international law. In this connection it is most noteworthy that the Brazilian constitution of 1891, in its article 88, contains the categorical stipulation that Brazil will not engage in any wars of conquest, either alone or in alliance with other nations.

THE TREND IN AMERICAN INTERNATIONAL LAW

The development in this country of the legal points in question may be seen from statements of some of our foremost jurists. Chief Justice John Marshall, delivering in 1828 the opinion of the United States Supreme Court in *American Insurance Co.* v. *356 Bales of Cotton* (1 Pet. 511), declared:

> The usage of the world is, if a nation be not entirely subdued, to consider the holding of conquered territory as a mere military occupation until its fate shall be determined at the treaty of peace. If it be ceded by the treaty the acquisition is confirmed, and the ceded territory becomes a part of the nation to which it is annexed, either on the terms stipulated in the treaty of cession or on such as its new master shall impose.

Henry Wheaton, in his treatise Elements of International Law, published in 1836, pointed to the line of demarcation existing between mere military occupation and conquest, and complete subjugation, writing—sixth edition, page 781:

> The rights of occupancy, then, cannot be coextensive with those of sovereignty. They are due to the military exigencies of the invader, and consequently are only provisional.

John Basset Moore, in his Digest of International Law, volume I, page 290, adopted the language of Chief Justice Marshall when he declared:

> The holding of a conquered territory is regarded as a mere military occupation until its fate shall be determined at a treaty of peace.

Charles Cheney Hyde, Moore's successor in the chair of international law in Columbia University, writing on Conquest Today—in 1936—in the American Journal of International Law, volume 30, pages 471–476, asks the question:

> May the victor in a war today without violating international law reap the fruits of conquest by effecting a transfer of sovereignty to itself of territory of which it has gained control?

Hyde then maintains:

No satisfactory answer is to be found in the exercise of a compulsion which produces technical acceptance by a defeated foe of a treaty which embodies a cession of desired territory, and a situation which thereafter precludes the grantor from successfully denying the validity of the arrangement.

Ellery C. Stowell, an outstanding American authority, writes in 1931 in his treatise, International Law, that under the heading of redress annexation of territory may be permissible and justifiable "when it is necessary to secure redress and to enforce respect for international law." However, Professor Stowell holds the right of redress to be limited by the legal character of "moderation in exacting" indemnity, since it is a rule of international law.

Stowell continues:

Conquest is generally closely associated with redress, which only too frequently is made use of to serve the purpose of a screen to conceal the iniquity of conquest.

He then points out:

The purpose and the fruit of aggression is conquest, which latter may be defined as any advantage secured by aggression or abuse of force. Otherwise expressed, conquest is the forcible seizure or the enforced cession of territory or rights from a state without the authorization of international law. Conquest is therefore, it is hardly necessary to repeat, a violation of international law.

Matthew Mark McMahon, another eminent scholar, in his treatise, Conquest and Modern International Law, published by the Catholic University, Washington, 1940, points—on page 13—to the inconsistency of those writers who still recognized conquest as a mode of acquiring territory and then rejected it as a right on the grounds that it is the forcible acquisition of territory admitted to belong to the enemy. These writers then claimed that conquest expressed not a right, but a fact, from which rights were derived.

Professor McMahon emphatically declares:

To deny the right of conquest, and to affirm rights vested by the fact of conquest, such as lawful character of title, reflects a vicious inconsistency—tantamount to declaring that conquest before it is put into operation is illegal, but that once it becomes a completed operation it is legal. No argument can sustain this proposition.

Reviewing McMahon's book, Professor Stowell writes in the American Journal of International Law, volume 35, 1941, page 171:

The totalitarian dictators have made conquest the burning question of the day. * * * It is true that the greater part of the possessions of the states of today has no other derivation, but it is contrary to the principles of any society that one of its members should be given the right to despoil his neighbors. * * * Vattel's view (that conquest renders lawful title) * * * is becoming obsolete. * * * We have more recently made retribution through the affirmation of the Stimson doctrine, which refuses to recognize the validity of the fruit of conquest.

The position taken by Stowell and McMahon in the 1930's and early 1940's manifests the then increasing weight of authority to deny that conquest and annexation can provide a legally valid method of obtaining title to alien territory. It is not incongruous with the trend that the United States District Court for the Southern District of New York in 1948 in *Brunell* v. *the United States* (77 F. Supp. 68) held that conquest and military occupation does not, alone, result in a change of sovereignty.

Though the language of John Marshall in American Insurance Co. against 356 Bales of Cotton is still echoing in the policy of this Government with reference to the German Provinces east of the Oder-Neisse line in considering the holding of the territory "a mere military occupation until its fate shall be determined at the treaty of peace," international law has advanced a great deal since the days of Marshall. Article 43 of the Hague Convention IV—on land warfare—has made it clear that occupation is not equivalent to conquest and does not confer title. The occupying power possesses but does not own the territory.

Conquest in its final phase of subjugation, which would possibly provide a basis for annexation, transgresses the limits of authority granted to the occupying power by the Hague Convention. Conquest therefore violates international law. Regardless of whether or not the formal act of annexation precedes the last phase of a conquest, annexation is likewise to be regarded as contrary to international law because it violates the Hague Convention IV and it is contrary to the basic rights of the State.

Since international law prohibits the use of force by one state against another, annexation has no longer a place in law; every conquest is to be regarded as a violation of law. Since this stage has been reached, the formal declaration of annexation has lost its previous formative effect.

Professor Herbert Kraus of Göttingen University, one of Germany's foremost authorities on international law, in a recent statement as to the legal position of the German Provinces east of the Oder-Neisse line has quite correctly pointed out that the present illegal occupation by the two Communist Powers, Poland and Soviet Russia, of these German Provinces is a violation of two principles of present-day international law, namely, the prohibition of conquest and annexation and the right of self-determination of peoples—compare his article in Germany: The International Magazine of the Federal Republic, Hamburg, December 1956.

VI

POLICY OF THE UNITED STATES GOVERNMENT UNITED STATES POLICY AND THE DEVELOPMENT IN THE LEAGUE OF NATIONS ON CONQUEST AND ANNEXATION

This country and this Government have had a prominent part in establishing these principles and in the development toward incorporating them into international law. It would be appropriate, therefore, to survey the development of the two fundamental principles as seen in the declarations of United States policy as well as in the affairs of Europe and to trace their growth toward acceptance as part of the law of nations.

The beginning in this country of the outlawry of conquest reaches back to the Monroe Doctrine. It obtained its theoretical basis in the policy of Secretary of State James G. Blaine, inaugurated in 1881 and leading to the resolution against conquest adopted by the First Pan-American Conference in 1890.

The policy of this Government was then definitely stated by President Woodrow Wilson, when he declared in a message to Congress on January 8, 1918:

The day of conquest and aggrandizement is gone by.

Nations that may perhaps have specific reason for being grateful to our World War I President should not fail to take notice of this statement.

A decisive step to outlaw conquest and annexation was taken in Europe by the adoption of the Covenant of the League of Nations. The preamble to the Covenant requests of the League members "a scrupulous respect for all treaty obligations." This is laid down as a prerequisite for agreement to the subsequent articles of the Covenant.

Article 10 of the league covenant then binds the members to respect the inviolability of the territory and the existing independence of all member nations and to safeguard them against an attack by the use of force. Thus, article 10, in the relationship of League members among each other, prohibited any act of annexation. Poland and Germany as well as the Soviet Union were members of the League of Nations and had solemnly avowed to observe the terms of the covenant.

Article 10 of the league covenant was by no means just another one of those "pious phrases" to which some governments pay lip service and no more. Instead, it was at once recognized by international law authorities as well as by leading statesmen as a far-reaching clause of the covenant and as adding a most important rule to the law of nations.

A committee, established by a League Council resolution on February 21, 1921, consisting of prominent jurists and meeting under the chairmanship of Vittorio Scialoja of Italy, gave this interpretation:

L'article 10, considéré comme une interdiction de violer le status quo territorial et politique confirmé par les traités et comme une garantie contre cette violation, contient la pensée fondamentale sur laquelle reposent les articles suivants du pacte.

It will be seen from this that the League members themselves interpreted the article 10 as an injunction against any violation by force of the territorial status quo. In other words, this was not merely a prohibition of annexation; but also any future annexation, if perpetrated by use of external force, was declared null and void. It should be noted, moreover, that the term "external force" did not limit the application of the injunction to the existence of a state of war.

The well-known Belgian statesman, Paul Hymans, who has frequently and ably represented his country in the halls of the League of Nations, spoke in 1925 of article 10 as "l'âme du Pacte et essence des engagements internationaux qu'il considère."

Paul Fauchille in his Traité de Droit International Public, volume I, section 557-12, published in 1926—though still holding that territory forcibly obtained and subsequently confirmed by a treaty may render a valid title—qualified these remarks by stating that article 10 "a en réalité nettement condamné l'existence du droit de conquête."

Axel Möller, the Danish authority, states in his International Law in Peace and War—translated by H. M. Pratt, London, 1931, part I, page 114:

> According to the Covenant of the League of Nations, conquest and compulsory cession of land can no longer be a valid ground of acquisition amongst members of the League.

The injunction against conquest and annexation was further strengthened by the Geneva Protocol of 1924 and the Locarno Pact of 1925. But there can be no doubt that the League covenant constituted a legal barrier against conquest and annexation by force and bound League members by its terms.

In this country the fight to outlaw war, conquest and annexation was taken up anew after the end of the First World War. It was vigorously carried forward in the Congress of the United States. A resolution for the outlawry of war was introduced in the Senate in 1923 by the Senator from Idaho, William E. Borah, based upon the Levinson plan of 1922 which specifically stated that—

> All annexations, exactions, or seizures by force, duress or fraud shall be null and void.

The Borah resolution led in time to the Pact of Paris, known as the Kellogg-Briand Pact for the Outlawry of War, which is today a vital part of our international law. It has been invoked by this Government time and again. The acts of aggression committed by the Governments of Japan, Fascist Italy and Nazi Germany, though temporarily endangering the whole structure of international law, have been a stimulus to the free nations of the world to stand together in rejecting any attempts on the part of the totalitarian regimes to reintroduce the law of the jungle.

When Japan, in violation of the Pact of Paris, began to occupy Manchuria the then Secretary of State, Henry L. Stimson, in his note of January 7, 1932, declared that the American Government cannot admit the legality of any situation de facto, nor would it recognize any situation, treaty or agreement, brought about by means contrary to the Pact of Paris.

When a dispute flared up between Bolivia and Paraguay over territory in the Gran Chaco, the United States joining with 18 other American Republics adopted, at Washington on August 3, 1932, a declaration in which they stated:

> The American Nations further declare that they will not recognize any territorial arrangement * * * which has not been obtained by peaceful means nor the validity of territorial acquisitions which may be obtained through occupation or conquest by force of arms.

Only a few days later, President Herbert Hoover pronounced in an address of August 11, 1932, the policy of this Government to be this:

> The United States did not and would never recognize the title to possession of territory gained in violation of the peace pacts which were signed with us.

The Governments of Poland, the Soviet Union and six other countries signed a convention at London on July 3, 1933, to which Finland as a ninth country later acceded. By the terms of this convention these nations legally bound themselves and each other to forgo conquest and annexation. The preamble of the convention pointed to the significance of the Kellogg-Briand Pact as a limitation on conquest and then stated:

> The signatories, "mindful of the fact that the Kellogg-Briand Pact prohibits all aggression, and noting that all states have an equal right to independence, security, the defense of their territories, and the free development of their institutions" are "desirous, in the interest of general peace, to ensure to all peoples the inviolability of the territory of their countries."

There is not even the shadow of a doubt that both, Poland and the Soviet Union, if not by any previous act, have here expressly and specifically legally bound themselves in the face of the world against aggression and annexation of foreign soil.

The United States is a party to the Montevideo Convention of 1933 on the Rights and Duties of States, which in its article 11 accepts as a rule of conduct for the parties their obligation "not to recognize territorial acquisitions or special advantages which have been obtained by force."

The United States has further committed herself by the Anti-War Treaty of Non-Aggression and Conciliation, signed at Rio de Janeiro on October 10, 1933, which contains the following provisions:

> The states designated below * * * to the end of condemning wars of aggression and territorial acquisitions that may be obtained by armed conquest, making them impossible and establishing their invalidity through the positive provisions of this treaty * * * have agreed on the following:
>
> "They declare that as between the high-contracting parties territorial questions must not be settled by violence, and that they will not recognize any territorial arrangement which is not obtained by pacific means, nor the validity of the occupation or acquisition of territories that may be brought about by force of arms."

This treaty, it may incidentally be mentioned at this point, has been ratified or adhered to by 34 other nations, including non-American nations, which by such accession have given approval of, and legally bound themselves to, the principle of nonrecognition of territorial annexations brought about by force of arms.

In a public statement on July 12, 1935, the Secretary of State, Cordell Hull, reemphasized the policy of this Government. He declared that the obligations resulting from the Pact of Paris of the United States are "no less binding now than when the pact was entered into by the 63 nations that are parties to it." He added that this country, moreover, is committed by still other treaties to a policy of nonrecognition of territorial acquisitions obtained by the use of force.

By these treaties the United States has definitely bound itself to a general rule of conduct which is applicable in all cases where she is called upon to decide whether to recognize the validity of territorial acquisitions made as a result of the use of armed force.

It may be said in conclusion of the pre-World War II period that the policy of the United States toward the outlawry of territorial aggrandizement, firmly declared in 1918 by President Wilson, followed up by the declarations of succeeding administrations, leading to the Kellogg-Briand Pact of Paris for the Outlawry of War, to the policy declarations of Hoover and Stimson, has been upheld by the Roosevelt and Truman administrations by the pronouncements of Secretary of State Cordell Hull and others.

UNITED STATES POLICY STATEMENTS ON THE RIGHT OF SELF-DETERMINATION OF PEOPLES

This country and Government have had an even more significant part in the development of the right of self-determination of peoples, which today is a generally accepted canon of international law.

The principle of self-determination of peoples has been succinctly stated by President Woodrow Wilson in his address of May 27, 1916, before the League To Enforce Peace, when he said:

> We believe these fundamental things: First, that every people has a right to choose the sovereignty under which they shall live.

In his address to the Senate of January 22, 1917, President Wilson stated:

> No right anywhere exists to hand peoples about from sovereignty to sovereignty as if they were property.

A year later, in his address of February 11, 1918, before a joint session of the two Houses of Congress, President Wilson declared:

> "Self-determination" is not a mere phrase. It is an imperative principle of action.

He then laid down four fundamental principles, among them:

> Second, that peoples and provinces are not to be bartered about from sovereignty to sovereignty as if they were chattels and pawns in a game, even the great game, now forever discredited, of the balance of power.

Finally, in his Mount Vernon address of Independence Day, 1918, President Wilson advanced as one of the fundamental ends to be achieved:

> The settlement of every question, whether of territory, of sovereignty, of economic arrangement or of political relationship, must be upon the basis of the free acceptance of that settlement by the peoples immediately concerned.

Through the exchange of notes between the then German Government and the governments of the Allied and Associated Powers, this statement has been made part of the record and was to be used for guidance at the peace treaty.

It should not be overlooked that the Soviet Government, in a note of March 7, 1933, reaffirmed its own promise to

adhere to the principle of self-determination of peoples with these words:

> Since the origin of the Soviet State, the Soviet Government has proclaimed as an essential principle of its policy the right of all peoples to self-determination, to manifest their desires in conditions of freedom and without all external pressure.

VII

UNITED NATIONS POSITION

THE ATLANTIC CHARTER

It was a logical sequence, therefore, that the Atlantic Charter of 1941 should make still further provision to outlaw conquest and annexation and to entrench the right of self-determination of peoples. In a solemn declaration in the face of the world, the Governments of the United States and Great Britain proclaimed:

> First, their countries seek no aggrandizement, territorial or other; second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned.

The Atlantic Charter was incorporated into the Declaration of the United Nations. Both the Soviet Union and Poland, jointly with 24 other nations acceded to it. They approved of, and reaffirmed, the principles stated therein, when they solemnly signed the United Nations Declaration in Washington, D. C., on January 1, 1942.

The next important step toward making these provisions still more forceful in international law, was taken in connection with the preparatory work for the United Nations organization and the drafting of a charter to be its basic law.

DUMBARTON OAKS

The United Nations Charter was accordingly discussed in its broad outline during the Foreign Ministers Conference in Moscow in October 1943, culminating in a Four Nations Declaration. The draft of the U. N. Charter was then approved of and accepted by the Dumbarton Oaks Conference, meeting from August 21 to October 7, 1944, with the Soviet delegates freely participating and joining in its final approval.

Chapter 2, section 1, of this draft reads: "All members of the organization will refrain in their international relations from every threat of force or every use of force which is incompatible with the aims of the United Nations".

The agreement reached at Dumbarton Oaks is a valid international agreement and is legally binding the nations the governments of which were represented at the conference. The draft of the United Nations Charter as agreed to by these representatives, and as then pronounced to be part of the Dumbarton Oaks Declaration, must be regarded, and is regarded, as a legally binding instrument. It cannot be brushed aside.

The Soviet Government in particular cannot, on the one hand, participate in the work on an international constitutional charter which in comparison with the Covenant of the League of Nations is to be broader and more effective, and specifically approve of the Dumbarton Oaks draft containing the proscription against the use of force while, on the other hand, this same Government would go about annexing German territory or turning German territory over to Poland. This would be a revolting case of perfidy.

THE UNITED NATIONS CHARTER

The prohibition of conquest and annexaton as finally incorporated in article 2, section 4, of the United Nations Charter reads as follows:

> All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any manner inconsistent with the purpose of the United Nations.

It should be noted that article 2 sets down the principles of the United Nations, while article 1 states its purposes. Both articles are paramount and are to direct the policy of member nations. But, while the purposes are goals to be aimed at for guidance, the principles are a concrete fundamental. They are the basic rules strictly binding the conduct of each member nation. They are the doctrine without which the United Nations would not be able to exist.

In order to make these principles still more comprehensive, section 6 of article 2 states:

> The Organization shall insure that states which are not members of the United Nations act in accordance with these principles so far as may be necessary for the maintenance of international peace and security.

In other words, these principles are the law. Member nations which act against the rules of the law must expect to stand indicted as violating the law. It is for this reason that article 6 of the charter declares:

> A member of the United Nations which has persistently violated the principles (that is, the provisions of art. 2) contained in the present charter may be expelled from the Organization.

It is of importance to realize and be aware of the preeminence of the principles as declared in article 2 of the charter. To use the words of Chief Justice Marshall in Marbury against Madison:

> The principles * * * so established, are deemed fundamental. * * * They are designed to be permanent.

They are constituting what Chief Justice Marshall would call the fundamental and paramount law.

It follows from this that article 107 cannot overrule article 2. Chapter 17 of the U. N. Charter dealing with transitional security arrangements contains articles 106 and 107 of which the latter reads:

> Nothing in the present charter shall invalidate or preclude action in relation to any state which during the Second World War has been an enemy of any signatory of the present charter, taken or authorized as a result of that war by the governments having responsibility for such action.

THE DRAFT CODE OF INTERNATIONAL PENAL LAW

Since the Dumbarton Oaks agreement in 1944 on the draft of the United Nations Charter, and since the adoption in 1945 of that charter, steps have been taken to incorporate into a code of laws the rule of the charter against conquest and annexation so as to make it still more binding in international law. By resolution of November 21, 1947, the United Nations General Assembly directed a commission of legal experts "to formulate the principles of international law recognized in the charter of the Nuremberg Tribunal and in the judgment of the Tribunal, and prepare a draft code of offenses."

Article 1 of the draft code, as adopted by the Commission, reads:

> Offenses against the peace and security of mankind, as defined in this code, are crimes under international law, for which the responsible individuals shall be punished.

Article 2 begins:

> The following acts are offenses against the peace and security of mankind.

And then lists under paragraph 8:

> The annexation by the authorities of a state or territory belonging to another state, by means of acts contrary to international law.

In the official commentary to the draft code, the Commission stated:

> Annexation of territory in violation of international law constitutes a distinct offense, because it presents a particularly lasting danger to the peace and security of mankind.

After referring to the provisions of article 10 of the League Covenant and to the stipulations of article 2, paragraph 4, of the United Nations Charter, the commentary continues:

> Illegal annexation may also be achieved without overt threat or use of force, or by one or more of the acts defined in the other paragraphs of the present article (e. g., par. 11: "Inhuman acts such as murder, extermination, enslavement, deportation, or persecutions, committed against any civilian population on social, political, racial, religious, or cultural grounds by the authorities of a state or by private individuals acting at the instigation or with the toleration of such authorities." It adequately covers the crime of expulsion).

It was in accordance with the rule of international law, prohibiting conquest and annexation, that the victorious Allies of the Second World War at the time of Germany's defeat declared null and void all overt and disguised acts of annexation committed by the Hitler government. However, the application of the rule is not limited to the vanquished aggressor; it binds the victor as well, even though the latter should originally have been the victim of aggression. There is not, nor can there ever be, a double standard in the application of justice.

We may conclude, therefore, that the Soviet Union and the Red regime of Communist Poland, by continuing to act in the eastern provinces of Germany in a manner as if exercising rights of sovereignty in that part of Germany, are continuously violating the charter of the United Nations and violating international law.

TEHRAN—YALTA—POTSDAM A DEVIATION?

It has been claimed that at Tehran and Yalta, President Roosevelt, apparently unaware of the position of international law and the firm declarations as well as the logical course of American

policy, did commit the United States to agree to acts of territorial aggrandizement by some of her wartime allies. Such claims, however, are not borne out by facts.

Furthermore, a statement of December 18, 1944, by the late Secretary of State Edward Stettinius has been brought in to support the claim of such commitment. However, the text of the statement fails to give evidence of a firm commitment. Moreover, in our system of presidential government a Cabinet member does not have the parliamentary responsibility which is carried by his opposite number in some of the European governments with their parliamentary or cabinet system of government. In this country it is the President alone who assumes the responsibility for the daily conduct of foreign policy.

In the closing paragraph of the Yalta Declaration, dealing with boundaries, the words "the three powers" in the original draft were changed into "the three heads of government," and for "agree" was substituted the word "feel." The changes thus transformed the statement on boundaries from a governmental commitment to an expression of views. Such it is and nothing more.

In his account of the Yalta meeting, Secretary of State James Byrnes pointed out:

> Time after time the President repeated that there could be no transfer of territory until there was a peace conference.

President Roosevelt himself, in his report to Congress of the Yalta Conference, stated:

> I am well aware of the constitutional fact—as are all of the United Nations—that this charter (i. e., the Yalta Declaration) must be approved by two-thirds of the Senate of the United States as will some of the other arrangements made at Yalta.

In a communication on March 24, 1945, to Stalin, President Roosevelt criticized Soviet failure to follow, on the Polish question, the Atlantic Charter principles and added:

> I am sure you are aware that genuine popular support in the United States is required to carry out any governmental policy, foreign or domestic.

There can be no doubt that the position of the American President has been sufficiently made clear to the Soviet Government.

As to the term "now under Soviet and Polish administration," President Truman at Potsdam in 1945 referred specifically to the use of that term and explained that it was adopted for formal reasons to emphasize the fact that a final agreement as to territorial changes must be reached by the peace conference.

In concluding this part of my remarks, I wish to point out that, in spite of a critical phase at the time of Teheran, Yalta, and Potsdam, the steady and uninterrupted advance which this country has made toward outlawing conquest and annexation has encouraged moral and legal forces in many other nations of the world. It has thus given aid to, and greatly strengthened, this development in international law. I cannot conceive that we should ever fall back again and prostitute our own principles by meek surrender to what may be called the "law of the jungle."

VIII

STAND OF GERMAN FEDERAL GOVERNMENT AND VATICAN

GERMAN PROTESTS LEGALLY VALID

Of course, the wrong, committed by the Communist Poles and Russians in continuing to occupy and hold the German Provinces east of the Oder-Neisse line, can only have legal consequences as long as the people who have been wronged against and their government and spokesmen will continue to fight for their right. Roman digest law once stated: "Jus civile vigilantibus scriptum est." The law of equity of the present day says: "Vigilantibus et non dormientibus jura subveniunt"—the laws aid those who are vigilant, not those who sleep upon their rights.

Have the German people and its elected government registered a legally valid protest? Have they persistently and vigilantly stood up for their right? A protest is a formal communication from one state to another that it objects to an act performed, or contemplated, by the latter. Such protest serves the purpose of preservation of rights, or of making it known that the protesting state does not acquiesce in, and does not recognize, certain acts.

When, on June 6, 1950, the Communist regime of the Soviet occupied zone of middle Germany concluded at Görlitz a so-called agreement with the Communist regime of Poland declaring the Oder-Neisse line to be the final boundary between Germany and Poland, they ignored the legal position and violated the law.

Thereupon, the Federal Government of West Germany in a note protested against the Görlitz agreement. The note stated that the territory east of the Oder and Neisse Rivers continued to be part of Germany. As part of the Soviet zone of occupation it had at the time of the Potsdam agreement been turned over to the Republic of Poland merely for the purpose of temporary administration. The boundaries of Germany could not be changed, except by a peace treaty with the whole of Germany.

The note was handed by the three western high commissioners to the Soviet commander in chief in Germany, General Chuikov. In transmitting the note, the western high commissioners emphasized of their own that the German boundaries, according to the agreement reached at Potsdam, could not be finally determined until a peace treaty was signed. The allied high commission was therefore constrained to regard the agreement on the Oder-Neisse line signed at Görlitz between representatives of the Soviet Zone republic and Poland as a violation of the obligations assumed by the four major powers.

This Government as well as the Governments of France and Great Britain supported by official statements the protest of the German Federal Government and the action taken by the three high commissioners. The statement issued in Paris on July 7, 1950, read:

> The French Foreign Ministry authorizes its high commissioner in Germany to state that France explicitly recognizes as German State territory the area within the frontiers of 1937 and that the Federal Government as a result of free elections is regarded as the spokesman for the whole of Germany.

The following statement was issued in London on the same day:

> The Oder-Neisse line had never been decided upon as a final boundary. * * * The British point of view has not changed since Potsdam. Stalin himself had stated on July 21, 1945, that the final settlement of the western Polish boundary could not be undertaken before a peace treaty was concluded. * * * The British Government therefore intended to ignore the Görlitz agreement and to regard it as nonexistent.

Our Department of State declared on the following day, June 8, 1950, that the Görlitz agreement was a violation of the Potsdam agreement:

> The present Soviet zone regime * * * is not * * * entitled to speak for the German people. The United States Government has in the past never recognized the Oder-Neisse line as the final eastern frontier of Germany. It does not recognize the present arrangement arrived at by the Polish Government and the administration of Eastern Germany.

The German Federal Government followed up her earlier note by publishing on July 9, 1950, a protest against the Görlitz agreement in which it stated:

> The so-called government of the Soviet Zone has no right whatsoever to speak for the German people. Its arrangements and agreements are null and void. The decision on the eastern German territories at present under Polish and Soviet administration cannot and will not be taken until a peace treaty is concluded with a united Germany. The German Federal Government, as the spokesman for the entire German nation, will never accept the annexation, contrary to every principle of law and humanity, of these purely German territories. The Federal Government will seek a just solution of this question in future peace negotiations between a genuinely democratic Poland and a democratic, united Germany.

THE BUNDESTAG RESOLUTION

In 1952 the German Bundestag—Federal Assembly—adopted at a special meeting a resolution which reads:

> According to the Potsdam agreement, the German territory east of the Oder and Neisse has been transferred as part of the Soviet Zone of occupation of Germany to the Polish Republic only for purposes of temporary administration. That region remains a part of Germany. Nobody has the right to arrogate to himself the power to abandon people and country, or to pursue a policy of renunciation.

This resolution has been adopted by a unanimous vote of all parliamentary parties, excepting the Communists. It was ratified by the Bundesrat—second chamber—and accepted by the Cabinet. It has, therefore, come to be regarded as a basic policy statement of German foreign policy.

The German Federal Government has never wavered in its stand. It has reaffirmed its position time and again up to the present day. In the early months of the first Eisenhower administration, the West German Chancellor, Dr. Konrad Adenauer, under date of May 29, 1953, addressed to the President of the United States a memorandum in which he declared:

> No German Government will ever be prepared to recognize the Oder-Neisse line.

Germany will, however, strive to settle in a new spirit of peaceful international cooperation the territorial questions that are connected with it.

On June 28, 1956, the West German Foreign Minister, Dr. Heinrich von Brentano, on behalf of the Federal Government made the following statement in the Bundestag:

The Federal Government maintains unchanged its determinate position with regard to the eastern boundaries. * * * In conformity with the declared will of the entire German nation, it has time and again called attention to the fact that Germany continues to exist within the boundaries of 1937, and that unilateral decisions made during the years following the complete breakdown of Germany are not recognized by the German people. The right to their homeland and to self-determination are inalienable prerequisites for settling the fate of men and peoples living in exile and bondage.

In October 1956 the West German Under Secretary of Foreign Affairs, Dr. Walter Hallstein, declared in the Bundestag:

The Federal Government will at every suitable occasion point out to the powers concerned and to the world that the 11 million expellees, now living in the Federal Republic have never waived the claim to regain their homelands in justice, peace, and freedom. Moreover, the Federal Government will call attention to the fact that this position is shared by the whole of the German nation.

DECLARATION OF GERMAN FEDERAL GOVERNMENT

The most recent and comprehensive reaffirmation of policy on the German provinces east of the Oder and Neisse Rivers was made by the West German Foreign Minister, Dr. Heinrich von Brentano, when he declared on behalf of the German Federal Government in the Bundestag on January 31, 1957:

The Federal Government has repeatedly stated its position to these questions in solemn declarations. It agrees with its allies on the fact that the final delimitation of the boundaries of Germany will have to be deferred until a freely negotiated peace treaty can be arranged for the whole of Germany.

Only a government of the whole of Germany and a body of people's representatives elected by the whole of the German people are authorized to reach a decision as to the future eastern boundaries of Germany.

The Federal Government continues to adhere to its position that such negotiations must leave no doubt, first, that as to the international territorial status of Germany the boundaries of the German Reich as of December 31, 1937, are legally valid and, second, that the German people cannot accept the Oder-Neisse line as a present or future boundary of Germany.

The Federal Government likewise continues to maintain that a solution of the boundary question is only conceivable by way of negotiation and should be reached neither by force nor by threat of force.

The Federal Government deems it necessary to reiterate its position today. It knows that this declaration has the approval of the German Bundestag and the people of Germany, including those Germans whose homelands are east of the Oder-Neisse line.

POSITION TAKEN BY THE VATICAN

It may not be irrelevant at this point to call attention to the clear and unequivocal stand taken by the Vatican and by prominent princes of the Roman Catholic church with regard to the part of Germany east of the Oder-Neisse line and its people, the present expellees in West Germany. The Roman Catholic stand may be based upon a passage of St. Augustine in his Epistulum ad Bonifacium:

When faith is pledged, it is to be kept even with the enemy against whom the war is waged.

Pope Pius himself, in a letter of March 1, 1948, called the expulsion from their homeland of the Germans an event without parallel in the past on which history would pass a severe judgment:

We think we know what happened during the war years between the Vistula and the Volga. But is it condonable to retaliate by driving 12 million human beings from hearth and home and exposing them to pauperization? * * * Our wish and our hope is that all those concerned will return to calm reasoning and revoke as far as possible, what has happened.

It is in accordance with this general policy that the Vatican has hitherto steadfastly refused to be pressured by Poland into appointing Polish archbishops and bishops to head the 6 dioceses in the German Provinces now under Polish administration. The only concession which the Vatican has recently—in December—made was the appointment for administrative purposes of 5 vicars-general and one coadjutor for the area.

However, in announcing the appointments the Vatican emphasized that they "are not to be looked at as a step, not even a first step, in the direction of recognition" by the Catholic Church of Polish sovereignty over the German Provinces east of the Oder-Neisse line. In accordance with the terms of the concordat any change in the German bishoprics of the area would have to await a final settlement of the boundary question.

The structure of jurisdiction in the German dioceses east of the Oder and Neisse Rivers remains unaltered. For instance, the official Vatican Yearbook for 1957 lists for the diocese of Danzig—the Free City of Danzig—to which a coadjutor has just been appointed, the German bishop, Bishop Splett, with the annotated remark "Prevented from exercising the functions of his office." Imprisoned by the Communist Poles soon after the end of the last war, and recently freed, Bishop Splett is now in West Germany.

I am naturally aware of isolated voices coming out of Germany, voices of some individuals who appear to be willing to barter their right away. Their own instinct for the right may have been blunted, and their vision dimmed, by years of subservience to the past Nazi regime. It is nothing unusual to hear some such dissonant voices.

They may be voices of Communist appeasers and neutralists; they may be voices of shifty intellectuals, ready to fall in with any new scheme; or they may be merely the voices of the meek, collaborating group, the yes men, who have not yet overcome the shock of surrender. One should not be misled by the cacophony. The rank and file German, the man in the street, is a patriotic citizen of his country.

IX

POINTING TOWARD A SOLUTION

A REALISTIC VIEW IS REQUIRED

A realistic policy for east central Europe must build upon the firm basis of international law and historic truth. To imagine that by taking advantage of a momentary situation a government can build its policy upon a basis of wrong, perpetuating such wrong, is altogether an illusion.

Germany has a valid title to her Provinces east of the Oder and Neisse Rivers. The Government in Bonn should be encouraged to insist upon its right. Wavering would be tantamount to strengthening the hold on Poland of the Kremlin, and would thus actually further Soviet imperialism.

The line from Virgil's Aeneid about the evil gift bringers—"Timeo Danaos et dona ferentes"—may be worthwhile remembering. The gift-bringer role of Stalin, offering to the Poles the east German Provinces, should have been suspected by his two western partners at Teheran and Yalta. Reaching a quickie solution left to the next generation a fatal heritage of loose dynamite.

THE INESCAPABLE LOGIC

To the same degree that Poland, at the instigation of Stalin and with the assistance of his two unsuspecting western partners, was being pushed geographically westward, she was being pushed politically eastward. This seeming paradox has a deadly, an inescapable logic.

When Poland was veritably stampeded into occupying the east German Provinces she then and there surrendered her independent foreign policy to Moscow, while the Kremlin rulers did not sacrifice as much as an iota of their range of political scheming. It will always remain within the Kremlin's discretion to dangle before the eyes of future German cabinets the tempting bait of the ancient German lands east of the Oder-Neisse line. Poland will never be secure in her wrongful possession.

Thus, the factual situation is exactly the opposite from what some of our political analysts believe it to be. This is no new discovery. It has long been realized by many intelligent Poles. It has been pointed out at various times and should be kept in mind. In his biography of Stalin, Isaac Deutscher stated the case:

The incorporation of the German provinces was to compensate the Poles for their eastern marshes; but it was also to expose them to such danger of German revenge in the future as to make them absolutely dependent on Russia's protection.

Indeed, only the backing of Soviet armies can ultimately insure Poland in holding on to her war spoils. As long as Poland continues her occupation of the German Provinces, she must go on playing ball with the Kremlin, she must do whatever is asked of her and, yet, never be sure. Kremlin policy is cynical and ruthless to the utmost. Moscow will not hesitate a moment to sell Poland "down the river" if, on some future day, the Soviet rulers can strike the right bargain. I sometimes wonder whether the present regime in Warsaw is not

aware of the inescapable logic on this point.

This Congress, and, in fact, the entire American public, wants to know whether the new Polish Government is still a puppet of the Soviets or is indeed a patriotic Polish Government. One of the best ways to determine this is to observe whether it continues the Soviet policy of pushing Poland westward into German territory, or throws aside this suicidal policy and follows the wise course of France in the Ruhr—of recognizing the rights of the peoples who inhabited the area of military occupation, while developing with the neighboring government a just solution of the problem which will still yield the economic advantages which Poland so badly needs.

THE KREMLIN'S DOUBLE-TRACK FOREIGN POLICY

However, by continuing her illegal occupation of the German Provinces east of the Oder and Neisse Rivers Poland acts, deliberately or unwittingly, as the servant of Moscow imperialism. It should not be forgotten that, from the very beginning, the Kremlin rulers have been pursuing a double-track foreign policy. People are apt sometimes to lose sight of the double-track feature: One track leads clearly toward Communist world domination. We are constantly reminded of its fifth column, the Communist units of other countries, the front organizations, and the hordes of tricky stooges.

The other track of Soviet foreign policy, however, promotes Russian imperialism under the thin cover of Panslavic interests. It uses for its agents a different set of dupes. It goads people to furthering the aims of Panslavism, while being the unwitting servants of a ruthless Soviet Russian imperialism. Kremlin technique switches the emphasis from one to the other and sometimes merges the two. Our political analysts and planners who may still be puzzled about the Kremlin's apparent retreat from Warsaw would do well to ponder about the other part of the double track which is too often lost sight of. Some of our analysts actually appear to be apologists for a so-called independent or national communism, dressing it up as if it were a long-lost brother of American democracy. If the Gomulka regime should thereby succeed in breaking down in this country the resistance barrier to Red influence it will have gained a major victory for the Kremlin.

Our aim to "softenize" the satellite area, and specifically by gradual steps to free the Poles from the remote control of the Kremlin, is one with which nobody will find fault. Those who wish Poland to continue to be a Soviet Russian stooge will encourage her in keeping the German provinces. Those who wish to see Poland free again, will urge otherwise.

What is to be required, therefore, is actually a renunciation, on the part of Poland, of her territorial aggrandizement and a voluntary withdrawal from an illegally occupied area of Germany. Only this step will free Poland from political servitude to the Kremlin rulers and will reestablish her true independence.

But do people learn a lesson from their own history? Ireland and Poland herself are two outstanding examples in modern history that conquest and annexation in the end cannot win. Poland, partitioned in the 18th century was restored during the First World War and, strangely, the powers that had once annexed her territory were the first to recognize her independence in 1916 and 1917. When partitioned again in 1939, the people of Poland knew that the wrong perpetrated by Hitler and Stalin would not prevail, just as most of them instinctively know now that the wrong of their attempted annexation of the German Provinces cannot prevail.

In conclusion, I wish to quote from words of a great woman, Ella Wheeler Wilcox. These are her words:

No question is ever settled until it is settled right.

Nobody can find fault with this sentence. In fact, it carries such immanent a force of logic that it has been at various times attributed to Abraham Lincoln.

Be this as it may; by continuing the wrong of occupation of the East German Provinces, Poland continues to chain herself to the Kremlin and continues to be dependent upon Soviet willingness to protect her territorial aggrandizement. Thus Poland has to pay, in the way of extortion, whatever the Kremlin demands and whenever it chooses to demand and how often it chooses to demand. It is a case of endless blackmail on an international scale.

POINTING TO A SOLUTION

We on our part should not overlook the booby trap which the Red fascists in Moscow may have set for those who are easily duped. The trap may well be the suggestion to compromise on a point of the law of nations, on which there can never be a compromise, unless we betray our own principles of freedom and justice, the very basis upon which this Nation of ours is founded, the hope of all the Free World, and, let us not forget, of those captive peoples longing to be free.

The solution can never be a trifling with right. Instead, the solution lies in the restoration of a status conforming with international law. This will provide the only fundament upon which to build future German-Polish relations of good neighborhood. It constitutes, therefore, the prerequisite for a durable peace in that part of Europe. It will, moreover, provide a basis for the growth in that part of Europe of a genuinely European spirit, a climate leading toward confederation.

Furthermore, the solution lies in the direction pointed to by the German-French settlement of the Saar question. Here, the Western Allies not only favored, but even committed themselves to support at a future peace conference, a political separation from Germany of German territory.

However, the French wisely refrained from pursuing on the road of violation of international law. Instead, they agreed to a reunification with Germany of this area. Simultaneously, though, they negotiated a highly profitable, long-term treaty of economic collaboration with their former "traditional foe."

This treaty of economic collaboration is securing for France advantages which are valued many times the gains they could have hoped of ever deriving from their rule over the German territory. I have no doubt that a parallel solution can be worked out in the German-Polish case.

Such an outcome would be a realistic settlement of a knotty problem, because it will be based on justice and the upholding of international law. It would be the basis of an honest rapprochement between these two nations. Again, as Immanuel Kant wrote in his essay On Eternal Peace:

Nature irresistibly wills that right shall ultimately prevail.

ARMED SERVICES DAY

The SPEAKER. Under previous order of the House, the gentlewoman from Massachusetts [Mrs. ROGERS] is recognized for 5 minutes.

Mrs. ROGERS of Massachusetts. Mr. Speaker, on Saturday, the 18th of this month, we celebrate and commemorate Armed Services Day. As we will not be in session, I would like to raise my voice in the deepest gratitude to the men and women of the armed services down through the years up to the present time. Nothing we can do will really compensate them for what they have given to us; their intelligence, their ability, their patriotism, and their courage—from the highest to the lowest. They deserve the support, financial and otherwise, of everyone in the United States and everyone in the free world, because their contribution has not been just to the United States but it has been worldwide.

I give to our great soldier President, Dwight D. Eisenhower, my especial thanks. Today he is our Commander in Chief of all the Armed Forces. His great leadership in World War II, then as Chief of Staff of the Army, and at present his great leadership in keeping us out of war, and his leadership, I believe, in leading us to complete victory and world peace merit our prayers and blessings.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. TEAGUE of Texas (at the request of Mr. PRICE) and to include extraneous matter.

Mr. THOMPSON of New Jersey.

Mr. ALGER and to include a speech.

Mr. POWELL in two instances and to include extraneous matter.

Mr. BREEDING and to include extraneous matter.

ENROLLED BILL SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H. R. 1544. An act to provide for the conveyance of certain real property of the

United States situated in Cobb County, Ga., to the trustees of the Methodist Church, Acworth, Ga.

ADJOURNMENT

Mr. McGOVERN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 40 minutes p. m.) under its previous order, the House adjourned until Monday, May 20, 1957, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

856. A letter from the Chairman, Federal Power Commission, transmitting a copy of its newly issued publication entitled "Federal Power Commission Reports, Volume 11"; to the Committee on Interstate and Foreign Commerce.

857. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill for the relief of Sgt. John F. Baughman"; to the Committee on the Judiciary.

858. A letter from the Clerk, United States Court of Claims, transmitting certified copies of the court's opinion rendered on May 8, 1957, relating to the case of *Richard M. Taylor and Lydia Taylor* v. *The United States* (Congressional No. 11–55), pursuant to sections 1492 and 2509 of title 28, United States Code, and House Resolution 309, 84th Congress; to the Committee on the Judiciary.

859. A letter from the Governor, Canal Zone Government, transmitting a draft of proposed legislation entitled "A bill to exempt certain teachers in the Canal Zone public schools from prohibitions against the holding of dual offices and the receipt of double salaries"; to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. NORRELL: Committee on Appropriations. H. R. 7599. A bill making appropriations for the legislative branch for the fiscal year ending June 30, 1958, and for other purposes; without amendment (Rept. No. 455). Referred to the Committee of the Whole House on the State of the Union.

Mr. FRIEDEL: Committee on House Administration. House Resolution 239. Resolution authorizing the Committee on Interstate and Foreign Commerce to employ two additional employees; with amendment (Rept. No. 456). Ordered to be printed.

Mr. FRIEDEL: Committee on House Adminstration. H. R. 790. A bill to amend the Legislative Appropriation Act, 1955, with reference to official office expenses of Members of Congress; with amendment (Rept. No. 457). Referred to the Committee of the Whole House on the State of the Union.

Mr. MORRISON: Committee of Conference. H. R. 4813. A bill to extend the life of the District of Columbia Auditorium Commission, and for other purposes (Rept. No. 458). Ordered to be printed.

Mr. MADDEN: Committee on Rules. House Resolution 254. Resolution for consideration of H. R. 2, a bill to authorize the State of Illinois and the Metropolitan Sanitary District of Greater Chicago, under the direction of the Secretary of the Army, to test, on a 3-year basis, the effect of increasing the diversion of water from Lake Michigan into the Illinois waterway, and for other purposes; without amendment (Rept. No. 459). Referred to the House Calendar.

Mr. SMITH of Virginia: Committee on Rules. House Resolution 255. Resolution for consideration of H. R. 985, a bill to provide that chief judges of circuit and district courts shall cease to serve as such upon reaching the age of 70; without amendment (Rept. No. 460). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 256. Resolution for consideration of H. R. 6548, a bill to amend the Universal Military Training and Service Act, as amended, as regards persons in the medical, dental, and allied specialist categories; without amendment (Rept. No. 461). Referred to the House Calendar.

Mr. THORNBERRY: Committee on Rules. House Resolution 257. Resolution for consideration of H. R. 7143, a bill to amend the act of August 3, 1950, as amended, to continue in effect the provisions relating to the authorized personnel strengths of the Armed Forces; without amendment (Rept. No. 462). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. NORRELL:

H. R. 7599. A bill making appropriations for the legislative branch for the fiscal year ending June 30, 1958, and for other purposes.

By Mr. BAKER:

H. R. 7600. A bill to provide a program for survival of small businesses and payment of estate taxes by estate-tax anticipation certificates; to the Committee on Ways and Means.

By Mr. DOLLINGER:

H. R. 7601. A bill to amend title II of the Social Security Act to provide that entitlement to State workmen's compensation benefits shall not prevent an individual from receiving full disability-insurance benefits (or child's insurance benefits based on disability) under such title; to the Committee on Ways and Means.

By Mr. FORAND:

H. R. 7602. A bill to amend title II of the Social Security Act to include Rhode Island and California among the States which are permitted to divide their retirement systems into two parts so as to obtain social-security coverage, under State agreement, for only those State and local employees who desire such coverage; to the Committee on Ways and Means.

By Mr. HESELTON:

H. R. 7603. A bill to amend the Communications Act of 1934, to provide for regulation of the amount of radio and television program time which may be devoted to advertising; to the Committee on Interstate and Foreign Commerce.

By Mr. MULTER:

H. R. 7604. A bill to amend the Bankruptcy Act with respect to the priority of debts owed by a bankrupt to workmen, servants, clerks, and certain salesmen; to the Committee on the Judiciary.

By Mr. NATCHER:

H. R. 7605. A bill creating the city of Cannelton Bridge Commission, defining the authority, power, and duties of said commission; and authorizing the commission and its successors and assigns to construct, maintain, and operate a bridge across the Ohio River at or near Cannelton, Ind., and Hawesville, Ky., to purchase and operate a ferry at such location, and for other purposes; to the Committee on Public Works.

By Mr. POWELL:

H. R. 7606. A bill to provide for the establishment of a Federal Advisory Commission on the Arts, and for other purposes; to the Committee on Education and Labor.

By Mr. PRICE:

H. R. 7607. A bill to provide for registration, reporting, and disclosure of employee welfare and pension benefit plans; to the Committee on Education and Labor.

H. R. 7608. A bill to amend and clarify the reemployment provisions of the Armed Forces Reserve Act of 1952, as amended, and the Universal Military Training and Service Act, as amended; to the Committee on Armed Services.

By Mr. SANTANGELO:

H. R. 7609. A bill to amend the Internal Revenue Code of 1954 to provide, in the case of professional athletes, an income tax deduction for depletion of physical resources; to the Committee on Ways and Means.

By Mr. WESTLAND:

H. R. 7610. A bill to provide for improved methods of stating budget estimates and estimates for deficiency and supplemental appropriations; to the Committee on Government Operations.

H. R. 7611. A bill to amend section 602 of the Federal Property and Administrative Services Act of 1949 with respect to the utilization and disposal of excess and surplus property under the control of executive agencies; to the Committee on Government Operations.

H. R. 7612. A bill to create a Supply and Service Administration as a department in the Department of Defense, and for other purposes; to the Committee on Armed Services.

H. R. 7613. A bill to facilitate the transfer of storage facilities between the military departments; to the Committee on Armed Services.

H. R. 7614. A bill to establish a Federal policy concerning the termination, limitation, or establishment of business-type operations of the Government which may be conducted in competition with private enterprise, and for other purposes; to the Committee on Government Operations.

By Mr. KEATING:

H. J. Res. 334. Joint resolution proposing an amendment to the Constitution of the United States to establish a Commission to determine the inability of a President, or one acting as President, to discharge the powers and duties of the Office of President; to the Committee on the Judiciary.

By Mr. RHODES of Arizona:

H. Res. 253. Resolution to amend the rules of the House to limit expenditures for fiscal year 1958; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BUCKLEY:

H. R. 7615. A bill for the relief of Kenneth Oswald Joseph; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H. R. 7616. A bill for the relief of Yee Gee Ping; to the Committee on the Judiciary.

By Mr. MICHEL:

H. R. 7617. A bill for the relief of Inge Gobel; to the Committee on the Judiciary.

By Mr. PHILBIN:

H. R. 7618. A bill for the relief of Mrs. Anne Morgan; to the Committee on the Judiciary.

By Mr. SANTANGELO:

H. R. 7619. A bill for the relief of Jose Arriaga-Marin; to the Committee on the Judiciary.

H. R. 7620. A bill for the relief of Bernardo Paternostro; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Tenth Anniversary of the Kingdom of Laos, May 11, 1957

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, Indonesia, I announced that I would address from the floor of Congress each one of the participating countries, except the two Communist regimes, on the occasion of their independence celebrations. May 11, 1957, was Laos' 10th anniversary of independence. I would like to congratulate the people of Laos, His Majesty Sisavang Vong and His Excellency Ourot Souvannavong, Ambassador of Laos, in recognition of this event.

For the 10th time the flags flutter high over Laos to commemorate their rebirth of freedom. In his address delivered at the ceremony of the signing of the Franco-Laotian Treaty, His Majesty Sisavang Vong recalled the origin of their association:

> A little more than a half century ago, one of my ancestors, His Majesty Oun Keam, entrusted into the hands of France * * * the destiny of the Laotian Kingdom, whose very existence was then threatened. His Majesty Oun Keam knew that he was safeguarding in this way the sovereignty and the permanence of his kingdom.

However, as nationalism and anticolonialism spread throughout Southeast Asia they found fertile soil in Laos. The idea was the idea of liberty which has had its ardent followers in all climates and all countries. When Laos' time came, its call summoned them too, and they could not hold back. The Laotian people, fired by their own burning desires for freedom and inspired by the examples of their neighbors in the region, actively entered the lists against colonialism and second-class citizenship and thus secured once more their independence.

The attainment of independence was only the beginning of a new life. Well-versed in the lessons of history, the Laotian people realized that the achievement of freedom is not an instantaneous event; it is a process. The seed is planted, but before the tree can take root and grow and spread it has to be nurtured untiringly by innumerable hands. The government established at the close of the colonial era was that of a constitutional monarchy with a king who is popular among his people. A constitution guaranteeing democratic freedoms to the Laotian peoples was promulgated May 11, 1947. Legislative power is exercised by direct universal suffrage.

Less disrupted by Communist aggression than some of its neighbors, Laos has known a smoother transition from colonial status to independence. However, very recently she has had to stoutly resist attempts at Communist-backed encroachments. It is hoped that the forces which are trying to lure Laos from the Western camp of the Free World will be signally overwhelmed.

I salute Laos upon her many accomplishments during her short period of nationhood and wish for the Laotian people continued success and progress.

Remarks of Charles A. Halleck, Republican, of Indiana, at Dallas County GOP Fund-Raising Dinner, Dallas, Tex., May 9, 1957

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, It was my happy privilege to welcome our colleague, the gentleman from Indiana, CHARLES HALLECK, to the Fifth District of Texas, and to introduce him as our guest speaker at our annual fund-raising dinner in Dallas, May 9. As to be expected, he did an outstanding job. He recognizes and understands our struggle in Texas to establish what so many Americans take for granted—a two-party society. I am happy to be a part of that effort and to bring Mr. HALLECK's message to the attention of our colleagues—a statement that speaks for itself:

REMARKS OF CHARLES A. HALLECK, REPUBLICAN, OF INDIANA, AT DALLAS COUNTY GOP FUND-RAISING DINNER, DALLAS, TEX., MAY 9, 1957

Mr. Chairman, my good Republican friends and, if I might hope, some good Democrat friends, too—but at any rate, fellow Americans all of you, this is the third time this year it has been my pleasure to address a political meeting in the South.

To the extent of my time and energies, I will look forward to making many more in this continuing campaign to win the people of this vast region to the Republican cause—the cause of sound government.

I don't want to be accused of trying to curry favor with you, but I could mention, in passing, that your hopes and aspirations with respect to the Tidelands were understood by a Hoosier, even though I can't say the issue generates much interest among the folks along the banks of the Wabash.

By the same token, I was a member of the Interstate and Foreign Commerce Committee which wrote the original Natural Gas Act, and I have been among those who thought that when Congress said the production and gathering of natural gas shouldn't be regulated by the Federal Government, that was precisely what we meant.

But I want to talk to you tonight about some broad political facts of life and why it seems to me the people of the South should be coming along with us in greater and greater numbers.

And it is gratifying for me to be welcomed by such an enthusiastic audience because it proves that we are making progress.

But it has been slow going.

As one who has served in the Congress of the United States for more than 20 years, I know what it is to labor under the handicap of heavy political odds.

When I came to the House of Representatives in 1935, after a special election in my district, Republicans were outnumbered three to one in the House of Representatives.

Like my good friend, your able Congressman BRUCE ALGER, I was the only Republican in my State's delegation—and that's a lonesome situation, believe me.

I always said I could hold a caucus in a phone booth.

At the height of the New Deal tide, Republican membership in the House slipped to 89 and we got stepped on—plenty.

There were times, through the years, when a lot of folks—and that includes me—wondered whether we would ever elect another Republican President or Republican majority in the Congress.

But we never gave up. And during those long, lean years, it was Republicans—by and large—who, standing together for principle, held a beachhead of constitutional government against the onslaught of radicals who were so determined to change this great system of ours.

But the chickens finally came home to roost for the opposition in 1952 and we did get a change.

The people of this Nation were wised up, fed up, and burned up.

They were sick of war and threats of more wars.

They were frightened by mounting inflation that cheapened the dollar, robbed people of their savings, their pensions, and their annuities.

They were disgusted by repeated disclosures of security risks in sensitive Government jobs and they were shamed by evidence of scandal in high public places.

Small wonder the citizens of America turned to the Republican Party for new leadership, and elected a Republican President and a Republican Congress.

Now we are moving into the second term of a man I am confident will go down in history as one of America's greatest Chief Executives—Dwight D. Eisenhower.

When I placed his name in nomination at the convention at San Francisco, I described him as "the most widely beloved, the most universally respected, the most profoundly dedicated man of our times * * *" and I meant every word of it.

During the recent campaign, I predicted that he would be overwhelmingly reelected—and it was the safest prediction I ever made.

But we didn't win the Congress, and there has been a lot of soul searching going on ever since.

I was not optimistic about our chances—and I don't think anyone who looked at the situation with real objectivity could have failed to realize that we had an uphill battle on our hands.

Long years in power have entrenched the opposition in our biggest metropolitan centers.

The solid South, in spite of the President's great popularity in this region, and the gains we have made organizationwise, is still pretty solid.

Just before I came down here I received an analysis of the 1956 election returns for the 5th, 8th, 14th and 16th Districts of Texas. Had the folks who supported President Eisenhower given their support to the Republican candidate for Congress in each of these districts, Texas would be represented in the House by four Republican Members instead of just one.

And as one who has served as House majority leader in two Republican Congresses—

the 80th and the 83d—I know something of what it means to have control of the legislative branch of the Government.

A lot of my good friends have been writing to me lately about the budget—and from the tone of some of the letters, I am beginning to wonder whether they still are my good friends.

I've been pointing out in my answers to them—among other things—that the only two times in a generation that the people of this country did see substantial budget cuts and substantial tax reductions were during those two Republican Congresses.

But what bothers me, folks, is that on each occasion, in spite of magnificent records for economy we got beaten when election time rolled around. You begin to wonder what our citizens really do want.

I have heard it said—and I'm afraid it's pretty true—that the public's memory—and that includes yours and mine—is notoriously short.

If that's the case, then one of the things we must never overlook in our continuing battle for the cause of sound Government is the necessity to hammer at the mess we were in when President Eisenhower and a Republican Congress took over the responsibilities of our Federal operation.

In 1952, the people of this country had called on Republicans to deliver them from war, from inflation, from bureaucratic control and regimentation, from corruption, from radicalism and from a lot of other things, including downright incompetence in high places.

Let's not let anyone forget that, because much of the difficulty we find ourselves in today can be traced directly to the mismanagement, the miscalculations, yes, and the misconduct of people who had held positions of high public trust under succeeeding New Deal-Fair Deal regimes.

I must say I am nothing short of amazed at the audacity of the opposition in their bare-faced attempts to pin the blame on Republicans for what they, themselves, did to the country. Just who was in control of this operation anyhow during the years following our victory in World War II when we had our golden opportunity to achieve a just and lasting peace for the world?

Who let us get into the position where today we find it necessary to spend upward of $50 billion a year just to defend ourselves from the threat of aggression?

Who was it that saddled the American people with nearly $300 billion of public debt, a debt so big it takes $7.4 billion a year now just to keep up the interest payments?

Who was it that plastered on the public 14 of the 15 income tax increases we have had since 1913?

Just exactly who was in control of the country's financial system during the years when the value of your dollar and mine was cut almost in half by inflation?

Yes, and who was doing the hiring and firing in the Federal workshop when the Alger Hisses and the Harry Dexter Whites were exposed as traitors on the public payroll?

And what party was it, my good friends, that refused, year after year, to come to grips with the problem of falling farm prices and mounting surpluses?

I could go on and on, but you know the answers to these questions as well as I do.

The important thing is that we not let the American people forget.

And that we not let the opposition get away with charges that somehow, since we now have a Republican in the White House, we are to blame for the difficulties on the international front, for high taxes and for the continuing necessity for spending billions of dollars for defense.

We didn't create these problems, we inherited them from the New Dealers and the Fair Dealers.

But when a Republican President took office and Republicans took over control of the Congress, we rolled up our sleeves and went to work.

The record of cooperation between Dwight Eisenhower and the Republican 83d Congress is on the books, and you know it well.

We laid solid foundations for a magnificent program of peace, progress, and prosperity.

We junked controls, cut public spending by billions, gave the Nation the greatest tax-reduction program in history and hammered out significant and far-reaching social gains for the American people.

It took some doing, my good friends, but we got the Reds out of Government and the Government out of the red.

You can make your own analysis of why we didn't win the Congress in 1954 or 1956.

Obviously from the figures, a lot of people who should have been in our corner didn't appreciate the importance of backing a Republican President with a Republican Congress.

But we did win the Congress in 1946 and we did win it in 1952.

And we can win it again in 1958—and that's our last chance to give the President a Congress that will put this sound and far-sighted Republican program back in high gear.

Of course, I'm a little selfish in this. I'd like to be majority leader again—with stalwart Republicans like Bruce Alger on my team—Republicans who will stand up and be counted when the chips are down.

The alternative is a complete wrecking job by the opposition on the progress we have already made.

As one who bears a few scars of battle in the Washington arena, I must say I get a bit impatient with some of my very dear friends when they suggest to me that there doesn't seem to be much difference today between Republican and Democrat policies.

I begin to wonder what I have been beating my brains out for all this time.

We've got an administration now that believes the value of the dollar ought to be protected—that money ought to be worth something.

I well recall sitting in on a meeting once at which a new program of Government loans at fantastically low interest rates was being discussed.

To his credit, the late Jesse Jones, then serving as chairman of the RFC, was resisting the pressures to further cheapen money.

"Maybe," he said, "the time has come to find out whether money is really worth anything or not."

Well, the rubber money advocates are still with us, believe me, and anyone who thinks there's no difference in policies is due for a shock if these people get control of the Federal Government's monetary operations.

One of the pledges made by Republicans to the American people was that we would get the Government out of competition with business wherever possible.

During the Republican 83d Congress, we really went to town on that one. We sold a barge line that had been losing taxpayers' money for years. We got rid of synthetic rubber plants and took the Government out of more than 250 other activities that could be handled better and cheaper by private enterprise.

We had to fight every step of the way to get these jobs done.

And then what did the opposition do when they took over the Congress?

They forced through a law requiring Government departments to get approval from Democrat-controlled Appropriation Committees in the House and Senate before any activity could be dropped.

This roadblock has proved mighty effective, as you may imagine. In less than a year, nearly 70 actions requested by the Defense Department alone were vetoed by these Democrat-controlled committees.

And let me pay my respects to your Congressman again right here. Bruce Alger has been in the forefront of this battle as a cosponsor of legislation which would bar Government competition with private enterprise.

Or take public power.

Republicans support a policy based on the partnership principle as against Federal monopoly.

We have a conviction that projects can, and rightly should, be handled in a cooperative venture, with Federal, State, and local interests—public and private—participating.

We do not believe the Federal Treasury is fair game, or that the taxpayers of one region should be saddled with the cost of a project that benefits another region.

Here again, the Nation's taxpayers can thank Republicans for turning back a Democrat drive to foist the half-billion-dollar Hells Canyon project on the Federal Government.

You know, there should be such a thing in our national life as self-reliance. Texans know something about that. You've been having your troubles lately, but there is plenty of evidence of a determination on the part of the people of your great State to see this thing through on your own.

One of my many interests in this area, over the years, has been in the fine work of the board of fundamental education at Jarvis College at Hawkins.

Actually, the board for fundamental education grew into the challenging national program it has become today because it employs the principle of self-help, encouraging the underprivileged to work out a better, more rewarding way of life.

We can stand a lot more of that spirit over the country.

I need not tell you that atomic energy is going to play an increasingly important role in our way of life.

The Republican 83d Congress enacted a far-reaching administration measure designed to maintain America's leadership in the development of atomic power, especially for peacetime use.

But here again it was a battle every step of the way against forces determined to create a huge new Federal bureaucracy in the atomic-energy field. These people wanted no part of a program that would utilize the genius, initiative, and resourcefulness of private industry.

Now what has happened?

The whole vast program—so tremendously important to the Nation's future—is being jeopardized by refusal of a Democrat-controlled Congress to enact insurance legislation that would signal a go-ahead on a broad front.

We do win once in a while, even though we're in the minority. With the help of a few of the more conservative members on the other side of the aisle, we succeed in blocking the more radical proposals offered by the opposition from time to time.

Unfortunately, however, lacking the power that goes with committee chairmanships and the privilege of programing legislation, Republicans can't take positive action to put across a continuing, affirmative Republican program.

Next year, we have another chance to get a Republican team back on the field to work with President Eisenhower.

The alternative is a return to what we had—and I just wish some of the folks who complain because more hasn't been done would take the time to consider this:

Instead of continuing Federal deficits and mounting public debt, Republicans have balanced the budget as we said we would.

Instead of war we are at peace—and may I say, as one who has been privileged to sit in high councils down here—there have been times in the last 4 years when men of lesser stature than President Eisenhower and those around him might well have gotten us into war.

We have kept the peace, as we said we would.

We have checked inflation, and last, but by no means least, the Nation is prospering and progressing as never before.

If this isn't a welcome contrast to what we had under the Democrats—and what we would get again—then I am ready to quit fighting.

And if anyone thinks I'm just indulging in a little scare campaign, let him get a copy of the CONGRESSIONAL RECORD of Wednesday, January 30, and turn to page 1324.

There he will find remarks entitled, "Proposed Program for the Democrats in the House of Representatives in the 85th Congress."

Among other things this enlightening document—endorsed by at least 80 House Democrats—calls for:

Bigger Federal payrolls.

More Federal Housing.

Expanded Federal aid for health services—that's Democrat talk for socialized medicine.

More public works.

A bigger Federal atomic energy program.

Outright repeal of the Taft-Hartley Act.

And so on and on—a blueprint straight out of ADA headquarters.

And as long as I've mentioned the ADA, I understand your Congressman scored a zero on his voting record as far as they are concerned.

In my book, that's a perfect record.

But to get back to this blueprint business:

With all these grandiose schemes for spending more and more public money, these folks have the audacity to claim they are also for tax reductions.

Now honestly, I can't believe the American people are gullible enough to fall for that.

Look, folks, I've been around this operation for a long, long time.

I've been around long enough to know that there is an awful big difference between talk and action.

And when I hear some of my colleagues on the other side of the aisle talking the economy line, I'm reminded of the old fellow who joined the church at 92 and lived an exemplary life thereafter.

They're just a little late in being converted—and what's more, I'm a bit suspicious of their sincerity.

No. The plain truth is, folks, that had it not been for President Eisenhower and Republicans in the Congress, the Federal budget would be bigger today by billions; the national debt would be bigger today by billions and the country's tax bill would be bigger by billions.

And what's more, your dollar would have been worth considerably less.

But we've got to fight harder than we've ever fought before to keep the spendthrifts, the radicals, the do-gooders, the bureaucrat-minded, big-government crowd from once again capturing control of Washington.

And I know this:

We aren't going to keep them out by sitting on our hands, or by glaring at each other, or by wasting our time and energies arguing over what kind of hyphenated Republican we think the other fellow is.

Let's understand that we're all Americans living in a changing world.

Let's understand that Republican principles are as sound today as they were a hundred years ago, and that like the great old foundation of our Republic—the Constitution—our party principles will always be adaptable to the needs of the times.

Republicans in the Congress of the United States have been waging stalwart battles to uphold these principles, to give life and meaning to policies that have served the Nation well through the years.

I urge you as citizens of a great State interested in sound government—help us in this fight.

To all of you who joined the revolt against radicalism in 1952, I say help the cause by working as never before to elect a Republican majority in the House and in the Senate in 1958.

I recall many years ago when I was a freshman member of the House I appeared in a debate with some Democrat members before a newspaper publishers meeting.

You know, Congress has always been fair game, and the country, encouraged by a late President whose name I won't mention, was having a field day chiding the legislative branch.

After this debate, as I recall it, we had questions from the floor and someone asked me: "What's wrong with Congress?"

The answer I gave then is still appropriate today: "Nothing that a good Republican victory wouldn't cure."

National Federation of Independent Business' George Burger Makes Excellent Suggestion To Help Small Business

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, George Burger, of the National Federation of Independent Business, made the following excellent suggestion to help small business which I have incorporated in my bill, H. R. 5703, which a recent poll showed was supported by 84 percent of the members of this nationwide group:

Why not see if it is possible for the Government to revise its business tax regulations to allow both corporations and unincorporated firms to deduct from their yearly taxable income, say, $500 or $1,000, providing businessmen have spent this on expansions, improvements, or other things to improve their businesses. If a businessman has spent, say, $2,000, he would be able to take, under this thinking, $500 of that as a complete deduction from taxable income and compute his depreciation and other figures on the balance.

Included here is the text of my bill, and an editorial from the Trentonian, a leading New Jersey newspaper, which declares that "without small business, there would be no big business, as we know it, for very long. Both must exist if our Nation is to remain strong, and grow stronger."

I likewise include a report by Mr. Burger on the results of the poll conducted by the National Federation of Independent Business on my H. R. 5703:

NATIONAL FEDERATION
OF INDEPENDENT BUSINESS,
Washington, D. C., May 13, 1957.

Hon. FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: As we advised you, we are polling our nationwide membership on your bill H. R. 5703. The poll has now been completed and the results are 84 percent for, 14 percent against, 2 percent no vote.

I know that you will be interested in these results.

High regards.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

[From the Trentonian of Wednesday, May 8, 1957]

BULWARK OF DEMOCRACY

Is the threat to small business a matter of economics only, or does it carry implications of even greater and more alarming proportions?

Congressman FRANK THOMPSON, of the Mercer-Burlington District, and Senator PAUL DOUGLAS, of Illinois, see small business as a bulwark against plutocracy eating into our democracy, and have fired another round in the continuing battle to save small business.

When Thompson introduced in the House a bill to amend the Internal Revenue Code of 1954 so as to grant a tax writeoff of up to $1,000 to small-business men as reimbursement for amounts "paid or incurred for the expansion of the trade or business or for the permanent improvement and betterment of property used * * *" he emphasized that his aim was to preserve "the basic strength of our country."

THOMPSON'S amendment is based on a suggestion made by George Burger of the National Federation of Independent Business, who says that rather than complicated percentages, "$500 or $1,000 in hard cash is something that they (the businessmen) can all understand, and very clearly."

In any event, the struggle to save small business goes on, with THOMPSON very much in the foreground. Up to the time he submitted the tax writeoff amendment, the Trenton legislator had introduced six major bills to deal with what he called "the various aspects of this basic and fundamental issue." He underlined its importance in these words:

"It seems to me that we must make every effort to strengthen our economic and political system with its emphasis on individual liberty and responsibility. Only in this way can we advance the prosperity of our people and the security of our Nation and our way of life."

DOUGLAS said, "I would further urge that a concentration of business and power is neither desirable nor inevitable and that what we should seek, instead, is a broader distribution of property and of power to the end that all may have enough to be secure but not so much as to menace others. This is the underlying economic and social problem of our times."

Summed up, it might be said that without small business, there would be no big business, as we know it, for very long. Both must exist if our Nation is to remain strong, and grow stronger.

H. R. 5703

A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer to deduct from gross income certain amounts paid or incurred for the expansion or improvement of a trade or business

Be it enacted, etc., That (a) section 162 (a) of the Internal Revenue Code of 1954 (relating to deduction for trade or business expenses) is amended—

(1) by striking out "and" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (3) the following new paragraph:

"(4) amounts paid or incurred for the expansion of the trade or business or for the permanent improvement and betterment of property used in the trade or business, and

amounts paid or incurred in restoring property used in the trade or business or in making good the exhaustion thereof, to the extent that such amounts do not exceed $1,000 during the taxable year."

(b) Section 263 (a) of such Code (relating to capital expenditures) is amended by striking out "No deduction" and inserting in lieu thereof "Except as provided in section 162 (a) (4), no deduction."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to taxable years beginning after December 31, 1956.

High Cost of Production and High Cost of Living

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the testimony presented by me before the Consumers' Study Subcommittee of the House Committee on Agriculture on May 9, 1957, concerning the difference in the price the farmer receives and what the consumer has to pay for his product. In view of the fact that there is considerable debate on the floor of the House at the present time concerning appropriations for the Department of Agriculture, I feel the information contained in this testimony is especially valuable:

I want to take this opportunity to say that I have followed the work of this subcommittee with great interest. It affects not only the producers of agricultural products, but the consumers of agricultural products. This covers every citizen of the country.

One of the most urgent needs this subcommittee has served is to contribute to the education of the consumer, and perhaps the farmer also. Publicity from some departments of Government and some farm organizations has widened the breach between the consumer and producer of agricultural products. This works to the detriment of both parties concerned. I believe this subcommittee is taking a big step in the direction of correcting this misunderstanding, and I would personally like to see it receive more publicity.

I would like to tell this distinguished committee how the findings of their investigation fully support the present plight of the farmers in southwestern Kansas. Because of the depressed condition of the wheat farmer in my area, I feel I should testify on his behalf. We are only permitted to produce 30 to 50 percent of our tillable acres in wheat. The average production in Kansas is approximately 200 million bushels. This year we are only going to raise 80 million bushels of wheat in Kansas, due to acreage controls and dry weather. Much of the wheat acreage has gone into the soil bank. Soil-bank payments are a help in drought years, but they provide only a small percent of the income which would be derived from a good crop yield.

I would like to bring out the cost of production first—the cost of our machinery has more than doubled. At the close of World War II, combines were selling for approximately $2,500. The same combine today costs us $6,500. Where tractors sold at that time for $2,500, the same tractor today costs us $4,500. Cars and trucks are proportionately higher. When we were paying $2,500 for our combines in 1946 and 1947, we were selling our wheat for $2.20 a bushel. And by comparison we are selling our wheat today at $2 a bushel. Wheat acreage for the Nation has been reduced to a minimum of 55 million acres as required by law. This is about 30 percent less of the total amount of acres suitable for wheat in our country. In many areas of this country wheat is the lifeblood of that area and this is true in my part of Kansas. Labor costs for an example have risen proportionately. In 1945 farm labor costs were from $6 to $8 per day. Today we pay $10 to $12 a day and in some instances where you hire help to operate combines the fee for labor is $15 to $20 a day. The average farmer in my district with this kind of wheat base acreage, and an average wheat production at the present price of wheat and the present cost of overhead cannot show a dollar net profit on today's market. Let me give an example of an average farm in my district with an average wheat production and managed by a tenant farmer. This is the actual experience of a GI farmer in Gray County, Kans., who is the father of four children. This is a farm that is better than the average I would say, and perhaps a little larger than the average. However, it is a 1-man farm, operated primarily by family labor. The size of the farm is 960 acres. The cultivated land is 908 acres; the grass land is 52 acres; the wheat base on this farm is 456 acres, which is above the average wheat base. And at present the land is used as follows: Wheat—456 acres, the estimated yield (county average) is 12 bushels per acre over a period of 10 years. The total production if the crop produced 12 bushels would be 5,472 bushels. This land is rented so that one-third of the wheat production goes to the landlord and two-thirds to the tenant—which would give the tenant farmer a total of 3,648 bushels and the landowner 1,824 bushels. This year his commodity credit loan netted him approximately $1.90 per bushel. The total income available is $6,931.20. Due to drought no stock can be run so no income can be expected from livestock. The balance of land used is as follows: summer fallow—400 acres, and available for feed crops for 1956 were 52 acres, making a total of 908 acres again as first set out.

Now I want to give you a portion of what is the majority of the expenses of this farm. Expenses are based on income tax records of past years of operation. Crop insurance, where you have Federal crop insurance or local hail insurance, has cost annually $597. He acquired his machinery after returning from the war—most of which was used machinery. The interest on this boy's debts amounted to $150. He has some personal property tax on his equipment which totals $80. He has no real estate taxes because he owns no land. He did not own a combine so he hired his wheat cut. His harvesting expenses cost him $1,500 which included additional truck hire. He also had actual expenses on his automobile and truck—which amounted to $500. The extra labor which he had to hire for harvest was $300. Most of his machinery is getting old and his machinery repair bill on his income tax figures was $700. The total bills to operate this machinery such as gas, oil, and repairs on this farm was $900. Insecticides and grasshopper poisons and so forth which are necessary he listed as $20, but I can name you many cases where that could have run up to $200 to $300 or more. His wife likes to have a garden to help feed these four children, her husband, and what hired help they must have. The seed and the material that she bought for this garden amounted to $40. Because of drought he had no expenses on the feed for the livestock. The total cost of his farm operations and expenses were $4,787. His living expenses were figured at $2,000. The total cost of living and operating this farm are $6,787. So he has in the beginning a net cash income of $144.20. He was allowed $1,000 depreciation on his farm equipment. Depreciation on his household goods runs $250 per year. However, all this will eventually have to be replaced with new. If all this is figured it would appear that at the end of the crop year he will most likely be in a worse condition by about $1,105.80 even if he gets 12 bushels per acre on every seeded acre. Of course, they haven't been getting this during the past few drought years. At present it does not appear that there will be any wheat produced in that area this year, which leaves this particular operator nothing to pay on his debts accumulated since 1952 when the last normal wheat crop was cut. In other words, the average farmer is getting quite a lot like Tennessee Ernie's song—Sixteen Tons, "just another year older and deeper in debt." His only chance is to be able to put out more acres in crops and produce enough to offset his increased costs. This land does not profitably produce grain sorghums or any other crop, so there isn't much he can turn to in the way of diversification. Also if he plants more acres of other crops he will have less summer fallow and consequently lower expected wheat yields. As you can see this individual is going to be a poor customer for the merchant in his local community. He cannot hope to purchase any new farm machinery, a new car, household furniture, TV sets, or even additional clothes and groceries for his family.

His neighbor who has possibly a little less land is proportionately worse off and will be even poorer as a customer. This boy is a poor risk for the banker, his local gasman, or anyone else. He has little chance to pay the businessman to whom he is already indebted. I think that this is an average example of an average farmer with an average production in my area. It seems to me that the only possible way the wheat farmer can show a net profit today is to have a higher than average yield—in other words instead of having a 12-bushel average yield he would have to produce a 40-bushel-per-acre wheat crop and then dispose of his holdings. But over a 10-year period he will eventually slip back to his county average if he continues to operate.

I would like to quote further some farm prices—the price of eggs—25 cents per dozen to the producer. On the consumer base it's 45 to 60 cents per dozen. The price of a loaf of bread—a pound loaf of bread—sells today for 20 cents. A few years back when wheat was selling for $2.20 or better the price of a pound loaf of bread was 15 cents. Gasoline fuel for farmers is consistently higher. Taxes in many instances since 1946 and 1947 have gone up from 300 to 400 percent. We have got to have more production and better prices or reduced prices for the cost of production if we are to meet success. Over the past few years there has been an ever-widening breach between the American farmer and the city consumer. All this wouldn't be so disheartening if the consumer was gaining from the loss the farmer was receiving. This, however, is not the case as the subcommittee findings show. The high cost of production and low net returns are bankrupting many farmers in my area. This in turn affects small-business men supported by the agricultural communities. It is one of our many objectives to try to bring new income into this area in order to offset the increased costs of production for the farmers who can't make a go of it operating a farm. This is a necessity because certainly many businesses are closing due to a decrease in sales from their farm trade.

Mr. Chairman, my question is, What is happening to the difference in the price the

farmer receives and what the consumer has to pay? Certainly in many cases the farmer is producing good food and losing money doing it. Yet the American consumer is paying the highest costs of all time to feed his family.

It has been a pleasure to present these views of mine to you and I thank you sincerely for your attention.

A. and M. Muster

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. TEAGUE of Texas. Mr. Speaker, Easter Sunday, because it fell on April 21 this year, had a double meaning for Texans and particularly former students of the Agricultural and Mechanical College of Texas.

April 21 is the day Texas won its independence and is annually observed by former students of Texas A. and M., their families and friends, as a day of commemoration of all Texans who have fought in defense of their country and all former students of A. and M. who have passed on.

This year the National Capital Texas A. and M. Club observed "muster" day at the Arlington National Cemetery Amphitheater and followed with the laying of a wreath at the Tomb of the Unknown Soldier. Former Texas Senator Tom Connally was the principal speaker at the ceremony. Former dean of agriculture at A. and M., Charles N. Shephardson, now a Governor of the Federal Reserve System, delivered the invocation.

Elsewhere A. and M. men gathered for musters in 44 States and 20 foreign countries. One was scheduled at McMurdo Sound at the South Pole.

The muster of former A. and M. students originated in 1903 but the annual ceremonies did not acquire prominence until 1942. In that year headlines over the United States were made by 23 Aggies, led by Maj. Gen. George F. Moore, class of 1908, who conducted a muster on the beleaguered island of Corregidor. At that historic muster, the Aggies, joined by other Texans, who had survived Bataan, drank a toast in water to their deceased comrades and to the heroes of 1836 who fought to free Texas.

As a graduate and a Texan, I am proud to say that Texas A. and M. is the largest military college in the United States. It is a land grant school and has always operated as a military school. It furnished more officers to the Armed Forces in both World War I and II than any other school or academy in the country. Over 400 Aggies, many of whom serve in the military, currently live in the Washington area.

How Aggies feel about the muster can be understood by quoting a portion of Senator Connally's address on that occasion:

> Today with thankful hearts and tremendous pride we look back to the great traditions of our foundation and the independence of Texas.
>
> On this A. and M. muster we pay tribute to the glorious past and we join together in our strength and our pride to pay appropriate observance to the independence of Texas and the great sacrifices made by the gallant sons at Goliad, the Alamo, and San Jacinto.
>
> We also pay tribute to other sons of A. & M. who through the years at Corregidor and elsewhere have added luster to the historic heroism of A. and M. men through the years.

Ninth Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. POWELL. Mr. Speaker, the ninth anniversary of Israel's independence is an occasion of great rejoicing not only for the people of Israel, but also for all of her friends who have watched her evolve into a democracy of prominence and stability. I wish to extend sincere felicitations to the people of Israel and their leaders in observance of this occasion.

Israel has weathered some difficult times in the past 9 years. It has stood up against great adversity, shown great courage and determination. The Republic of Israel emerged fully clothed with the problems and realities of political statehood on May 14, 1948. During these short years of independence the two main preoccupations of Israel have been economic development of the country and the establishment by diplomatic and military means of the security of the country within the boundaries set by the armistice agreement.

Israel is a product of an ancient dream, a monument to man's inconquerable spirit. The triumph of the human spirit in Israel over seemingly endless and overwhelming obstacles is a constant beacon light of faith to all men.

That Israel has achieved so much in so short a time and under such trying circumstances is a credit to the fortitude, the intelligence, and the national spirit of the Jewish people. Because Israel is small and poor in natural resources it faces towering economic problems. The economy of Israel is still in the process of building healthy foundations for a normal existence. Israel is developing an indigenous blend of free enterprise and free government suited to its own particular problems.

Israel opened wide her doors to the poor and the oppressed. Many on arriving there have no possessions, only determination and willingness to be a part in the march of progress of which Israel is the symbol. She has kept her doors open to those still homeless, penniless, and broken by years of Nazi oppression and denied other sanctuaries. Israel fortified by her faith and ennobled with a cooperative spirit, made room for her less fortunate brothers.

Within the Middle East the State of Israel is clearly the heartland of the crossroads. The deeply disputatious question of peace with the Arab States leaves the political future clouded. Yet within Israel there is energy and optimism, for here at last a dream of centuries for a homeland has become a political reality. The avowed aim of the United States is to promote the political and economic stability of the entire region of the Middle East with a course of action based on neither favoritism nor on prejudice, but on the principle of safeguarding the best interests of the United States and the free world. If our worldwide position is to be secure, we must recognize the potentialities of Israel as an outpost for Western civilization. We can strike no more effective blow in defense of our way of life on a global basis than to do everything possible to make Israel a strong bastion of freedom in the Middle East and through it to reach the rest of the region in the true spirit of our freedom.

May Israel enjoy peace and happiness on this ninth anniversary and hold steadfast to her principles of freedom, liberty, and democracy.

SENATE

FRIDAY, MAY 17, 1957

Rev. Herley Curtis Bowling, assistant secretary, Methodist Commission on Chaplains, Washington, D. C., offered the following prayer:

O God, our Father, as we enter upon a new day, help us to accept the responsibilities it thrusts upon us in the same spirit that we receive the privileges it offers us. Grant that in the decisions to be made this day we shall not be driven by anger or resentment but led by the sweet light of reason and justice. Help us to stand against the pressures of power and to yield to the inner persuasion of Thy truth.

In all things may we be mindful that it is both our duty and our privilege, through the trust placed in our hands, to support the weak, lift up the downtrodden, and hold in check those who prey upon the helpless.

Take our hands firmly in Thine, that, being led by Thee, we may lead our people toward peace, justice, and freedom. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Journal of the proceedings of Thursday, May 16, 1957, was approved, and its reading was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H. R. 790) to amend the Legislative Appropriation Act, 1955, with reference to official office expenses of Members of Congress, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H. R. 790) to amend the Legislative Appropriation Act, 1955, with reference to official office expenses of Members of Congress, was read twice by its title and referred to the Committee on Rules and Administration.

LEAVE OF ABSENCE

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that I may be absent from the Senate this afternoon to attend the southern regional meeting of the National Citizens Council for Better Schools.

The VICE PRESIDENT. Without objection, leave is granted.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the following committees or subcommittees were authorized to meet today during the session of the Senate:

The Foreign Relations Committee;

The Committee on Post Office and Civil Service;

The Subcommittee on Withdrawal of Public Lands for Military Purposes, of the Committee on Interior and Insular Affairs; and

The Antitrust Subcommittee, of the Committee on the Judiciary.

ORDER DISPENSING WITH CALL OF THE CALENDAR ON MONDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that on Monday the call of the calendar, under the rule, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE PROGRAM—TRANSACTION OF ROUTINE BUSINESS—LIMITATION ON STATEMENTS

Mr. JOHNSON of Texas. Mr. President, the distinguished senior Senator from Florida [Mr. HOLLAND] has done a very thorough and workmanlike job on House bill 6700, the appropriation bill for the Department of Commerce and related agencies.

So far as I am informed, the bill does not involve any great controversy. I am very pleased that is so. I believe we have had all the controversies in connection with appropriation bills that we should have in 1 week.

The Senate has convened at an earlier hour today in the hope that it will be possible to have an explanation of the appropriation bill presented and to have the Senate act on the amendments and pass the bill and end the session at an early hour. All week the committees have been meeting in the mornings and in the afternoons, and in some cases also in the evenings.

We are hopeful that next week there will be ready for action at least 2 or 3 additional appropriation bills.

Under the circumstances, Mr. President, I shall request that, in connection with the usual morning hour routine business, under the rule, statements be limited to 3 minutes; and at the conclusion of the morning hour, I shall suggest the absence of a quorum. Following that, we wish to have the Senate proceed with consideration of the Department of Commerce appropriation bill, and I hope it will be considered with dispatch.

Mr. President, as I have just stated, under the rule there will be the usual morning hour for the introduction of bills and the transaction of other routine business; and in that connection I ask unanimous consent that statements be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. HOLLAND. Mr. President, I understand that the usual morning hour will be had before the Senate begins consideration of the Department of Commerce appropriation bill. I shall hold myself in readiness.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON REVIEW OF HOUSING AUTHORITY OF JACKSONVILLE, FLA.

A letter from the Comptroller General, transmitting, pursuant to law, a report on review of the Housing Authority of Jacksonville, Fla., Public Housing Administration, Housing and Home Finance Agency, dated May 1956 (with an accompanying report); to the Committee on Government Operations.

REPORT ON PROVISION OF WAR-RISK INSURANCE AND CERTAIN MARINE AND LIABILITY INSURANCE

A letter from the Secretary of Commerce, transmitting, pursuant to law, a report on the provision of war-risk insurance and certain marine and liability insurance for the American public, as of March 31, 1957 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

PUBLIC DISCLOSURE OF FINANCIAL REPORTS AND OTHER INFORMATION FILED BY LABOR ORGANIZATIONS WITH THE SECRETARY OF LABOR

A letter from the Secretary of Labor, recommending Congressional action be taken to authorize him to make public disclosure of the financial reports and other information filed with him by labor organizations under subsections (f) and (g) of section 9 of the National Labor Relations Act, as amended; to the Committee on Labor and Public Welfare.

PROPOSED PROCEDURE FOR ALTERING CERTAIN BRIDGES

A letter from the Secretary of the Army, transmitting a draft of proposed legislation relating to the procedure for altering certain bridges over navigable waters (with an accompanying paper); to the Committee on Public Works.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A joint resolution of the Legislature of the State of California; to the Committee on Agriculture and Forestry:

"Assembly Joint Resolution 23

"Joint resolution relative to memorializing Congress concerning establishment in California of a soil and water conservation laboratory

"Whereas a bill has been introduced in the Senate of the United States by Senator THYE, designated S. 575, to provide for the establishment by the Secretary of Agriculture of 4 soil and water conservation laboratories, 1 to be located in the western irrigated area of the United States; and

"Whereas there is a great interest throughout California's extensive agricultural community in research into problems relating to soil and water management and conservation; and

"Whereas an excellent location for such a conservation laboratory exists at the Davis Campus of the University of California: Now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the Congress to enact S. 575; and be it further

"*Resolved*, That the Legislature of the State of California wishes to express its intent to the Congress and to the Secretary of Agriculture that it shall provide necessary land at or near the Davis Campus of the University of California upon which a conservation laboratory may be established and maintained; and be it further

"*Resolved*, That the chief clerk of the assembly is hereby directed to transmit copies of this resolution to the President of the United States, to the President of the Senate in the Congress of the United States, to the Speaker of the House of Representatives in the Congress of the United States, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of Agriculture."

A joint resolution of the Legislature of the State of California; to the Committee on Armed Services:

"Assembly Joint Resolution 2

"Joint resolution relative to hunting and fishing on military reservations in California

"Whereas the fish and game of the State of California are the property of the people of the State; and

"Whereas the people of the State of California through their legislature have passed laws for the protection, preservation, and propagation of the fish and game of this State, which laws must be observed by all persons who take fish or game within the jurisdiction of the State of California; and

"Whereas on certain Federal military reservations in this State the laws of California relating to fish and game are not being observed especially by the resident military personnel; and

"Whereas the millions of dollars expended by the State of California for the protection and progation of fish and game has been expended to increase and preserve all fish and game in the State including that which is on

such Federal military reservations: Now, therefore, be it

"Resolved by the Assembly and Senate of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to provide that the laws of the State of California relating to fish and game shall be observed in all Federal military reservations within the State of California; and be it further

"Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"Assembly Joint Resolution 27

"Joint resolution relative to the statehood of the Territories of Alaska and Hawaii

"Whereas the United States of America has become the greatest power in the history of mankind because it is a united Nation of equal and sovereign States and not an empire; and

"Whereas the people of the United States devised a method and program of incorporating territories, which method, as a first step leading to the full privileges of statehood, imposes on the people of such territories the obligations of the citizens of the several States, while withholding from such territorial citizens, however, the basic rights of self-government and full representation in the councils of the United States; and

"Whereas Alaska and Hawaii have been incorporated as Territories of the United States for many years, and by the very act of such incorporation as United States Territories have been promised the full privileges of statehood with first-class citizenship for the peoples of Alaska and Hawaii; and

"Whereas both political parties have recognized that every consideration of fairness demands that the people of these Territories be given the full privileges of American citizenship in their platforms and other policy declarations; and

"Whereas the granting of statehood to these Territories will strengthen the United States immeasurably in human resources and in its foreign relations particularly as regards the great Pacific Basin area; and

"Whereas we in the West have a particular interest in and close ties with the people of Alaska and Hawaii: Now, therefore, be it

"Resolved by the Assembly and Senate, of the State of California, That the Legislature of the State of California respectfully memorialize the President and the Congress of the United States to take the steps necessary for the admission of the Territories of Alaska and Hawaii into the full status of statehood in the United States of America; and be it further

"Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of Minnesota; to the Committee on Finance:

"Resolution 12

"Joint resolution memorializing the Congress of the United States to repeal excise taxes levied on the transportation of persons and property by common and contract carriers

"Whereas certain excise taxes imposed during World War II are still in effect; and

"Whereas the reason given for imposing said taxes was to discourage use by civilians of common and contract carriers of persons and property when an extraordinary demand was placed on transportation by the large increase in traffic due to World War II; and

"Whereas these taxes have caused, and continue to cause, substantial diversion of traffic to private carriers, thus causing higher rates to be charged especially on the transportation of property which places a heavy burden on the farmer, the small-business man, and the small manufacturer, because they do not have sufficient value to engage in the transportation of their own property and must depend on common and contract carriers for their transportation needs; and

"Whereas these excise taxes are discriminatory to Minnesota products as illustrated by the fact that a shipment of Minnesota products from Minneapolis, Minn., to Northfield, Minn., wherein the cost of transportation was $10, would pay a tax of 30 cents and whereas the transportation of the same product to Chicago, Ill., for example, might have a transportation charge of $50, and the tax would be $1.50; and

"Whereas the repeal of these excise taxes will result in a direct reduction in transportation costs and eliminate the tax discrimination against shippers who live a long distance from the market for commodities produced and sold, or supplies and equipment manufactured at distant locations; and

"Whereas the same discriminatory situation exists where persons use common carrier passenger service; and

"Whereas repeal of these excise taxes will not result in any substantial or effective diminution of tax revenue to the Federal Government since these taxes are now paid by shippers for a business purpose and are deductible as ordinary and necessary expenses, and elimination of these taxes would in effect produce a greater net income taxable to the benefit of the Federal Government from said shippers and businesses who now deduct these excise taxes from their taxable revenue: Now, therefore, be it

"Resolved by the Legislature of the State of Minnesota, That we respectfully memorialize the Members of the United States Senate and House of Representatives from the State of Minnesota to introduce and support legislation to repeal the excise tax of 10 percent on the transportation of persons and 3 percent on the transportation of property by rail, motor, and water common carriers; be it further

"Resolved, That the secretary of state transmit copies of this resolution to United States Senator EDWARD J. THYE, United States Senator HUBERT H. HUMPHREY, Representative AUGUST H. ANDRESEN Representative JOSEPH P. O'HARA, Representative ROY W. WIER, Representative EUGENE J. MCCARTHY, Representative WALTER H. JUDD, Representative FRED MARSHALL, Representative H. CARL ANDERSEN, Representative JOHN A. BLATNIK, Representative COYA KNUTSON, Vice President RICHARD NIXON, and Speaker SAMUEL RAYBURN.

"A. I. JOHNSON,
"Speaker of the House of Representatives.
"KARL F. ROLVAAG,
"President of the Senate.

"Passed the house of representatives the 11th day of March 1957.

"G. H. LEAHY,
"Chief Clerk, House of Representatives.

"Passed the senate the 9th day of April 1957.

"H. Y. TORREY,
"Secretary of the Senate.

"Approved April 13, 1957.

"ORVILLE L. FREEMAN,
"Governor of the State of Minnesota.

"Filed April 13, 1957.

"JOSEPH L. DONOVAN,
"Secretary of the State of Minnesota."

A resolution adopted by the Board of Directors of the Lodi, Calif., District Chamber of Commerce, relating to duplication and waste in Department of Defense; to the Committee on Appropriations.

The petition of Edward Foeley, of Cornwall on Hudson, N. Y., relating to the budget for the Department of Defense; to the Committee on Appropriations.

A letter from Mrs. G. O. Shea, of Riverside, Calif., transmitting 13 petitions signed by citizens of that city, praying for an investigation of the activities of the Food and Drug Administration concerning the Hoxsey treatment for cancer (with accompanying petitions); to the Committee on Labor and Public Welfare.

CONCURRENT RESOLUTION OF SOUTH CAROLINA LEGISLATURE

Mr. THURMOND. Mr. President, on behalf of myself, and my colleague, the senior Senator from South Carolina [Mr. JOHNSTON] I present, for appropriate reference, a concurrent resolution of the South Carolina Legislature, commending the committee of the United States Senate on the selection of John C. Calhoun to the Senate Hall of Fame. I ask unanimous consent that the concurrent resolution be printed in the RECORD.

There being no objection, the concurrent resolution was ordered to lie on the table, and, under the rule, to be printed in the RECORD, as follows:

Concurrent resolution commending the committee of the United States Senate upon the selection of John C. Calhoun to the Senate Hall of Fame

Whereas the people of the State of South Carolina have long held in respect and admiration the memory of John C. Calhoun; and

Whereas John C. Calhoun served his State and Nation with distinction as a United States Senator, Vice President of the United States, Secretary of War, and Secretary of State; and

Whereas in those positions he exemplified all that is admirable in a public servant; and

Whereas the General Assembly of the State of South Carolina desires to express its appreciation to the Senate committee which named John C. Calhoun to the Senate Hall of Fame: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the General Assembly of the State of South Carolina expresses its appreciation to the Senate Committee for the selection of John C. Calhoun, an illustrious servant of the people of the State of South Carolina and of the United States, to the Senate Hall of Fame; be it further

Resolved, That a copy of this resolution be forwarded to the Honorable JOHN F. KENNEDY, United States Senate, chairman of the committee.

I hereby certify that the foregoing is a true and correct copy of a resolution adopted by the South Carolina House of Representatives and concurred in by the Senate.

INEZ WATSON,
Clerk of the House.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. SMATHERS, from the Committee on Interstate and Foreign Commerce, without amendment:

S. 937. A bill to amend section 4 of the Interstate Commerce Act, as amended (Rept. No. 333).

By Mr. SMATHERS, from the Committee on Interstate and Foreign Commerce, with amendments.

S. 377. A bill to establish the finality of contracts between the Government and com-

mon carriers of passengers and freight subject to the Interstate Commerce Act (Rept. No. 334); and

S. 943. A bill to amend section 218 (a) of the Interstate Commerce Act, as amended, to require contract carriers by motor vehicle to file with the Interstate Commerce Commission their actual rates or charges for transportation services (Rept. No. 335).

EXECUTIVE REPORTS OF COMMITTEES

As in executive session:

The following favorable reports of nominations were submitted:

By Mr. GREEN, from the Committee on Foreign Relations:

Walter P. McConaughy, of Alabama, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Burma;

Joseph S. Farland, of West Virginia, to be Ambassador Extraordinary and Plenipotentiary to the Dominican Republic;

Don C. Bliss, of New Jersey, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to Ethiopia;

Wilson C. Flake, of North Carolina, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Ghana;

Robert C. Hill, of New Hampshire, to be Ambassador Extraordinary and Plenipotentiary to Mexico; and

Miss Frances E. Willis, of California, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to Norway.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MAGNUSON (by request):

S. 2114. A bill to amend the act of March 3, 1901 (31 Stat. 1449), as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to acquire land for field sites, to undertake construction and improvement of buildings, and for other activities; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON:

S. 2115. A bill to amend the act of June 7, 1897, as amended, and section 4233 of the Revised Statutes, as amended, with respect to lights for vessels towing or being overtaken; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. CARLSON:

S. 2116. A bill for the relief of Andreas Werner Andresen; to the Committee on the Judiciary.

By Mr. CASE of South Dakota:

S. 2117. A bill directing the Secretary of the Army to transfer certain buildings to the Crow Creek Sioux Indian Tribe; to the Committee on Public Works.

By Mr. DOUGLAS:

S. 2118. A bill for the relief of Edward Dizer; to the Committee on the Judiciary.

By Mr. MAGNUSON:

S. 2119. A bill to expedite the utilization of television facilities in our public schools and colleges, and in adult training programs; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. HILL (for himself, Mr. MCCLELLAN, Mr. SMITH of New Jersey, Mr. MURRAY, Mr. IVES, Mr. KENNEDY, Mr. PURTELL, Mr. MCNAMARA, Mr. GOLDWATER, Mr. ALLOTT, Mr. MORSE, Mr. COOPER, Mr. THURMOND, and Mr. MUNDT):

S. J. Res. 94. Joint resolution directing that the financial reports and other information filed with the Secretary of Labor pursuant to subsections (f) and (g) of section 9 of the National Labor Relations Act, as amended, be made available to the public; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. HILL when he introduced the above joint resolution, which appear under a separate heading.)

INVESTIGATION OF CONSUMER SERVICES

Mr. JAVITS. Mr. President, I submit, for appropriate reference, a resolution to authorize the Senate Committee on Interstate and Foreign Commerce to study and investigate the effectiveness and extent of consumer services provided by Federal, State, and local governments and private groups. The purpose of the study is to determine what action may be taken by the Federal Government to supplement and coordinate such services.

Mr. President, ours is becoming increasingly a consumers' economy, both in terms of consumption and in terms of production, because so many of our people are owners of industry, through stockholdings, through pension and welfare funds, and through mutual insurance companies and savings banks. This is the destination toward which America is destined to go. Therefore, I hope very much that we may improve and develop further the services we offer, in order to facilitate that progress.

The VICE PRESIDENT. The resolution will be received and appropriately referred.

The resolution (S. Res. 137) authorizing an investigation looking to the supplementation and coordination of consumer services of the Federal and State governments and private groups, submitted by Mr. JAVITS, was referred to the Committee on Interstate and Foreign Commerce, as follows:

Resolved, That the Senate Committee on Interstate and Foreign Commerce, or any duly authorized subcommittee thereof, is authorized and directed to make a full and complete investigation and study of the extent, character, and effectiveness of consumer services (including protective services) made available by (1) the Federal Government, and (2) State and local governments and private groups, for the purpose of determining what action should be taken by the Federal Government to supplement and coordinate such services. The committee shall report its findings, together with such recommendations as it may deem advisable, to the Senate at the earliest practicable date.

SEC. 2. For the purposes of this resolution, the committee, or any duly authorized subcommittee thereof, is authorized to employ upon a temporary basis such technical, clerical, and other assistants as it deems advisable. The expenses of the committee under this resolution, which shall not exceed $50,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

ACQUISITION OF LAND AND CONSTRUCTION OF BUILDINGS BY NATIONAL BUREAU OF STANDARDS

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a bill to amend the act of March 3, 1901 (31 Stat. 1449), as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to acquire land for field sites, to undertake construction and improvement of buildings, and for other activities. I ask unanimous consent to have printed in the RECORD a letter from the Secretary of Commerce, requesting the proposed legislation, together with a statement of its purpose and need.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the letter and statement will be printed in the RECORD.

The bill (S. 2114) to amend the act of March 3, 1901 (31 Stat. 1449), as amended, to incorporate in the Organic Act of the National Bureau of Standards the authority to acquire land for field sites, to undertake construction and improvement of buildings, and for other activities, introduced by Mr. Magnuson, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter and statement presented by Mr. MAGNUSON are as follows:

THE SECRETARY OF COMMERCE,
Washington, D. C., May 10, 1957.

HON. RICHARD M. NIXON,
President of the Senate,
United States Senate,
Washington, D. C.

DEAR MR. PRESIDENT: There are attached four copies of a proposed bill "to amend the act of March 3, 1901 (31 Stat. 1449), as amended, to incorporate in the organic act of the National Bureau of Standards the authority to acquire land for field sites, to undertake construction and improvement of buildings, and for other activities."

There are also attached four copies of a statement of purpose and need in support thereof.

We are advised by the Bureau of the Budget that it would interpose no objection to the submission of this proposed legislation.

Sincerely yours,

SINCLAIR WEEKS,
Secretary of Commerce.

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION

The proposed legislation will (1) authorize the acquisition of field sites, (2) incorporate the provisions of Public Law 618, 81st Congress, 2d session (15 U. S. C. 285–286), in the organic act of the Bureau, (3) clarify the Bureau's authority to undertake improvements or construction projects and raise the limitation on such projects, (4) permit certain construction on leased property, and (5) correct a minor error in recently enacted amendments to the organic act.

The first section of the proposed bill will add three sections to the Bureau's organic act. An explanation of those sections follows.

The new section 13 provides permanent authorization for the appropriation of funds for the acquisition of field sites for NBS. The need for field sites arises primarily in connection with the radio propagation research programs conducted by the Bureau's Central Radio Propagation Laboratory which

is now quartered at Boulder, Colo. Some of the radio research work cannot be undertaken in the main laboratories and the choice of field locations is severely limited by technical considerations. For example, some of the work must be done in locations where the transmission will not disrupt commercial, military, and other radio communications. Similarly, some work must be located where manmade noise and commercial or experimental transmissions will not disrupt the delicate measurements being made. The Bureau always attempts to use existing Government-owned property or leased property, but these and other considerations, such as terrain conditions and availability of electric power, often prevent that. In such cases, the acquisition of land for a field station is the most satisfactory and most economical solution to the problem. A more complete discussion of the present need for field sites is contained in appendix A, attached.

At the present time the Bureau needs to acquire five field sites for the radio program. However, over a longer period of time as program changes occur, the requirements will change with respect to size, location, or number of sites needed. The proposed legislation will permit the Bureau to request funds for new sites, if needed in the future, without additional authorizing legislation. In all cases it will be necessary for the appropriation act to contain a specific provision for such purchase.

Section 14 will add to the Bureau's organic act the authority, now contained in section 2 of Public Law 618, 81st Congress, 2d session (15 U. S. C. 286), to construct buildings and facilities and make improvements to existing facilities. Although this authority has been rephrased to eliminate certain ambiguities in the current statute, the proposed language does not change the substance of the present authority. It merely eliminates the need for reference to legislative history to interpret the authority, and it incorporates that authority in the Bureau's basic statute.

This section does change the existing cost limit on improvements and construction which may be undertaken without specific provision in appropriation acts. When the current statute was enacted in 1950 the $25,000 limitation permitted NBS to undertake most of the miscellaneous improvements and construction projects needed to support and further the Bureau's technical program. The Bureau practice has been to contract for these jobs unless the Bureau's Plant Division can do them at a lower cost. Since 1950 the cost of such jobs has risen sharply, the construction-cost index having risen more than 40 percent and Bureau labor and material costs having increased. Also as a result of changes in the NBS accounting system and appropriation structure the Comptroller General has required that a portion of Bureau overhead costs be included in the total of costs chargeable to jobs performed by the Plant Division. This increase in construction costs has severely reduced the magnitude of the improvements which can be undertaken without specific authorization. As a result, urgently needed improvements must either be postponed or reduced to the point of makeshift. In either case the effect on the technical program needing the structure is detrimental.

Section 15 incorporates in the organic act the authority contained in section 1 of Public Law 618, 81st Congress, 2d session (15 U. S. C. 285). That section authorized the expenditure of NBS appropriations for certain purposes. However, under the Bureau's cost accounting system, many of these items are more properly chargeable to Bureau overhead and hence to all source of financing of Bureau projects. The incorporation of this authority in the Bureau's basic statute will automatically authorize the use of all funds for such expenditures because the recently enacted section 12 (b) provides that the working capital fund "shall be available for obligation and payment for any activities authorized by this act."

Some of the paragraphs of this section involve changes in the previous language. Paragraph (c) clarifies rental authority by specific reference to field sites and warehouse space as well as laboratory and office space. Paragraph (d) eliminates a qualification on the authority to purchase reprints from technical journals and adds authority to pay page charges to technical journals which publish NBS research papers or reports. A recent decision of the Comptroller General gives rise to the belief that the latter authority is available to NBS, but inclusion of the authority in the basic statute eliminates any doubt.

The authority contained in paragraphs (e) and (f) is extended to provide for work in the Antarctic as well as the Arctic. Recent work in connection with the International Geophysical Year program has indicated the need for this extension both for current programs and the future.

Paragraph (g) is completely new. The Bureau has interpreted Public Law 390, 81st Congress, 1st session, as providing authority to erect quarters and facilities on leased sites. However, the Comptroller General has questioned that interpretation. This paragraph is proposed in order to clarify this situation and to extend the authority to all funds available to the Bureau. Frequently, technical programs of the Bureau, especially the radio propagation program, require the use of field sites for a relatively short period of time. Purchase of such field sites would be uneconomical, but it is often necessary to erect special facilities such as antennas, to extend utility lines, or to provide shelter for delicate technical equipment. In such cases, leasing the necessary land and erecting the facilities thereon is often the most economical course. Since the need for such action often arises on short notice in connection with high-priority programs for other agencies, the Department requests provision of permanent authority, subject, of course, to administrative determination of necessity in each case. In the exercise of this authority due consideration would be given to the expected length of occupancy of the site and the nature of the facilities to be erected. Ordinarily the facilities would be of a special nature which would not enhance the value of the property to the owner.

Section 2 of the proposed bill will correct a minor error in the recently enacted amendments to the Bureau's basic statute (Public Law 940, 84th Cong., 2d sess.). In repealing section 13 of that act and reenacting it as section 11, Public Law 940 inadvertently changed the word "herein" to "therein." For the sake of clarity, section 2 of this bill will correct that situation.

Section 3 of this bill repeals Public Law 618, 81st Congress, 2d session, which section 1 reenacts as sections 14 and 15 of the basic statute.

The proposed legislation does not expand NBS functions and therefore will not require increased expenditures. However, the new section 13 authorizes the purchase of land and the Bureau plans to request appropriations for the acquisition and construction of field installations at an early date after enactment. The Bureau estimates that the currently needed field sites will require appropriation of $575,000 for land purchase and construction of operating facilities. None of this will be for personal services.

Section 14 does not require additional appropriations. The Bureau normally receives an appropriation for miscellaneous improvements and construction required to meet the needs of changes in technical programs. The proposed section 14 merely increases the portion of such appropriation which can be expended for a single project.

Similarly, most of the authorizations in section 15 are contained in existing statutes. Paragraph (g) authorizes expenditures for a new purpose but a cost estimate for this authority is not feasible. The need to exercise the authority will presumably arise only intermittently and the requirement of a determination that the construction on leased property best serves the interests of the Government would preclude a large-scale program.

APPENDIX A

PROPOSED RADIO PROPAGATION FIELD SITES

The acquisition of new field sites for radio propagation research is essential now that the Central Radio Propagation Laboratory has been established at Boulder, Colo. One of the prime reasons for moving the laboratory from the Washington area was to make possible more adequate conditions for conducting field experiments. Until the laboratory was moved, field operations were located primarily at a large site in the Washington area (Sterling, Va.). Since the move, field operations which needed to be relocated as quickly as possible have been established on leased sites in Colorado and Illinois. While some operations will always be continued in the Washington area, additional activities should be located closer to the headquarters of the laboratory.

The radio propagation program involves steady transmissions, pulsed transmissions, and precise measurements of reception of radio signals. The nature of the research program necessitates that part of it be conducted at field sites meeting certain specialized requirements. Radio research work is always on the fringe of the possible and therefore requires careful avoidance of all possible sources of extraneous noise. Also, care must be exercised to avoid creating interference with commercial and military radio communication. These field sites must be located where manmade noise and commercial transmissions will not disrupt the delicate measurements and where experimental transmission will not interfere with established communications systems.

While much of the work can be done at a general experiment station, several smaller sites are also needed to separate pulse transmission studies from steady transmission studies and to provide receiving stations for transmissions from the other station.

Distinctly separate sites are required for receiving sites and pulse transmission sites.

1. Receiving site: This is a site where experiments concerned with the reception of radio signals can be carried out on a continuous basis without receiving interference from other experiments. Steady transmissions (not pulsed) will not cause interference to other experiments operating at different frequencies. Thus it is feasible to use the receiving site for experiments which involve steady transmissions and this is included in our proposed field site plans.

2. Pulse transmitting site: Pulse transmissions cause marked interference to sensitive receivers even at different frequencies for some distance from the transmitter. Thus these need to be carried out in a distinctly separate location to avoid having to stop all experiments of the receiving type during the pulse transmissions.

Examples of the type of projects which will utilize these sites are:

1. Ionospheric forward scatter and meteoric reflections: Both of these projects, requiring pulse transmissions, represent new methods of radio communication of particular importance to reliable communication over long distances. These continuing projects call for intensive experimentation on the various facets of the phenomena and for continued field strength observations through a minimum of 1 solar cycle of 11 years in order to determine the solar cycle dependence of the phenomena.

2. Antenna studies: Proper antenna design may make considerable difference in the effectiveness of radio equipment when used to measure various phenomena important for radio propagation and communication. While some antenna types may be designed by computations, many others require experimental adjustments before proper operation can be obtained requiring an antenna range facility. Such a facility requires a large flat area with no reflecting structures nearby which would distort the field of the antenna and invalidate the results.

3. Ionospheric radio astronomy: This program calls for increased attention to use of emissions from radio stars and also emissions of general galactic noise to study the structure and characteristics of the ionosphere. These studies require both large areas for the erection of suitable directive antenna systems and for reduction of interference from outside sources.

4. Upper atmosphere physics: This project includes a study of motions of winds of the ionosphere and calls for a steady transmission and reception on three spaced antennas.

5. Sferics: An active program is presently under way on recording these very low frequency pulses which originate from lightning strokes. This experimentation gives us information about propagation at these frequencies.

Although some experiments present special requirements for sites, a large share of the experiments in radio propagation present similar or common requirements for a field site. The most important requirements for such field sites are as follows:

1. Proximity and accessibility of site to main laboratories.

2. Economical availability of electric power of adequate capacity, stability, and continuity.

3. Distance from overhead power lines: This requirement in one sense conflicts with the preceding. Proximity to overhead lines, particularly high tension, introduces noise and, under certain conditions, distortion of radiation patterns of antennas.

4. Flatness and levelness of terrain over a large area: This is quite important for antenna-measurement work. Reflections from terrain irregularities, from obstructions or even transient targets (such as vehicles, personnel, or animals) produce standing waves which impair the accuracy of the results. A flat site, on which large antenna systems can be laid out without encountering obstructions of the horizon in any desired direction, is an important and general requirement for most radio propagation measurements, and, in particular, radio direction finding experiments and very high frequency propagation studies.

5. The size of the site should be as large as feasible. For nearly all propagation work there is a minimum size below which the site is unsatisfactory. Such a minimum size depends on the nature of adjoining property and the extent to which satisfactory agreements can be negotiated with adjacent property owners for protection against electrical interference and structures which can give rise to interfering wave reflections. If the site satisfying all the requirements is larger than the minimum size, the results are in general improved and obtained with less investment of time in investigating sources of interference and siting effects.

A large single site satisfying the requirements makes it possible to group together a number of mutually noninterfering projects with economy in transportation, overhead, and in original improvements such as power supply and access roads.

6. Low prevailing radio noise intensities: This leads generally to a requirement for a somewhat isolated site, remote from industrial or commercial areas, heavily trafficked highways, concentration of farm electrical machinery, or other sources radiating electrical interference. This requirement is extremely important because most radio propagation experiments involve the need for receiving, measuring, and recording radio waves, often at very low energy levels relative to ordinary ambient interfering radio noise.

In accordance with these criteria, five sites have been tentatively selected to meet present needs of the radio program:

1. Table Mesa, Boulder County, Colo.
2. Gunbarrel Hill, Boulder County, Colo.
3. Haswell, Colo.
4. Erie, Colo.
5. Havana, Ill.

LIGHTS FOR CERTAIN VESSELS

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, a bill to amend the act of June 7, 1897, as amended, and section 4233 of the Revised Statutes, as amended, with respect to lights for vessels towing or being overtaken.

The purpose of the suggested amendment to the act of June 7, 1897, as amended, and section 4233 of the Revised Statutes, as amended, is to bring the provisions of law which govern the use of towing lights on vessels operating under Pilot Rules for Inland Waters and Western Rivers Rules more nearly into conformity and thus eliminate confusion and possible hazarding of the vessels when they pass from areas where they operate under inland waters regulations to areas controlled by western rivers regulations, and vice versa. The amendment is also designed to provide readily distinguishable and identifiable lights for overtaken and overtaking vessels, thus further adding to the safety of operations.

The suggested amendatory provisions have been arrived at by vessel operators working through the western rivers panel of the Merchant Marine Council of the United States Coast Guard and have the approval and sanction of the United States Coast Guard.

I ask unanimous consent that a comparative type showing changes in existing law by the proposed legislation may be printed in the RECORD.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the comparative type will be printed in the RECORD.

The bill (S. 2115) to amend the act of June 7, 1897, as amended, and section 4233 of the Revised Statutes, as amended, with respect to lights for vessels towing or being overtaken, introduced by Mr. MAGNUSON, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The comparative type presented by Mr. MAGNUSON is as follows:

COMPARATIVE TYPE SHOWING CHANGES IN EXISTING LAW BY THE PROPOSED BILL

[Matter proposed to be omitted enclosed in black brackets; new matter in italic]

ARTICLE 3 OF SECTION 1 OF THE ACT OF JUNE 7, 1897, AS AMENDED (30 STAT. 97, AS AMENDED; U. S. C., 1952 EDITION, TITLE 33, SEC. 173)

ART. 3. (a) A steam vessel when towing another vessel or vessels alongside or by pushing ahead shall, in addition to her side lights, carry 2 bright white lights in a vertical line, 1 over the other, not less than 3 feet apart, and when towing 1 or more vessels astern, regardless of the length of the tow, shall carry an additional bright white light 3 feet above or below such lights. Each of these lights shall be of the same construction and character, and shall be carried in the same position as the white light mentioned in article 2 (a) or the after range light mentioned in article 2 (f).

[Such steam vessel may carry a small white light abaft the funnel or aftermast for the vessel towed to steer by, but such light shall not be visible forward of the beam.]

(b) A steam vessel carrying towing lights the same as the white light mentioned in article 2 (a), when pushing another vessel or vessels ahead, shall also carry at or near the stern 2 bright amber lights in a vertical line, one over the other, not less than 3 feet apart; each of these lights shall be so constructed as to show an unbroken light over an arc of the horizon of 12 points of the compass, so fixed as to show the light 6 points from right aft on each side of the vessel, and of such a character as to be visible at a distance of at least 2 miles. A steam vessel carrying towing lights the same as the white light mentioned in article 2 (a) may also carry, irrespective of the position of the tow, the after range light mentioned in article 2 (f); however, if the after range light is carried by such a vessel when pushing another vessel or vessels ahead, the amber lights shall be carried in a vertical line with and at least 3 feet lower than the after range light. A steam vessel carrying towing lights the same as the white light mentioned in article 2 (a), when towing 1 or more vessels astern, may also carry, in lieu of the stern light specified in article 10, a small white light abaft the funnel or aftermast for the tow to steer by, but such light shall not be visible forward of the beam.

ARTICLE 10 OF SECTION 1 OF THE ACT OF JUNE 7, 1897, AS AMENDED (30 STAT. 98; U. S. C., 1952 EDITION, TITLE 33, SEC. 179)

ART. 10. (a) A vessel [which is being overtaken by another,] *when under way,* [except a steam vessel with an after range light showing all around the horizon,] *if not otherwise required by these rules to carry one or more lights visible from aft,* shall [show] *carry* [from] *at* her stern [to such last mentioned vessel] a white light, [or a flare-up light,] *so constructed that it shall show an unbroken light over an arc of the horizon of 12 points of the compass, so fixed as to show the light 6 points from right aft on each side of the vessel, and of such a character as to be visible at a distance of at least 2 miles. Such light shall be carried as nearly as practicable on the same level as the side lights.*

(b) In a small vessel, if it is not possible on account of bad weather or other sufficient cause for this light to be fixed, an electric torch or a lighted lantern shall be kept at hand ready for use and shall, on the approach of an overtaking vessel, be shown in sufficient time to prevent collision.

SECTION (D) OF RULE NO. 3 OF SECTION 4233 OF THE REVISED STATUTES OF THE UNITED STATES, AS AMENDED (U. S. C., 1952 EDITION, TITLE 33, SEC. 312)

(d) At or near the stern, where they can best be seen, 2 [red] *amber* lights in a verticle line, one over the other, not less than 3 feet apart, of such a character as to be visible from aft for a distance of at least 2 miles, and so screened as not to be visible forward the beam.

RULE NO. 10 OF SECTION 4233 OF THE REVISED STATUTES OF THE UNITED STATES, AS AMENDED (U. S. C., 1952 EDITION, TITLE 33, SEC. 319)

Rule No. 10: (a) A vessel [which is being overtaken by another] *when under way,* [except a steam vessell which already has] *if not otherwise required by these rules to carry* one or more [running] lights visible from aft, shall [show] *carry* [from] *at* her stern [to such last mentioned vessel] a white light, [or a flare-up light,] *so constructed that it shall show an unbroken light over an arc*

of the horizon of 12 points of the compass, so fixed as to show the light 6 points from right aft on each side of the vessel, and of such a character as to be visible at a distance of at least 2 miles. Such light shall be carried as nearly as practicable on the same level as the side lights.

[The white light required to be shown by this article may be fixed and carried in a lantern, but in such case the lantern shall be so constructed, fitted, and screened that it shall throw an unbroken light over an arc of the horizon of 12 points of the compass, namely, for 6 points from right aft on each side of the vessel, so as to be visible at a distance of at least 2 miles.]

(b) *On a small vessel, if it is not possible on account of bad weather or other sufficient cause for this light to be fixed, an electric torch or a lighted lantern shall be kept at hand ready for use and shall, on the approach of an overtaking vessel, be shown in sufficient time to prevent collision.*

USE OF TELEVISION FACILITIES FOR EDUCATIONAL PURPOSES

Mr. MAGNUSON. Mr. President, I introduced, for appropriate reference, a bill to expedite the utilization of television facilities in public schools and colleges, and in adult training programs. I ask unanimous consent to have printed in the RECORD a memorandum explaining the purposes of the bill.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the memorandum will be printed in the RECORD.

The bill (S. 2119) to expedite the utilization of television facilities in our public schools and colleges, and in adult training programs, introduced by Mr. MAGNUSON, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The memorandum presented by Mr. MAGNUSON is as follows:

EXPLANATION OF EDUCATIONAL TELEVISION BILL

This bill is intended to expedite the utilization of television facilities in our public schools and colleges. In addition, it will be possible for States to establish adult training programs with the facilities provided.

The legislation would provide grants to the States, limited to $1 million to each State and Territory, where the State has agreed to bear the operating and maintenance costs of the television equipment and facilities to be provided. Under this section the Federal Government will provide only the equipment needed for television broadcasting, including closed circuit television and the States would have to provide the buildings and land required.

It is estimated that a suitable television facility in terms of equipment would cost approximately $150,000 to $200,000. Thus each State could establish under this matching grant program 5 or 6 school television facilities. There have been approximately 250 educational channels set aside by the Federal Communications Commission, so that this present program is tailored to present educational television plans.

Some experts have indicated that educational television can be likened to the development of the printed textbooks in terms of the dramatic impact it can have upon advancing public education. While it is still in the experimental stage, and considerable work will have to be done in order to determine the best uses for television in public schools, it is almost universally accepted that it will be a real benefit in terms of the problems confronting education today. This bill will make possible earlier realization of these benefits.

STATE, JUSTICE, AND JUDICIARY APPROPRIATIONS, 1958—CHANGE OF CONFEREE

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator from Montana [Mr. MANSFIELD] be excused from further service as a conferee on the bill (H. R. 6871) making appropriations for the Departments of State, Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes, and that the Senator from Arkansas [Mr. FULBRIGHT] be appointed in his stead.

The VICE PRESIDENT. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. DWORSHAK:

Address entitled "Let's Get Everybody Pitching Hay," delivered by Senator WATKINS at the Western Water and Power Conference.

By Mr. JAVITS:

Report by him to the people of the State of New York on the 1st session of the 85th Congress.

Message from Senator CLARK and Senator JAVITS to the Prayer Pilgrimage for Peace.

Correspondence between him and Under Secretary of State Christian Herter, relating to the position of the United States regarding the Suez Canal.

By Mr. HICKENLOOPER:

Address delivered by the Secretary of Agriculture to the Iowa State Club, in Chicago, Ill., on May 6, 1957.

NOTICE OF HEARING ON NOMINATION OF EARL E. T. SMITH TO BE AMBASSADOR TO CUBA

Mr. GREEN. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that the Senate received today the nomination of Earl E. T. Smith, of Florida, to be Ambassador of the United States to Cuba, vice Arthur Gardner, resigned.

Notice is given that this nomination will be eligible for consideration by the Committee on Foreign Relations at the expiration of 6 days, in accordance with the committee rule.

TAX REFORM

Mr. WILEY. Mr. President, I send to the desk a brief statement regarding comments which were made in the course of a report by the research and policy committee of the noted Committee for Economic Development—comments on behalf of a study looking toward tax reform.

The CED comments, I am delighted to say, parallel the suggestion which I have made for enactment of the Wiley bill, S. 769, for a Federal Tax Commission.

I ask unanimous consent that this statement be printed in the body of the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

I was pleased, indeed, to note that the Committee for Economic Development, in a release on Tuesday, accompanying the 50-page report by its research committee, made the following observation:

"It is time to give serious thought to the problem of reforming the tax system."

Following this statement, the committee recommended the establishment "of a nonpartisan advisory tax commission to make a thorough investigation, with the view of arriving at proposals for revamping the Federal tax system."

The report continued: "An impartial review of the issues by a group of prominent and respected citizens, representing various shades of opinion, can provide a good basis for the balanced revision that is so urgently needed in the near future."

As will be recalled, these recommendations for revision and improvement of our tax structure closely parallel my own recommendation in the introduction of my bill, S. 769, which is cosponsored by 14 other Senators.

This bill proposes to create a Hoover-type Commission for a top-level, long-range review and an analysis of our American tax system. The objectives, of course, are to iron out inequities, plug loopholes, fairly redistribute the taxload, and generally pave the way for tax reductions, which our people badly need.

I believe this firm declaration by so renowned a group, stressing the need for a top-to-bottom revision of our tax laws heavily buttresses the case for the establishment of such a commission.

There follows now an extract from the CED report, Tax Reduction and Tax Reform—Where and How:

THE NEED FOR TAX REFORM

"Even though it may be necessary to postpone tax reduction this year, work on reforming the tax structure cannot be delayed. In the first place, expenditures are rising and there is little evidence that the trend will be checked in the near future. In the second place, tax reduction—when it does come—should not, as it has too often in the past, consist only of cuts in the rates of the major taxes. Action is also essential to correct those provisions of the tax law that distort economic decisions and create inequities among taxpayers.

"It would be desirable to have a goal toward which we can move. For this purpose, it will be necessary to give consideration to the many complicated issues in this difficult area of public policy.

"We believe that these are matters deserving serious study and analysis by the Congress. We recommend that the study be undertaken by the Joint Committee on Internal Revenue Taxation, which consists of the senior members of the two tax-writing committees and which was set up to make studies of taxation problems and to submit recommendations to these committees.

"To do the job adequately, the joint committee will need the advice and assistance of a special Advisory Tax Commission recruited from among representatives of business, labor, agriculture, and consumer groups, with ample staff and time to explore all of the major problems. The Federal tax system has undergone a revolution since the beginning of World War II, but the net result is still to be evaluated. The mere fact that there is so much disagreement about taxes indicates that much good could be accomplished by a review of the issues among a group of competent and public-spirited citizens representing different shades of opinion in the community."

COMMISSION SHOULD BE INDEPENDENT, WILEY SAYS

Finally, let me say that I, for one, believe that the Tax Commission should be independent of the legislative branch, and for that matter, of the executive branch. The Commission should stand on its own—should have independent powers, including subpena powers, rather than merely being advisory to the Joint Committee on Internal Revenue. It should be advisory instead to both major branches of Government, as a whole.

Ultimately, of course, the Commission's report will be deposited before that joint committee and before the Ways and Means and Senate Finance Committees.

LIST OF CED TRUSTEES AND RESEARCH COMMITTEE

Now, in conclusion, I should like to list the distinguished trustees of the CED together with a description of how this splendid and far-seeing organization works. I should also like to list the membership of its Research and Policy Committee.

I may say that the CED's latest report—in which I have referred to but one of the phases, is an exceedingly stimulating and workmanlike job, as is customary in CED presentations.

TRUSTEES OF THE COMMITTEE FOR ECONOMIC DEVELOPMENT

Donald K. David, chairman; chairman, executive committee, the Ford Foundation.

Jervis J. Babb, vice chairman; chairman of the board, Lever Bros. Co.

Paul F. Clark, vice chairman; chairman of the board, John Hancock Mutual Life Insurance Co.

Gardner Cowles, vice chairman; president, Des Moines Register & Tribune and Cowles Magazines, Inc.

Thomas B. McCabe, vice chairman; president, Scott Paper Co.

J. Cameron Thomson, vice chairman; chairman of the board, Northwest Bancorporation.

Frazar B. Wilde, vice chairman; president, Connecticut General Life Insurance Co.

Thomas Roy Jones, treasurer; president, Daystrom Inc.

James L. Allen, senior partner and chairman; executive committee, Booz, Allen & Hamilton.

William M. Allen, president, Boeing Airplane Co.

Stanley C. Allyn, president, the National Cash Register Co.

Frank Altschul, New York, N. Y.

Robert B. Anderson, president, Ventures, Ltd.

F. J. Andre, president, Congoleum-Nairn Inc.

George S. Armstrong, president, George S. Armstrong & Co., Inc.

William Balderston, chairman, Philco Corp.

John W. Barriger, president, Pittsburgh & Lake Erie Railroad Co.

S. D. Bechtel, president, Bechtel Corp.

S. Clark Beise, president, Bank of America.

Frank N. Belgrano, Jr., president and chairman of the board, Transamerica Corp.

Elliott V. Bell, chairman of the executive committee, McGraw-Hill Publishing Co., Inc.

William Benton, chairman of the board, Encyclopaedia Britannica, Inc.

Sarah G. Blanding, president, Vassar College.

Joseph L. Block, president, Inland Steel Co.

Harold Boeschenstein, president, Owens-Corning Fiberglas Corp.

Marvin Bower, partner, McKinsey & Co.

W. Harold Brenton, president, Brenton Bros., Inc.

Henry P. Bristol, chairman of the board, Bristol-Myers Co.

James F. Brownlee, partner, J. H. Whitney & Co.

Thomas D. Cabot, president, Godfrey L. Cabot, Inc.

Everett Needham Case, president, Colgate University.

Frank A. Christensen, chairman of the boards, America Fire Insurance Group.

Walker L. Cisler, president, the Detroit Edison Co.

M. W. Clement, Philadelphia, Pa.

Erle Cocke, chairman, executive committee, the Fulton National Bank.

L. L. Colbert, president, Chrysler Corp.

John S. Coleman, president, Burroughs Corp.

S. Bayard Colgate, honorary chairman of the board, Colgate-Palmolive Co.

John L. Collyer, chairman of the board, the B. F. Goodrich Co.

S. Sloan Colt, chairman of the board, Bankers Trust Co.

James B. Conant, New York, N. Y.

John T. Connor, president, Merck & Co., Inc.

George H. Coppers, president, National Biscuit Co.

H. H. Cory, chairman of the board, George A. Hormel & Co.

Charles R. Cox, president, Kennecott Copper Corp.

Jay E. Crane, Standard Oil Co. (New Jersey).

Paul L. Davies, chairman of the board, Food Machinery and Chemical Corp.

Nathanael V. Davis, president, Aluminium Limited, Inc.

Donald C. Dayton, president, Dayton's.

John S. Dickey, president, Dartmouth College.

George S. Dinwiddie, president, New Orleans Public Service, Inc.

Morris Edwards, vice president, Thomas E. Wood, Inc.

Fred J. Emmerich, chairman of the board, Allied Chemical & Dye Corp.

Charles T. Fisher, Jr., president, National Bank of Detroit.

Edmund Fitzgerald, president, the Northwestern Mutual Life Insurance Co.

Ralph E. Flanders, United States Senate.

Lamar Fleming, Jr., chairman of the board, Anderson, Clayton & Co.

Percival E. Foerderer, Philadelphia, Pa.

William C. Foster, executive vice president, Olm Mathieson Chemical Corp.

John M. Fox, president, Minute Maid Corp.

Fred C. Foy, president, Koppers Co., Inc.

Clarence Francis, General Foods Corp.

Alfred C. Fuller, chairman of the board, the Fuller Brush Co.

Walter D. Fuller, chairman of the board, the Curtis Publishing Co.

George M. Gadsby, chairman of the board, Utah Power & Light Co.

Clark R. Gamble, president, Brown Shoe Co.

Paul S. Gerot, president, Pillsbury Mills, Inc.

Philip L. Graham, president and publisher, the Washington Post and Times Herald.

Gordon Gray, director, Office of Defense Mobilization.

George L. Harrison, New York Life Insurance Co.

H. J. Heinz II, president, H. J. Heinz Co.

Robert Heller, president, Robert Heller & Associates, Inc.

William A. Hewitt, president, Deere & Co.

Paul G. Hoffman, Pasadena, Calif.

John Jay Hopkins, president and chairman, General Dynamics Corp.

T. V. Houser, chairman of the board, Sears, Roebuck & Co.

Eric Johnston, president, Motion Picture Association of America, Inc.

Henry R. Johnston, New York, N. Y.

William H. Joyce, Jr., San Marino, Calif.

Ernest Kanzler, vice chairman of the board, Universal C. I. T. Credit Corp.

Meyer Kestnbaum, president, Hart, Schaffner & Marx.

Sigurd S. Larmon, president, Young and Rubicam, Inc.

Roy E. Larsen, president, Time, Inc.

Fred Lazarus, Jr., president, Federated Department Stores, Inc.

Ralph Lazarus, executive vice president, Federated Department Stores, Inc.

Leroy A. Lincoln, chairman of the board, Metropolitan Life Insurance Co.

Elmer L. Lindseth, president, the Cleveland Electric Illuminating Co.

Homer J. Livingston, president, the First National Bank of Chicago.

George H. Love, president, Pittsburgh Consolidated Coal Co.

J. Spencer Love, chairman of the board, Burlington Industries, Inc.

Robert A. Lovett, partner, Brown Brothers Harriman & Co.

Franklin J. Lunding, chairman of the board, Jewel Tea Co., Inc.

Fowler McCormick, Chicago, Ill.

Ralph McGill, editor, the Atlanta Constitution.

Stanley Marcus, president, Neiman-Marcus Co.

J. A. Martino, president, National Lead Co.

Fred Maytag II, president, the Maytag Co.

Eugene Meyer, the Washington Post and Times Herald.

Don G. Mitchell, chairman of the board, Sylvania Electric Products, Inc.

C. H. Moses, House, Moses & Holmes.

Malcolm Muir, president, Newsweek.

Alfred C. Neal, president, Committee for Economic Development.

L. B. Neumiller, chairman of the board, Caterpillar Tractor Co.

Aksel Nielsen, president, the Title Guaranty Co.

W. A. Patterson, president, United Air Lines.

Morris B. Pendleton, president, Pendleton Tool Industries, Inc.

Howard C. Petersen, president, Fidelity-Philadelphia Trust Co.

T. S. Petersen, president, Standard Oil Company of California.

Malcolm Pirnie, Malcolm Pirnie Engineers.

M. J. Rathbone, president, Standard Oil Co. (New Jersey).

ABOUT THE COMMITTEE FOR ECONOMIC DEVELOPMENT

The Committee for Economic Development is composed of 150 leading businessmen and educators.

They believe CED's record of the past 15 years demonstrates that "men of practice and men of theory," working together, can conduct objective economic research; support and promote economic education; and formulate and publish recommendations on major economic problems that will contribute to growth and stability in the American economy, higher living standards, and increasing opportunities for all Americans, and to strengthening the institutions and the concepts essential to progress in a free society.

CED's work is supported by voluntary contributions from business and industry. It is nonprofit, nonpartisan, and nonpolitical.

The trustees, who generally are presidents or board chairmen of corporations and presidents of universities, are chosen for their individual capacities rather than as representatives of any particular interests. They unite scholarship with business judgment and experience in analyzing the issues and developing recommendations to resolve the economic problems that constantly arise in a dynamic and democratic society.

Through this business-academic partnership, CED endeavors to develop policy statements and other research products that commend themselves as guides to public and business policy; for use as texts in college economic and political-science courses and in management-training courses; for consideration and discussion by newspaper and magazine editors, columnists, and commentators; and for distribution abroad to promote better understanding of the American economic system.

CED believes that by enabling businessmen to demonstrate constructively their concern for the general welfare it is helping business to earn and maintain the national and community respect essential to the successful functioning of the free-enterprise capitalist system.

At 28 college-community research centers throughout the country CED also is seeking to apply cooperative research and education between business and academic men to local and regional economic issues. In an increasing number of cases, this approach is being applied to local or regional aspects of economic problems which are engaging CED itself in studies of national and international scope.

CED is expressing in still another fashion its conviction that successful functioning of a free society requires knowledge and understanding of its economic processes. It is helping to increase both the extent and the quality of economics instruction in the secondary schools through the Joint Council on Economic Education. This independent, cooperative endeavor by educators and businessmen is now sponsoring activities in 35 States. CED helped establish the joint council and continues to give it wholehearted support.

RESEARCH AND POLICY COMMITTEE

CELEBRATION OF THE 20TH ANNIVERSARY OF THE MILWAUKEE JOURNAL'S STOCK OWNERSHIP PLAN

Mr. WILEY. Mr. President, I was pleased to read in the Wednesday, May 15, issue of the Milwaukee Journal a most inspiring writeup of an important occasion in the history of that great

newspaper, and in the life of the Greater Milwaukee area. That day marked the 20th anniversary of the Milwaukee Journal Employees' Stock Trust Agreement—the plan under which more than 62½ percent of the capital stock of the Journal Company is owned by the employees themselves.

Plaques were presented to the two persons who brought about this unique and impressive program, under which those who have built the Journal—those who have served it well—have been enabled to become part owners of the Journal itself. The plaques honored Mr. Harry J. Grant, Chairman of the Board of the Journal Company, and Miss Bay McBeath, niece of the late Lucius W. Nieman, founder of this world-famous paper.

Mr. President, I have long been deeply interested in various plans by which great American companies have encouraged their employees, voluntarily, to become owners of equity in the companies themselves. To me, this is Americanism in action. It is the very opposite of the situation which had for so long prevailed in Europe, where the so-called working class—rootless, propertyless—had nothing but contempt and hostility for the owners of the factories in which they worked.

In America, there are no classes. The employee can and should be a capitalist, so to speak, in his own right, feeling a sense of deep pride, not only in his work, but in the fact that he is part owner of the very place in which he spends almost one-third of his life.

Of course, it is an especially interesting matter to note how well the stock ownership concept has worked in a great newspaper like the Journal.

A stock ownership plan is no cure-all for problems. Many such a plan has foundered on the rocks of mismanagement, misunderstanding, and changing economic tides. But the Journal plan has worked, and worked impressively. And not only are the Journal's faithful employees the happier for the fact that the plan has succeeded, but the vast community served by the Journal has been enriched and improved, thanks to the success of this fine plan.

I send to the desk the text of the article marking the 20th anniversary. I believe that this article will be of deep interest to all who esteem the Fourth Estate, which I am sure includes every one of us. And it is especially appropriate, for the Journal has always appeared among the ranks of America's 10 greatest newspapers. It is a "civic conscience" newspaper, a newspaper with its own conscience, and a newspaper which is determined to be the conscience of a great community—keeping it wholesome, keeping it progressive—moving forward, serving it, informing it.

I like very much the fine creed expressed by Mr. Grant, which this present article recalls—a creed set forth in 1947, when Mr. Grant said to the Journal employees, "Neither reward friends nor punish enemies."

He also said, "Use the strong instrumentality of the Journal for the best interests of the community, and deal always in good faith with one another."

I ask unanimous consent that this article be printed at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOURNAL AIDS HONOR GRANT, MISS MCBEATH—EMPLOYEE UNIT HOLDERS MARK 20TH YEAR OF STOCK PLAN BY GIVING THEM PLAQUES

More than 900 employee unit holders of the Journal Co. Wednesday commemorated the 20th anniversary of the Journal employees' stock trust agreement by presenting bronze plaques to the two persons who made the company employee owned—Harry J. Grant, chairman of the board of the Journal Co., and Miss Faye McBeath, niece of the late Lucius W. Nieman, founder of the Journal.

The plaques, created by Milwaukee sculptor Dick Wiken, will hang in the lobby of the Journal Building. They were purchased with funds raised by a popular subscription among unit holders.

PRESENTED BY WARMUTH

Milwaukee Journal employees now own 62½ percent of the capital stock of the Journal Co., which operates the Milwaukee Journal, radio station WTMJ, and television station WTMJ–TV. The value of the employee holdings is more than $13 million. By December 1, 1958, employee stock ownership will have risen to 67½ percent.

The Journal employees' stock trust agreement, inaugurated in 1937 by Mr. Grant and Miss McBeath, and the heirs of the late Lloyd Tilghman Boyd, provides that no new holding of the Journal Co. stock ever shall be issued outside the employee group nor shall any employee holdings ever be withdrawn from the trust.

Presentation of the plaques in the fourth floor office of Mr. Grant was made by William Warmuth, an advertising copywriter and chairman of the unit holders council, on behalf of the 920 employees who are unit holders. The unit holders elect their representatives to the council.

CREDITED WITH KEY ROLE

The plaque presented to Mr. Grant carried this inscription:

"In recognition of his vision in inaugurating in 1937 his partners in ownership plan for employees of the Journal Co. His creative imagination conceived it. His perserverance drove it from dream to reality. His faith in constructive human values has placed control of great newspaper and communication facilities in the hands of the men and women who are the Milwaukee Journal and WTMJ, radio and television. The plan's 20 years of growth and gains, of abundant benefits for co-owners, company, and community, merit this heartfelt expression of thanks from the Journal Co.'s 920 employee-owners."

Miss McBeath's plaque said:

"In recognition of her key role in the creation of the Journal employee stock ownership plan. Miss McBeath, niece of Lucius W. Nieman, founder of the Milwaukee Journal, joined wholeheartedly in Harry J. Grant's partners in ownership undertaking, recognizing in it the human relations ideals she cherished, and a beneficial means of perpetuating a strong and independent Journal. Her steadfast support of the plan, her unselfish cooperation in its development, her warm personal interest in the welfare of Journal people, have won the gratitude of her associates, who honor her with this plaque."

Miss McBeath smiled through tears as Warmuth finished reading the inscription and asked Mr. Grant to speak for her.

VERY MUCH TOUCHED

"We are very much honored and very much touched by this evidence of your understanding and appreciation of the ownership plan," Mr. Grant said. "It is nothing without some force, some human agency to make it work. Without that force the plan would have come to naught.

"That is what has made it effective for over 20 years. That and only that will continue to make it effective over the next 20 years. The employees must stay with it and make it work. I leave it to them in the future."

Ending his formal acceptance speech, Mr. Grant smiled and said:

"I don't know whether to fight or cry."

"You fight; I'll cry," said Miss McBeath.

Present at the brief ceremony were company officers and other officers of the unit-holders council.

INAUGURATED IN 1937

The stock trust agreement was inaugurated May 15, 1937, under a plan conceived by Mr. Grant. At that time 25 percent of the Journal Co. stock was sold to full-time employees with 5 years or more service, from the holdings of the then owners of the Journal, Mr. Grant, Miss McBeath, and by heirs of Boyd, former Journal business manager who died in 1914. Employees paid for their shares the price accepted by trustees under Mr. Nieman's will, an offer which was later approved by the county court.

By 1947, employees owned 40 percent of the Journal's stock. At a 10th anniversary banquet of employee stockolders, Mr. Grant said:

"For a long time before the employees stock-trust agreement was signed, I had hoped to broaden the stock ownership base by a method that would lead to eventual stock control by a majority of the Journal employees. I believed that the responsibilities of actual stock ownership by employees would, through a new interest in their work, help to safeguard the Journal and promote its fine service to the public. I have never doubted that the employees, the men and women who make the Journal, would be the most trustworthy and competent partners.

POINTS TO CHANGES

"Large newspaper investments depend on service to the public. They are frequently destroyed, on the death of their individual owners, by failure properly to provide for changes in ownership and management. Sometimes new ownership and management come almost unannounced. Despite good intentions, they bring confusion and misunderstanding affecting employee rights that are fatal to the institution.

"Many bequests place control of estates and responsibility for their operation in the hands of trustees and executors, usually drawn from the legal and banking professions. These men, honest and efficient in their financial dealings and competent in their judgment of broad, general policies, have not the background needed in successful newspaper making.

"It is not surprising that they should lack this knowledge, as many intangible things and details are involved in the printing of news and editorials dealing with daily events. Frequently, they dare not take the needed risks involved because of legal restraints. It seems obvious that something more than a transfer of shares in a record book and correct legal procedure are needed to insure the future of any newspaper.

"The human element is a major force in any business. The men and women on the job are most trustworthy and competent partners as productive workers or as managers. A tremendous force for good or evil lies with you in the control of the Journal Co., as you are dealing with the welfare of all classes of people. You must serve them readily and loyally, by methods which are easily understandable.

"Plain sense, rather than clever formulas, should be the rule. Never tolerate special

privilege. Neither reward friends nor punish enemies. You will, quite naturally, be influenced by your loyalties—those to your family, your friends, your church, your professional groups, and your labor unions. But I know of no loyalty that need in any way conflict with your loyalty to the Journal and your associates, which should rank near the top in your scale, as it is the foundation of your business life and economic welfare.

"It is my wish that you use the strong instrumentality of the Journal for the best interests of the community and deal always in good faith with one another."

THE GENERAL MOTORS THREAT TO THE STATE OF MICHIGAN

Mr. McNAMARA. Mr. President, last month, the people of the State of Michigan received a most unusual threat. The president of the largest manufacturing corporation in the world, with headquarters and many plants in my State, flatly warned that Michigan tax rates had forced his company to locate plants in other States, and this would be a consideration for the future.

The timing of the threat obviously was to influence the Michigan Legislature which was considering a corporate income tax proposal.

Wielding this blackjack was Harlow H. Curtice, president of the General Motors Corp.

With utter and callous disregard for Michigan and for the people who helped make General Motors the giant it is, Mr. Curtice sought to blacken the name of one of the Nation's greatest industrial States. His motive could only be one of selfishness and greed.

Michigan is a proud State. It is proud of its natural beauty, and, of course, its leadership in industry. To care for the needs of General Motors workers, and all other working citizens and their families, Michigan has built up an enviable record of services. Coupled with our natural resources, Michigan is an outstanding place for industry and people to work and live.

For Mr. Curtice to threaten the economy of Michigan to gain temporary financial advantage amounts almost to a betrayal of his State.

Any advantage which might result would be only temporary. When other areas of the Nation achieve the high wage, living, and service standards of Michigan, as they must eventually, then the likes of Mr. Curtice will have no place to hide.

Perhaps Mr. Curtice will fail to follow through on his threat. Indeed, there are indications that General Motors already is sorry for its action. A General Motors vice president is quoted as saying, in the Detroit Times of May 5, "I think we made a serious tactical error by that statement."

Mr. President, last Tuesday, Governor Mennen Williams, of Michigan, wrote a letter to Mr. Curtice denouncing his ill-considered outburst. I ask unanimous consent that the text of Governor Williams' letter be printed in the RECORD at the conclusion of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 14, 1957.

DEAR MR. CURTICE: On April 28 you issued a statement saying in effect that General Motors Corp. would move its operations out of Michigan if the legislature adopted any additional taxes which would affect the corporation.

This statement, coming as it did from one of our most prominent citizens, had a widespread impact. It damaged the reputation of our State with the rest of the country and made much more difficult our task of bringing new industries to Michigan. But even more immediately important, your statement helped to create an impasse in the legislature. Nobody, of course, wants to do anything which would actually cause General Motors or any other corporation to leave Michigan. The Republican leaders of the legislature are naturally reluctant, for political as well as economic reasons, to act in the face of what seems to be a threat from General Motors.

As a consequence, legislative consideration of the State's financial problem has bogged down. Although there is general agreement that a substantial tax increase is necessary, the two chambers are at odds, one advocating an increased cigarette tax and the other a beer and liquor tax, for the support of the public schools. It is generally admitted that neither of these expedients would come close to meeting the shortage of school funds, not to mention the needs of higher education, mental health, public safety and other vital services.

Your pronouncements have helped materially to create this situation, and it seems to me as a consequence you have some responsibility to help in resolving it. I agree, of course, that you had every right to speak as you did, and to seek the most favorable tax treatment possible for your corporation. But I am sure you do not wish to remain in the purely negative position of threatening the State, yet offering no constructive suggestions.

Furthermore, General Motors Corp. bears a very definite responsibility for the present Michigan tax structure. Representatives of General Motors helped to create the imbalance between consumer and business taxes and the favoring of certain large businesses over smaller ones, which I found when I took office in 1949.

Representatives of General Motors and a few other large industries actually wrote the present business activities tax, and a spokesman for the corporation actually appeared on the floor of the House in 1953 to explain the bill to legislators. Representatives of General Motors helped to write the present unemployment insurance law, under which the tax rates of all Michigan business automatically go up to pay for layoffs in the automobile plants. To a considerable degree General Motors agents have created the Michigan tax system which today is the subject of complaint from you.

Having injected itself into the formation of State tax policies, I believe General Motors has an obligation to more than declare its reluctance to pay any additional taxes. Therefore, I am now asking you, as a citizen of this State, to give me your best thoughts on the following questions:

1. It is generally admitted in the legislature that some additional taxes are necessary. Do you agree that some additional State taxes are necessary?

2. If you do not agree that some additional State taxes are necessary, do you approve the necessary results—severe curtailment of the State's higher education system; a moratorium on all college and university expansion; cuts in appropriations for child mental clinics, the children's mental hospital, the research and training center at Lafayette Clinic; cancellation of plans to expand the traffic safety program which last year saved more than 250 lives; cancellation of plans to build a new boys' vocational school; cancellation of plans to complete the new youth reformatory at Ionia; sharp reduction of State aid to local schools, and so forth?

3. If you do agree that some kind of additional State taxes are needed, what kind of taxes would you favor? Would you favor a flat rate personal income tax? A graduated income tax? A general income tax on individuals and corporations? or an increase in the sales tax?

4. Do you approve of the current legislative bills for increases in the cigarette tax and a new tax on beer and liquor to make up part of the shortage in school aid funds?

5. Do you approve of the present plan of Republican legislative leaders to curtail funds for the University of Michigan and Michigan State University in the face of an expected increase of more than 4,000 students next year?

6. If you do agree that some additional taxes are necessary to maintain our State services and provide for necessary expansion would General Motors be willing to pay any portion of the increase?

Your position on these questions will be of great interest to the people of Michigan and I believe of genuine assistance to the legislature in resolving the present confusion. In its institutional advertising, General Motors has stressed the obligations of corporate citizenship. Among those obligations, it seems to me, is a responsibility to offer not merely threats but constructive ideas for the financing of indispensable State services.

Very truly yours

G. MENNEN WILLIAMS,
Governor.

KANSAS, THE CENTER OF THE NATION

Mr. CARLSON. Mr. President, I should like to call the attention of the Senate to an editorial from the Topeka Daily Capital, Topeka, Kans., entitled "Let's Sell Kansas' Central Location."

I remind the Senate that there is only one geographical center in this Nation, and that is in Kansas. In fact, our State might well be classed as the hub, and the balance of the Nation would be the perimeter around this hub.

My reason for calling this to the Senator's attention is the fact that Kansas has every requirement for becoming the industrial center or the hub of the Nation. We have outstanding labor; we have easy access to the largest gas fields in the Nation; based on records, we are either the first or second in the Nation when it comes to health and longevity, and we have a long record of progressive legislation in government, education, highways, and health.

This editorial stresses the fact that Kansas is truly the main street of America.

I ask unanimous consent that the editorial be printed in the RECORD as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S SELL KANSAS' CENTRAL LOCATION

For a long time now, Kansas has let other States argue the sentimental claim to being the heart of America. Kansas is the heart of America, the center of the Nation.

Near Lebanon in Smith County is the official geographic center of the United States. Moreover, if you have an argument about the location of the fence between your back yard and your next door neighbor's, it will be settled with reference to a modest marker in a pasture in Osborne County—the geodetic capital of all North America. What Greenwich is to the world's longitude, this

simple marker is to surveyors' lines and boundaries for this entire continent.

We think it's time Kansans let the world know there is only one center in this great Nation—and that it's here in Kansas. No other State can claim it. This is the place.

Kansas is the crossroads, the heart, the hub, and the center. As someone said, it is "Midway, U. S. A."

Naturally, being in the center of the Nation has many advantages. It is the safest location in this atomic age. It is an ideal location for industry because it's halfway to everywhere. It's even back east to half the Nation. This is where the West begins—where North meets South, where farm meets factory.

Each year tourists from all the States and many foreign countries register at the stone marker located at the geographic center. Many are disappointed that such an important site is so modestly designated. Because of its national significance, the center deserves a suitable national monument or a small park.

But in addition to having the exact center more properly designated, Kansas as a whole should take advantage of its location. It should be more widely publicized. Imagine what publicity-minded Texas or California or Florida would do with such a sales tool.

Through the years, Kansas has had a number of slogans. The Wheat State, the Sunflower State, the Land of Friendship, to name a few. We have no quarrel with any of these slogans. But none of them tells the Kansas story. Kansas is more than wheat, certainly more than sunflowers. Sure, it's a friendly State. Neighborliness is a tradition here, but other States are friendly, too.

Kansas is the Nation's centerpiece. No one can quarrel about that. And if properly sold, the strategic location can mean future dividends to the State in more industry and more tourist traffic.

Actually our State has more to offer visitors than most other areas. It is rich in history and tradition. The places of interest are real and void of tinsel and make-believe. And getting back to our location again, one could say that travelers don't have to go out of their way to visit Kansas.

Kansans should join hands now to sell our State as the center of the Nation—the main street of America. Let's adopt a suitable slogan and spread it across the land. Look what Minnesota did with "the land of 10,000 lakes" and what a bottling company accomplished with "the pause that refreshes."

This newspaper pledges full cooperation and support to such a movement.

ORDER OF BUSINESS

Mr. KNOWLAND. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KNOWLAND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, is the morning hour concluded?

The PRESIDING OFFICER. Is there any further morning business? If not, morning business is closed.

Mr. JOHNSON of Texas. If the morning hour is concluded, I hope the Senator from Florida will proceed to make an explanation of the Commerce Department appropriation bill so we can get some action on it.

PUBLIC DISCLOSURE OF FINANCIAL REPORTS AND OTHER INFORMATION FILED BY LABOR ORGANIZATIONS WITH THE SECRETARY OF LABOR

Mr. HILL. Mr. President, before the Senator from Florida proceeds with his remarks on the appropriation bill, will he yield to me?

Mr. HOLLAND. I yield to the Senator.

Mr. HILL. The distinguished Senator from Arkansas [Mr. MCCLELLAN], the senior Senator from New Jersey [Mr. SMITH], and the junior Senator from Massachusetts [Mr. KENNEDY] are waiting to introduce a joint resolution to the Senate. It deals with the publication of certain reports in connection with labor-union funds. I believe it will take only a few minutes to present the resolution to the Senate, and only brief comments will be made by these Senators.

I wonder whether the Senator from Florida would be willing to yield at this time for that purpose, with the understanding that any remarks that may be made at this time will be placed in the RECORD at the appropriate place?

Mr. HOLLAND. Mr. President, I would prefer not to do so at this time, because I have only a 2-page statement to read in connection with the formal presentation of the appropriation bill, which I shall be very happy to expedite. Then I have agreed to yield first to the distinguished ranking minority member of the subcommittee, the Senator from Maine [Mrs. SMITH], for a statement on the bill, which I understand will take only a few minutes. After that I shall be happy to yield to the Senator from Alabama, before I submit myself to general questioning from the floor, if that will meet with the Senator's approval.

Mr. HILL. Of course that will be agreeable to us. It is merely that the Senator from New Jersey [Mr. SMITH] desires to return to a meeting of the Committee on Foreign Relations, and I know that the Senator from Arkansas [Mr. MCCLELLAN] has a committee meeting to attend.

Mr. HOLLAND. Will the Senator give me an indication of the total time that would be involved?

Mr. HILL. So far as I am concerned, I will not take more than 2 minutes. The Senator from Arkansas states that he will limit himself to 2 minutes. The Senator from New Jersey indicates 1 minute will be sufficient. The Senator from Massachusetts states that he will take not more than 1½ minutes.

Mr. HOLLAND. I have never heard such——

Mr. HILL. Self-abnegation——

Mr. HOLLAND. Self-abnegation and resignation on the part of any Senator. With the assurance that the entire matter will take only 6½ minutes in its entirety, I ask unanimous consent that I may yield for that purpose for only 6½ minutes, with the understanding that the distinguished occupant of the chair will see to it that the floor is yielded to me at the expiration of the 6½ minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HILL. Mr. President, out of order, I introduce, for appropriate reference, a joint resolution on behalf of myself, the Senator from Arkansas [Mr. MCCLELLAN], the Senator from New Jersey [Mr. SMITH], the Senator from Montana [Mr. MURRAY], the Senator from New York [Mr. IVES], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Connecticut [Mr. PURTELL], the Senator from Michigan [Mr. MCNAMARA], the Senator from Arizona [Mr. GOLDWATER], the Senator from Colorado [Mr. ALLOTT], the Senator from Oregon [Mr. MORSE], the Senator from Kentucky [Mr. COOPER], the Senator from South Carolina [Mr. THURMOND,] and the Senator from South Dakota [Mr. MUNDT].

The joint resolution would authorize the Secretary of Labor, in accordance with such regulations as he may deem appropriate, to make available to the public information filed by labor organizations pursuant to subsections (f) and (g) of section 9 of the National Labor Relations Act, as amended, commonly known as the Taft-Hartley Act.

I may say that it is the thought of those who are submitting the resolution—certainly many of them—that this is a step forward, but that it is not in and of itself a complete answer to the problems which have been raised in connection with union funds, particularly as they have been raised by the investigation of the committee headed by the senior Senator from Arkansas [Mr. MCCLELLAN].

At this point I do not wish to consume further time myself, and I therefore yield the floor to the Senator from Arkansas.

Mr. MCCLELLAN. Mr. President, in the memorandum accompanying the resolution it is stated, as a part of the necessity for its enactment, that the recent investigations and hearings conducted by the Select Committee on Improper Activities in the Labor and Management Field indicate that public disclosure of financial reports and other statements filed under sections 9 (f) and (g) of the Taft-Hartley Act would be in the interest of the public and of labor union members. I join in submitting the resolution, because, as the distinguished chairman of the Committee on Labor and Public Welfare, the Senator from Alabama [Mr. HILL] has stated, it is a step in the right direction.

However, because as chairman of the select committee I have joined in cosponsoring this resolution, I do not want any inference to be drawn that this is to be the only corrective action that needs to be taken.

The fact is that this is one of the very minimum steps which should be taken, based on the revelations the select committee has disclosed up to the present time. Other steps which are far more important will have to be dealt with by appropriate legislation. Therefore I am going along with this resolution merely as an intermediate vehicle to accomplish the disclosure of financial reports which should be disclosed and to make the information available to the public. I hope that in due time the select committee will be able to make recommendations to Congress, even before the adjournment of this Congress, for more substantial

and more vital improvements that need to be made.

Mr. SMITH of New Jersey. Mr. President, as the ranking Republican member of the Committee on Labor and Public Welfare, I have joined our distinguished chairman in introducing this joint resolution. I may say that all the Republican members of the committee have joined in cosponsoring this resolution. I can also assure the Senate that the matter has had very careful and favorable consideration by the Secretary of Labor. He has said, furthermore, that the publication of union financial reports has the wholehearted approval of the President of the United States.

Therefore I feel that we have strong, united, bipartisan support for this joint resolution, which will be a step toward curing some of the ills involved in the misuse of union funds.

I agree with the Senator from Alabama [Mr. HILL] and the Senator from Arkansas [Mr. MCCLELLAN] that this is only a first step in curing the ills disclosed so far in the so-called Beck scandal.

We must protect the workingman from the misuse of his union funds. We believe that publicity in this connection will be of great value, although it is only a partial remedy for the many abuses of union funds which have recently been exposed.

Mr. KENNEDY. Mr. President, although I have joined in sponsoring this joint resolution to make clear the Labor Department's authority to make public the union financial reports filed under the Taft-Hartley Act, I want to stress the fact that I consider it a wholly inadequate remedy with respect to the evils uncovered by the select committee headed by the Senator from Arkansas [Mr. MCCLELLAN], and I hope that no one will be lulled into accepting this as a remedy.

I wish to point out in this regard that the mere publication of these reports would not have prevented any of the misdeeds in the Teamsters' and other unions uncovered by the McClellan committee. Those reports are completely inadequate and frequently inaccurate, containing no detail or breakdown to reveal transactions such as those which have been disclosed. They contain no listing—as the SEC asks of all registrant corporations—of all transactions, past or proposed, in which the principal officer or his associates have an interest. The accuracy of these reports is not subject to any check by the Labor Department or any independent audit; they are not filed under oath; and no union is penalized for filing false information. The mere publication of these reports, while a first step, is an inadequate one.

I am hopeful that it will be possible for the Committee on Labor and Public Welfare to suggest some substantial improvements, and I am certain that Congress will give prompt attention during this session to correct these inadequacies.

Mr. HILL. Mr. President, I wish to express the deep appreciation of the Senator from Alabama and the other Senators who have spoken on this matter for the great generosity and kindness shown by the distinguished Senator from Florida.

Mr. HOLLAND. Mr. President, I wish again to express my appreciation of the restraint shown by the distinguished Senators who have spoken so briefly, and of their sense of self-abnegation, to plagiarize from the remarks of the Senator from Alabama.

I take this occasion to thank all of them and each of them, as I feel certain countless millions of people throughout the Nation do, including the members of the unions themselves, for the fair and decent way in which they have approached the matter of cleaning up the troublesome question concerning the administration of union funds.

Mr. SMITH of New Jersey. Mr. President, I wish to thank the distinguished Senator from Florida for yielding to us for this purpose.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S. J. Res. 94) directing that the financial reports and other information filed with the Secretary of Labor pursuant to subsections (f) and (g) of section 9 of the National Labor Relations Act, as amended, be made available to the public, introduced by Mr. HILL (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

DEPARTMENT OF COMMERCE APPROPRIATIONS, 1958

The PRESIDING OFFICER. Without objection, the Chair lays the unfinished business before the Senate.

The Senate resumed the consideration of the bill (H. R. 6700) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. HOLLAND. Mr. President, for the convenience of all Senators who may wish to follow the items in the pending bill, H. R. 6700, I ask that there be distributed at this time a printed sheet which depicts the action taken by the House of Representatives and by the Senate Committee on Appropriations upon the bill, showing the various amounts in which the House and Senate committee recommendations are in conformity, and the various amounts with respect to which the Senate committee has recommended some change from the House-passed bill. In some instances, the changes are increases, and in some instances they are reductions.

I believe the best way for Senators to follow these items is to follow the sheet which is now being distributed.

Mr. President, the total amount of funds carried by this bill, as reported to the Senate, is $2,303,584,290. However, by far the largest part of the total amount is represented by the appropriation from the Federal-aid highway trust fund for going forward with the Federal-aid highway-construction program and the Interstate System of Highways, which has now become the most important part of that program.

The total amount allowed from the special trust fund set up for the Federal-aid highway program is $1,690,000,000. I invite attention to that fact at the beginning for two reasons: First, there will be no further reference to this item unless Senators have a question about it. Second, the item does not appear in the total budgeted amount of the general budget of $71.8 billion. Therefore, it should not be considered in any way as having relation to the huge sum which is included in the general budget.

The amount of $1,690,000,000, which is provided by this bill, was recommended by the Bureau of the Budget, has been approved by the House, and is supported by the collections in the trust fund. There is no question as to the ability of the trust fund to carry those items.

The $1,690,000,000 will be required during fiscal year 1958 to meet the commitments of the Federal Government to the several States, both under the ordinary Federal aid program, and also in the much larger amount required for going forward with the Interstate System, which is now under way.

Mr. BYRD. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from Virginia.

Mr. BYRD. With regard to the trust fund, does the Senator know what the estimated surplus is?

Mr. HOLLAND. I do not understand the question of the Senator.

Mr. BYRD. In the highway trust fund is there an estimated surplus above what is to be appropriated in this bill?

Mr. HOLLAND. That estimate was presented, I will say to the Senator from Virginia, in the committee, and the presentation showed that notwithstanding this proposed expenditure, a very sizable surplus would remain at the end of fiscal year 1958. I shall be glad to supply the figure for the record.

Mr. BYRD. I agree with the Senator that a surplus is predicted. I wondered, however, if the Senator had available the exact amount of the estimate.

Mr. HOLLAND. The amount estimated by Mr. Tallamy, the able Federal Highway Administrator, in his testimony before the committee, to be in existence at the end of fiscal 1958, was $872 million. The Senator from Virginia knows, I suspect better than most of us, that the speed of collections depends upon items which cannot be foreseen with complete definiteness.

Mr. BYRD. I thank the Senator.

Mr. HOLLAND. I was impressed by the fact that the Federal Highway Administrator, Mr. Tallamy, seemed to approach the matter conservatively.

Mr. President, unless there is some question relative to this very large appropriation from the trust fund for the grants to States with which to move forward with the Federal-aid roads, I shall leave that item entirely and proceed to consider the portions of the bill which relate to the regular budget for the Department of Commerce and related agencies.

Mr. O'MAHONEY. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from Wyoming.

Mr. O'MAHONEY. I should like to ask the Senator a question or two about the trust fund. It has attracted my attention, because of an examination of the brief summary of the budget which was distributed from the White House through the Bureau of the Budget with respect to the expenditures.

Examining the figures under the highway expenditures, I found, as I now recall the figures, that the document cited the total expenditures for the year 1956 to be $783 million. I noticed that in the next column the expenditures for 1957 were estimated at $44 million. Then, glancing into the next column, I noted that the estimate for 1958 was $42 million. The discrepancy between the $783 million actually expended in 1956 and the $44 million predicted or estimated for 1957 and the $42 million estimated for 1958 appeared to me rather extraordinary. I found the explanation in the fact that I had overlooked the significance of a few little words following the word "highways." In parenthesis the words appeared, "not including trust funds."

So, examining into the trust fund, I found that for 1957——

Mr. HOLLAND. Mr. President, may we have order? The distinguished Senator from Wyoming is phrasing a very difficult question to the Senator from Florida, and I should like to have the opportunity to hear it.

The PRESIDING OFFICER. The Senate will be in order.

Mr. O'MAHONEY. I never knew a question to be difficult for the Senator from Florida.

I noticed, therefore, that there were actual expenditures from the trust fund of more than $1,050,000,000. On making inquiry, I was advised that sum represented the total amount of the trust fund which was allowed under the highway law for expenditure. Therefore, the $44 million mentioned in the Federal budget pamphlet represents a dipping into the general fund of the Treasury for that sum.

Further investigation with respect to 1958 showed that an estimate of expenditure of $1,650,000,000, as I recall the figure, is being made from the trust fund.

Mr. HOLLAND. One billion six hundred and ninety million dollars.

Mr. O'MAHONEY. One billion six hundred and ninety million dollars. I am reciting the figures from memory. I do not have the document before me. That means that it will be necessary to dig into the general fund of the Treasury in the amount of $42 million in 1958. Did the committee take evidence regarding this discrepancy?

Mr. HOLLAND. I think the discrepancy is more apparent than real. Under the most recently passed Federal-aid highway act, the receipts from various automobile sources with which the Senator is familiar are placed in a trust fund, to be used solely for the regular Federal aid program, primary, secondary, and urban, plus the Interstate Highway System. All such receipts held in the trust fund are to be used solely for the purpose of moving forward with the construction of Federal aid projects by paying to the States commitments made pursuant to the Federal-aid program.

If I may go a little further, the fact is that there are other Federal-aid programs not appearing in the ordinary primary, secondary, or urban programs and the Interstate System—such as forest highways, public-lands highways, the Inter-American Highway, reimbursement to the highway fund of the District of Columbia, and the Woodrow Wilson Memorial Bridge, or the Jones Point Bridge, which were allowed for by appropriations in 1957, in the total amount of $39,425,000 out of the general revenue fund, and properly so, because the trust fund was not available for these particular items, as the Senator from Florida understands.

The items which are comparable for 1958, under the estimates, are: $28 million for the forest-highway program—I am quoting, now, from the President's budget—$2 million for public-lands highways; and $12 million for the Inter-American Highway, or a total of $42 million. So, to get the entire picture for highways, it is necessary to consider the $42 million total budgeted for the several items I have just mentioned; and also the $1,690,000,000 total which is payable out of the trust fund, which I have just advised the Senator from Virginia [Mr. BYRD] is available in adequate amount to meet that demand. I pointed out that that commitment exists because of the provisions of the Federal Aid Highway Act, passed by us last year.

Mr. O'MAHONEY. But is it not a fact that the expenditures from the trust fund which are not represented in this summary of the budget are, therefore, not a part of the $71.8 billion expenditure which the budget report shows?

Mr. HOLLAND. Of course, the Senator is entirely correct. It is also fair to say that in former years—years before construction of the huge Interstate System was undertaken—these same items were shown as a part of the regular budget. However, the fact that they are not so shown this year is the result of legislation passed by the Congress last year, which set aside, in the special trust fund, the receipts from various kinds of automobile user taxes, earmarked specifically for the purposes for which the $1,690,000,000 is now proposed to be appropriated.

Mr. O'MAHONEY. But the fact is—and I ask this question merely for the RECORD—that the President's budget for 1958, when we consider these trust fund expenditures for the new Federal highway system, is not $71.8 billion, but $72 billion, or even $73.2 billion.

Mr. HOLLAND. The Senator is, of course, correct, except that he might say with equal truth that there are other items provided for by the action, or the suggested action by Congress, out of trust funds of one kind or another.

Mr. O'MAHONEY. Absolutely.

Mr. HOLLAND. Those other items do not fall within the total of $71,800,000,000. However, the point the Senator has made is completely correct, that the item contained in the pending bill of $1,690,000,000 from the trust fund to meet the commitments of the Federal Government to the several States for the three regular Federal-aid road programs, plus the Interstate System, does not appear in the regular budget of $71.8 billion, but must be added thereto before we can begin to see what the total commitments for expenditure from Federal funds from various sources are recommended to be for the fiscal year 1958.

Mr. O'MAHONEY. I now ask the question up to which I have been leading.

The Senator has doubtless observed the statement which was made by the Secretary of Defense yesterday, explaining the increased cost of airplanes and of the defense budget by the fact that we are living in an era of inflation. The price of steel is going up. The prices of various commodities which are needed in building weapons of war, as well as those needed in building the highways of the Nation, have been going steadily up, and nothing is being done by the Government to restrain the inflation except the imposition of the tight-money program by the Federal Reserve Board.

At the same time that the tight-money program is being imposed upon the masses of the people, the States, school districts, and other agencies which would like to borrow money for public purposes in local communities are unable to do so because of the high rate of interest, while at the same time, as the Senator from Virginia pointed out the other day, by the granting of rapid tax amortization to certain private applicants, they are made the beneficiaries of a very loose fiscal policy, and gain a great advantage, which proves most difficult and burdensome to the masses of our people.

Mr. HOLLAND. I appreciate the comment made by the distinguished Senator, but I do not propose to defend inflation in the budget.

Mr. O'MAHONEY. I am not asking the Senator to defend inflation in the budget.

Mr. HOLLAND. What I am trying to do is to explain the implications of the road trust fund, and the very large appropriation of $1,690,000,000 out of such fund, which appears in the pending bill, not merely by act of the Executive. I, for one, would have to accept my full share of responsibility. I supported the Interstate Road System program——

Mr. O'MAHONEY. So did I.

Mr. HOLLAND. Because I thought the speeding up of the construction of our trunk highways was very badly needed, and that, among other things, there was involved the safety of millions of people who travel on our highways. I suspect the Senator from Wyoming felt the same way.

Mr. O'MAHONEY. That is the way we all felt.

Mr. HOLLAND. The Senator is correct in calling attention to the fact that the very large figure of $1,690,000,000 is not included in the regular budget, but must, with other items, be added to the regular budget of $71.8 billion before we know what is the total commitment of the Federal Government for the fiscal year 1958.

Mr. O'MAHONEY. I thank the Senator. I think his answer has added greatly to public information on a very vital topic.

I might add that the Subcommittee on Fiscal Policy of the Joint Economic Committee, which subcommittee is headed by Representative MILLS, is about to hold hearings in June on what really constitutes the national debt. The picture presented in the budget is not an accurate one.

Mr. HOLLAND. I thank the distinguished Senator from Wyoming.

Mr. President, I now come to the portion of the bill which refers to the recommendations contained in the general funds budget.

The total amount contained in H. R. 6700 as reported to the Senate by the committee is $613,584,290. This is $257,928,710, or 29.6 percent, under the estimates for 1958, and $154,950,846 under the appropriations for 1957.

The bill as reported by the committee is $40,100,770 under the House bill.

In this connection, however—and since I think all of us owe the duty to be completely candid in these matters—I wish to call the attention of the Senate to the statement beginning at the top of page 2 of the printed committee report, as follows:

> It is to be noted that $65,000,000 of these reductions is made possible by authorizing the transfer of certain unexpended balances of the War Shipping Administration liquidation fund for use in meeting liquidation of obligations in connection with operating differential subsidies.

In other words, the utilization of these balances in the amount of $65 million does not reduce the expenditures under the budget by that amount, but it does make possible the reduction of appropriations in this bill by making these funds available for purposes other than those for which they were appropriated, in view of the fact that the original purpose has already been achieved, and the further fact that the funds are on hand in such shape that they can thus be utilized for a kindred field, that is, shipping differentials, by the same agency, the Department of Commerce.

Substantially the greater part of the bill is included in title I, the Department of Commerce. After the other body had completed action on the budget request of $803,790,000, and had allowed $591,387,060, a reduction of $212,402,940 from the estimates, there was an appeal to the Senate committee for the restoration of $78,892,940.

This amount was ultimately reduced by the Secretary of Commerce to an appeal for $78,787,840, after the Secretary of Commerce had withdrawn a request for the restoration of funds in the amount of $105,100 for the Office of Strategic Information.

The following is a brief summary of the recommendations of the committee. This is statistical and will appear in the RECORD, but I think, for the information of Senators present, I should read this 1-page summary of increases and decreases as we contrast the amounts in the Senate bill and the House bill.

The total amount of the House bill is $653,685,060. The increases over the House bill are as follows:

In the Civil Aeronautics Administration, for operation and regulation, $12,453,200, and for the establishment of air-navigation facilities, $16,083,330. These are the principal increases over the House bill. I may say, for the information of the Senate, that they represent the carefully considered judgment of the subcommittee and the full committee. These amounts represent high priority items in the total request of the Civil Aeronautics Administration relating to the establishment of air-navigation facilities and the operation and regulation of air traffic in a way very badly needed, as we seek to complete the installation of new facilities regulating the flight of airplanes, and affecting the safety of the personnel operating the planes and the millions of people who are traveling in the planes.

It was, in the committee's judgment, completely necessary for us to recommend these increases, because we felt that the action taken by the other body, no matter how conscientiously taken, deprived the large part of the public which is traveling by air for a considerable period of time of priority items in the matter of the establishment of new and improved air navigation facilities, and the operation and regulation under those facilities, which will very greatly add to the safety and security of the millions of our people who are traveling over the airways.

The second item, for business and defense services administration, for salaries and expenses, $2,167,000.

I shall not make specific comments on any of these added items, because I desire to present this report in a brief way, and then to yield to my colleague, the distinguished senior Senator from Maine [Mrs. SMITH], who has served capably and cooperatively as the ranking minority member of the subcommittee handling the bill.

Bureau of Foreign Commerce, salaries and expenses, $183,500.

National Bureau of Standards, expenses, $1,039,500.

Weather Bureau, salaries and expenses, $772,100.

Canal Zone Government, for operating expenses, $117,000.

Capital outlay, $25,000.

Both of these items are from funds derived from the operation of the Panama Canal.

Advisory Committee on Weather Control, $250,000. This will enable the completion of that important research effort.

Civil Aeronautics Board, for salaries and expenses, $469,600.

Tariff Commission, $60,000.

The total of recommended increases over the House bill is $33,620,230.

The decreases from the House bill are five in number, as follows:

Civil Aeronautics Administration, for grants-in-aid for airports, $5 million.

For area development, salaries and expenses, $195,000.

For maritime activities, in operating differential subsidies, $65 million.

I digress long enough to say that this is the same item which I discussed in the beginning of my formal statement. It represents a reduction in appropriations, but not a reduction in expenditures.

Bureau of Public Roads, for forest highways, a reduction of $2 million .

Civil Aeronautics Board, a reduction in the sum for payments to air carriers, $1,526,000.

The total amount of decreases from the House bill is $73,721,000, which I again remark includes the $65 million sum which I have specially mentioned.

The amount of the bill as reported by the subcommittee, therefore, is $613,584,290.

The reduction from the appropriations carried by the House bill is $40,100,770.

The reduction from the 1958 budget estimates is $257,928,710, or 29.6 percent.

The amount of decrease from the appropriations for 1957 is $154,950,846.

I apprehend that there will be questions as to some of these items, but I now wish to yield to my colleague, the distinguished senior Senator from Maine [Mrs. SMITH], to enable her to make her statement, which I understand may be, in some degree, along the general lines of my opening statement.

I yield to the Senator from Maine.

Mrs. SMITH of Maine. I thank the chairman of the subcommittee for being so kind as to yield to me.

Mr. President, as the ranking minority member of the Senate Appropriations Subcommittee on the Commerce Department, I want to take recognition of the very fine work of the chairman of the subcommittee, the senior Senator from Florida [Mr. HOLLAND]. He was most patient, thorough, constructive, and intelligent in his steering of the bill through the subcommittee and then through the full committee. I also want to commend the staff members, John Witeck and Bill Kennedy, who worked so diligently on the bill. Without them, the subcommittee could not have done its work.

The subcommittee conducted hearings on the items in the bill commencing on April 10, and, with interruptions due to pressures of other meetings and activities, finally concluded on May 8, after approximately 20 hours of taking testimony. The matters heard will be found in the 626-page volume.

The total budget request in the amount of $871,513,000 is comprised of 37 money items.

I should call to your attention that in the case of 21, or approximately 60 percent, of the items, the subcommittee, endorsed by the full committee, approved without change items allowed in the House bill, and by this joint act, if these recommendations are adopted, will effect a reduction totaling $100,357,700 from the budget estimates. I do not believe that in this instance we can be called the upper body for upping House allowances.

Furthermore, in the case of 5 items, where the House had already made reductions totaling $31,586,000, our recommendations propose further appropria-

tions reductions amounting to $73,721,000, for a total reduction of $105,307,000 in appropriations. In this group is included, as a reduction in appropriations, the amount of $65 million, which is made available by transfer from balances of a fund provided for purposes which have largely been achieved.

Finally, in 11 instances, the recommendations in our report provide for increases totaling $33,620,230 over the amounts in the House version of the bill; however, despite this, they are still $52,264,010 below the budget estimates.

In summary, reductions of $100,357,700 were made concurrently with the allowances made in the House version of the bill; reductions of $105,307,000 were made by cutting below the House appropriation figures; and, in instances where increases were made over the House allowances, the budget estimate reduction was still $52,264,010. In all, these reductions total $257,928,710 from the budget amounts.

Mr. President, I ask unanimous consent that a tabulation of the data to which I have referred be printed at this point in the RECORD, in support of my remarks.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Item and reduction	
Salaries and expenses, general administration	$139,800
BUREAU OF THE CENSUS	
Salaries and expenses	653,200
1958 censuses of business, manufactures and mineral industries	845,000
18th Decennial Census	850,000
CIVIL AERONAUTICS ADMINISTRATION	
Maintenance and operation, Washington National Airport	$234,000
Construction, Washington National Airport	250,000
Maintenance and operation, Alaska airports	550,000
Air navigation development	500,000
Salaries and expenses, Coast and Geodetic Survey	550,000
Salaries and expenses, Office of Business Economics	20,000
MARITIME ACTIVITIES	
Ship construction	91,500,000
Salaries and expenses	425,000
Maritime training	190,700
Salaries and expenses, Patent Office	200,000
Bureau of Public Roads, Public Lands highways	500,000
NATIONAL BUREAU OF STANDARDS	
Plant and equipment	350,000
Construction of facilities	2,000,000
Establishment of meteorological facilities, Weather Bureau	600,000
Total reductions	100,357,700

In the following three items, the House bill provides the amount of the budget estimate, and the Senate committee recommends agreement with the House action:

Export control, Bureau of Foreign Commerce.

State marine schools, Maritime Administration.

Inter-American Highway, Bureau of Public Roads.

Items reduced in House bill and further reduced by Senate committee

Items	House reduction	Senate committee reduction
Grants-in-aid for airports, Civil Aeronautics Administration	$5,000,000	$5,000,000
Salaries and expenses, Office of Area Development	----------	195,000
Operating-differential subsidies, Maritime Administration	20,000,000	[1] 65,000,000
Forest Highways, Bureau of Public Roads	3,000,000	2,000,000
Payments to air carriers, Civil Aeronautics Board	3,586,000	1,526,000
Total	31,586,000	73,721,000
Recapitulation:		
House reduction	31,586,000	----------
Senate reduction	----------	73,721,000
Total	$105,307,000	

[1] This reduction in appropriations is not a reduction in expenditures; an equivalent amount of money is made available by language authorizing transfer of balances from "War Shipping Administration liquidation" fund.

Item	Increase over House bill	Reduction below budget
CIVIL AERONAUTICS ADMINISTRATION		
Operation and regulation	$12,453,200	$4,799,000
Establishment of air navigation facilities	16,083,330	42,354,810
Salaries and expenses, Business and Defense Services Administration	2,167,000	1,393,000
Salaries and expenses, Bureau of Foreign Commerce	183,500	200,000
Expenses, National Bureau of Standards	1,039,500	1,552,000
Salaries and expenses, Weather Bureau	772,100	1,047,800
Operating expenses, Canal Zone Government	117,000	782,400
Capital outlay, Canal Zone Government	25,000	75,000
Advisory Committee on Weather Control	250,000	60,000
Salaries and expenses, Civil Aeronautics Board	469,600	----------
Tariff Commission	60,000	----------
Total	33,620,230	52,264,010

Mr. HOLLAND. Mr. President, I certainly appreciate the splendid remarks of the Senator from Maine, and I am grateful for the kind things she has had to say about the Senator from Florida.

Mr. President, before I yield for questions, let me say that the reductions made by the committee are very real. The 29.6 percent reduction from the amount voted by the House of Representatives is a reduction in the appropriations. It contrasts with a 22-percent reduction in the amount of the expenditures, after allowing for the fact that $65 million, instead of being appropriated by means of the bill as reported by the Senate committee, is simply transferred from another appropriation, as I have already stated, and as has been stated also by the Senator from Maine.

Mr. President, I understand that there are Members who wish to ask questions regarding certain of these items, and I shall be glad to yield to any Senators who have questions to ask about any items in the bill.

Mr. WILLIAMS. Mr. President, will the Senator from Florida repeat the amount which he says the bill, as reported by the Senate committee, represents as a saving, as compared with the appropriation bill of last year?

Mr. HOLLAND. The statement I previously made covered several approaches to the matter. As reported by the committee, the bill represents reductions in the amount of $257,928,710 from the budget estimates, or a reduction of 29.6 percent in the appropriations recommended by the budget.

However, as I have said repeatedly, a part of that reduction is merely a reduction in appropriation, represented by the transfer of the $65 million item from the fund representing the liquidation of the Shipping Board.

Mr. WILLIAMS. I address my question first to this point: How does the bill as reported by the Senate committee, and as now before the Senate, compare with the bill as passed by the House of Representatives?

Mr. HOLLAND. As reported by the Senate committee, the bill carries appropriations which represent a decrease in the amount of $40,100,770 from the appropriations voted by the House of Representatives, and is $24,899,230 above the expenditures provided by the bill as passed by the House of Representatives.

Mr. WILLIAMS. In other words, the bill as reported by the Senate committee carries spending authority $24 million greater than that carried by the bill as passed by the House of Representatives; is that correct?

Mr. HOLLAND. The Senator from Delaware is correct; and I have been trying to make that point completely clear, because I want all Senators to understand it. I also want them to understand that that fact is brought about by our recommendations in connection with the expenditures for the Civil Aeronautics Administration. The total increases we suggest for the Civil Aeronautics Administration are as follows: $12,453,200 for operation and regulation, and $16,083,330 for establishment of new air navigation facilities; or a total of a little more than $28,500,000.

Mr. WILLIAMS. The bill as reported by the Senate committee provides for transfer of the $65 million authorization for operating differential subsidies for ships, funds formerly available to the War Shipping Administration, the result being additional spending authority for the Department of Commerce for the next year in the amount of $24 million; is that correct?

Mr. HOLLAND. The Senator from Delaware is correct. The committee felt it was much better practice to transfer the $65 million, already in hand, and in a similar fund, and representing the liquidation of a Government operation, to the operation in which we voted to place it, which is the operating differential subsidies, rather than to appropriate new money.

In that connection, I call the attention of the Senator from Delaware to the fact that by that process we kept the recommendation contained in the bill as reported by the committee exactly identical with the recommendation contained

in the bill as passed by the House of Representatives, which provided for the expenditure of $100 million in the fiscal year 1958 for operating differential subsidies. In other words, we continued the reduction effected by the House version of the bill, as regards spending, from the $120 million recommended by the budget for this subject, for the fiscal year 1958, to $100 million; and there is also a substantial reduction below the appropriations for the fiscal year 1957, because the total appropriations for this purpose in the fiscal year which is now coming to an end were $124 million. So the $100 million called for by the bill as reported by the Senate committee and by the bill as passed by the House of Representatives is $24 million less than the appropriations for the fiscal year 1957, and is $20 million below the budget estimate for this objective for the fiscal year 1958.

Mr. WILLIAMS. Mr. President, I am not discussing the merits of what the Senate committee did. I am trying to establish the clear understanding that I have and to get it set forth in the RECORD, that the bill as reported by the Senate committee still carries the authority—as originally voted by the House of Representatives—for $100 million for the operation of subsidies for the merchant marine; and the bill as reported by the Senate committee carries spending authority of $24 million more than was included in the bill as passed by the House of Representatives. I think that on that point we are in agreement.

Mr. HOLLAND. The Senator from Delaware is correct; and I made both of those points completely clear in my opening statement.

Mr. WILLIAMS. One other point—I refer now to the language of the Senate committee version of the bill, which provides additional spending authority to the Department of Commerce, as appearing on page 8.

Mr. HOLLAND. Will the Senator state the particular part of the bill to which he is referring?

Mr. WILLIAMS. I am referring to page 8 of the bill, beginning on line 14, where the following proviso is found:

Provided, That transfers may be made to the appropriation for the current fiscal year for "Salaries and expenses" for administrative and warehouse expenses (not to exceed $1,700,000) and for reserve fleet expenses (not to exceed $500,000), and any such transfers shall be without regard to the limitations under that appropriation on the amounts available for such expenses.

The first part of the proviso is very clear, in that it provides for $2,200,000, but I desire to read the last phrase in the proviso and then ask a question.

I address my question to the Senator from Florida and call attention to the remaining part of the last three lines in the proviso, beginning with the word "and":

And any such transfers shall be without regard to the limitations under that appropriation on the amounts available for such expenses.

That appears to be rather innocent language, but if I understand it correctly, as it will be applied to the existing law, it provides the machinery to use $92 million spending authority for the next 12 months for construction differential subsidies, the $92 million being an unexpended balance from previous appropriations.

Am I correct in that understanding?

Mr. HOLLAND. First, I may say to the Senator that the item to which he now addresses himself has no relation at all to that which he has just been discussing, that is, operating-differential subsidies.

Mr. WILLIAMS. That is correct. I am now speaking of ship construction subsidies.

Mr. HOLLAND. This relates entirely to ship construction.

Mr. WILLIAMS. Perhaps I should make that clearer.

In the report of the committee there is listed an appropriation of $3 million for construction differential subsidies and a claimed saving of $97,700,000. Yet, if I understand the language correctly—and I wish to be corrected if I am in error—if we adopt the Senate bill, we are still leaving $92 million available for expenditures by the Department of Commerce whereby it can still expend this amount for ship construction in the next 12 months.

Mr. HOLLAND. The fact is that both the House and the Senate committee cut to the very bone the fund which the Bureau of the Budget requested, $94,500,000. We found there was a substantial balance on hand, and we followed the House in its recommendation of $3 million as the amount necessary to add to the funds on hand for 1958. However, we realized, when the Department was then under limitations because of action taken by the House, and limitations under the earlier bill, which limitations had been lived up to, that the Department would need funds authorized for administrative purposes for 1958. We therefore made available the $3 million in 1958.

The amendment provides that "transfers may be made to the appropriation for the current fiscal year for 'Salaries and expenses' for administrative and warehouse expenses (not to exceed $1,700,000) and for reserve fleet expenses (not to exceed $500,000), and any such transfers shall be without regard to the limitations under that appropriation on the amounts available for such expenses."

Therefore, there were limitations in the bill, and those limitations have been already practically exhausted.

Mr. WILLIAMS. If the Senator will consult with the committee staff, I think he will find that by the language of the committee bill we will be leaving $92 million available to the Department to spend for construction differential next year.

Mr. HOLLAND. We do not so understand, and we do not understand this has any relation at all to the operating-differential subsidies. It applies only to construction, and we are simply offering to enlarge the funds, by $1,700,000 in one case and by $500,000 in the other case, notwithstanding the more drastic limitations which appeared in the original grant. The debate should make that quite clear if the language of the bill does not, and I think the language does make it clear.

Mr. WILLIAMS. Would the Senator go along with an amendment striking the language out?

Mr. HOLLAND. No. The Senator from Florida feels the Department made a good case for needing some additional expense money, and the House had not allowed for the fact that in cutting out practically the full amount of the requested increase in funds in this particular field—that is, for ship construction—sufficient allowance had not been made for the fact that the Administration could go ahead.

Mr. WILLIAMS. I am not, at this moment, debating the merits of whether or not we need the ship-construction subsidy. I am saying that if it is needed let us make the grants directly, in specified amounts, and know what we are doing. In this instance, while the bill suggests only $3 million as being appropriated for payment of construction-differential subsidies for next year, the fact is that actually the Department will have $95 million available, or $92 million of previously appropriated funds plus the $3 million here today.

I still think the committee language will give the Department $92 million additional expense money which it would not have if the amendment were not adopted.

Assuming I am in error, will the Senator accept a proviso to the amendment stating that under no circumstances shall this amendment be interpreted as providing additional spending authority for an amount in excess of the two amounts named totaling $2,200,000?

Mr. HOLLAND. I would have no objection to such an amendment, because I think that is what the language means. I believe the legislative history made on the floor now so limits it. I cannot imagine that an administrative agency would fly in the face of such legislative history made on the floor of the Senate. If it did, it would have a difficult time selling its case to Congress or a committee, before which it would have to appear soon.

I simply state that the committee felt and understands that its action simply allows the use of appropriated funds in the amount of $1,700,000 more than the present limitations would permit for administrative and warehouse expenses, and $500,000 more than the present legislation permits in the case of reserve fleet expenses.

Mr. WILLIAMS. Is it the committee's understanding that the proviso provides only for two items, namely, one for $1,700,000, and the other for $500,000?

Mr. HOLLAND. The Senator is completely correct, and the Senator from Florida would steadfastly oppose any other construction, and would feel that the purpose and intent of the committee, and of the Department in making the request which the committee granted, was being stultified by any other interpretation, which would allow the use of greater funds.

Mr. WILLIAMS. Is it the understanding of the Senator from Florida that by no interpretation, and in no manner, will this language be interpreted as providing any authority for

the Maritime Commission to spend one dime for construction differential subsidies under the provisions of the bill?

Mr. HOLLAND. The Senator is correct. The only purpose of the amendment, and the only purpose of the request which we grant in proposing the amendment, is to allow the diversion, in the one case, of $1,700,000 for administrative and warehouse expenses, and, in the other case, a diversion of $500,000 for reserve fleet expenses, since neither of those amounts could be expended under existing limitations.

Mr. WILLIAMS. Can the Senator from Florida, as chairman of the subcommittee, also give us assurance that it is not the intention of the committee either to come before the Congress with a supplemental bill or to recommend the restoration of the $97 million, or any part thereof, during the next 12 months?

Mr. HOLLAND. The Senator from Florida can simply say that he has no such intention at this time. He knows no one else who has such intention.

However, there is no way in the world to foreclose in advance a consideration of the needs of all agencies of Government. The Senator from Florida has frequently voted for, and frequently voted against, supplemental budget requests. The Senator from Florida expresses the very strong hope that there will not be any such supplemental budget request.

Mr. WILLIAMS. I appreciate that.

Mr. HOLLAND. But any such request will have to be judged on its merits and on the conditions existing at the time. The Senator from Florida would not be true to his trust, or to the Senator from Delaware, or to anybody else, if he should seek to preclude himself from giving fair consideration to any request for a supplemental item which might come from an important agency of government in a period which has not yet begun. The fiscal year begins July 1 and extends for the year thereafter. The Senator from Florida certainly cannot go as far as the Senator from Delaware requests in assuring his distinguished friend, much as he would like to do so.

Mr. WILLIAMS. If the Senator from Florida will yield further, I did not mean to ask for a blanket promise from the Senator. I recognize that either one of us may change his mind as to the merits of a proposal brought before us later. What I referred to was the interpretation to be put upon the amendment now pending, and as to the manner in which it might be modified so as to make sure that the purposes intended would be carried out.

The interpretation of the Senator from Florida is that the adoption of the amendment will in no way be used as a justification for the restoration of any funds under a supplemental bill by an agency which might say, "Under this amendment we were supposed to get some money which you did not give us."

Mr. HOLLAND. The Senator is stating exactly what I feel. The adoption of this amendment has no relation to the creation of additional funds for ship construction. This amendment would allow the agency to carry forward the administrative work which they must perform under the law. If the agency took any position different from that indicated before the committee, it would find at least one member of the committee, the Senator from Florida, very hostile in his attitude toward any such interpretation, because his understanding has been that they were asking for needed funds for administrative purposes, which we should grant them, and not that they should have a foot in the door which would enable them to come to Congress later to ask for $100 million or any other sum for ship construction.

Mr. WILLIAMS. If the Senator from Florida will yield further, is it correct to state that we can assume the bill now before the Senate, with committee amendments—either in the language proposed in this amendment under the ship-construction item or in any other place in the bill, for that matter—will not give the Maritime Administration the authority to use previously appropriated funds to carry out their ship construction differential payments, or any transfer as provided in the operational case when there was a transfer of funds from the War Shipping Administration?

Mr. HOLLAND. Oh, no. The distinguished Senator has my assurance that there is no such course being followed here as we followed in the transfer of the funds from the liquidation of the War Shipping Administration.

Mr. WILLIAMS. There is no transfer.

Mr. HOLLAND. This is a matter which makes available for other purposes funds which could be used under present law only for construction. It makes those funds available in limited amounts for administration; in one case $1.7 million, and in the other case $500,000.

I wish to assure the Senator that the committee has no thought whatever in suggesting this amendment, if it shall be agreed to, of laying a predicate for a supplemental budget request. Quite the contrary, we are trying to afford the agency the machinery and funds by which it can continue to properly administer funds already appropriated through the fiscal year 1958.

Mr. WILLIAMS. I recognize that. I do not wish to have the Senator from Florida think that I am questioning his good intentions by asking these questions. I am merely trying to establish the record, so that he or I or anyone else reading the RECORD will understand what is meant. Is it correct to say we have a clear understanding that there is nothing in the language of the amendment, and nothing in this bill, intended to release any previously appropriated funds to this agency whereby they can use previously appropriated but unobligated funds for the purpose of payment for ship construction, over and above the two amounts mentioned, namely, $1.7 million for the administrative and warehouse expenses, and $500,000 for fleet expenses?

Mr. HOLLAND. I will say to the Senator, he has stated the matter exactly the way I understand it, with this exception: Previously appropriated funds can be spent only as the terms of the appropriation permit. There are unexpended funds in the item for the ship building differential, as the Senator knows. They will have to be used for the purposes for which appropriated, with the exception of these two items, which are being earmarked and permitted to be transferred to administrative use. That is the only change.

Mr. WILLIAMS. The authority of the Maritime Administration to use previously appropriated funds represents the $92 million about which we are talking. What I am asking is: Are we in this bill authorizing the expenditure of unobligated funds previously appropriated?

Mr. HOLLAND. Not unless the expenditure is authorized by previous legislation. This bill would not make any change in any way whatsoever in the provisions of previous appropriations except as stated by the amendment, that funds not now usable for administrative purposes shall be available for those purposes in the amount of $1.7 million in the one case and in the amount of $500,000 in the other case. That is the only purpose, the only effect, and the only result that would be accomplished by this amendment.

The Senator from Florida has already given his friend, the Senator from Delaware, the assurance that the Senator from Florida would be made very hostile toward any request of this agency if it came forward and sought to apply some different construction to the language.

Mr. WILLIAMS. My reason for persisting in asking this question is that the language of the committee amendment on page 8 in my opinion definitely releases $92 million of previously appropriated funds for this agency to use next year for the payment of the construction differential subsidies, which they cannot pay without the adoption of this amendment. If the Senator from Florida will assure me that is not true, I will accept his assurance.

Mr. HOLLAND. Mr. President, I assure the Senator from Delaware that there is no such intention in the amendment. I do not so construe it. It is my positive assurance to the Senator that the whole committee would not stand for any such interpretation.

Mr. WILLIAMS. Mr. President, with the permission of the Senator from Florida, I should like to suggest the absence of a quorum.

Mr. HOLLAND. Mr. President, I did not yield for that purpose.

Mr. WILLIAMS. I withhold the suggestion and will resume the questions later.

Mr. BARRETT. Mr. President, I should like to ask the Senator from Florida a number of questions with respect to certain items in the bill.

I invite attention to the items for the Bureau of Public Roads. I note that the request for the Federal-aid highway trust funds was allowed in full, to the extent of $1,690,000,000.

Mr. HOLLAND. The Senator is correct.

Mr. BARRETT. That amount is pursuant to the Highway Act which Congress passed a year ago, and involves merely the use of the money which was provided for by the additional taxes, and so forth, under that act.

Mr. HOLLAND. The Senator is correct. Under that act the trust fund was

set up to meet the expenses of the ordinary Federal aid to road construction—primary, secondary, urban, and the Interstate System. So far as those systems are concerned, they are now being financed from the trust fund. But there are other objectives in which the Federal Government has an interest, in connection with road construction, which are not embraced in the trust fund, and they are found in the forest highway item, the public lands highway item, and the Inter-American Highway item.

Mr. BARRETT. That is my next question, if the Senator will yield for that purpose.

Mr. HOLLAND. I yield.

Mr. BARRETT. I note that the budget estimate for forest highways was $28 million, and that was reduced by the House to $25 million. The Senate committee makes a further reduction to $23 million.

Mr. HOLLAND. The Senator is correct; and that reduction was made because the agency itself stated to us that the $23 million would be ample to pay all the obligations now existing under contractual authorizations which will be payable in 1958.

Mr. BARRETT. I call the Senator's attention to the hearings on page 501. I note there the statement that, as of April 1 of this year, projects programed but not yet placed under construction involved approximately $25 million of forest highway funds, leaving a balance of $4,200,000 available for programing additional projects. Reference is made to exhibit 3. What I should like to call the Senator's attention to is this particular situation:

The Congress provided for an interstate highway system, and an enlarged Federal highway system, and further it authorized the Bureau of Public Roads to expand the forest highway system to the amount of $30 million a year. That was under the act of Congress last year. I call the Senator's attention to the fact that we are proceeding with the interstate system and the enlarged Federal-aid system to the extent of 100 percent, as the Senator stated a moment ago, but we are reducing the funds available for forest highways from $28 million to $23 million. That will result in a bottleneck in our entire highway system in the Western States. In other words, we shall wind up with an improved and enlarged Federal-aid system, and a tremendously enlarged interstate system, but when we come to the forest highways, with respect to which the Bureau of Public Roads reported that about 75 percent was coincidental with the Federal-aid system, and furthermore, that 800 miles of the forest highways are a part of the national system of interstate and defense highways, we shall have a great number of "dead ends" in the 11 Western States unless we do as the Congress intended should be done, namely, authorize and direct the Bureau of Public Roads to contract for and to spend $30 million each year for the forest highways, although I think that sum is inadequate. However, the committee is reducing the sum from $30 million to $23 million.

Mr. HOLLAND. I can understand the concern of the distinguished Senator. However, I want him to know that this reduction is based upon conferences between the committee and the Budget Officer of the Department of Commerce and the Assistant Secretary for Administration. The reduction represents their considered view, only a week ago, long after the budget was made up, and long after the hearings in the House were held, as to the full amount which will be required for the building of the forest highway system in 1958.

Let me say also to the distinguished Senator that he is in error in his conclusion that the $1,690,000,000 represents the full authorization for construction of the Interstate System and the ordinary Federal-aid programs in the fiscal year 1958.

Mr. BARRETT. It does represent the full budget estimate, however.

Mr. HOLLAND. It represents the full budget estimate, which in that instance was based upon commitments to the States, as to the amounts which would have to be paid in those years.

If the Senator will turn to page 499 of the hearings, he will see that the total amount of the program which could have been carried on if the program could be advanced so quickly under the Interstate System and the 3 ordinary, secondary, and urban systems, was authorized to be $2,550,000,000. So the approach to that total, in the allowance of $1,690,000,000, represents an even smaller percentage than that which is worked out in the case of forest highways.

Mr. BARRETT. I understand that; but I still insist, so far as the budget estimates are concerned, that the Bureau of Public Roads did request, through the Department of Commerce, $28 million. However, the committee in this bill is cutting the appropriation back to $23 million.

Mr. HOLLAND. The Senator is correct; but we cut it back not because the committee wanted to cut off one dime of funds that could be used or would be needed in the fiscal year 1958, but because, after the situation was resurveyed only last week by the paying agency, we were told that $23 million would be adequate to cover full payments on all construction underway or contemplated, with respect to which money would be payable in the fiscal year 1958. The committee has not cut off a dime. It simply reduced the figure because, as time has lapsed, the Agency has been able to get a clearer view of what it would need. It is the Agency's estimate of $23 million which now represents its conviction as to the full amount which it will need in fiscal 1958.

Mr. BARRETT. That is what disturbs me more than anything else. Every State in the West is asking for twice as much work to be done on the forest highways as they are able to have done. I cannot understand for the life of me how the Bureau of Public Roads can say they do not need the full $28 million. There is something wrong somewhere. Either the Bureau is not following the mandate of Congress and constructing forest highways to the full extent authorized, to wit, $30 million, or they are cutting back the requests of the various States for work in those States.

Mr. HOLLAND. The Senator from Florida would not be agreeable to cutting it back. He wants the whole program to go forward. He is sorry that the program for the interstate system, the primary system, the secondary system, and the urbans system cannot utilize the total of $2,550,000,000 which was provided for fiscal 1958. He is sorry, with his friend from Wyoming, that the program for the forest highway system cannot utilize the full $30 million. However, the fact of the matter is that the combined roadbuilding program now underway so greatly exceeds any program we have ever carried on in the past that we cannot get to it all at once.

The Bureau of Public Roads impressed the committee with its desire to strengthen the program and enlarge it within the full figures authorized in every way within its power. However, it was bound to say to the committee what its judgment was under the changed conditions since the time the budget estimate was made last fall. The conditions have changed from last fall to last week. These changed conditions relate to the forest highway system.

The Senator from Florida has given to the Senator from Wyoming the exact picture in that connection. I wish to say further that, difficult as it is to get supplemental items approved, I believe there would be no question whatever about getting a supplemental appropriation, if one were needed, to fill an obligation for highway construction where the agency has gone ahead and let a contract and needs the money. In my judgment, that would go through with the greatest of speed, because it would be recognized as being an obligation of the Federal Government which Congress had authorized to be made. Certainly there would be no trouble about it.

The distinguished Senator from Wyoming knows that there would be no justification for Congress to appropriate $30 million merely because it was asked for last September.

Mr. BARRETT. Of course not.

Mr. HOLLAND. The distinguished Senator from Wyoming should approve the action of the committee in insisting that the figures be brought up to date from the standpoint of resurveying the situation and finding out exactly what amount will be needed. I believe that in private business he would insist on it.

Mr. BARRETT. Indeed I would. I agree with the Senator 100 percent. I am not attempting to raise any question amout the wisdom of the committee in taking this action. I am questioning the action taken by the Bureau of Public Roads. I can assure the distinguished Senator from Florida that every State in the West is clamoring for more forest highways. We need such highways. We need them very badly. At present, in many places, forest roads are in a dangerous condition. They are an integral part of our primary system and, as I indicated a while ago, they are even a part of the new interstate system.

Why the Bureau of Public Roads could not enter into contracts for the full $30 million, which in my judgment is only half of what is needed—it ought to be $60 million, instead of $30 million, if an integrated highway system is to be built in the Western States—I will never be able to understand.

Let me ask the Senator another question. I appreciate the Senator's patience.

Mr. HOLLAND. I wish to be helpful to the distinguished Senator. I am having exactly the same kind of aches and pains in connection with the interstate mileage in my State that the Senator from Wyoming is having with regard to forest highway mileage in his State.

People in Florida cannot understand why all the interstate mileage cannot be built at once, and why all the money made available cannot be spent in the year it is available. The Senator from Wyoming knows—he has been governor of a great State, and the Senator from Florida served at one time in a similar capacity—that we cannot possibly anticipate that a program of roadbuilding, expanded as greatly as the program was expanded by last year's legislation, can be put into operation overnight. The Bureau of Public Roads is the agency which, more than any other agency, wants to see this whole program put under contract and completed as soon as possible. I believe they are doing their best toward that end.

Mr. BARRETT. I agree with the Senator. The Bureau of Public Roads has been authorized by the highway law we passed a year ago to expend $30 million by contract authorization on the forest highways. This bill will leave a shortage in that fund of $7 million. The question I have is this. Will that amount be carried over, and can the Bureau contract next year for the $30 million provided in the law and for the $7 million that is not provided for in this appropriation bill?

Mr. HOLLAND. I am sorry to say to the distinguished Senator from Wyoming that, without having reference to the specific provisions of the section dealing with that subject in last year's legislation, I cannot answer the question. If the Senator will give me a moment, I shall place the information in the RECORD. I should like to read from the section in the act that deals with this subject. Neither the distinguished Senator from Wyoming nor I can possibly hope to remember all the items in a law of the magnitude of the one we passed last year.

Section 103, which deals with forest highways and forest development roads and trails, reads, in part, as follows:

> For the purpose of carrying out the provisions of section 23 of the Federal Highway Act of 1921, as amended and supplemented, there is hereby authorized to be apportioned (1) for forest highways the sum of $30 million for the fiscal year ending June 30, 1958, and a like sum for the fiscal year ending June 30, 1959.

Then the next language has to do with forest development, which I shall omit.

I continue to quote:

> *Provided further*, That hereafter funds available for forest highways and forest development roads and trails shall also be available for adjacent vehicular parking areas and for sanitary, water, and fire-control facilities.

I may say to the distinguished Senator from Wyoming that Congress was a good deal more generous in dealing with his State and other States which have extensive forest highways, in this regard, than it was in dealing with other States which do not have forest highways. The Senator from Florida was glad to join in that provision.

Mr. BARRETT. I remember that. I appreciate it.

Mr. HOLLAND. I do not find the exact answer to the Senator's question in that section. I suggest that he take it up with the appropriate agency. Suffice it to say that the Bureau of Public Roads has not been able to keep up with forest highway authorizations. I remember that we had to eliminate an accumulation of such authorizations which had not been used when we enacted the road legislation last year.

Mr. BARRETT. Yes; I remember that.

Mr. HOLLAND. But I may say also that I was in earnest when I voted for this portion of the act, as I know the Senator from Wyoming was. I agree with him that we want to speed the construction of forest highway links in the regular Federal aid system, and that is what he is talking about.

Mr. BARRETT. That is precisely so.

Mr. HOLLAND. We want to speed such construction as rapidly as we can, as is true of all other portions of the program, and I shall join him in anything that is reasonable along that line. I will not join him—if, indeed, he is asking that it be done— in restoring an estimate made in September, when the same agency feels now, in May, that it cannot use those funds and, instead, requires the smaller amount.

Mr. BARRETT. I am not asking that that be done.

Mr. HOLLAND. I thank the Senator.

Mr. BARRETT. The sole purpose of my inquiry was to ascertain whether the Bureau of Public Roads was proceeding with the dispatch I had hoped they would exhibit, so that we could get the forest highway program underway.

Mr. HOLLAND. I suspect the answer which the Bureau of Public Roads would give is the same one they have given to us with respect to the delays in starting the roadbuilding programs in Florida, namely, that they simply cannot get all the plans and specifications ready at once, and they cannot get all the contractors to bid on a vast building program at one time.

The industry itself is increasing its capacity in this field month by month, and will continue to do so under this tremendously expanded program.

I join with my distinguished friend from Wyoming, and I assure him that I will assist in any way I can, from the congressional angle, to speed the programs under the great bill which Congress passed last year.

Mr. BARRETT. I think the distinguished Senator from Florida will agree with me that the Bureau of Public Roads should make every effort it possibly can to get the work underway in the next fiscal year, and if he can be of some assistance in that respect, I will appreciate it very much. I thank him for his expression here today.

Mr. HOLLAND. I always stand ready to cooperate with my good friend from Wyoming, and certainly in a reasonable, understandable request of this kind.

Mr. BARRETT. I thank the Senator from Florida.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from New Mexico.

Mr. CHAVEZ. I thank the Senator from Florida for his indulgence.

I wish to tell the Senator from Wyoming that I am deeply interested in the problem he has discussed. I think the road-building program is so vast that there has not been sufficient time in which to get it started. In the first place, the average State is not moving rapidly with its program because of a lack of engineers and surveyors. Because of that situation and because the program is so vast and so important, I have asked that the Subcommittee on Public Roads of the Committee on Public Works, headed by the distinguished junior Senator from Tennessee [Mr. GORE] hold hearings, which he has been doing, in an effort to accelerate the program. There is no use authorizing and appropriating money if the roads cannot be built.

Mr. BARRETT. The Senator from New Mexico is exactly correct. He is chairman of the Committee on Public Works, which has jurisdiction over this entire matter. I know that he and his State are just as much interested in forest highways as is Wyoming, or as I am.

Mr. CHAVEZ. That is correct. When the Senator from Wyoming discusses forest highways or roads, I believe I understand that particular subject. I agree with everything the Senator has said; but, as was explained by the Senator from Florida, we do have to try to push the program.

Mr. BARRETT. That is precisely what we are trying to do.

Mr. CHAVEZ. That is correct. I am glad the Senator from Wyoming has made his remarks. The Senator from Florida is in charge of a very important bill, and is deeply interested in this subject, because good roads are important to any State, whether it be Republican Wyoming, or Democratic New Mexico, or Democratic Florida.

Mr. HOLLAND. Mr. President, I greatly appreciate the kind statement by the distinguished Senator from New Mexico, who is chairman of the Committee on Public Works, from which came last year the legislation we have been discussing. Certainly his statement that the road-building industry simply cannot expand, and the engineering studies by State highway departments, and others, cannot be accelerated overnight to take care of this program, really confirms the statement which I made a few minutes ago.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. NEUBERGER. I am glad the able Senator from New Mexico is on the floor, because perhaps he can assist, in his capacity as chairman of the Committee on Public Works, in answering my question.

Is it not true that the expansion of forest highways might not involve some of the same difficulties pertaining to the construction industry as are faced in the construction of other highways? Forest highways rarely are surfaced; they are much more crude in construction, and they do not require the vast amounts of steel, concrete, and other materials which go into the more finished roads.

Mr. HOLLAND. I readily see how the Senator from Oregon could come to that point of view, but I think he is confusing the term "forest highways," because that type of highway applies only to links in the Federal-aid system which go through forests.

I think perhaps the Senator is thinking of the developmental roads and the access roads and trails, which are certainly of lighter construction and have been properly described by his question.

Our problem does not relate to them, but to the links of the interstate highways which pass through forests and which becomes the peculiar responsibility of the Federal Government to construct, so that they will be of the same high type of construction as are the other Federal-aid projects.

Mr. NEUBERGER. The Senator from Florida has answered my question. The bill does not apply, in other words, to what may be described as forest access roads and trails, which are built in the national forests.

Mr. CHAVEZ. For the protection of the forests.

Mr. NEUBERGER. For the protection of the forests, so that the timber may be economically and prudently harvested.

Mr. CHAVEZ. That is correct.

Mr. NEUBERGER. This bill does not apply to those roads, does it?

Mr. HOLLAND. What the Senator from Florida is now discussing are the national forest roads which are connected with the Interstate Highway System.

Mr. NEUBERGER. Rather than the developmental and access roads and trails. They are not involved in this particular bill.

Mr. HOLLAND. No. We are talking about forest highways; and under the technical meaning of the term as it is embraced in the Federal-Aid Highway Act, it applies to the mileage of the regular Federal aid system, whether primary or secondary, and on the Interstate System in particular, which happens to traverse the national forests.

Mr. CHAVEZ. It is on the Interstate System. I may say to the Senator from Oregon, also, that so far as access roads for the protection of the national forests are concerned, they will be the subject of another bill, the Department of the Interior appropriation bill.

Mr. NEUBERGER. I thank the Senator from Florida and the Senator from New Mexico for setting me straight and affording me exactly the information I desired. I had hoped they would understand my question, because I was trying to be vigilant in protecting the very real interests of my State with respect to forest roads.

Mr. HOLLAND. I think every Senator knows the very great interest which the Senator from Oregon has in the forests and in everything which pertains to the forests, and the national parks, as well. We recognize him as a kind of special pleader for those objectives, and we thoroughly understand his position on this point.

Mr. CHAVEZ. Through the kindness of the distinguished senior Senator from Georgia [Mr. RUSSELL], who at one time handled the Agriculture appropriation bill, I had the privilege and the opportunity to visit the forest roads in the State of the Senator from Oregon. I wish that Wyoming and New Mexico had the kind of forests which exist in Oregon.

Uncle Sam owns, in my State alone, 16 million acres of timberland, but there it takes 85 years to make a merchantable tree. I know that between Newport and Tillamook, along the Pacific, they make a merchantable tree in 30 years.

Mr. NEUBERGER. I wish to make one correction in what the distinguished Senator from New Mexico has said. His facts are absolutely correct, but it is not "they" who make a tree; it is the Creator of heaven and earth who makes the tree, and we in Oregon can only offer thanks for that good fortune.

Mr. CHAVEZ. I will not take a back seat to anyone as to who created the tree. But I say they make a tree in 30 years and produce 100,000 board-feet per acre.

Mr. NEUBERGER. That is correct.

Mr. CHAVEZ. I wish that could be done in other Western States; but Oregon has the proper climate.

Mr. NEUBERGER. Oregon often has 80 inches of coastal rainfall from weather patterns coming from the Aleutians. Although the people sometimes complain about too much dampness there could not be, without this rainfall, the great forests which the Senator has described.

Mr. CHAVEZ. I landed at a place called Klamath Falls. I did not go on the main road. I went on the forest road to Bend, and then went over the Cascades and followed the river into Eugene. I never saw more beautiful things than those the Lord and nature had provided.

I congratulate the Senator; he comes from a wonderful State. The Lord and nature have been good to that area of the United States.

Mr. NEUBERGER. The Senator's State of New Mexico has magnificent canyons and the great uplands of the Southwest. We in Oregon have the majestic forests which the Senator from New Mexico has described. Each of us is fortunate in a slightly different way.

Mr. CHAVEZ. That is correct. If we in my State had a different kind of country, it would not be New Mexico. So far as New Mexico is concerned, we are very happy with it as it is.

Mr. NEUBERGER. I think the Senator should be happy.

Mr. CHAVEZ. Not only happy, but proud.

Mr. NEUBERGER. The Senator should be proud, also.

Mr. CHAVEZ. My ancestors have been in New Mexico since 1589. I am happy that it has been possible to discuss with the Senator from Oregon the subject of highways in his great State and mine.

Mr. NEUBERGER. I cannot claim that my ancestors were in Oregon that long ago, because, if they had been in Oregon at that time, they would have been there before the great explorers Meriwether Lewis and William Clark arrived. My grandfather came to the great Northwest from Germany in 1869, for the very good reason of wishing to avoid becoming personally involved in the Franco-Prussian War. The year 1869 is a very much more recent date than the date of the arrival of the illustrious ancestors of the Senator from New Mexico.

Mr. CHAVEZ. That indicates one of the good features of the United States of America. Those who wished to avoid becoming involved in the Franco-Prussian War, those who wished to be adventurers from Spain, and those who wished to leave Wales, have come to America. I think it is wonderful.

Mr. NEUBERGER. I hope the Senator from New Mexico and I and others will be able to take action to preserve the great natural assets and the natural resources of our country, so that all Americans—both those who are Americans by birth and those who have become Americans as a result of immigration—will be able to enjoy those great natural assets.

Mr. CHAVEZ. Mr. President, I am a great admirer of Teddy Roosevelt. I know he fought at San Juan Hill, as a Rough Rider; and I know he was responsible for the construction of the Panama Canal. But I believe his greatest contribution to the welfare of the people of the United States was his action in having the Federal Government take over the national forests, for the benefit of the American people.

Mr. NEUBERGER. Yes; the national-forest system is Teddy Roosevelt's greatest monument.

Mr. CHAVEZ. That is correct.

Mr. HOLLAND. Mr. President, I thank the distinguished Senators for their contribution to the debate.

I have agreed to yield to the Senator from Delaware.

Mr. WILLIAMS. Mr. President, to resume the previous colloquy I had with the Senator from Florida, at which time we were referring to the item on page 8 of the Senate committee report on ship construction. In the report the committee claims that the bill as reported by it will appropriate only $3 million for ship construction for next year, representing a saving of $91,500,000 below budget requests.

My point is that although that may be a cut in the budget request, nevertheless, so far as actual spending authority for the Maritime Administration is concerned in connection with the payment of ship construction differential subsidies during the next fiscal year, the agency will have sufficient appropriations avail-

able whereby it can still spend more money than it spent during any of the 4 preceding years. In effect with the passage of the Senate bill this agency will have $92 million, plus the $3 million provided for in the committee amendment, or a total of $95 million. All of this can be spent for ship construction differential payments beginning in the fiscal year 1958. It is more than has been spent in any of the 4 preceding years.

I believe I am correct in stating that the Maritime Administration, of the Department of Commerce, will have a total of $92 million plus the $3 million, or a total of $95 million for the payment of ship construction differential subsidies beginning in the next fiscal year notwithstanding any supposed reduction in appropriations by means of the bill as reported by the Senate committee.

Mr. HOLLAND. First, Mr. President, let me say that I do not like the use of the word supposed, in connection with the reductions carried in the bill as reported by the Senate committee, because the bill as reported by us is replete with reductions.

Mr. WILLIAMS. The bill is replete with reductions in the budgetary requests, but I am referring to spending authority. Is it not true that with the passage of this bill the Maritime Administration has $92 million which it can use under existing law, plus the $3 million now proposed to be provided; and is it not also true that last year the Maritime Administration spent $87 million for ship construction differential subsidies, and that they spent $86 million in the fiscal year 1956, $70,500,000 in the fiscal year 1955, and $82,300,000 in the fiscal year 1954? Is it not also true that, under the pending bill, as reported by the Senate committee, the Maritime Administration will begin with $95 million available for expenditure for this purpose, notwithstanding any economies about which we may be talking? Under this bill we are not reducing the spending authority of this agency for next year.

Mr. HOLLAND. Mr. President, at the time of the House committee hearings, $92 million was available in this fund. The amount now available may be somewhat less. That available amount was carried over from previous appropriations. The Senator will find on page 7 of the House committee report a very careful treatment of this subject, indicating why the House made the $3 million available. That portion of the House committee report concludes with the following words:

> All new funds requested for this purpose have been deleted, in view of the fact that $92 million of ship-construction funds, available from 1957 and prior years, will permit the construction of 17 new vessels in 1958.

If the Senator from Delaware will also refer to pages 390 and 391 of the House hearings, he will find the same subject matter dealt with there. Congressman SHELLEY and Mr. Morse, in testifying, made it very clear that as of the date of their testimony—which I believe was in March—$92 million was available, and that it was to be used in the construction of the 17 ships, which were planned for construction in 1958, and that the construction of the 17 ships could go forward by means of use of the $92 million. For that reason, the committee then decided to delete all the budget request for this particular field, except $3 million, which was for specific purposes, as outlined in the committee's report.

In reviewing that matter, the Senate committee felt that that action was sound; and that although sometimes there may be justification for having a pipeline full, so that those concerned will know what they can spend from accumulated funds, in connection with planning already underway, this was one occasion when, under existing conditions, we thoroughly approved the philosophy of the House of Representatives in voting to reduce the appropriation to $3 million.

There has not been any effort to misinform anyone regarding the facts of this matter. The facts are that on that date, $92 million was available. As of the present time, that amount has been reduced somewhat, although I do not have available at the moment the exact amount as of today. The $92 million was adequate for proceeding with construction of the 17 ships. We did not wish to interfere with that; those in charge of the operation are ready to proceed. So we simply voted to delete the budget request, except for the $3 million.

I do not think the distinguished Senator from Delaware could possibly wish to delete that fund, inasmuch as it relates to the construction of ships already planned and now ready to be constructed, and inasmuch as such a deletion would mean that a program already covered by Congressional authority in past years would be ended before it could be begun. Furthermore, that program is important in terms of national defense; it provides for the incorporation into these 17 ships, as they are being constructed, of the features—whether they be speed or equipment or arrangements of space—which will make them available at once in the event of national emergency, to be used for the national defense. Certainly the Senator from Delaware would not wish to disturb that $92 million, would he?

Mr. WILLIAMS. Mr. President, I think the Senator from Florida is correct in taking the position that additional funds should not now be appropriated for this agency.

The point is that we are talking about cutting the budget, and the American people want to have it cut. In that connection, I think the true facts should be shown. The test as to whether it will be possible for us to cut taxes will be the actual expenditures of funds for which the Congress provides.

And so far as spending authority is concerned, the bill as reported to the Senate by the committee carries additional spending authority of $613 million. In addition to that, $65 million represents a transfer from funds previously appropriated to the War Shipping Administration to the Maritime Commission under the Department of Commerce. This is for payment of operational subsidies of the merchant marine, thus bringing the total up to $678 million. The $65 million is extra spending authority, and is not a saving to the American taxpayers.

In addition, another $92 million will be available from previously appropriated funds for payments of ship construction differential subsidies. The Senator from Florida will admit, I am sure, that unless the $3 million item and the language included in the bill are enacted, the Maritime Administration will not have authority to spend either the $3 million or the $92 million.

So, Mr. President, if the bill as reported by the Senate committee is enacted into law, the Commerce Department will have a total of $770 million spending authority for the fiscal year 1958, rather than the $613 million to which reference has been made. Spending is not being cut below last year's level, but is actually being increased.

Also, in comparing the amount with the appropriation for last year, let me point out that I notice the committee report contains a reference to last year's appropriation as being $768,553,136, but that item included two supplemental bills totaling $80,600,000. If we delete these, as we should if we wish to make an actual comparison and use the total amount in the bill which was passed last year, we find that last year's bill provided only $688 million, against the pending bill of $770 million. Actually, the bill as reported by the Senate committee provides for an increase in the amount of $82 million over and above the appropriations made for this agency last year. Instead of a decrease, we are actually increasing expenditures for this agency.

Mr. HOLLAND. Of course, the figures used by the Senator from Delaware are correct; but I am sure the Senator is not questioning the fact that the bill as reported by the Senate committee reduces by $257 million the appropriations requested by the Budget, and that only $65 million might by the remotest stretch of the imagination be characterized as apparent, rather than real.

As a matter of fact, that is $192 million below the spending authority of the Budget, and $257 million below the appropriations requested by the Budget Bureau.

I believe the Senator has already been gracious enough to say earlier in the debate that he approved of at least two things the committee has done. First, he approved of requiring the agency to use the $65 million in the liquidation fund of the War Shipping Administration fund. It was in one of their pockets, and we insisted on their putting it into their other pocket and using it. Secondly, I understand the Senator approves of the committee's cutting the request for $94.5 million down to $3 million. There have been no such cuts in bills reported in this field since the Senator from Florida has been a Member of the Senate.

Even though the Senator from Florida knows of the desire of the Senator from Delaware to cut expenditures, he also knows of his sense of fairness, and hopes the Senator from Delaware will admit that similar proposed cuts in bills have

not previously been made in this session or any other session of Congress since he and I have been Members of this body.

Mr. WILLIAMS. I agree with the Senator that this represents a cut in the budgetary request. To that extent I compliment him and his committee.

Mr. HOLLAND. We appreciate that.

Mr. WILLIAMS. I think it is a step in the right direction. But I point out the appropriations on which we are passing would allow more to be spent next year than was spent this year. I do not think it is quite right to let the statement be made that we are saving the American taxpayers $97 million on construction subsidies in the merchant marine next year when in reality we are providing means whereby in that particular field the agency can spend more money than it has spent for the same programs in any of the preceding 4 years.

While I think the Senate committee should be congratulated for bringing this particular agency more in line, in order that we may see how far out of line it has been on previous requests, I should like to read the record of the past 3 or 4 years.

In fiscal 1954 it had left over an unexpended balance for payment of construction subsidies of $65 million. There was appropriated $82,600,000, bringing the total amount available to the agency at the beginning of the 1955 fiscal year of $147,600,000.

In 1955, the agency spent about $70,500,000, leaving $78,992,000 left over at the end of that year. The next year the agency got another appropriation of $86,450,000, bringing the total available at the beginning of 1956 to $155 million.

The agency spent $86 million in fiscal 1956. It had $79 million left over at the end of that year.

During fiscal 1957, Congress appropriated $82,700,000. The agency asked for a supplemental appropriation of $18 million, bringing the total up to $100 million, which it received in fiscal 1957, bringing the total to $179 million available to the Department.

According to the testimony, the agency spent $87 million last year, leaving $92 million to begin operations next year.

This year the agency asked for another $114 million. I might say that, so far as this agency is concerned, it has not been backward in its requests. The committee wisely reduced the request to $3 million.

Personally, I think the committee should have deleted it entirely, because the agency has more money than it needs. I have not heard anybody criticize them for being too restrictive in their payments in this particular field. On the contrary, the Comptroller General has been rather critical several times of the freedom with which the agency disburses its money.

Notwithstanding the facts I have stated and notwithstanding all the progress which has been made by the committee, there is still in this particular item $95 million available for the agency beginning fiscal 1958, which is more money than it has spent in any of the 4 preceding years.

I think that point should be made very clear in the minds of the taxpayers. So far as the bill is concerned, the agency can still spend more money next year than it spent last year or any preceding year.

It is my contention that all unexpended balances left over in any fiscal year should revert to the Treasury, and it is indefensible that this agency has so recklessly sought appropriations far in excess of its needs. I am glad that some progress is being made here today to shed light on its operations and check this policy.

Mr. HOLLAND. I appreciate the attitude of the distinguished Senator. I think he has brought out a very useful bit of knowledge, which is that last year the appropriation and balances, as he has mentioned, was $179 million. Under the action recommended by the committee, the amount will be $92 million.

The Senator's figures also showed that $155 million was the total amount on hand for use for this purpose in 1956, and $146 million-plus the year before.

The net result of the committee's recommendation is to make $92 million available now, as contrasted with sums of $50 million more than that in the years back to the time of the war.

I should like to make one further statement for the RECORD. If the Senator will look at page 7 of the House report, he will see that the $3 million which was granted by the House committee—and that action was approved by the Senate committee—is not for shipbuilding, but is earmarked for specific purposes. I read from the report:

> The amount approved includes $1,250,000 for acquisition of replaced ships and $1,750,000 for research and development.

In other words, this must not be confused with the ship-construction item, which remains $92 million, or that portion under existing appropriations available for ship construction.

Mr. WILLIAMS. I agree that technically the Senator is correct, and I think we both agree on the point I made previously, namely, that if we struck out the amendment, the agency could not spend the $92 million. So we are, in effect, continuing the authority for the agency to spend the $92 million.

I am not going to oppose the committee action with respect to the $3 million. I think we would be wiser not to allow the $3 million at all, but I think the committee has made such a great step forward in requiring the agency to use up old appropriations before authorizing new ones that I am going to go along with the committee.

However, I am reminded that in preceding years when I opposed such appropriations, I was told that the agency could not stand a cut, and that we would disrupt the whole American merchant marine, and that everything would collapse if amendments cutting these appropriations were adopted. We now find that the agency had a reserve of millions while they were pleading bankruptcy to the Congress. Had we had at that time the figures which are now available, I think I can safely say that some of these appropriations would have been cut out entirely a year or two ago. It is utterly inconceivable that Congress should be asked to appropriate $102 million for an agency that has more money on hand—unexpended funds—than it can intelligently use for the next 12-month period. The agency does not need a dime.

I think the agency should be criticized even for asking for more money under such circumstances. The record should be made clear that what the Senate is doing should not be considered merely a token action, but should serve as a warning that this is what is going to happen next year and the years thereafter. Let us consider passing a law rescinding all unexpended appropriations at the end of each fiscal year.

Mr. HOLLAND. Mr. President, I should like to say, briefly, that I think the Senate and the whole country are indebted to the Senator from Delaware for having continued his efforts to effect economy. So far as the Senator from Florida is concerned, sometimes he has agreed with the Senator from Delaware and sometimes he has not, but he feels now that the Senator from Delaware ought to have a very great sense of satisfaction at the action taken by our committee this year. I think the fact that we have provided only funds sufficient to build 17 ships, now contemplated to be built in 1958, and have allowed only $3 million for necessary objectives, and earmarked those objectives, should commend this bill to the Senator from Delaware and to everyone else, and I am sure that has been the result.

I say again, in concluding my presentation of this matter, that I am happy to state as a fact that the bill we have reported accomplishes the maximum reduction ever accomplished by any bill in this field in the 11 years the Senator from Florida has been a Member of the Senate, and he is happy that is the case.

Mr. President, there are several language changes which I am willing to discuss, if any Senator wishes to have me refer to them, but I shall not do so if it will merely weary the Senate.

Mr. O'MAHONEY. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. THURMOND in the chair). Does the Senator from Florida yield to the Senator from Wyoming?

Mr. HOLLAND. I yield to the Senator from Wyoming.

Mr. O'MAHONEY. I thank the Senator from Florida for his graciousness. The confidence this body reposes in the Senator from Florida in handling the very technical and complex measure he has in charge I think is well attested to by what has been said by those who have participated in the discussion with him, and also by the attendance in the Chamber. The entire Senate knows that the Senator from Florida is not only a diligent and sincere Member of this body, but an extraordinarily able one, and one who understands figures. I am proud, for one, to join in complimenting him on the record he has made in making the largest reduction in 11 years in the appropriation bill.

Mr. HOLLAND. Mr. President, I certainly appreciate those gracious words.

Even if I entertain a little apprehension about what is to come, I yield further to the Senator from Wyoming.

Mr. O'MAHONEY. I may say to the Senator from Florida that I served on the Appropriations Committee for many years, and I know the burden which is borne by the chairmen of the various subcommittees.

I was about to remark that another evidence of the confidence of the Senate in what the Senator from Florida has done is that, so far as I know, there are no amendments printed to be offered to the bill. No Senator has signified any intention to offer an amendment.

I wish to invite the attention of the Senator and of the Senate, and of those who read the RECORD, to the appropriation for the Bureau of the Census. This is a comparatively minor activity in the Department of Commerce, but it is one of the most important.

INDUSTRIAL CENSUS

Last year, and the year before, I invited the attention of the Senator from Florida to the fact that the Committee on the Judiciary of the Senate was conducting an investigation of the concentration of economic power, and I suggested the census of manufactures was very essential to bring about the development of information from which logical and sound conclusions could be drawn. We engaged in a colloquy on the floor, which resulted in bringing about such a spirit of cooperation between the Senate committee and the Bureau of the Census that highly desirable results were obtained.

I observe that for the census of business, manufactures, and mineral industries the budget estimate is $1,845,000. That amount represents a large increase over the appropriation for 1957, which was only $150,000, but the increase in this general appropriation has been due to the fact that there have been some extraordinary revelations with respect to the concentration of business.

CONCENTRATION OF DEFENSE WORK

The Department of Defense on the 10th of April 1957, released a statement as to "100 companies and affiliates listed according to net value of military prime contract awards." There is a striking conclusion which one draws from the release, that one-third of all the defense contracts awarded by the Department of Defense in the past 6 years have been garnered by 10 companies, and the percentage is steadily rising.

For the 6 years from July 1950 to June 1956, the 10 companies doing the most business with the Department of Defense—which is, in these years of the cold war, the Government's largest purchasing agent—were given 31.5 percent of all defense contracts. The leading 10 companies in the 18 months which ended last December 31 received 36 percent. That is an increase of 4½ percent in 18 months.

The 100 companies which received the largest amount in 6 years were awarded 63 percent of all the contracts let by the Department of Defense.

I should like to read from the release of the Department of Defense:

It is emphasized that only a part of these prime contract funds are retained by the prime contractors for work in their own plants. This is shown by reports, recently submitted by 163 large military prime contractors, on their total receipts from military prime contracts and subcontracts, and their payments to their large and small first-tier subcontractors.

The term "first tier," by the way, is rather interesting, because there are tiers upon tiers of subcontractors.

Of the 163 reporting companies, 74 are among the 100 parent companies and 207 affiliated companies which make up the list of 100 for the 1½-year period from January 1955 through June 1956. The 74 companies account for 81.8 percent of the total value awarded to all companies on the 100-company list for that period. The 74 companies reported that 56.9 percent of their total receipts for military work were paid out to other firms for subcontract work, in the 6-month period ending December 31, 1956.

Now, turning to the list, we find that for the period July 1, 1950, to June 30, 1956, the total amount of the contracts awarded by the Department of Defense was $140,358,800,000, and of this more than $140 billion, there were awarded to the 100 companies and their subsidiaries $88,369,600,000 worth of contracts.

The highest awards were made to General Motors Corp. and its two subsidiaries, Ethyl Corp. and Frigidaire Sales Corp. The awards to this one group were $6,965,000,000.

The next highest was the Boeing Airplane Co., with $6,175,700,000.

I shall not fill the RECORD with these figures, but it is only necessary to call attention to the figures to see what is happening.

INCREASING MERGERS

One of the contributing factors to the increase is the number of mergers, which are taking place so rapidly. The total number of firms represented in the accumulated list, including parent companies, wholly owned subsidiaries, and partially owned subsidiaries, has increased from 240 to 1953 to 307 in 1956. According to the Defense Department's own study, this is an incomplete count, because "many former affiliates have now become divisions of the parent companies, and therefore are no longer counted as separate companies."

Defense contracts do descend to smaller companies. The largest companies are prime contractors. They subcontract much of their work. Seventy-four of the 100 companies report that they subcontract 56.9 percent of the total amount of contracts. It is undoubtedly true that in the interest of efficiency and economy the Department of Defense must deal with prime contractors.

INDUSTRIAL FEUDALISM

Irrespective of that, the end result is industrial feudalism. There is a very close analogy between the present industrial practice and the old feudal practice of subinfeudation, that is to say, one man holding land from another, but in turn subcontracting it out to a third. Considering that our ancestors came to the New World to escape landed feudalism, it is ironic that this generation faces the prospect of industrial feudalism.

One of the studies for which the Bureau of the Budget approved the application of the Bureau of the Census in the Department of Commerce had to do with the transportation census. The transportation census is a part of the census of manufacturing, mining, business, and transportation. The request for the transportation census was $300,000. It was eliminated by the House.

Another item for which the Bureau of the Budget approved the request of the Bureau of the Census was $100,000 for the County Business Patterns. A census of business in the counties of the United States is essential if we are to understand why it is that small business is failing and large business is growing.

A striking fact is revealed by the reports of receipts of the five wealthiest States in the United States in 1955, as compared with the five largest corporations. The five wealthiest States in the United States are New York, Ohio, Pennsylvania, California, and Texas. The total receipts of those five States from all sources—taxes and revenues of all kinds—amounted, as I recall, to $5,669,000,000.

RICHEST COMPANIES

The five richest companies in the United States are General Motors, Standard Oil of New Jersey, the American Telephone & Telegraph Co., the Ford Co., and the United States Steel Corp. Few people realize that the receipts of those five companies amount to $31,600,000,000, or more than five and one-half times as much as the receipts of the five wealthiest States.

If we want to know why there is concentration in government; if we want to know why there is concentration in business, we must have these figures. We must have this census. The Bureau of the Census will undertake in 1958 preparatory work for economic censuses.

A complete census is scheduled to be made in 1959, covering the year 1958 in the fields of manufacturing, mining, business, and transportation. It is important that the Bureau of the Census should not be handicapped in doing this work. Of course, we shall have the decennial census shortly, and much work must be done in that connection.

HOUSE REDUCTION

The figures in the report show, on page 7, that the House cut $845,000 from this request of the Bureau of the Census, leaving a recommendation of $1 million. The Senate committee accepted the recommendation of the House. It made no addition and no reduction below the House figure, but the report which is submitted is $845,000 below the budget recommendation.

When one considers that the total reduction in the Census Bureau figure made by the bill as reported is $2,348,200, and the total reduction in the entire bill is $257,928,710, as shown on page 11, it is obvious that a restoration of at least a portion of the cut made by the House, on the basis of the facts, which I have related here this afternoon, might well appeal to the conference if it appealed to

the Senator from Florida. That is a sort of question.

Mr. HOLLAND. I thought I detected the question mark. I am bound to say that this subject was seriously considered by our committee. The distinguished Senator from Wyoming will find that a sizable portion of our quite large printed hearings was utilized in hearing the Census Bureau, notwithstanding the fact that the Secretary of Commerce made no request for any restoration in any item for the Census Bureau.

Notwithstanding that fact, and notwithstanding the fact that it was a little irregular for us to do so, we bored rather deeply into the requests of the Census Bureau, and, for that matter, most of the other agencies with respect to which there was no request for restoration. The committee did not feel that the judgment of the Secretary of Commerce, important as it was, should necessarily be final and stand as the judgment of the committee. The Senator has already noted that in several instances the committee recommends restorations not requested by the distinguished Secretary of Commerce. In this instance, not only was there no request for a restoration, but the Senator will note that there was an appreciable increase over the appropriation for 1957.

Mr. O'MAHONEY. I have already noted it and commented on it.

Mr. HOLLAND. For instance, for salaries and expenses, the item last year was $7,475,000. We increased that item to $7,881,800, or an increase of $406,800.

In the case the Senator has been dealing with so ably, the 1958 census for business, transportation, manufactures, and mineral industries, we increased last year's appropriation of $150,000, when, frankly, this census was just getting under way, to $1 million.

Mr. O'MAHONEY. That is my point. It was just getting under way. The House cut the budget estimate by $845,000, and the Senate committee allowed the item to remain as the House had left it.

Mr. HOLLAND. To return to my recital of the step-up from $150,000 in 1957 to $1 million for 1958——

Mr. O'MAHONEY. That was because we were approaching the decennial census.

Mr. HOLLAND. No. The step-up for the approaching decennial census is in another item, which did not appear last year.

Mr. O'MAHONEY. What I mean to say to the Senator from Florida is that the other censuses which I have mentioned are very basic to the decennial census.

Mr. HOLLAND. Undoubtedly they have an impact on the decennial census. The committee approved an appropriation of $3,250,000 for the 18th decennial census. There was no appropriation for that item last year. We omitted two nonrecurring items. They deal with the census of governments and the national housing inventory. They total $2,750,000.

We stepped up the requests, overall, by $1,756,800. We had in mind, first, the fact that there was no request for restoration and, second, that the House committee had made it very plain in its report that they wanted the suggested census for transportation to be omitted entirely, and that involved an appreciable amount. Having those two facts in mind, the committee felt that we should leave the House action as it was on this particular item. We did step up the Census Bureau appropriation by $1,756,800. We felt that it was rather clear evidence of our appreciation of the great importance of the Census Bureau and of the functions it performs.

Frankly, the Senator from Florida was unhappy about the the reduction of the appropriation for the Eighteenth Decennial Census. A large part of it was for a new Univac, and equipment of that kind. We were assured, after going into the matter, that orders could be placed and the material obtained without a restoration in that particular field.

Therefore I will say to the distinguished Senator from Wyoming that I hope he will not offer an amendment. If a good cause can be made for a supplemental request, the Senator from Florida certainly will not be adamant in advance, but will be reasonable. He always tries to be reasonable. Some very fine devoted public servants conduct the business of the Census Bureau. They are career people, if we have any in our Government.

Mr. O'MAHONEY. That is correct.

Mr. HOLLAND. The Senator from Florida understands completely that good results flowed from the underlying arrangements effected last year by the distinguished Senator from Wyoming with the Bureau of the Census and with our committee in connection with the bill which came from his subcommittee of the Committee on the Judiciary. We are always willing to cooperate.

Not being asked to restore the amount and not finding any emergency, and remembering the adamant opposition that we ran into from the other House on the question of restoring the transportation census, the committee felt that it was treating this agency with comparative generosity in stepping up from last year's appropriations of $10,375,000 to this bill's appropriation of $12,131,800.

Mr. O'MAHONEY. As I said in the beginning, the Senator from Florida is most persuasive and eloquent. However, I believe he is overlooking a few items which are worthy of some consideration. I had not intended to quote from the editorial which appeared in the Journal of Commerce of Wednesday, May 1, 1957. However, the argument of the Senator that there was no appeal, forces me to do so. The editorial is entitled "Axing the Census Bureau." It reads, in part, as follows:

As chairman of a Senate Subcommittee on Appropriations considering the Commerce Department's budget for the next fiscal year, Senator SPESSARD HOLLAND was quick to note on Monday that there was something unusual about the appearance of Assistant Commerce Secretary George Moore with the warning that projected cuts in the Census Bureau's budget will create long delays in reporting monthly foreign trade figures.

It is, of course, not unusual for the Chief of a Government bureau to protest a proposed slash in his budget. But it was a little out of the ordinary, as Senator HOLLAND noted, for an Assistant Secretary to warn Congress of the injurious results certain to follow a cut in which his chief, Secretary Sinclair Weeks, had previously acquiesced.

I admit that was amusing. However, it proves, I think, by the Senator's own notation at the time, that there is nothing surprising about the fact that the Bureau had not asked for a restoration.

The Senator will remember that I met him in the lobby one day when I was hurrying to a meeting of the Judiciary Committee. I asked him when the hearings would be held by his subcommittee on the Commerce Department appropriations with respect to the Bureau of the Census. He said, "I am sorry, but we have completed the hearings. We are marking up the bill this morning."

I said, "Well, possibly if I appeared with a letter, you might file the letter."

The Senator nodded rather affably. Unfortunately my work in other fields, on the Committee on Interior and Insular Affairs and the Committee on the Judiciary, made it impossible for me to appear. I would have asked for the increase, and I am asking for it now, not because I represent the Department of Commerce, but because I am a member of one of the principal committees of the Senate, the Committee on the Judiciary, which is carrying on a very vital study of the concentration of economic power.

CONFERENCE RESTORAL

My request to the Senator from Florida is simply this. I shall not offer an amendment. It would be futile to do so. I think this case is worthy of consideration in the conference committee of the two Houses. Will not the Senator consent—I plead with him, I beg him, I ask for an exercise of his judicial temperament, and I solicit his kindly feeling—to make a motion himself to add $100,000 or $200,000 or $150,000 to the appropriation for the Census Bureau, and see what develops in the conference committee?

I shall be very happy to appear before the conference committee and argue for such an increase. Will not the Senator consent?

Mr. HOLLAND. The Senator from Florida appreciates the interest of the Senator from Wyoming, and he dislikes to deny any request, whether small or great.

But the Senator from Florida is trying to hold the bill intact. He is trying to keep faith with the members of the subcommittee who have worked arduously and cooperatively in preparing the bill, and with the other members of the full committee. He would not feel that, simply because of his affection and respect for the distinguished Senator from Wyoming, it would be at all in keeping with the fulfillment of his responsibility to himself to accept an amendment the subcommittee and the full committee had declined to make.

Having heard the distinguished Senator from Wyoming, under similarly responsible situations, react in somewhat the same way when he was being catechized by friends when he was handling appropriation bills, I am certain he will at least understand and sympathize with the position of the Senator from Florida.

Mr. O'MAHONEY. The Senator from Florida is very disarming. He leaves me without my blade or without my six-shooter. But I do have some facts, and the facts which I have presented upon the floor today were not presented to the committee. They were not presented because the Secretary of Commerce was cutting his President's budget. There was no discussion of the vital need of a proper census, if we are ever to learn, for legislative purposes, what makes the giant corporations become giants, what causes them to become monopolistic in their concentration, and what drives small business in every State of the Union into the desperate status in which it now is.

PLEA FOR RESTORAL

I plead with the Senator from Florida to add $250,000 for this vital enumeration.

Mr. HOLLAND. The Senator from Wyoming is so appealing that it really hurts me not to go along with his request, but I could not do it because of the responsibility which I have to other members of the subcommittee and the full committee.

I will say that the Senator from Wyoming has made a persuasive case, and I hope he will make it if and when a supplemental bill comes before the Senate. I assure him of a special invitation to appear before our committee.

I, too, was a little nonplused when the Secretary of Commerce restrained himself so fully when he made the requests for restoration. I expressed that feeling in the hearings. Yet in these troubled times I cannot fall out very heavily with anyone who has decided that economy is the order of the day. Although there has been some difference of opinion in the administration, it is not the first time there has been such a situation. The Senator from Florida, in spite of the fact that he planned at one time to make some rather acid comments about this particular situation, decided it was better not to do so. Instead, he left these omitted items for such showing as can be made, if it should be made, in a supplemental request.

Mr. O'MAHONEY. I am certain the Senator from Florida realizes that economy in this matter is undercutting the economics of the Nation.

However, the Senator from Florida has been gracious enough to say that he will welcome the Senator from Wyoming and other members of the Committee on the Judiciary with open arms if a supplemental bill is offered. I have no doubt, when I note the bills that continue to come from the House, that there will be supplemental bills and deficiency bills, so I shall take full advantage of the Senator's kind offer.

Mr. HOLLAND. I thank the Senator from Wyoming. We will gladly subject ourselves to assault by the golden talk and the sharp sword—and I believe he mentioned a six-shooter, too—carried so ably by the Senator from Wyoming, because we know that, even though effective, he is always generous and gracious.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. JOHNSTON of South Carolina. I call the Senator's attention to an item on page 24 of the bill, headed "General Provisions—The Panama Canal." The reason I do so is that this provision was placed in the bill by the House, and we in the Senate cannot raise a question, so far as its being out of order is concerned. But I do not think it is correct each year to include in appropriation bills matters which are covered by general legislation. I believe it will be found that most of the matter to which I am referring, or practically all of it, if not all, is upon the statute books at present. There is no necessity for its being included in an appropriation bill year after year.

To show, too, how confusing it is, this problem is right now being considered by my committee, the Committee on Post Office and Civil Service, which handles questions of this kind. I have sent a member of my staff to the Panama Canal Zone to make an investigation concerning the matter. I did so at the request of the State Department and at the request of the Ambassador from the United States to Panama. After I had talked with the Ambassador, he requested that I take the action I did. I also had the Ambassador from Panama to the United States visit with me and talk over the matter. He asked that I send someone there to investigate the very matter which is being dealt with in the appropriation bill.

I fear that the people of the Panama Canal Zone and the Panamanians themselves might misjudge us when they learn that we are legislating on this particular item, because they will think that Congress is putting its approval on this proposal at this particular time.

It was for that reason that I wanted to call the Senator's attention to the item. I hope the Appropriations Committees of the Senate and the House will examine into the matter, because if legislation is already on the statute books, it is not necessary to include it in an appropriation bill; it should be left out.

Mr. HOLLAND. I think I concur with the distinguished Senator from South Carolina. I am only sorry that his request reached us after the bill had been marked up by the subcommittee and the full committee. That was due to no fault on the part of the Senator. His letter was dated May 15. I immediately communicated with him to tell him that the bill was already marked up and had been reported to the Senate.

Upon checking, however, I find that something of this sort has been carried in each bill for a good many years, and that the utmost effect of this provision would be to operate through fiscal 1958, unless it is modified or repealed by the substantive legislation which the Senator's committee is now considering and which has, of course, complete jurisdiction to handle it. Therefore, I appreciate his restraint in not offering an amendment. I explained to the Senator that if we had known of the situation earlier the committee would have been glad to hear him.

Mr. JOHNSTON of South Carolina. I hold in my hand a letter from the honorable W. E. Potter, Governor of the Canal Zone. The portion dealing with this particular matter reads as follows:

> Let me assure you that your farsightedness in sending Mr. Faucette to the Canal Zone is welcomed by everyone here. I am sure that the report he gives you will be of great assistance in showing you the very serious problem that we have.

This shows that some action needs to be taken in this field. The only reason I make these remarks is to let the residents of the Canal Zone and the Panamanians know that we are not closing the door and that, based upon the information we obtain, we shall act in accordance with the best interests of those concerned.

Mr. HOLLAND. I appreciate the comment by the distinguished chairman of the appropriate legislative committee to handle this type of proposed legislation. He is exactly correct in his statement that we are not taking unusual action at this particular time, but are simply continuing the practice which, whether rightly or wrongly, has been followed in the appropriation bills for some time past. We will gladly yield to his legislative committee as it considers the substantive legislation proposed.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. CASE of South Dakota. I wish to express a word of admiration for the committee with respect to two items. One concerns the restoration of the portion of the budget estimate for the Advisory Committee on Weather Control. The other concerns the restoration of certain items for the Weather Bureau.

Some legislative hearings on the work of the Advisory Committee on Weather Control have recently been completed, following which one of the outstanding meteorologists of the country said to me that he believed the work of that committee, in time to come, would be rated as more basic and more far reaching, even, than the work of the Atomic Energy Commission. Therefore, I am glad to see that the subcommittee, headed by the able Senator from Florida provided funds to complete the report of the Advisory Committee on Weather Control.

The other item relates to the restoration of $772,000 for the Weather Bureau. That item, I think, is equally well justified. I especially commend the committee for specifying that $400,000 of that amount shall be used for the high speed electronic computer for meteorological research. My slight acquaintance with that field indicates that the use of the electronic computer will make it possible for the Weather Bureau to have complex data fed into the machine and then to receive, in a relatively few minutes' time, results which, under other methods, could be obtained only after weeks or months of work. I think this is a highly desirable item and that highly desirable returns and great benefits will flow to the country and its various activities as a result of this agency's work.

Mr. HOLLAND. Mr. President, speaking for both myself and the committee, let me say that I certainly appreciate the kind comment of the Senator from South Dakota. It is a fact that the

computer is badly needed. This agency already has one; but the expanded activities of the Weather Bureau and the much greater number of observations and amount of data now available to the Weather Bureau, as compared with those previously available, make it necessary for the Weather Bureau to have access to another computer. By using the additional computer, the Weather Bureau will be able to reflect into helpful reports which will be available promptly, from time to time, the conclusions to be drawn from such data and observations, whereas otherwise the delay in making the reports available would be so great as to render them of little value.

Mr. President, a distinguished citizen of Massachusetts wrote to the editor of the New York Times a letter regarding funds for the Weather Bureau. Since the matter is of some importance I ask unanimous consent that the letter be printed at this point in the RECORD as a part of my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 1, 1957]

FUNDS FOR WEATHER BUREAU—HOPE EXPRESSED THAT SENATE WILL RESTORE CUTS IN BUDGET

To the EDITOR OF THE NEW YORK TIMES:

Do we really want our weather service cut back so that we can be spared paying 2 cents more per capita in taxes? The Weather Bureal asked for 24 cents, the House voted 22 cents, and the Senate Subcommittee on the Department of Commerce Budget, Senator SPESSARD L. HOLLAND, chairman, will begin hearings on whether or not to sustain the House's cuts.

In 1956, 175 million calls were recorded by telephone companies in the 11 cities where the Weather Bureau's latest hourly weather observation and forecast is automatically available. At an average of perhaps 7 cents a call, the cost must have been about $12 million, and from this the Federal Government probably received $1,500,000 in taxes.

Two years ago it became evident to the public that the appropriations for the Weather Bureau were far below what they should be for the forecasting service, particularly regarding severe storms. Accordingly, Congress added materially to the amounts the Bureau had been allowed to request by the Department of Commerce and the Bureau of the Budget. These additions were still considerably short of what the Bureau could use effectively.

PROTECTIVE MEASURES

The reporting network is still inadequate, especially for upper air reports from the great blank areas of the western Atlantic and eastern Pacific Oceans. Research needs more support. Increased service for the safety of aviation, for warning against flash floods, and for agriculture are also sorely needed. Such further increases would be protective measures, the returns from which could be expected to improve the national economy far more than the cost, even to the point that increased receipts from taxes would more than cover the costs.

The Weather Bureau's budget, totaling $40,500,000 for fiscal year 1958, as presented to Congress, had already been cut back $958,500 in general weather services, research, and administration from what Congress had voted a year ago for the current fiscal year. Of the $2,952,000 voted for research, $607,300 had to be used for general salaries and administration when the Civil Service Commission last July ordered a substantial increase in salaries. To meet the higher salaries this coming year, another $351,200 was cut from the Bureau's regular program.

On the other hand, the budget calls for six special appropriations totaling $5,127,000. One is for $1,381,300 on account of the mandatory new requirement that each bureau must be charged for the retirement fund deposits for its own personnel. Another, almost equally mandatory, is for $1,097,900 to operate the 430 major units of new equipment obtained with special appropriations totaling $10 million for modernization during the last 2 years. An additional $1,200,000 is asked for a continuation of the modernization over the next 3 years; $2,500,000 was appropriated for such a year ago, and $7,500,000 the year before.

There are three new items: increased service to aviation, $1,022,000; increased tempo in forecasting research, with the aid of a larger, faster computing machine, $400,000; and related additional administrative expense, $25,800.

CUTS MADE

The House cut $300,000 from the mandatory retirement fund request, which is the same as adding another $300,000 to the budgeted $958,500 cut in general weather service, research and administration. The House knocked $97,900 off the requirement for the operation of new storm warning and other facilities, which amounts to discarding about 40 major units of brand-new safety equipment, worth about $1 million.

The request for new facilities was cut $600,000, thereby postponing end-of-runway equipment for many airports where such equipment is much needed and postponing the replacement of decrepit and leaky buildings at 2 of the 4 Pacific stations in bad shape.

The request for $400,000 for stepped-up research in day-to-day and longer range numerical forecasting on dynamic principles, a joint project of the Weather Bureau, Air Weather Service and Navy, was denied by the House. So also was $1,022,000 for the increased aviation weather service now required by high speed, flying jet planes, new international air routes from the Middle and Far West over the polar regions to Europe, and greater safety in flight by giving pilots continuous information about the weather.

It has been a few weeks since the House voted these cuts of about $2,500,000 on top of an already budgeted reduction of nearly $1 million, and it has been possible in that time to assess what the effects would really be if the Senate does not restore them and get the House to agree.

CHARLES F. BROOKS,
Professor of Meteorology and Director Blue Hill Meteorological Observatory, Harvard University.
MILTON, MASS., April 27, 1957.

Mr. HOLLAND. Mr. President, I have now concluded, unless there are other questions to be asked.

Mr. President, if there are no further questions to be asked, I now ask unanimous consent that the bill be read for amendment; that the committee amendments be first considered; and that they be considered en bloc and be agreed to en bloc—unless there is objection. Let me state that if there is objection, I am perfectly willing to have the committee amendments taken up and acted on separately.

The PRESIDING OFFICER (Mr. CLARK in the chair). Is there objection?

Without objection, the committee amendments will be considered en bloc.

The question is on agreeing en bloc to the amendments of the committee.

The amendments were agreed to en bloc, as follows:

Under the heading "Title I—Department of Commerce—Civil Aeronautics Administration", on page 3, line 21, after the word "exceed", to strike out "forty" and insert "forty-nine"; in line 22, after the word "exceeding", to strike out "$600,000" and insert "$750,000"; at the beginning of line 24, to strike out "ninety-two" and insert "one hundred"; and, on page 4, line 2, after the word "snowshoes", to strike out "$177,747,800" and insert "190,201,000."

On page 4, line 19, after the word "appropriation", to strike out "$116,561,860" and insert "$132,645,190."

On page 4, line 24, after the word "contracts", to strike out "$30,000,000" and insert "$25,000,000."

On page 6, line 1, after the word "exceed", to strike out "$192,000" and insert "$255,000."

Under the subhead "Business and Defense Services Administration", on page 7, line 11, to strike out "$3,515,000" and insert "$5,682,000."

Under the subhead "Office of Area Development", on page 7, line 14, after the word "Development", to strike out "$395,000" and insert "$200,000."

Under the subhead "Bureau of Foreign Commerce", on page 7, line 18, after the word "reports", to strike out "$2,261,500" and insert "$2,445,000."

Under the subhead "Maritime Activities", on page 8, line 14, after the word "expended", to insert a colon and "*Provided*, That transfers may be made to the appropriation for the current fiscal year for 'Salaries and expenses' for administrative and warehouse expenses (not to exceed $1,700,000) and for reserve fleet expenses (not to exceed $500,000), and any such transfers shall be without regard to the limitations under that appropriation on the amounts available for such expenses."

On page 9, line 1, after the word "Commission," to strike out "$100,000,000" and insert "$35,000,000, and in addition, $65,000,000 to be derived by transfer from the appropriation 'War Shipping Administration Liquidation, Treasury Department.'"

On page 12, line 4, after the numerals "1946," to insert a colon and "*Provided*, That the unexpended balance of such appropriation to the Secretary of the Treasury less the amount of $10,000,000 continued available and less the amount of $65,000,000 transferred to the appropriation 'Operating-differential subsidies,' by this act, is hereby rescinded, the amount of such unexpended balance to be carried to the Surplus Fund and covered into the Treasury immediately upon the approval of this act."

Under the subhead "Bureau of Public Roads," on page 16, at the beginning of line 20, to strike out "$25,000,000" and insert "$23,000,000"; and in line 22, after the word "and," to strike out "$8,750,000" and insert "$6,750,000."

On page 18, line 25, after "(5 U. S. C. 55a)," to insert "in an amount not exceeding $10,000"; and on page 19, line 2, after the word "of" to strike out "$50" and insert "$100."

Under the subhead "National Bureau of Standards," on page 19, at the beginning of line 11, to strike out "$8,908,500" and insert "$9,948,000."

Under the subhead "Weather Bureau," on page 20, line 12, after the word "law," to strike out "$37,480,100" and insert "$38,252,200."

Under the subhead "General Provisions—Department of Commerce," on page 21, after line 21, to insert:

"SEC. 104. The Secretary of Commerce hereafter is authorized, subject to the procedures prescribed in section 505 of the Classification Act of 1949, as amended, but without regard to the numerical limitations contained therein, to place one position in grade GS-18, 3 positions in grade GS-17, and

10 positions in grade GS-16, in the general schedule established by the Classification Act of 1949, as amended, and such positions shall not be in lieu of any positions in the Department previously allocated under section 505."

Under the heading "Title II—The Panama Canal—Canal Zone Government," on page 23, line 2, after the word "transfusions," to strike out "$15,648,600" and insert "$15,765,600."

On page 23, line 9, after the word "assets," to strike out "$1,000,000" and insert "$1,025,000."

Under the subhead "General Provision—The Panama Canal," on page 26, line 2, after the word "exceed", to strike out "$50" and insert "$100."

Under the heading "Title III—Independent Agencies," on page 26, after line 13, to insert:

"ADVISORY COMMITTEE ON WEATHER CONTROL

"Salaries and expenses: For necessary expenses of the Advisory Committee on Weather Control, established by the act of August 13, 1953 (67 Stat. 559), as amended, including services as authorized by section 15 of the act of August 2, 1946 (5 U. S. C. 55a), $250,000, to remain available until July 30, 1958."

Under the subhead "Civil Aeronautics Board", on page 27, line 9, after the word "diem", to strike out "$5,255,400" and insert "$5,725,000."

On page 27, line 15, after the numerals "1953", to strike out "$38,754,000" and insert "$37,228,000."

Under the subhead "Tariff Commission," on page 28, line 18, after "(5 U. S. C. 55a)", to strike out "$1,640,000" and insert "$1,700,000"; and in line 20, after the word "shall", to strike out "thereafter" and insert "hereafter."

Under the heading "Title IV—General Provisions", on page 29, line 12, after "Sec. 401" to strike out "(a)."

On page 29, after line 14, to strike out:

"(b) No part of any appropriation contained in this act shall be used for payment of any expert or consultant, or of any management engineering corporation, company, firm, or other organization, for the performance of any service relating to the management or organization of the Department of Commerce or any bureau, administration, office, corporation, or other agency thereof, the Canal Zone Government, the Panama Canal Company, or any independent board, corporation, or commission, unless the utilization and payment of experts or consultants, or of management engineering corporations, companies, firms, or other organizations, is specifically authorized by law for the performance of such service."

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. JOHNSON of Texas. Mr. President, I desire to express my deep appreciation to the very able and thorough senior Senator from Florida [Mr. HOLLAND] for the very fine job he has done on the Department of Commerce appropriation bill. As usual, he has been meticulous, careful, cautious, and constructive in the consideration of this measure. I think the fruitful results of his weeks of labor will be demonstrated by the unanimous vote the bill will receive; and I wish to express my deep appreciation to the chairman and to all the other members of the committee.

Mr. HOLLAND. Mr. President, I wish to express my appreciation to the distinguished majority leader.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall the bill pass?

The bill (H. R. 6700) was passed.

Mr. HOLLAND. Mr. President, I move that the Senate insist upon its amendments, request a conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. HOLLAND, Mr. ELLENDER, Mr. MAGNUSON, Mr. STENNIS, Mr. JOHNSON of Texas, Mr. PASTORE, Mr. HAYDEN, Mrs. SMITH of Maine, Mr. BRIDGES, Mr. KNOWLAND, Mr. THYE, and Mr. POTTER conferees on the part of the Senate.

Mr. JOHNSON of Texas. Mr. President, I express the hope that the distinguished chairman of the subcommittee and the other conferees on the part of the Senate and the conferees on the part of the House will be able to arrange a conference on the bill at the earliest possible date, so that the differences between the two Houses can promptly be resolved and the bill can be sent quickly to the White House.

The appropriation bills are coming to us a little later this year than usual. I am anxious to have action on them expedited. So I hope the distinguished chairman of the subcommittee will arrange with the conferees on the part of the House for a conference on the Department of Commerce appropriation bill as soon as possible.

Mr. HOLLAND. Mr. President, just as soon as I learn of the appointment of the conferees on the part of the House, I shall proceed without any delay at all to seek, insofar as I am able to do so, to bring the conference to an early conclusion.

Mr. JOHNSON of Texas. I greatly appreciate the excellent cooperation of the distinguished senior Senator from Florida.

THIRD SUPPLEMENTAL APPROPRIATION BILL, 1957

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 315, House bill 7221, making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes.

The motion was agreed to; and the Senate proceeded to consider the bill (H. R. 7221) making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes, which had been reported from the Committee on Appropriations, with amendments.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to point out that during the present very busy week, the Senate has passed the Treasury-Post Office appropriation bill, which by now should be on its way to the White House; the State, Justice, and Judiciary appropriation bill, the conference on which will be held during the early part of next week; and the appropriation bill for the Department of Commerce and related agencies.

At the present time the Senate is ready to proceed with consideration of the third supplemental appropriation bill. However, in connection with that bill there must be a little lag. Some of the minority members are not here, and they wish to be present when the bill is considered. Therefore, Mr. President, we expect to have the Senate convene on Monday at 11 a. m.

I express the hope that next week it will be possible for the Appropriations Committee to report the Department of the Interior appropriation bill and perhaps also the general Government matters appropriation bill, so that at least we shall be able to clear the good name of the Senate from criticisms by uninformed persons who know little of the procedures in this Chamber.

Mr. President, at this time I desire to discuss another matter.

The PRESIDING OFFICER. The Senator from Texas has the floor.

FLOODS AND TORNADOES IN TEXAS

Mr. JOHNSON of Texas. Mr. President, my State of Texas has been hard hit by a spring crop of floods and tornadoes.

Mr. President, I see in the Chamber at this time my delightful friend, the distinguished senior Senator from Maine [Mrs. SMITH]. Before she leaves the Chamber, I wish to put in a "plug" for Texas.

Texas is a large State in many respects, as all of us know. In this particular instance, Texas is large in an unusual respect; it is large enough to have a drought and floods and a series of tornadoes, all at the same time.

Mr. President, last week the west Texas town of Lampasas was devastated by a flash flood.

This week the town of Silverton, in the Texas Panhandle, found itself in the path of a tornado, which took a heavy toll in dead and injured and in property damage.

During the last 2 months there have been other disastrous floods, other death-dealing tornadoes.

Man has not yet devised a way to control tornadoes. But man has found a way largely to control floods and to conserve potential floodwaters for his own benefit. To the extent that this knowledge has been applied, Texas has profited greatly during this season of floods.

I am informed by the Corps of Engineers—in response to a request I made—that the full extent of recent flood damage in Texas cannot be fully determined until the waters recede and detailed surveys can be made. The engineers state that a tentative and very preliminary estimate of the damage is $59 million. Texas sources tell me that the estimate is only partial and is quite conservative.

In any case, it is known that the loss is indeed heavy.

But there is another figure that is more significant than the one showing the loss caused in Texas by the floods of this spring. That is the figure—or the series of figures—showing the damage that was prevented—prevented, Mr. President, by flood-control and water-conservation projects authorized by the Congress and carried out with funds appropriated by the Congress.

Twenty years ago, when I first came to Congress as a Member of the House of Representatives, one of my first acts was to fight—and fight successfully—for legislation authorizing the construction of a series of hydroelectric and flood-control dams on the lower Colorado River, in Texas. Those dams were built long since. They have proved one of the greatest assets of the people of the area in which they are located.

Mr. President, only yesterday I received a telegram from the Honorable J. C. Ash, mayor of the city of Bastrop, Tex. Bastrop is a town of approximately 4,000 population, situated on the Colorado River, in central Texas. It has in years gone by suffered periodically from damaging floods.

Mr. President, what happened this year, when the heavy rains came, after the dams had been built? The telegram from Mayor Ash tells the story. Here is its text:

> Series of Colorado River dams saved town of Bastrop during recent floods. We had about $1 million damage in 1935. Recent floods would have been much greater. Lower Colorado River Authority did an excellent job of controlling floodwater, therefore we had no damage.

Mr. President, I see on the floor my distinguished junior colleague from Texas [Mr. YARBOROUGH]. He was a member of the first board of the Lower Colorado River Authority. He contributed distinguished service to that great project, which has saved so many millions of dollars and so many lives.

Mr. President, the telegram I have read to the Senate is a report, from just one small town in Texas, on the benefits it has reaped in a single flood season from a flood-control project made possible by action of the Congress.

Mr. THYE. Mr. President, will the Senator from Texas yield to me?

Mr. JOHNSON of Texas. I yield.

Mr. THYE. Mr. President, what the distinguished majority leader has just referred to is positive evidence of the soundness of flood-control projects. Oftentimes Members of Congress are criticized for voting for appropriations for the construction of flood-control projects. Such criticisms are based on statements to the effect that such projects, which are public works, are, in a sense, pork-barrel operations. I have been accused because I voted for such projects. I am very happy that the distinguished Senator is bringing this matter to public attention, and pointing out that here are some Federal funds the use of which has resulted not only in saving untold millions of property, but in saving cities and the lives of people who live in the cities from the devastation of floods.

Mr. JOHNSON of Texas. I appreciate the observation of my delightful friend from Minnesota. His comments constitute a definite contribution to the statement I am making.

I read only last week in the north Texas newspapers that the Federal Government had invested $65 million in a flood-control project, and the Army Corps of Engineers, who are quite conservative engineers, as the Senator knows, estimated that that project saved $68 million in damage this year.

I agree with the Senator from Minnesota that there is considerable misunderstanding about flood-control, irrigation, and water-conservation projects. Sometimes I am inclined to believe that there is a certain amount of low-grade demagogery connected with assertions that projects designed to conserve floodwaters and to save people's lives are "pork barrel" projects. I think if some of the writers, who sit back in their castles in the East and criticize Members of the Congress who vote to construct dams in order to avert floods in rivers, save the lives of men, women, and children, and prevent homes from floating into the gulf, could see the true picture, they would be a little more restrained and a little more reluctant in making their assertions and indulging their criticisms.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from South Dakota.

Mr. CASE of South Dakota. As a member of the Committee on Public Works, and particularly as the ranking minority member of the Subcommittee on Flood Control, I wish to express agreement with the sentiments expressed by the distinguished majority leader and also the able and distinguished Senator from Minnesota.

In addition to expressing appreciation for their remarks with regard to flood-control and flood-preventive works, I should like to observe that the Committee on Interstate and Foreign Commerce has been conducting hearings on a bill which I introduced, S. 86, to authorize a flood-experimental program in cloud modification.

I wish the Senator from Texas could have taken time from his manifold duties to have listened to some of the testimony we heard last Monday, when eminent meteorologists and scientists expressed the belief that research would lead us to ways of modifying clouds with tornadic implications. We received testimony on projects of research into hail suppression and lightning suppression, and the belief was expressed by competent witnesses that continuation of research in that field would lead to projects for the control of threatening tornadoes.

Mr. JOHNSON of Texas. I appreciate the work of my friend from South Dakota. It was with great pride that I cleared, last year or the year before, the Senator's original bill. The only regret I have is that I did not have the foresight to be the author of the bill. But if the Senator from South Dakota will permit me to become associated with him in this endeavor, I assure him I will make whatever contribution I can.

Mr. CASE of South Dakota. I appreciate that statement because the Senator from Texas is in a position to be helpful in that regard, and he does have the vision and the courage that prompt him to go ahead with some of these research projects.

Mr. JOHNSON of Texas. Mr. President, there are people who live in areas which already have adequate dams or have no flood-control or irrigation or hydroelectric problems. They are not the people who must watch women and children swept away by floodwaters and who must watch death, destruction, and devastation.

I live on a small river in Texas which is a tributary of the Colorado River. It has been dammed. Now our people have flood control. They no longer suffer the loss of $500,000 a year in property damage and hundreds of lives over a few years. They are protected. But during the Easter holidays sadness was brought to the home of a family in what is known as the hill country, when a mother, her baby daughter, and another woman started to cross a river. A flash flood hit them, and the mother and child and their friend were swept away. As a consequence, the mother and baby died, and the lady who was with them had to wait for hours until she could be rescued. That happened on a branch of the Pedernales River.

I hope we shall be able at this session at least to undertake a study of what might be done to avert a situation like that.

Mr. President, it is simple, in the comfort and safety of metropolitan cities, to write smugly about "pork barrel" projects. It is not so easy to dismiss the problem with a few scornful phrases when one is on the firing line of the battle between man and the elements.

I doubt whether any other single form of appropriation of Federal funds is returned to the American people in such a direct and tangible form as the money we have spent for dams to control our rivers. The cost of these projects is an investment in the future of our country—and not the far distant future, either.

Mr. President, when we multiply such benefits by our numerous projects and our many cities and spread them out all over the Nation, the result is astounding.

In the Trinity River Basin in Texas alone, damage that would have totaled $64,554,000 according to authoritative estimates, was prevented by projects the Army engineers had completed.

In the Brazos River Basin, the comparable figure was $23,708,000.

When I consider those figures, I feel a deep personal sense of satisfaction, and a profound sense of gratitude to my colleagues in the House and Senate who have worked all through the years to bring about the enactment of legislation which has made such savings possible.

At the same time, Mr. President, I realize clearly that the job is not yet done, either in Texas or in the Nation.

On the Trinity, on the Brazos, on the San Antonio, on the Guadalupe, and on the Pendernales, there are projects which should be constructed. If they

had been built, they would have been prevented flood damage in this past spring totaling more than $31 million.

In these comparative figures are to be found urgent, compelling reasons for pressing ahead with necessary flood control and water conservation projects.

Mr. President, I ask unanimous consent that there may be printed in the RECORD at this point a telegram I received from Hon. J. V. Ash, mayor of the city of Bastrop.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

BASTROP, TEX., *May 15, 1957.*

Senator LYNDON B. JOHNSON,
Senate Office Building,
Washington, D. C.:

Series of Colorado River dams saved town of Bastrop during recent floods. We had about $1 million damage in 1935. Recent floods would have been much greater. LCRA did an excellent job of controlling floodwater; therefore, we had no damage.

J. V ASH,
Mayor, City of Bastrop.

Mr. JOHNSON of Texas. Mr. President, I should like to read into the RECORD a communication I received from Mr. Arthur C. Perry on May 16, 1957:

Corps of Engineers state they cannot fully evaluate extent of recent flood damage in Texas until the waters recede and they are able to go in and make detailed surveys. This they expect may not be earlier than several months from now.

However, a tentative and very preliminary estimate of the damage is $59 million.

This preliminary estimate covers each of the following river basins: Sabine, Brazos, Neches, Colorado, Nueces, Trinity, San Antonio, and includes the Lampasas flood and the damage in the Galveston district.

FLOOD DAMAGE IN TEXAS

The Corps of Engineers state that they cannot fully evaluate the extent of all the recent flood damage in Texas until the waters recede, but they have made a tentative and very preliminary estimate of the damage to the following river basins: Sabine, Brazos, Neches, Colorado, Nueces, Trinity, and San Antonio. The preliminary estimate covers those river basins, and includes the Lampasas flood and the damage in the Galveston district, and the preliminary estimate of damage is $59 million.

RED CROSS REPORTS ON DAMAGE

I have here the Red Cross report on damage and relief expended in Texas because of recent floods. The American Red Cross reports damage as the result of recent floods in Texas in 28 counties, affecting over 100 communities in the State.

Nine persons were killed. Seven are missing. Fifty-seven received major injuries.

Mr. President, I am talking about humans now, about people. One hundred and nine received minor injuries. Fifteen required hospitalization.

Seventy-five homes were totally destroyed. Four hundred and thirty homes received major damage. Two thousand and seventy-one homes received minor damage.

One hundred and forty-one farm buildings were completely destroyed. Two hundred and ten additional farm buildings received major damage, and 249 received minor damage.

Fifty-three other buildings were destroyed, 104 other buildings received major damage, and 265 other buildings received minor damage.

The Red Cross estimates that 2,194 families have suffered losses. Of this number the Red Cross anticipates, in round numbers, that it will be able to assist more than 1,500.

The Red Cross estimates that the total relief it alone will pour out will run into the hundreds of thousands of dollars.

FARMERS' HOME ADMINISTRATION REPORT

I have received from the Farmers' Home Administration a report of the rain and flood damage in Texas, by FHA areas and counties, which covers dozens of counties. I ask unanimous consent that the report be printed in the RECORD at this point as a part of my remarks.

The PRESIDING OFFICER (Mr. YARBOROUGH in the chair). Is there objection?

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FARMERS' HOME ADMINISTRATION REPORT ON RAIN AND FLOOD DAMAGE IN TEXAS, BY FHA AREAS AND COUNTIES

AREA 1

Bowie: No damage to buildings and no loss of livestock. Delayed planting. Pasture and crop damage estimated at $300,000.

Cass, Morris: No damage to buildings and no loss of livestock. Delayed planting of crops.

Harrison, Marion: No damage to buildings or loss of livestock. Delay in crop planting.

Red River: No damage to buildings or loss of livestock. Delayed planting of crops, replanting of some feed crops necessary.

Titus, Franklin, Camp: No loss of livestock nor damage to buildings. Delay in planting crops.

Upshur: No loss of livestock nor damage to buildings. Planting of crops delayed. Some replanting necessary.

AREA 2

Cherokee: Light damage to farm buildings. No loss of livestock. Fences need repairing along creeks and rivers. Fifty-percent damage to early truck crops and corn. Additional land preparation necessary.

Panola: Negligible damage to farm buildings. Small loss of livestock due to flood of Sabine River. Fifty percent of crops consisting of truck and corn to be replanted.

Rusk: No damage to buildings. No loss of livestock. Fifty percent of early crops require replanting. Other crop planting delayed.

Smith, Gregg: Damage to farm buildings scattered and mostly limited to roofs. Some livestock loss in flood. Crop replanting necessary to some extent.

Van Zandt: Slight damage to buildings, roads, and bridges. No loss of livestock. Damage to crops, consisting of sweetpotatoes and June corn high. Planting other crops delayed.

Wood, Rains: No damage to buildings or loss livestock. Reservoirs for irrigation water damaged. Small grain prematurely ripening. Truck crops practically complete loss, making replanting necessary. Planting other crops delayed.

AREA 3

Angelina, Tyler: Farm fences damaged but no loss of buildings or livestock. Almost complete loss of small grain and truck crops. Delayed planting, and additional land preparation necessary.

Jasper, Newton: Considerable damage to buildings and some loss of livestock. Corn, silage, and grain crops lost. Large area of these two counties covered by timber which was not affected.

Nacogdoches: Slight loss in livestock. Very little damage to buildings. Farm fences damaged in low areas. Corn and truck crops damaged 40 to 50 percent.

San Augustine, Sabine: No loss in buildings or livestock. Crop planting delayed. Replanting necessary for early feed and truck crops.

Shelby: No loss of livestock or damage to farm buildings. Early feed and truck crops 50 to 75 percent lost.

Trinity, Polk: No damage to buildings or loss of livestock. Crop planting delayed. Pastures damaged by backwater. Increased amount of land preparation before planting necessary.

AREA 4

Fort Bend: No damage to buildings or loss of livestock. Early crops that were planted will need to be replanted.

Jefferson, Orange: No damage to buildings or loss of livestock. Hay crops will have to be replanted. Cotton and truck crops damaged 50 percent. Rice planting delayed 15 to 30 days.

Liberty, Chambers, Hardin: Very little damage to buildings or loss of livestock. Cotton and rice planting delayed.

Harris, Galveston: Some damage to farm buildings and livestock. Fifty percent of growing crops need replanting. Other crop planting delayed.

Matagorda, Brazoria: No significant loss of livestock or damaged farm buildings. Crop planting delayed. Additional land preparation necessary.

Wharton: No loss of livestock or damage to buildings. Estimated late crops due to delayed planting. Practically all planted crops will require replanting.

AREA 5

Bee, Live Oak: No damage to farm buildings or loss of livestock. Small amount of damage to crops.

Dewitt, Goliad: No loss of livestock or damage to buildings. Eighty percent loss of crops in river bottoms. Some crops will have to be replanted.

Gonzales, Lavaca: No report received.

Jim Wells, Kleberg: No loss of livestock or damage to buildings. Small damage to crops.

Nueces, San Patricio, Aransas: No loss of livestock or damage to buildings. Crop damage insignificant.

Victoria, Calhoun, Jackson, Refugio: Victoria and Calhoun damage to crops tremendous. No loss to livestock or damage to buildings. Too late to replant corn and maize. May 10 deadline for planting cotton, practically all cotton that was up was destroyed. Unable to replant cotton unless May 10 deadline date extended.

Jackson, Refugio no damage to buildings or loss of livestock. Practically all planted crops will require replanting. Other crop planting delayed.

AREA 6

Austin, Colorado: Minor damage to buildings. Negligible loss of livestock. Seventy-five percent of planted crops damaged, replanting necessary.

Brazos, Grimes, Madison: Damage to farm buildings and livestock light. Considerable damage to crops already planted and delayed in planting of other crops.

Fayette, Bastro, Lee: No damage to livestock or buildings. Thirty to forty percent of all crops planted will have to be replanted.

Milam, Burleson: Loss of farm buildings and livestock negligible. Seventy-five percent of all cropland needs replanting.

Walker, Montgomery, San Jacinto: No damage to buildings or loss of livestock. Little damage to growing crops as few crops

were planted due to weather conditions before floods.

Washington, Waller: No damage to livestock or buildings. All cropland needs replanting.

AREA 7

Falls: No serious loss of livestock or damage to buildings. All crops in lowlands ruined. Most cropland needs to be replanted.

Freestone: Practically no damage to farm buildings and no loss of livestock. Light damage to crops. Planting delayed.

Houston, Leon: No serious damage to buildings or loss of livestock. Growing crops considerably damaged. Other crop planting delayed.

Limestone: Small loss of livestock. Two farm homes and outbuildings destroyed by tornado. Bottomlands flooded, planted crops lost. Other planting delayed.

McLennan: No significant damage to buildings or loss of livestock. Fences damaged in low areas. Terraces and fields damaged by floodwater. Twenty to 30 percent of all planted crops destroyed.

Robertson: No appreciable damage to livestock or farm buildings. Damage to truck crops 50 percent of more. Damage to corn crops 30 percent. Cotton planting delayed.

AREA 8

Anderson: Livestock loss reported by two large ranchers. No damage to buildings reported. Truck crops suffered 25 percent loss. Corn 50 percent. Other crop planting delayed.

Ellis: No damage to building or loss of livestock. Twenty-five percent of all planted crops will need to be replaced. Other planting delayed.

Henderson: Livestock losses light. No reports of damage to buildings. All crops will have to be replanted.

Hill: Damage to buildings negligible. Fences damaged along creeks and branches. Few livestock lost. Fields badly damaged by water erosion. Some replanting necessary for corn and other feed crops. Additional land preparation necessary before cotton is planted.

Johnson: No damage to farm buildings or loss of livestock. Customary planting of cotton delayed. Some damage to small grain crops and other feed crops. Some replanting necessary.

Navarro: No appreciable livestock losses. Very little building damage. Fifty percent of corn destroyed. Seventy-five percent of cotton yet to be planted or replanted.

AREA 9

Delta: No damage to farm buildings or loss of livestock. One-third vetch, oats, wheat, and alfalfa crops destroyed or badly damaged. Additional land preparation necessary before planting cotton.

Fannin: No damage to buildings or loss of livestock. Slight damage to small grain. Coton planting delayed.

Hopkins: No report received.

Hunt, Rockwall: No report received.

Kaufman: Very little damage to buildings and no loss of livestock reported. Small grain, vetch, alfalfa excessively damaged in low areas. Cutworms and other insect damage to grain crops and pasture threatening. Cotton and other crop plantings delayed.

Lamar: Two farm buildings completely destroyed by tornado, along with outbuildings. Other buildings on seven farms were destroyed. Eighty percent of the corn on blackland will not be planted due to delay beyond planting date. Cotton planting delayed at least 2 weeks. Some loss of livestock.

AREA 10

Collin: No report received.

Cooke and Montague: No damage to farm buildings or loss of livestock. Growing crops damaged because of too much water. Cotton and other crop planting delayed.

Dallas: Damage to farm buildings and loss of livestock insignificant. Small grain damaged approximately 50 percent. Cotton plantings seriously delayed. Permanent and temporary pastures in the dairy farming area seriously damaged by floodwaters. Hay crop damaged to some extent.

Denton: No damage to farm buildings or loss of livestock. Small-grain crops damaged to some extent. Cotton planting seriously delayed.

Grayson: No damage to buildings or loss of livestock reported. Twenty-five to thirty-five percent of all corn that has been planted will need to be replanted. Damage to small grain, mostly wheat, is serious. Chief damage to wheat and small grain caused by overflowing floodwaters.

Tarrant: Loss of livestock and damage to farm buildings insignificant. Very little damage to growing crops. Cotton and other crop planting delayed.

AREA 11

Baylor, Knox, Throckmorton: No damage to buildings or loss of livestock reported. No serious damage to crops.

Haskell, Stonewall: No damage to buildings or loss of livestock reported. No damage to crops.

Wichita, Archer, Clay: No loss to farm buildings or loss of livestock. Damage to crops in Archer and Wichita Counties, 10 to 20 percent; Clay County, 35 to 50 percent.

Wilbarger, Foard, Hardeman: No damage to buildings or loss of livestock. One farmer reported damage to wheat crop by hail.

Wise: No damage to farm buildings, but some loss of livestock. Small-grain crops and alfalfa on bottom land total loss.

Young, Jack, Stephens: No report received.

AREA 12

Brown: No damage to buildings. Small loss of livestock. No damage to field crops.

Comanche: No damage to buildings or loss of livestock. No damage to crops.

Eastland: No damage to buildings or loss of livestock. No damage to growing crops.

Erath, Hood: No loss of livestock or damage to buildings. No damage to crops.

Parker, Palo Pinto: Considerable damage to buildings and no loss of livestock. Serious damage to small-grain crops caused by floodwater. Additional plantings necessary.

AREA 13

Bell, Coryell: No damage to buildings or loss of livestock reported. Estimated to be 5 percent damage to small-grain crops. Light damage to corn. Serious delays in cotton planting.

Bosque, Somervell: No damage to buildings or loss of livestock. Damage to small-grain crops and early planted maize confined to small areas of the Bosque River bottoms.

Hamilton: No damage to buildings or loss of livestock reported. Damage to cropland near small streams. Crop replanting required and other crops seriously delayed.

Lampasas, Burnet, Mills: Burnet County no appreciable damage to farm buildings or loss of livestock. Approximately $50,000 damage to growing crops. Frequent replantings necessary. Cotton planting seriously delayed. Estimated 300 miles of terraces need rebuilding at total cost of $15,000 to $20,000 and 500 miles of fencing needs rebuilding at total cost of $30,000. Lampasas and Mills no appreciable damage to buildings or loss of livestock or crops reported.

Travis, Hays, Williamson: Williamson County livestock losses high. Some 500 sheep, 150 head of beef cattle, 100 dairy cattle, and 50 hogs reported missing. Damage to field terraces terrific. Some 3,200 miles of terraces damaged or destroyed. Considerable damage to farm buildings and farm machinery in the high-water flood area. Crops seriously damaged, replanting necessary. Damage to farm ponds high, 30 ponds broken and about 100 damaged. Fences badly damaged. Loss of topsoil impossible to estimate. Travis-Hays Counties no appreciable loss of livestock or damage to buildings reported. No significant loss except farm fencing in low areas. Crops seriously damaged, replantings necessary.

AREA 14

Atascosa, McMullen: No damage to buildings or loss of livestock reported. Approximately 75 percent of the farmers will have to replant all cropland. Additional land preparation will be required.

Bexar, Medina: No damage to buildings or loss of livestock reported. Overall crop damage does not exceed 20 percent. Loss chiefly caused by need for replanting.

Frio, La Salle: No damage to buildings or loss of livestock reported. Seventy-five percent of all cotton, melons, blackeyed peas will have to be replanted. Corn 100 percent loss in most places. Too late to replant. Forty percent of peanut acreage will need to be replanted.

Dimmit, Uvalde, Zavala: No significant loss or damage to livestock, crops or farm buildings.

Guadalupe, Caldwell, Comal: No significant damage to buildings or loss of livestock. Damage to crops chiefly consist of need for replanting.

Wilson, Karnes: Wilson County no loss of livestock or damage to buildings reported. Growing crops damaged 10 to 15 percent. Karnes County no significant damage to buildings or loss of livestock reported. Extent of damage to growing crops 15 to 20 percent.

AREA 15

Brooks, Duval, Jim Hogg: No damage to farm buildings or loss of livestock reported. No damage to crops.

Cameron: No damage to crops, farm buildings or loss of livestock reported.

Hidalgo: No damage to farm buildings. No loss of livestock reported. Very little damage to crops.

Starr, Webb, Zapata: Starr County no livestock or farm building damage or loss reported. Growing crops damaged, cantaloup loss approximately 50 percent, irrigated cotton 15 to 20 percent, dryland cotton 5 to 7 percent, grain 5 to 7 percent loss. Webb County no damage to farm buildings; however, some livestock loss was reported on one large ranch north of Laredo. No crops lost, however, slight damage was received on cantaloups, Zapata County no loss to livestock or damage to farm buildings reported. No loss or damage to growing crops.

Willacy, Kenedy: No damage to farm buildings or loss of livestock. No damage or loss to crops.

AREA 16

Gillespie, Mason Counties: Little or no damage to buildings or livestock. Damage to growing crops slight. Small amount of damage to terraces and fences in lowlands.

Llano, Blanco, Menard, and Kimble Counties: No damage or loss to crops, livestock, or buildings reported.

Kerr, Bandera, Kendall, Real: Loss or damage to livestock and buildings negligible. Slight damage to crops. In some instances hay crops may have to be replanted.

Val Verde, Edwards, Kinney, Maverick, Terrell: No damage or loss to crops, farm buildings, or livestock.

San Saba: No loss or damage to livestock, crops, or buildings.

AREA 17

Coleman, Runnels: No loss of livestock or damage to farm buildings. Practically no loss or damage to crops.

McCulloch: No loss or damage to crops, farm buildings, or livestock.

Concho: No report received.

Tom Green, Irion, Schleicher, Sterling: Damage or loss to crops, livestock, or buildings minor.

Crockett, Reagan, Sutton: No significant damage or loss to crops, farm buildings, or livestock.

AREA 18

Callahan: No damage to growing crops, farm buildings, or loss of livestock reported.

Fisher: No damage to farm buildings, crops, or loss of livestock reported.

Jones, Schackelford: No loss of livestock or damage to buildings reported. No significant loss or damage to crops. Some terracing systems will require repairs.

Nolan, Coke: No loss or damage to crops, livestock or buildings.

Taylor: No significant loss of livestock or damage to farm buildings. Small damage to terraces and farm ponds. Some grain sorghum crops had to be replanted.

AREA 19

Childress: No loss or damage to crops, livestock or farm buildings.

Cottle, King: No loss or damage to crops, livestock or farm buildings.

Dickens, Kent: No significant loss or damage to crops, livestock or farm buildings.

Floyd, Motley: No significant loss or damage to crops, livestock or farm buildings.

Hall: No damage to crops, livestock or farm buildings. Some land damaged from flood erosion along small branches and creeks.

AREA 20

Dallam, Hartley: No loss or damage to livestock or farm buildings. Wheat damaged some areas by hail.

Moore, Hutchinson, Sherman: No damage or loss to crops, livestock or farm buildings.

Ochiltree, Hansford, Lipscomb, Roberts: No loss or damage to livestock or farm buildings. Crops damaged by heavy winds soon after rain. Insect damage on wheat from green bug excessive.

Wheeler, Hemphill: No damage or loss to crops, livestock or buildings.

AREA 21

Collingsworth: No loss or damage to crops, livestock or farm buildings.

Deaf Smith: No loss or damage to crops, livestock or farm buildings.

Donley, Armstrong, Gary: Very little loss or damage to livestock or farm buildings. No damage to crops from excessive rains, however, irrigated wheat was damaged from recent freeze and snowstorm received in March. Heavy damage to land in southeast part of Donley County from floods.

Potter, Carson, Oldham, Randall: No loss or damage to crops, livestock, or farm buildings.

Parmer: No loss or damage to crops, livestock, or farm buildings.

AREA 22

Bailey: No report received.

Cochran: No loss or damage to crops, livestock, or farm buildings.

Hale, Castro: No loss or damage to crops, livestock, or farm buildings.

Lamb: 108 farm buildings damaged, 16 completely destroyed by tornado. Some livestock loss due to tornado, minor. No crops damaged.

Swisher, Briscoe: No loss or damage to crops, livestock, or farm buildings. A very small amount of hail damage reported recently.

AREA 23

Gaines: No loss or damage to crops, livestock, or farm buildings.

Hockley: No damage to crops or livestock reported. Cyclone damaged 25 farmhouses and outbuildings, 6 of which were FHA borrowers.

Lubbock, Crosby: Several farmhouses in the immediate Lubbock area damaged. No loss or damage to livestock reported. No damage to crops.

Lynn: No loss or damage to crops, livestock, or farm buildings.

Terry: No loss or damage to livestock or farm buildings. Slight loss to crops.

Yoakum: No loss or damage to crops, livestock, or buildings.

AREA 24

Dawson, Borden: No loss or damage to crops, livestock, or buildings.

Howard, Glasscock: No loss or damage to crops, livestock, or farm buildings.

Martin, Midland, Andrews, Ector: No loss or damage to crops, livestock, or farm buildings.

Mitchell: No loss or damage to crops, livestock, or farm buildings.

Scurry, Garza: No loss or damage to crops, livestock, or farm buildings.

AREA 25

El Paso, Culberson, Hudspeth: No loss or damage to crops, livestock, or farm buildings.

Pecos, Crane, Upton: One farm building reported damaged by high wind and hail. Very slight damage to crops and livestock.

Presidio, Brewster, Jeff Davis: No loss or damage to crops, livestock, or farm buildings.

Reeves, Loving, Ward, Winkler: No loss or damage to crops, livestock, or farm buildings.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to my distinguished friend, the acting minority leader, the Senator from Connecticut [Mr. BUSH].

Mr. BUSH. Mr. President, I came into the Chamber just after the Senator from Texas began his remarks, and I have only been able to pick up the thread of the Senator's remarks, which have interested me very much, indeed. I wish to commend him for bringing to the attention of the Senate this afternoon the importance of flood-prevention measures, because we very shortly will be considering an appropriation bill which will contain a rather large number of very important flood-protection items.

I wish to say, first, and I believe am sure I can speak for everyone in my State, that I should like to express my sympathy to the people of the stricken State of Texas, whose plight the Senator has spoken of so eloquently this afternoon.

Mr. JOHNSON of Texas. We thank the Senator. We are grateful for his consideration and for his help.

Mr. BUSH. Unless one has actually seen the devastation such floods can wreak, I doubt that one can fully appreciate how terrible are their ravages.

Mr. JOHNSON of Texas. I wish to say at this point, if I may, that the distinguished Senator from Connecticut has a very enlightened far-seeing, progressive son who has moved away from the section where he discovered America and has come down to live among us in Texas. In the event the Senator should decide to give up his political activities and could give us assurance that he would not wish to run for office in Texas, we would welcome him to join us, because we think we would profit from his citizenship.

Mr. BUSH. Mr. President, I appreciate that compliment very much, indeed. I can hardly think of a nicer one. I am grateful to my good friend for his opinion. I hope I shall never have to impose upon the good will of his State to that extent.

I will say that naturally I am very happy to have one of my sons in the great State, which I have recently visited, and for which I have tremendous admiration.

If the Senator will permit me a few words along the line of his own argument, I wish to endorse particularly what he has said about existing flood-protection works preventing damage which, measured in money alone, in material wealth, represents many times their cost.

Time after time we have seen such catastrophes in the United States. In 1955 we saw such a tragedy—really for the first time in a terrible way in New England. We saw it in Massachusetts, Connecticut, New York, Pennsylvania, and New Jersey, in the terrible floods of 1955. The year before, in connection with the hurricanes in 1954, we saw similar evidences.

I can say specifically, in support of what the Senator from Texas has mentioned about flood-control dams, that in the case of the Naugatuck River Valley alone, had we installed the Thomaston Dam, authorized back in 1947, but money for which was never appropriated, there would have been some $90 million of damage in the lower Naugatuck River Valley, according to the Army engineers, whom the Senator correctly characterizes as conservative, able, intelligent, and farsighted. There would have been saved some $90 million, not to mention the hundreds of lives lost, and the property dislocated and the suffering and sickness and separations of families brought about, if we had appropriated back in 1947 or 1948, at the time of the authorization, approximately $8 million.

Appropriations for that project have begun, as the result of the flood, after the damages I have spoken of, but instead of a cost of $8 million, approximately, the cost will be $17 million, so we lost both ways by postponing the construction of the project.

I wish to say one more word, if the Senator will permit, because he has raised a subject very pertinent and timely to his State and to other States. We shall have coming before the Senate very shortly a flood-insurance appropriation. The request is for a very modest amount of money. The budget request was for $50 million, but the House cut out the item entirely. The Senate Committee on Appropriations restored the item in the amount of $14 million.

I am sure the Senator from Texas was favorable to that action. My point is that I hope he will join with me and others who feel as we do about floods, and who have seen something of them, in an endeavor to keep that item in the bill as it comes from the Committee on Appropriations, and in trying to persuade the House to yield, so that we can get this program underway.

The Senator can correct me if I am wrong, but I think the Senate passed the authorization bill for the flood-insurance program by an overwhelming majority. There were only a handful of votes against it.

The distinguished former Senator from New York, Mr. Lehman, brought that

bill to the floor after weeks and months had been spent preparing it. The Senate took a very broad and constructive view of it, and the House adopted it. Why the House knocked the item from the appropriation bill I do not understand.

This is an experimental program, but the march of events has proven that if one does not have protection, at least one has to have some insurance against devastation. Since private industry cannot or will not undertake this program alone, the time has come when the Federal Government, in cooperation with private industry, in accordance with the terms of this bill, should do something to see whether a flood-insurance program can be put on a paying basis. The proposal allows 5 years to find that out.

I am very grateful to the Senator for his having brought this whole issue before the Senate this afternoon. In closing, I wish to again express my very deep sympathy for the people of his State who have suffered such terrible devastation in the past months. We have all watched it from a distance with very deeply sympathetic hearts.

Mr. JOHNSON of Texas. Mr. President, I am touched by the generous sentiments expressed by my friend, the Senator from Connecticut. I welcome his cooperation and his assistance. He is always very helpful to those who have endeavored to have this body pass adequate flood-control measures.

Mr. President, in the next few days we shall have before the Senate a housing bill for consideration. Last year we had for consideration by the Senate a bill proposing improvements in our social-security system. Before the present session is over we shall have for consideration before the Senate a minimum-wage bill. I have no doubt that there will be some type of labor legislation brought before the Senate.

Mr. President, all of those measures will be considered on their merits, as well as the supplemental appropriation bill which contains the flood-control insurance provision. It is the pending business. We will not take it up today, but we will take it up at 11 o'clock on Monday.

Mr. President, when we take up a housing bill to pledge the resources of the Nation to the extent of $4 billion or $5 billion, those who live in metropolitan areas do not call it a pork barrel measure. They say that it is in the national interest.

When we take up a minimum wage bill, to place a floor under wages to help the little man, and keep him from being exploited, that is called social progress.

When we come forward with a social security bill to make it possible for a widow to draw her benefits a little earlier, or for a woman to retire when her husband retires, that is called a great social advancement. But when the Senator from New Mexico [Mr. CHAVEZ], the great chairman of the Public Works Committee, comes forward with a bill to provide for the construction of dams on our rivers so as to keep men, women, and children from drowning, and keep homes from floating into the gulf, what do we see? We see men who sit behind typewriters—unaware, I believe, of all the facts—branding it as a pork barrel measure.

If they could have stood on the banks of the Pedernales or the Colorado, or if they could have flown over the Brazos, as I did during the Easter season; if they could have read the story of death, havoc, and destruction that came to the helpless when we had 8 inches of rain in 2 hours; those who wrote the stories branding public works projects as pork barrel items would have blushed with shame.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the distinguished chairman of the Public Works Committee, a leader in this field.

Mr. CHAVEZ. So far as I am concerned, as a Senator from New Mexico, there is no distinction between the needs of Texas and the needs of Connecticut. No one has done better work in the Public Works Committee than did the able Senator from Connecticut, when he was a member of that committee. He worked for the people of Connecticut and of New England.

There is one difficulty in New England and in Pennsylvania and New York. The people of that region had to learn the hard way. They had to go through the experience of 168 people dying in a flood. As far back as 1936 authority existed for building flood control projects in New England. However, the main obstacle was a local situation. I can readily understand that there are local problems in Connecticut.

However, I assure the Senator from Connecticut and the Senator from Texas that whether it be in Texas or in Connecticut, I believe in flood control. The fact that a flood control project is located in Connecticut is only incidental. We believe in flood control and protection for Texas, for Connecticut, for Pennsylvania, and for every other State in the Union. Our committee is trying to do something for the local folks at home.

Mr. JOHNSON of Texas. I commended the Senator last year when he and his colleague from Oklahoma brought to the floor what I considered to be the best insurance policy this country ever bought.

I refer to a bill which would have authorized approximately $1½ billion worth of flood control projects, irrigation projects, and hydroelectric projects. The bill passed this body overwhelmingly. It passed the House overwhelmingly. But what happened? Over the land we saw articles about pork barrel, pork barrel, pork barrel. Somehow or other that philosophy drifted into the highest councils of the Government, and the almost unanimous action by both Houses of Congress was vitiated. The bill was vetoed. Now disaster is upon us. General Gruenther is sending his Red Cross dollars and staffs into various areas. The Congress is appropriating money for disaster relief. I hope it will be a lesson to us. I hope the House will act, in days to come, on the bill which the Senate has already acted upon. I hope we have learned a lesson from what happened last year.

Mr. CHAVEZ. The Senate is 2 months ahead of schedule.

Mr. JOHNSON of Texas. The Senator from New Mexico knows that the White House says that the Senate is lagging. The Senator read what Governor Adams said.

Mr. CHAVEZ. We do not want insurance for Connecticut. We want protection for Connecticut. It is all right to talk about insurance, but I would rather save a life. I do not want some insurance companies in Connecticut paying for the losses. I would rather prevent the losses.

Mr. BUSH. I agree with the Senator.

Mr. JOHNSON of Texas. Does the Senator know of any better insurance the Federal Government can get than by investing its money in dams on our rivers to conserve our water resources? Does the Senator know of any better insurance than that?

Mr. CHAVEZ. The best insurance is a dam.

Mr. JOHNSON of Texas. I thank the Senator. I agree with him.

Mr. CHAVEZ. If some poor fellow in Connecticut loses his property, or a family in Connecticut loses its property, I am in favor of insurance; but I prefer to enact national legislation so that there will be no such loss of property.

Mr. BUSH. I agree with the Senator. Mr. President, will the Senator from Texas yield in order that I may make a brief observation?

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that I be permitted to yield to the Senator from Connecticut so that he may reply to the statement of the Senator from New Mexico, without my losing the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAVEZ. I think I know this problem.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. CHAVEZ. Let me say this to the Senator from Connecticut. Please believe me. I am in favor of protecting Connecticut property and lives in Connecticut. Since 1936 there have been many authorizations for such projects in New England. However, because of local difficulty, which the Senator knows as well as I do, advantage was not taken of such authorizations.

I do not like the idea of insurance. If it is necessary, we should have it, whether it be life insurance or other insurance.

However, I would prefer to keep the family in Connecticut from losing its property by building a dam on the Naugatuck.

Mr. JOHNSON of Texas. Mr. President, I must leave the Chamber. First I wish to yield to my friend from Connecticut.

Mr. BUSH. Mr. President, I shall be very brief. I wish to acknowledge very briefly the generous sentiments expressed by the distinguished Senator from New Mexico, and to say once more, as I have said before, that his comprehension of this problem since I have been in the Senate has been better than that of anyone else I know of.

Mr. CHAVEZ. I have tried to approach the problem from a nationwide viewpoint, instead of a sectional viewpoint.

Mr. BUSH. The Senator has taken the broad view of the problem. I agree with the Senator.

Mr. JOHNSON of Texas. Mr. President, while we are in agreement——

Mr. BUSH. I wish to make just one point. I do not desire to detain the Senator from Texas.

I agree with what the Senator from New Mexico says about flood insurance. It is of secondary importance compared to protection. Protection is what we want. If we have protection, we do not need insurance; but until we get protection, we ought to have a flood-insurance program.

Mr. JOHNSON of Texas. Can the chairman of the Public Works Committee obtain any kind of assurance from the acting minority leader that he will join with us in trying to keep the flood-control bill we have already passed, and to prevent it from being subjected to a pocket veto, which was the fate met by the bill last year? The acting minority leader is a very influential member of his party. He is a very able and respected modern Republican. Last year we worked long and late to secure the passage of what we considered to be a very comprehensive, far-reaching bill. The Senator will remember the hours of labor which went into the preparation of that bill.

We did not have a veto message on it. We did not have it returned so that we could override the veto. We had what is called a pocket veto. It is the sort of action that amounts to putting something in one's pocket, so nothing further can be done about it.

Therefore, I express the hope that the Senator from New Mexico, after the bill is passed by the House and goes to the White House—and I pray that when it goes to the White House it will not suffer another pocket veto—will use his good offices and enlist the aid of the Senator from Connecticut, a very influential Member on the other side of the aisle, so that we will not have another pocket veto, and so that we will not have to override a veto.

Mr. CHAVEZ. Of course I am very fond of the Senator from Connecticut. Aside from his being a Republican, of course, I like him very much.

Mr. JOHNSON of Texas. If we must have Republicans——

Mr. CHAVEZ. I would rather have him than many other Republicans.

Mr. JOHNSON of Texas. I agree with the Senator.

Mr. CHAVEZ. But I hope that the Senator from Texas will not pass judgment on the President of the United States.

Mr. JOHNSON of Texas. I am not passing judgment on the President of the United States. I am asking that we not suffer the same fate we suffered last year, by a pocket veto.

Mr. CHAVEZ. That is the President's business, after all.

Mr. JOHNSON of Texas. But it is ours also. It does not do any good for us to pass bills if they are not signed.

Mr. CHAVEZ. That is correct. However, although I feel, as the Senator from Texas does, that the bill should be signed, nevertheless, I would not want the President of the United States to pass judgment on me because I voted a certain way, and therefore I do not want to pass judgment on the President for his action.

Mr. JOHNSON of Texas. The President has passed judgment, though.

Mr. CHAVEZ. I would not pass judgment on the President of the United States, merely because in his responsibility he vetoed a bill. That is still his business. I am willing to take the responsibility, under the oath I took as a Member of the Senate, to do my duty. I want to give the President of the United States the same responsibility.

Mr. JOHNSON of Texas. That is correct. However, if the President vetoes a bill, we have a chance to vote on overriding the veto. Last year the bill was vetoed by what is called a pocket veto. I now yield to the Senator from Oregon.

Mr. NEUBERGER. Mr. President, I commend the distinguished Senator from Texas for taking his very generous attitude toward flood control throughout the country, not only for his State of Texas. He favors flood control not only in his own State, but elsewhere in the United States as well.

It is my understanding that within a few weeks, under the leadership of the Senator from Texas, there will reach the floor of the Senate a bill to provide 3,800,000 acre-feet of storage for flood control in the great Hells Canyon reach of the Snake River in the Pacific Northwest. It is my hope that our modern Republican friends, who favor effective flood control in New England, as they most certainly and rightfully should do, will join the Senator from Texas and other Senators in advocating effective flood control in the great Pacific Northwest.

Again I say that we in the Pacific Northwest particularly appreciate the fact that the Senator from Texas not only favors flood control in Texas but favors it everywhere else in the country.

Mr. JOHNSON of Texas. I will try to save enough money by eliminating nonessential items from appropriation bills so that we will have some money to spend on flood control.

Mr. BUSH. Mr. President, I should like to say to the majority leader that I would not want my remarks this afternoon to be interpreted as advocating projects which are naked public power projects. If the Senator from Texas will indulge me further, we have been talking about flood control, but I would not want anyone to interpret what I have said as indicating my support for the Hells Canyon Dam or any other public power project that is a naked public power project, which private industry is ready, willing, and able to undertake.

Mr. JOHNSON of Texas. I have no intention of making any interpretation of the Senator's statement. He can make his own interpretation. We always welcome him into the fold whenever he wishes to join us. Even when he is not willing to join us, we express the hope that he will retain in the minority his present position.

ACCELERATED TAX AMORTIZATION CERTIFICATES

Mr. DWORSHAK. Mr. President, I am in sympathy with the objectives of the bill introduced by my esteemed colleague the senior Senator from Virginia [Mr. BYRD] to place greater limitations on the use of rapid tax amortization certificates. However, I find there is a great misunderstanding concerning the character of the certificates.

Since the issue has been injected into the Hells Canyon controversy, there has developed an erroneous public impression that the amortization certificates were issued to Idaho Power Co. alone. This, as we all know, is far from the truth, as 913 other private utilities have received similar certificates.

I ask unanimous consent to insert in the body of the RECORD an editorial entitled "What's the Whole Story?" published in the Idaho Daily Statesman, of Boise, Idaho, bearing on this subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S THE WHOLE STORY

Now that the outburst over the Idaho Power Co.'s accelerated depreciation permit has worn itself out for the moment, it is in order to take an impartial look at this particular situation.

Senator DWORSHAK told the Associated Press that "certificates of necessity for accelerated tax amortization under a policy initiated in 1950 showed that on December 31, 1956, a total of $37,949,000,000 had been applied for, all of which, except about $1 billion was granted. The amount of certification totaled $22,005,115,000 involving 21,655 cases. Included in this were 29 certificates for Idaho, 95 for Oregon, and 222 for Washington. The provisions of the Internal Revenue Act authorized by Congress provide for the issuance of certificates of the character under discussion here and if those certificates were issued in accordance with those provisions and in conformity with the regulations of ODM, I can see no basis for discrimination against an Idaho applicant."

For Idaho, 29 certificates for accelerated depreciation.

For Oregon, 95 certificates for accelerated depreciation.

For Washington, 222 certificates for accelerated depreciation.

All this under a law passed by Congress in 1950.

The Statesman has requested the Associated Press to provide the following information:

1. The Idaho corporations granted certificates and the amounts involved.

2. The Oregon corporations granted certificates and the amounts involved.

3. The Washington corporations granted certificates and the amounts involved.

Also, we have asked the history of the accelerated depreciation legislation and the Senate vote which enacted it.

The information should be interesting to all concerned.

The purpose of accelerated depreciation was to encourage business expansion thereby increasing corporation tax income to the Federal Government as quickly as possible. No taxes were to be written off, none were to be forgiven. The Government deferred depreciation to gain more corporate tax income. It was a profitable deal for the United

States Treasury. That is why Senator MORSE has never attempted to repeal or revise the law.

The Statesman is especially interested in learning whether Senators MORSE, MAGNUSON, JACKSON, and others opposed this accelerated depreciation policy in the first place. And we want to learn their opinion on the 95 permits in Oregon and the 222 in Washington.

Unless these Senators are dedicated to the ruination of Idaho, as seems to be the case, they are going to have a difficult time explaining how a tax program of Federal scope does not apply to Idaho as well as to Oregon and Washington. If there are to be amendments to Federal laws which exclude the State of Idaho, the proponents would be better identified if they would come forward and openly admit their stand. There is no use hiding behind the public power issue which is not Idaho's fight. The controversy here is water.

OMISSION OF JEFFERSON'S NAME FROM PRESIDENT'S LIST OF FOUR "GREATEST"

Mr. NEUBERGER. Mr. President, I doubt if anything has so characterized the origin of some of the backward policies of this administration as the fact that President Eisenhower, on May 15, submitted his list of four "top Americans of the past" and omitted Thomas Jefferson from that list.

If this were done because Jefferson founded the Democratic Party, then it is political partisanship at its worst.

If it were done because Jefferson still stands as the leading liberal of our history and the leading advocate of the freedom of the human spirit, then it is far more disturbing.

President Eisenhower named Abraham Lincoln, George Washington, Benjamin Franklin, and Robert E. Lee as the four "top Americans of the past."

With this list I have no quarrel, but what about the man who wrote our Declaration of Independence, who was a major factor in the Bill of Rights, who helped to found general education and religious liberty in this Nation—and who was the first man ever twice elected President of the United States in contested elections?

What of the man who defied ruthless political opposition to add the vast Louisiana Purchase to our Nation, and who sent Lewis and Clark westward to carry the American flag to the Pacific's distant shores?

The New York Times dispatch of May 16, which listed President Eisenhower's four "top Americans of the past," also stated:

> General Eisenhower feels closer to Lincoln than to any other President. He quotes him most often.

Fortunately, Mr. President, Abraham Lincoln apparently did not share General Eisenhower's lack of high regard for Thomas Jefferson. From all available information, Jefferson ranked as Lincoln's own "top American of the past." This is what Lincoln said about Thomas Jefferson, in a letter written at Springfield in 1859:

> All honor to Jefferson—to the man who, in the concrete pressure of a struggle for national independence by a single people, had the coolness, forecast, and capacity to introduce into a merely revolutionary document an abstract truth, applicable to all men and all times, and so to embalm it there that today and in all coming days, it shall be a rebuke and a stumbling block to the very harbingers of reappearing tyranny and oppression.

That, Mr. President, was what Abraham Lincoln thought of Thomas Jefferson.

I regret greatly that President Eisenhower did not include Thomas Jefferson among his "top Americans of the past."

Mr. CHAVEZ. Mr. President, will the Senator yield for a brief statement in that respect?

Mr. NEUBERGER. I am very happy to yield.

Mr. CHAVEZ. The press has had a great deal to say about what happened at Gettysburg when General Montgomery and the President discussed the Battle of Gettysburg.

I thought they were completely wrong about Lee, and even about Meade. According to their line of thinking, George Washington made a mistake in crossing the Delaware. Of course Andrew Jackson probably was at fault, too, militarily speaking, at New Orleans.

Does the Senator from Oregon think that they could have been right, or do Thomas Jefferson and Andrew Jackson deserve the credit they have been given in American history?

Mr. NEUBERGER subsequently said: Mr. President, earlier in the day, when the majority leader took the floor to read a list of the various bills which would be on the agenda for next week, the Senator from New Mexico had just asked me my opinion of the historic rank of certain illustrious Americans.

I should like to state for the RECORD that I am not a military expert, nor have I ever pretended to be. Therefore, I cannot equate the respective merits of General Meade, General Lee, and other eminent participants in the wars in which our country has been engaged, either in the United States or abroad.

However, I agree completely with the Senator from New Mexico that Thomas Jefferson and Andrew Jackson should be ranked at the apex or very near the apex, in listing outstanding Americans in our history.

I wish to repeat what I said briefly earlier, namely, that it is a disappointment to me, as an American citizen, that the President of the United States did not see fit to include Thomas Jefferson in his recent list of the four top Americans of the past. If any person belongs in the list of four select Americans—and I am not sure that such a list can be prepared—certainly it is Thomas Jefferson. If any one man contributed more than any other single person to the spirit and essence of American democracy, I believe it was Thomas Jefferson. I hope President Eisenhower will see fit to revise his list and to place Thomas Jefferson among his select four.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Texas will state it.

Mr. JOHNSON of Texas. Who has the floor?

The PRESIDING OFFICER. The Senator from Texas has the floor.

Mr. JOHNSON of Texas. If my friends, the Senator from Oregon and the Senator from New Mexico, will indulge me, I should like to make an announcement now, because I must make an appearance at 3 o'clock before a committee, following which I must keep two other appointments. I should like to make one announcement; then I will yield the floor. The Senator from Oregon can then obtain it in his own right. Will that be agreeable?

Mr. NEUBERGER. It will be quite agreeable.

ORDER FOR ADJOURNMENT UNTIL 11 A. M. MONDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its deliberations today it stand in adjournment until 11 o'clock a. m. on Monday next.

THE PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I announce that on Monday, following the morning hour, the Senate will proceed to the consideration of the supplemental appropriation bill. I express the hope that the Department of the Interior appropriation bill and the general Government matters appropriation bill will be reported next week and that the Senate may be able to consider them next week.

I announce also at this time the possibility of considering the following bills, in between the consideration of the appropriation bills. I do not announce definitely that they will be considered, but I want all Senators to be prepared in the event the bills are called up.

Calendar No. 111, S. 913, to provide permanent authority for the Postmaster General to establish postal stations at camps, posts, or stations of the Armed Forces, and at defense or other strategic installations and for other purposes.

Calendar No. 130, H. R. 4815, to provide permanent authority for the Postmaster General to establish postal stations at camps, post, or stations of the Armed Forces, and at defense or other strategic installations, and for other purposes.

Calendar No. 131, Senate Concurrent Resolution 20, authorizing an investigation by the Federal Trade Commission into the activities and practices of companies engaged in the production, distribution, or sale of newsprint in interstate commerce.

Calendar No. 192, S. 495, to authorize the acquisition of the remaining property in square 725 in the District of Columbia and the construction thereon of additional facilities for the United States Senate.

Calendar No. 193, S. 728, by Messrs. HAYDEN and BRIDGES, to authorize the acquisition of the remaining property in square 725 and 724 in the District of Columbia for the purpose of extension of the site of the additional office building for the United States Senate.

Calendar No. 249, S. 1164, to make the evaluation of recreational benefits resulting from the construction of any flood control, navigation, or reclamation project an integral part of project planning, and for other purposes.

Calendar No. 264, S. 1639, to provide for the suspension of the vesting of alien property and the liquidation of vested property, under the Trading With the Enemy Act.

Calendar No. 288, Senate Resolution 78, to make a study of critical raw materials and resources of the Soviet Union and certain Eastern Hemisphere countries and its effect upon the United States.

This resolution will not be called up until the senior Senator from Nevada [Mr. MALONE] is present. I gave him my assurance that it would be held until he returned.

Calendar No. 293, H. R. 2146, to amend the Small Reclamation Projects Act of 1956.

Calendar No. 298, Senate Concurrent Resolution 26, to print additional copies of the report entitled "The International Petroleum Cartel."

I have discussed the resolution with the Senator from Wyoming [Mr. O'MAHONEY], and it is planned to take up the measure and to have a colloquy concerning it in the early part of next week.

Calendar No. 301, S. 864, to provide for the transfer of certain lands to the State of Minnesota.

Calendar No. 302, S. 2051, to amend the Atomic Energy Act of 1954, as amended, and for other purposes.

Calendar No. 304, S. 534, to amend section 702 of the Merchant Marine Act, 1936, in order to authorize the construction, reconstruction, or remodeling of vessels under the provisions of such section in shipyards in continental United States.

Calendar No. 305, S. 886, to provide transportation on Canadian vessels between ports in southeastern Alaska and between Hyder, Alaska, and other points in southeastern Alaska or the continental United States whether directly or via a foreign port, or for any part of the transportation.

Calendar No. 306, S. 1446, to amend title 14, United States Code, so as to provide for retirement of certain former members of the Coast Guard Reserve.

Calendar No. 307, S. 1806, to amend the Sockeye Salmon Fishery Act of 1947.

Calendar No. 310, H. R. 5832, to increase the retired annuities of the civilian members of the teaching staffs of the United States Naval Academy and the United States Naval Postgraduate School.

Calendar No. 311, H. R. 2797, to amend title 10, United States Code, to authorize the Secretary of a military department to furnish stevedoring and terminal services and facilities to commercial steamship companies, and for other purposes.

Calendar No. 313, H. R. 2781, to amend the act entitled "An act to authorize the Secretary of the Navy to enlarge existing water supply facilities for the San Diego, Calif., area."

Calendar No. 314, H. R. 4285, to authorize the sale of degaussing equipment by the Department of the Navy to the owners or operators of privately owned merchant ships of United States registry.

Calendar No. 315, H. R. 7221, making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes. That bill is the unfinished business.

Calendar No. 320, S. 105, to exempt from taxation certain property of the National Association of Colored Women's Clubs, Inc., in the District of Columbia.

Calendar No. 322, S. 1576, to exempt the sale of materials for certain war memorials in the District of Columbia from the District of Columbia Sales Tax Act.

Calendar No. 323, S. 1586, to eliminate the financial limitations on real and personal estate holdings of the American Historical Association in the District of Columbia.

Calendar No. 324, H. R. 2018, to permit the purchase from the District of Columbia Reformatory at Lorton, Va., gun mountings and carriages for guns for use at historical sites and for museum display purposes.

Calendar No. 325, H. R. 6258, to amend the act entitled "An act to provide additional revenue for the District of Columbia," approved August 17, 1937, as amended.

Calendar No. 326, S. 923, to amend the act for the retirement of public school teachers in the District of Columbia.

Calendar No. 327, S. 1264, to exempt from taxation certain property of the National Trust for Historic Preservation in the United States in the District of Columbia.

Calendar No. 331, S. 60, to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado. This is a very important bill.

Mr. CHAVEZ. May I interrupt the Senator? Is that the Fryingpan project?

Mr. JOHNSON of Texas. That is the Fryingpan project.

Calendar No. 332, S. 1269, to amend the act entitled "An act to create a Board for the Condemnation of Insanitary Buildings in the District of Columbia, and for other purposes," approved May 1, 1906, as amended.

Calendar No. 333, S. 1708, to amend the act entitled "An act relating to children born out of wedlock," approved January 11, 1951.

Calendar No. 334, S. 1842, to amend the act entitled "An act to provide for compulsory school attendance, for the taking of a school census in the District of Columbia, and for other purposes," approved February 4, 1925.

Calendar No. 335, S. 1906, authorizing the conferring of appropriate degrees by the District of Columbia Teachers College on those persons who have met the requirements for such degrees and for other purposes.

Calendar No. 336, H. R. 192, to provide that members of the Board of Education of the District of Columbia may be removed for cause.

Mr. President, may I ask the distinguished Senator from Oregon the order number of the bill to which he referred? Has it been reported to the Senate? I understand it had been reported yesterday.

Mr. NEUBERGER. It is my understanding that the distinguished Senator from Montana submitted the report yesterday, but I have not seen the bill on the calendar.

Mr. JOHNSON of Texas. It is Calendar No. 330, S. 555, to authorize the construction of the Hells Canyon Dam on the Snake River, between Idaho and Oregon, and for other purposes.

I have been requested by the minority leadership to hold that bill. I had previously given assurance to the Senate that I would schedule the bill as early as I could conveniently arrange to do so. I now announce that Calendar No. 330, S. 555, will be called up on motion as soon as I can work out arrangements with the proponents and try to accommodate the opponents, so as to have a satisfactory time in which to discuss the bill.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. MORSE. Will the Senator, for the RECORD, make the same reference to this bill as he did concerning the Fryingpan bill, namely, that it is a very important bill?

Mr. JOHNSON of Texas. The Senator from Texas has already made reference to this bill in the RECORD. He has made reference to it with his vote. He has authorized the senior Senator from Oregon to state on his behalf that he plans to call up the bill on motion and to support the bill, and he hopes the Senate will pass the bill.

I hope Senators will consult the RECORD, because I want all of them to be on notice that these bills may be called up at any time when the Senate is in session. Of course, appropriation bills will have the highest priority.

The recommendations of the President—some 148 in number—have a very high priority in all the 15 standing committees. I have asked the chairman and the clerk of each of the standing committees to give consideration to each of the President's 148 recommendations.

I trust that from day to day action will be taken on them. Some of it will be favorable, and some of it unfavorable; and action on some bills may be postponed. But judgments will be reached on the recommendations of the President and on the recommendations of the Members of the Senate, as well.

I wish to notify all Senators that the schedule from this time forward, until sine die adjournment, will be a heavy one. The Senate probably will be in session late in the evening and perhaps on Fridays and Saturdays. If there are bills on the calendar which require action, the Senate will be in session.

I make no pretense of being too efficient; but since there are some persons downtown who not only assume to themselves the prerogative of running the executive department but also want to advise the legislative branch of the Government as to what it should do, I intend to answer them, and I shall answer them with a voice they can hear and not misunderstand.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield to the Senator from Oregon.

Mr. MORSE. Does our very able majority leader think there might be some prospect of sessions which would justify some of us keeping ourselves in a condition so that the Senate could be in session all night, too?

Mr. JOHNSON of Texas. I never want to think of the unpleasant. I am a very optimistic person, as the Senator from Oregon knows.

I have not observed anything which I could possibly say would require all-night sessions. Generally speaking, I am opposed to sessions in the evening at all; and I am certainly opposed to them until after the dogwood has bloomed and the summer has reached us. When the time comes for the Congress to get ready to leave Washington, sometimes it becomes necessary to stay late.

But I am certain we all know that the Senator from Oregon does not need a notification to get in condition. The Senator from Oregon stays in condition. If there are to be any all-night sessions, the Senator from Texas may not be at his desk all evening, but he has no doubt that the Senator from Oregon will be here and will be well prepared and equipped to discharge his responsibilities.

Mr. President, the Senate has entered an order to convene on Monday morning at 11 o'clock. I shall yield the floor with the understanding that no further business will be transacted. I have assured Senators of the minority that they may make speeches and insertions in the RECORD, but I should like to have the assurance of Senators who speak that no business will be transacted, because the acting minority leader must be away and I must leave to testify before the Committee on Appropriations.

Mr. CHAVEZ. Mr. President, before the Senator from Texas leaves, may I ask him if he announced that Calendar No. 192, S. 495, and Calendar No. 193, S. 728, would be called up?

Mr. JOHNSON of Texas. I do not recall at the moment what those bills are.

Mr. CHAVEZ. Will they be called up on Monday?

The PRESIDING OFFICER. The Chair will state for the information of the Senator that both those bills were announced.

Mr. JOHNSON of Texas. They were both announced, but I did not state any date on which they would be taken up. We shall first take up a supplemental appropriation bill.

Mr. CHAVEZ. That will take priority.

Mr. JOHNSON of Texas. All appropriation bills will take priority at all times. I remind all Senators of this fact, because if they desire that other bills be taken up, they must understand that appropriation bills will take priority. I am hopeful that the very able and effective and distinguished occupant of the chair, the Senator from Alabama [Mr. SPARKMAN], who is the outstanding authority in the Congress in the housing field, will soon have before the Senate the housing bill, and perhaps also a small-business bill. The Senator from Alabama has worked long and hard in those fields, and we hope his committee will soon have those bills on the calendar.

I have asked the Judiciary Committee to attempt to report an immigration bill, and we expect it be on the calendar in a short time.

So, Mr. President, the days ahead will be busy ones for the Congress, and I want all Members of the Senate to be on notice.

The PRESIDING OFFICER. Let the Chair take advantage of this opportunity—in response to what the majority leader has said—to state that on yesterday the Banking and Currency Committee completed action on a housing bill, and it will be reported within the next few days.

Following that, it is our plan to take up a veterans' housing bill, as a separate piece of proposed legislation.

On June 3, if the Chair remembers correctly, our committee will begin hearings on the small-business bill.

So the Chair thinks the majority leader can rest assured that those three measures will be ready for the calendar soon.

Mr. JOHNSON of Texas. I thank the Senator from Alabama, the present occupant of the chair. I am aware that the Senator has been working on those bills throughout the session, and has held hearings, and has had many controversies to resolve, and that he has been busily engaged in marking up the bills. I had anticipated that we would schedule them during the month of March. However, as the Senator from Alabama knows, we have certain so-called experts on legislative procedure—who perhaps have served as much as one term in the House of Representatives—who seek to pressure us and tell us how to operate; and I want to be sure that we give them the kind of answer they deserve.

THE NATIONAL FORESTS

Mr. MORSE. Mr. President, I wish to insert in the RECORD, as a part of my remarks, an excellent speech by Mr. David Brower, executive director of the Sierra Club. The speech was delivered to the supervisors of the United States Forest Service, at a meeting in Portland, Oreg.; and I consider that the speech merits widespread dissemination. In addition, I wish to comment on it today.

Mr. Brower asked whether the foresters' term "multiple use" is a shibboleth. He stated that an eminent forester in the Northwest prefers to refer to the many uses of the national forests as coordinate uses. I do not care to argue the point, but I must confess that the term "coordinate use" more nearly fits my concept of what we are trying to achieve in our great national forest programs. In my judgment, we are bound to courses of action which protect the water and the soil, for these are the basic natural resources that provide the strength of America. We must coordinate the uses, be they for recreation, grazing, or logging, so that the soil retains its full fertility and its ability to promote the best production of water.

Mr. Brower makes the interesting observation that we can hold an area available for water production, as a fish and game habitat, for recreation and research, and the basic soil and water resource can be maintained. If we proceed to cut timber before we have the facts which establish the effect upon soil and water, we may destroy or damage the basic soil and water resource.

We have marched across this Nation with the ax and the plow, turning the forest and the prairie into farms and cities. We have caused our rivers to run brown with mud, and one has only to walk from this Chamber to the banks of the Potomac to witness this fact. In recent weeks in the great States of Texas and Colorado the citizens have been flooded with water while they could hardly breathe for the dust in the air from terrible soil-destroying duststorms.

Our national forests stand as jewels among the treasures of our heritage; but, as Mr. Brower pointed out, there is much to be done to insure their radiance. Even more important is the need to extend conservation practices across all of our land.

To my way of thinking, research is an important program that needs considerably more emphasis at the Federal, State, and private levels. Research produces carefully documented evidence, which, if properly applied, can guide our actions. I want to take this opportunity to urge that we gear our research programs to a level that provides us with the facts we need in order to assure proper management of our vital soil and water resources. We must assure these basic productivity agents as we harvest the crops that the soil and the water provide.

So, Mr. President, I now ask unanimous consent to have printed at this point in the RECORD, as a part of my remarks—because I find myself in such hearty approval with its major premises—the speech entitled "A Conservationist's Questions About National Forests," and I urge my colleagues to read the contribution to this subject that Mr. Brower has made.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A CONSERVATIONIST'S QUESTIONS ABOUT NATIONAL FORESTS

(Statement made before supervisors' meeting, United States Forest Service, Portland, Oreg., by David R. Brower, executive director, Sierra Club, April 5, 1957)

"Today, with a vast store of scientific knowledge and what we prefer to regard as a high level of intelligence, we look with tolerance on the superstitions and folklore of our ancestors. We appreciate the ingenuity often displayed in arriving at a wrong answer. We try to understand the mental inertia and the fear of the unfamiliar that caused backward peoples to resist the encroachments of scientific thinking.

"But are we equally appreciative of some of the ready-made answers that today take the place of rational thinking and scientific investigation? Do we realize that our actions have been guided for many years by pronouncements made by the medicine men of forestry? Are we fully conscious of the extent to which we accept without question the traditional and sometimes fallacious beliefs that have established and continue to establish our attitudes toward forest economics? Are not many of us still planting our seeds of thought in the dark of the

moon, and grinding up unicorns' horns to ward off the things we fear in the future?

"This is not to imply that there is no constructive thinking being done in the field of forest economics today. Both in public service and in private industry a healthy scientific attitude can be found, and many sincere attempts are being made to understand and straighten out tangled relations. But because studies in forest economics have been slow to develop, we have accepted doctrines and beliefs that have never been tested adequately. So firmly established is this body of bromide and folklore that it is almost heresy to question it, just as it was once heresy to question the movement of the sun around the earth or the displeasure of the gods that caused crops to fail and animals to die.

"* * * The dominance of the silviculturists in forestry has been a major factor retarding the development of a sound body of economic doctrine. The belief that silvicultural perfection is the ultimate goal of forestry, and the preemptive assumption that what is silviculturally good is economically sound, often threaten to relegate forest economics to a minor role or to complete extinction.

"* * * But our actions are still influenced by the traditional emphasis on silviculture. From habit rather than as the result of rational processes we are inclined to conceive the most desirable forest to be one with fully stocked stands of a preferred species, rather than one that will provide the maximum returns in the form of watershed protection, game refuges, community support, useful products, and direct financial return. We fight what often seems to be a losing battle to protect a favored but disappearing species against insects, disease, fire, and cutting. We fail to consider the fact that protection from fire often encourages the less desirable species, or that the forest of useful species is often actually the product of long periods of uncontrolled natural fires. Only after years of fighting blister rust and fire, with expenditures running into millions of dollars, do we finally begin to question the economic justification of these efforts. Perhaps we should be devoting more effort to making the most of the so-called inferior species that seem destined to replace some of our old favorites.

"The silvicultural bias leads us not only to an advocacy of cultural practices that may be uneconomic, but to a belief that it is wasteful to leave any land idle if forests would grow on it. Nature's opinion of a vacuum is nothing more than a mild dislike compared to an ardent forester's abhorrence of an idle acre. * * *

"Part of the doctrine that has guided the thinking of many forestry protagonists is the belief that there will be profitable markets for all the timber that can be produced. If we err in our attempt to produce the correct quantity of timber for the future an excess would probably be more desirable than a deficit as a matter of public policy. But public policy should be justified on the basis of possible emergency or public security rather than by unsupported assumptions of future demand. The statement that future markets will take all the timber that can be produced may be true. Or it may only be wishful thinking. It is not true simply because it has been stated by some of our high priests and repeated over and over again. Nor can all the reasons advanced in support of this doctrine be accepted without question. * * *

"The doctrine of unlimited demand is also supported by the belief in the indispensability of wood. It is true that wood is now necessary for railway ties, for newsprint, for bobbins and shuttles, and for crates. There is a preference for wood over other materials for many other uses. But the indispensability of wood has been challenged many times. New materials and new methods are constantly threatening markets for forest products. The idea of indispensability, much as we may like it, is another that is subject to question. * * *

"The idea of sustained yield has been glorified by those who condemn forest destruction. But failure to define sustained yield precisely has encouraged its loose usage by forest owners and operators. Without complete and clear definition, sustained yield is almost meaningless. The forester may mean a high level of intensive cultural management, but the owner can use the term to describe a liquidation operation if he is holding and protecting his cutover lands. The public is taught that sustained yield is necessary to preserve our forest economy, and is lulled into a sense of security when it is told that millions of acres in private ownership are on a sustained-yield basis." (Bromides and Folklore in Forest Economics, Ralph W. Marquis, forest economist, United States Forest Service, Washington, D. C.)

"As a group, foresters have done little to promote intelligent, productive use of the forest for recreation, or even to manifest much interest in it. It has been largely forced upon them by public demand. They have not been leaders but followers in respect to this resource. In this position, they are finding themselves faced with the necessity of solving problems for which they are not too well prepared with answers. Whether they will play a constructive part in future development and administration of this rapidly growing forest resource remains to be seen.

"The reluctance of foresters in the early days to encourage recreational use of forest lands is understandable. The influx of people increased the difficulty of protecting and utilizing timber, forage, and water. In the early days the only justification for recreational expenditures was either from the standpoint of fire protection or sanitation. These were negative approaches. Summer homes were originally permitted on public lands since it was thought the additional occupants would assist in fire suppression. Some foresters have been unsympathetic, either by temperament or education, because they dislike to deal with intangible values like recreation.

"Professionally, many foresters assign and accept only materialistic objectives and returns. The results of their professional activity that they can accept are those which can be measured in terms of board, cubic or linear feet, cords, pieces, or tons. Watershed protection became respectable only as it began to be expressed in second- or acre-feet of waterflow, height of flood crest, or plus or minus cubic yards, or acre-feet of sedimentation. There is much more to a forest than material goods. Even an undisturbed forest is not necessarily an unmanaged forest, for it may have an economic value as well as an esthetic attraction that no cutover land has.

"* * * Some foresters no doubt believe that before forest recreation can attain respectability commensurate with timber production, forage, and other uses, formulas must be devised with which to measure precisely the number or the worth of the happy hearts of children or the contented hours of adults eased of the tensions of modern existence, and thus made more productive or at least saved from deterioration. They believe that to bring forest recreation into its own, methods must be devised through which human enjoyment can be measured in standard units and assigned a cash value. However, less materialistic and more realistic foresters already appreciate that there are human values which transcend the dollar values of ordinary business.

"* * * The forestry profession has gone a long way from the days in which the forester thought of himself primarily, if not only, as a producer of cellulose. The term 'multiple use' is now an accepted description of the attitude of the forestry profession toward the forest. There is probably no one element of forest use which touches a greater number of people than the recreation element. I am not certain, but I am inclined to believe that if trustworthy statisics were available it would be found that, from a commercial standpoint, the forest in its service of recreation runs into figures that would compare favorably with the timber production and other commercial aspects of the forestry business. It is for this reason that my feeling is very strong that in training men for forestry work real emphasis should be put on the value of the forest from the recreation standpoint.

"Regardless of the soundness of the multiple-use principle in the sense of the unified administration of several or all uses of wildland by a given agency or single management, the optimum combination of uses on a single area or site is subject to constant change due largely to the constant change in economic and social conditions. Optimum use on a given area might require a single use or possibly the exclusion of several subordinate uses in favor of the dominant use or uses. There are, however, strong forces at work in the direction of making recreation a more dominant use on wildlands, and the trend of public thinking is definitely in that direction. Therefore, in the long-range planning of public wildlands in particular, recreation should be given the benefit of the doubt where there is a question as to which are the present and prospective dominant, codominate and subordinate uses.

"The forestry profession should reexamine its views and standards regarding the economic and social utility and significance of forests. Technology now serves, or promises to serve, with other forms or things many material needs hitherto served best or exclusively by the products of forests. But it offers no such promise for those recreational or spiritual needs of the American people hitherto and now served best or only by forests. As population and urbanization increase, and as forests decrease, these spiritual needs will become greater and more acute. It may well develop that the professional forester of the future will depend for his place in the sun upon his contributions in this field to an equal or even greater degree than upon the requirements for the time-honored and traditional materials products of the forests. * * *

"There is the belief that if we could have forest recreation, wildlife activities, and other similar forms of nature programs in the hands of professional foresters, we should be ahead in promoting the general purposes of forest conservation. In the few instances where we have technical foresters who have also specialized in some of these other uses of the forest, results indicate a much better balance in our recreation program. * * *

"Here is a challenge to the schools of forestry and conservation as well as to the foresters themselves. Recognizing the present trend in public use of the forests, adequate adjustments and expansion in the training program for forestry students must be made so that when graduated they will have a more comprehensive grasp of these newer trends of forest management in order to meet the demands placed upon them as forest administrators. It follows that adjustments will also have to be made in the examinations given to foresters in order to get qualified persons for positions in the broader field of management.

"It is only when the intangibles of forestry are added to the wholly material values that professional permanency and security become well established. The professional forester would be unwise were he to fail or refuse to recognize the part and place of

these intangibles in his professional field. The continuity and adequacy of a forest policy rest wholly on the attitude of mind of the American people and the thinking of those people is not influenced so much by fear of a shortage of inch boards or 2 by 4's as it is by the hope or desire to spend a happy vacation in a scene of unimpaired forest beauty. Up to a certain point, emphasis upon an impending deficiency of timber supply may be wholly justified but it is only partially effective. Emphasis, from here on, on the dual value of the forest as the scene and opportunity for wholesome forms of outdoor recreation, and on the formulation of plans of management and development which fully feature and provide for such dual use in optimum measure, is a more potent argument and one with tremendously popular appeal. If foresters are to furnish the talent for good land management, they should know something about all the multiple uses of that land, how each use affects the others and how they can be coordinated in a related program for the greatest good to the greatest number in the long run. The I. Q. rating of professional foresters will be determined by the way in which they respond to this situation." (Recreational Forest Management as a Part of the Forestry Profession, Ray E. Bassett, Chief, Section of Forest Recreation, U. S. Forest Service, Milwaukee, Wis.)

"The continuous maintenance of a forest cover may involve periods of anywhere from 40 to 200 years to complete the cycle from seedling to harvest. This means that the working plans made today may contemplate a future where the authors and original administrators may be dead and buried for a century or more before their plans come into fruition. This further means that the management of the public forests is not determined solely by the exigencies of the moment nor the needs of one decade. Public forest management, unlike that of individuals or corporations, is not limited to the benefit of an immediate generation, but is projected far into a future where people yet unborn may enjoy a full measure of the things we guard today. * * *

"On the part of Americans, since the beginnings of the Nation, there has been an inherent feeling of common ownership of the great waters, mountains, and forests of the country, and all that is in them. Psychological it is, perhaps, but the attitude is a persistent force, that the high and wide places, the sea, and the wild forested areas are nature's solitudes and belong to all the people. The fish, the game, the wildlife of the forests, and man's right to wander obscure paths into the wildernesses of the woods are common rights—not to be seriously abrogated, and then only in the public interest.

"The degree of emphasis to be given recreation in the management of public forest properties cannot be safely based on a dollars and cents comparison of recreation with other resources. In the first place, no satisfactory basis of evaluating recreational features has ever been worked out. One cannot place a cash value on a sermon or an immortal musical composition in cataloging man's achievements. Neither can we put a dollar value on a thrush's song or an autumn sunset. Even fishing and hunting, whose end results so many people erroneously appraise only in pounds of meat, cannot be appraised in terms of the inner satisfaction which animates a genuine sportsman.

"The amount of time and money which people will spend to enjoy the forests is, after all, only a partial and unsatisfactory yardstick, which does not reflect accurately the circumstances in life of an individual or of a human generation. Of one thing only we may be sure, and that is that, as time goes on, the recreational desires and the recreational needs of the American people will most definitely increase. Consequently, it will become more important but probably not too difficult to strike a satisfactory balance between recreation and the other values existing in the forests.

"* * * No one can forecast what changes will be forced by the population pressures of the future. We do know that human needs and human nature will be essentially the same when we have 200 million people in this country as they are right now.

"This means that forest recreation is not only here to stay, but will take on greater and greater intensity as time goes on. Out of this certain prospect comes two major conclusions:

"First. We must maintain our present national forests in public ownership and continue to handle all their combined multiple uses and values for the permanent benefits of all the people.

"Second. The Forest Service must evaluate the spiritual and physical recreation needs of the Nation, not simply on the basis of the present, but also with vision and purpose so that we may adequately meet future needs as fast as they develop.

"Foresters sometimes have to look ahead 200 years in charting a working plan for a forest stand. We also have the infinitely more difficult task of charting a form of management that will recognize and protect all of the recreation values which will be so sorely needed much earlier than 200 years.

"We cannot afford to make any serious mistakes. If we err at all it must be on the conservative side of overestimating recreational needs of the people. We dare not and we must not shortchange the future." (The Place of Recreation in the Multiple-Use Management of the National Forests, John W. Spencer, regional forester, U. S. Forest Service, Denver, Colo.)

I don't know how much of what I have said you are ready to agree with. Chief Forester McArdle recently wrote to a conservationist friend of mine that he did not expect that you people would agree with everything I have to say here. I don't even imagine that all foresters in the Forest Service agree with each other. Let me pause now to point out that every word I have read so far has been unmercifully plagiarized—from foresters, foresters with whose quoted remarks I myself agree. A professor of forestry helped me round up the quotations for this occasion, and they all come from the proceedings of the Society of American Foresters meeting in Minneapolis in 1947. All material quoted was from men who were in the Forest Service at the time.

This has been a trick, I'll grant you, and I apologize for it. But perhaps it will help to dramatize in your own minds what changes, if any, have come about in the past 9½ years. You will know far better than I. From here on I'll proceed under my own steam. Any similarity between what follows and what others have written is purely coincidental.

THE SIERRA CLUB'S CONSERVATIONIST ROLE

As a preface to the rest of my remarks, let me start with a subject I known firsthand, and then branch out into your subject, about which I shall try to propound questions rather than attempt to carry coals to Newcastle in a knapsack. At present I am chairman of the Natural Resources Council of America, an organization founded in 1946 to help 40 national conservation organizations keep each other informed about mutual needs and problems. Their total membership exceeds 2 million, and includes the Sierra Club, second oldest of the group and the oldest of them devoted to conservation of scenic resources. The Sierra Club was founded in 1892, now has more than 11,000 members, and I am its executive director.

For 16 years before the word "conservation" became popular, the Sierra Club was practicing it, just as John Muir had before the club was founded. Conservation has meant many things, and through the years members of the club have individually been interested in all of them, including the conservation of soil, water, forests, and materials in general—conservation in the sense of wise use, with minimum waste, of the resources the earth affords for man's economy. The club itself, however, has never been more than indirectly concerned with the economics of resource conservation. From the beginning its specialty has been the preservation of natural scenery, in national parks and monuments, in national forest recreation areas, in wilderness under whatever jurisdiction, in State and local parks, together with a deep interest in the wildlife that makes these places complete. Whether justifiably or not, those who work for conservation of natural scenery and wildlife have come to be known as conservationists, a term which excludes the people who have a role in managing a resource for profit, even though they may conserve it in doing so.

Thus the Sierra Club is a group of conservationists, active and potentially active, whose interest in the cause of conservation has received its impetus from direct knowledge of scenic America which the members have acquired in the club's program of outings and other outdoor activities. This, at least, was the principal stimulus of conservation interest in the early decades of the club. More recently there has been a pronounced rise in the number who support the club solely to further its public-service program, only rarely to enjoy its activities.

In all its program, the club has carefully avoided taking action that would benefit itself or its members any more than it would benefit the public as a whole. This does not mean that the club has not been misunderstood at times. For example, it has always been easy for people who have not known the whole story to assume that because the club advocates the preservation of wilderness and also conducts wilderness outings, the club therefore strives to protect wilderness for its own selfish purposes. While it is true that the club's wilderness outings would cease if there were no wilderness, so would all wilderness outings, whatever their sponsorship—and the club's contribution to wilderness travel in toto is very minute. Moreover, the club outings are nonprofit.

The club, in its conservationist role, has placed special emphasis on wilderness preservation in the last quarter century (which saw the dropping of the words "to render accessible" from the club's purposes because too many people thought this meant "accessible by road or tramway") because wilderness, after all, is the most precious of our scenic possessions. It is least likely to get support from the branch of conservation devoted to resource management. And it can never be replaced if the resource managers covet it successfully.

Which brings us, as conservationists, full circle—back to where we collectively need to keep our conservation interest broad enough to be aware enough of resource-management needs to preserve wilderness from management. For instance, wilderness will be safest from exploitation by lumbermen if the extensive tree-bearing areas that need not be wild are managed with maximum long-range efficiency. It behooves us, then, to know enough about the technique of forestry to know when it is not efficient—to be able to point out to the lumbermen who covet the wilderness rain forest of Olympic National Park that there are other ways, if they operate efficiently, to get the lumber Olympic's dedicated forests could produce but should not.

Now, what can a mere urban conservationist who has mastered no forestry and

managed no resources contribute to a broad-gage look at conservation in its whole context? He can think about the problems and he can seek out the ways in which utilization and preservation may both be accommodated, each in its own place. On the one hand, he is in a good position. His lack of familiarity with a resource subject may also mean a lack of bias and can insure a good perspective, so long as he keeps an open, inquiring mind and minds his logic. On the other hand, of course, the conservationist is in peril—all the peril that awaits the sciolist and his little knowledge that can be a dangerous thing.

Such is the layman's dilemma; and with this explanation of my position here I'll embark upon my own question period, hoping to learn some answers after I have yielded the floor. The questions derive from what I think is an absolute truth: If nature does something, there's a good reason for it, and it is ecologically right. A noted forester told a group of us last year, "Nature never does anything right." However, I'll stick by my assumption, realizing that one of the things nature did, alas, was to allow man to be arrogant—as overendowed with self-esteem, perhaps, as the dinosaurs were overendowed with self-armament. But on to the questions:

1. Is multiple use a shibboleth?

At our biennial wilderness conference which convened in San Francisco last month one conservationist stated that multiple use was a concept that lipservice was paid to, and no more. He serves on the advisory board of the California region and is also chairman of the Secretary of the Interior's Advisory Committee on Conservation. I think he meant what he said. Just 2 weeks ago in Portland, Regional Forester Stone said that he didn't like the term "multiple use," but preferred "coordinate use."

Does multiple use mean a multiplicity of uses on each acre of a forest? Of course not, but many people think so. Does it mean the whole galaxy of uses in each ranger district, or on each forest, or in each region, or in the system as a whole? Is it a system of zones, or of priorities? Is it clearly defined by law or in the Forest Service Manual? I have yet to hear a forester explain the difference between national forests and national parks without saying that national forests are for multiple use and national parks are for single use. Do you think this is true? If so, you must have a clear definition of multiple use in mind. I don't happen to think it is true at all.

2. Would you say that multiple use consists of timber production plus something else? I have heard this definition suggested more than once. I think everyone here would reject it, without giving it a second thought. But let's give it a second thought. First, how many hours of a forester's training are directly and indirectly devoted to timber—to the art of getting soil, water, and sunlight to market in the form of wood products? And how many hours to all other forest uses? We have the periodic, multimillion-dollar Timber Resource Review, but how well along are we in producing equivalent reviews for other forest uses? In the management plan for any forest, how many man-hours go into problems of producing board-feet compared to problems relating to all other uses? What, then, is the meaning of multiple use?

3. Is the admonition to provide the greatest good for the greatest number in the long run a noble objective, but not a route to it? I think we are badly in need of clear definition of greatest good now that the crowded world is upon us. And hasn't that phrase "in the long run" been omitted from quite a few publications lately? It's a serious omission, many conservationists feel, not only of words but also in thinking.

4. How important is that phrase "in the long run"? One of the most impressive papers given at our Wilderness Conference was by an ecologist who had just completed a study in all the Easts—Near, Middle, and Far. Some of his most dramatic photographs were of deserts which resulted from forestry practice that forgot the long run; instead, it was forestry for the short-term gain that sent the Cedars of Lebanon—most of them—out to the sea in ships. The greatest good for the greatest number at the time—and desert thenceforth. No, it wasn't a change in climate that created those deserts, the ecologist assured us. He showed slides taken nearby and in the same climatic zone, of handsome mixed forest abounding with wildlife, which still exist because they were protected from exploitation by accident—pitifully small islands of an Eden, too small to ward off enduring poverty. The Promised Land that Moses led his people into was a beautiful wilderness; but the cardinal rule of good stewardship, thinking of the long run, was forgotten. And now there's a desert, the barren stone skeleton of the greater Eden.

But to move from Biblical times to our own, I have also been impressed by the grave difficulty recently encountered in Germany with fourth-generation forest that had been managed so as to produce pure spruce. Do we begin to know enough about what happens to watershed protection and to timber production itself when we shift from the so-called climax forest that we find on a piece of land, and try to grow there instead, without rotation of the crop, a single species for several generations? I am confident that we don't know enough. As of last year the Forest Service did not yet have a single research project under way on that subject.

I asked Oregon State's Dean McCullogh about that last May, and he wrote: "The Forest Service is only 50 years old. We will have to wait 250 or 350 years to appraise the results of several generations of the same species on the same site."

Must we wait that long? I myself have an appointment to keep before the returns are in, and several subsequent generations will be in the same fix.

I don't think we need to wait that long, nor do I think that we may ethically do nothing because it is such a long wait. We can take a cue from the geneticist, who has devised very effective experiments with Drosophila, those fruitflies who go from generation to generation so fast that centuries, by our standards, can be telescoped into a single student's course. The botanical equivalent, from which valuable extrapolations could be made, would be the annuals—plants and grasses. Or take a cue from the medical researchers, and extrapolate from short-lived guinea-pig tree species. These methods won't provide the clearest of crystal balls for forestry, but they should help, and the results can be correlated with what history tells us and what paleobotanists have uncovered. Our own generation will not reap many of the benefits of such research, but will anyone here argue that we should therefore skip it? I think not.

5. What studies does the Forest Service contemplate of the changing trends in forest uses? And of the long-range compatibility of uses, each with the others? This is an especially leading question, and heads me back toward my own primary concern about how the Forest Service can revive the intensity of interest in wilderness preservation which was so evident in the work of Aldo Leopold and Robert Marshall and the chiefs and secretaries who backed them up.

6. What is happening to wilderness protection? After 7 years' study and 4 wilderness conferences in which hundreds of resource managers and conservationists participated, a bill was drafted to reflect their consensus as nearly as possible. In Washington, D. C., a year ago three of us submitted to the Forest and Park Services the first draft of that bill to establish a National Wilderness Preservation System. We asked for further advice and counsel. Within a few hours—and long before advice or counsel were received—copies of this draft were in the hands of the American Mining Congress, the stockmen, and the United States Chamber of Commerce. The chamber very quickly claimed, in its Natural Resources Notes, that this proposal was a threat to multiple use of the forests, and this same fear was subsequently expressed by the American Forestry Association and by various other chambers of commerce. All these groups favored wilderness, but they didn't want it frozen or, one could presume, otherwise preserved. In the California Chamber's committee discussion, one forester put it this way: Wilderness is fine in the rocky, untimbered country of national forests so long as there are enough roads to make it easily accessible. This was the forester who had said that nature never did anything right.

7. What about wilderness and multiple use? I submit that wilderness dedication is multiple use in perpetuity. It there any evidence to back this up?

First, let's try this definition of multiple use: In national forest management the term relates to management of the forest as a whole, and not of a particular acre. Some plots may be zoned for an exclusive use; on others, a paramount use is designated, with which a few others may be coordinated.

What are the various uses? I count 11, some already recognized by tradition, and some likely to be:

Timber: This was once the most important use of national forests.

Watershed (and soil) conservation: This is now the most important use of most national forest lands.

Mining.

Grazing.

Fish and game habitat protection: For recreation and for the fish and game per se.

Science: A control area for research, and a genetic reservoir of unmanaged species and strains of incalculable value to the future.

Education: A natural museum for public information about resource values.

Roadside recreation of all kinds, including some in which the natural beauty of the whole scenic setting is preserved.

Reservoirs and other water-development structures.

Conservation reserve of commodity resources for future generations if they must choose to use them.

Wilderness recreation.

All these uses could be accommodated on a big national forest. But how many of these are fully compatible within a particular area? There's room for a wide spread of opinion here. Conceivably some people would think timber production was fully compatible with all the other uses. I don't think it fully compatible with any, but I would say it was partly compatible with grazing, fish and wildlife, roadside recreation, and reservoirs.

I won't take the time to list all the various intercompatibilities, full and partial, and doubt that any two people would agree anyway. A committee, however, might come up with some interesting results. I will say, however, that wilderness preservation is almost fully compatible with five other uses—watershed protection, fish and game habitat, science, education and conservation reserve—almost all of which are mutually compatible.

However we rate them now, the relative importance of the uses has changed and will change. For example, watershed management is assuming enormous importance; forest recreation, hardly thought of 30 years ago, is now the dominant use on many forests. We are only beginning to realize the irreplaceable value of the genetic strains and microbiota to be found only in the natural complex of wild lands. (For example,

what pest-resistant genes may we lose, or what new wonder drugs, if we lose wilderness? We don't know.) Forest lands will become increasingly important for outdoor wild museums as suburbia spreads over the land. And it was hardly three decades ago that we began to realize that wilderness was vanishing so rapidly as to have a scarcity value. More and more people will have more and more time for multiple-use enjoyment of wilderness—whatever wilderness, that is, that we save for them.

Would it not be helpful to attempt a monetary estimate of the worth of each combination of uses? This could be developed in several ways: (a) Totals, in terms of a constant dollar, for each decade of national-forest history; (b) totals, per decade, from now until the year 2000 according to our best estimates; and (c) variations of the estimates as they would be effected by various combinations of preference uses.

For example, according to studies on the Roosevelt National Forest, Colorado, returns per acre of forest per year were as follows:

Grazing (Federal receipts from permits)	$0.50
Timber (Federal receipts)	1.00
Water (at headgate)	5.50
Recreation (spent by users)	25.00

It must be borne in mind, of course, that the grazing and timber receipts are gross receipts. Legitimate offsetting costs, not shown, are the increased costs of personnel to manage the timber as well as Federal costs of access roads and watershed restoration that would not be necessary if the area were left as wilderness. The receipts for water probably reflect only the amortization of development works and the cost of labor, and so forth, and nothing for the water itself. So our analysis would require our finding an honest yardstick for measuring values.

Such an analysis of the various uses would, I think, demonstrate that wilderness preservation fits in nicely with the most valuable blend of uses, in the long run, that can be found on the national forests.

The traditional national forest crops—wood products, minerals, forage—will more and more come from alternative sources: Wood products from gentle-sloped woodlots and private forests in the humid regions, minerals from seawater reduction, forage from irrigated pasture. Water and wilderness, I think, can get along fine together; wilderness will insure good protection of the quantity and quality of water, and gravity will bring it down to civilization. I am aware, of course, of work on the Frazer experimental Forest seeking to increase water yield by cutting windows in the forest. I am also aware of the pressure to initiate an operation tin roof in the Salt River watershed in Arizona. But I think we will do well to have our wilderness standing by, untinkered with. It can reveal how man may stop the chain reactions he invariably unleashes, for all his scientific skill, when he upsets nature's balance. For example, thanks to wild lands near that German experiment with spruce forests, man was able to observe the important ecological role of the lowly ant, and thus to reintroduce ants where monoculture had wiped them out—and the timber crop along with them.

Let me close with a plea, a statistic, and a try at philosophy.

The plea: That you all assume a role in making sure that we look ahead to all the needs our forests must fulfill as thoroughly as we have been looking ahead to timber-resource needs.

The statistic: In the past 4 decades and their 2 world wars, this world has used up more of its resources than have all previous generations of men.

And philosophy: This generation is speedily using up, beyond recall, a very important right that belongs to future generations—the right to have wilderness in their civilization, even as we have it in ours; the right to find solitude somewhere; the right to find themselves there; the right to see, and enjoy, and be inspired and renewed, somewhere, by those places where the hand of God has not been obscured by the industry of man.

As of the year 1957, the United States Forest Service has a key role in the preservation of this right, as it pertains to many of the most beautiful samples of original America. Your leadership will go far to determine the fate of that right, so far as people of our time can pass opportunity along to their sons. Apathy can mean that we pass them a dead torch. Or, knowing that this is a very special kind of torch that man cannot light again, we can keep it aflame. I am convinced that we shall, for that is the emerging American temper.

IMPORTANCE OF FLOOD CONTROL

Mr. MORSE. Mr. President, having just mentioned the matter of floods in Texas and Colorado, I wish to associate myself with the remarks of the majority leader, the senior Senator from Texas [Mr. JOHNSON], a few minutes ago, on the floor of the Senate, when he made his eloquent plea for greater support for flood control.

Of course, I speak with great concern about flood control in the Pacific Northwest; but let me assure the Senator from Texas and others that my interest in flood control is nationwide, and I think the situation in Texas and Colorado should receive the immediate attention of the Congress. That is why I am always so glad to support flood-control measures, no matter what part of the country is involved. The criticisms the Senator from Texas bespoke today, in regard to the laggard policy of this administration in regard to flood control, need to be emphasized and emphasized again.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Oregon yield to me?

Mr. MORSE. I yield.

Mr. JOHNSON of Texas. I thank my friend for his comments. No Member of this body is more aware than I of the fact that there is no sectionalism about the senior Senator from Oregon [Mr. MORSE]. He always looks to the interests of the whole Nation. I am grateful for that approach and for his tender of assistance to the people of my State. I assure him that he will always find me working for the best interests of a national flood-control policy whenever I have an opportunity to do so.

Mr. MORSE. I thank the Senator from Texas and I want the RECORD to show that we in Oregon know his record. I know I am in a position to thank the Senator from Texas on behalf of the people of Oregon for the great assistance he has given us time and time again with respect to needed flood-control legislation, just as he is helping us at the present time with the great Hells Canyon project, which has a very important flood-control feature connected with it. That is what I want to talk about for a few minutes, Mr. President.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. MORSE. I am delighted to yield.

Mr. MAGNUSON. Of course, the Senator from Oregon knows I share his sentiments about the help that many Senators, including the present occupant of the chair [Mr. SPARKMAN], have given us in our projects. There has been much said in the Senate today about the value of flood-control projects. We all agree they have high value and we are in favor of such developments, but I think the RECORD ought to show—and I am sure the Senator from Oregon will bear me out—that not only are these projects in our area valuable for flood-control purposes, but in the case of hydroelectric projects, as mentioned by the majority leader and other Senators today, we are well on our way in the repayment schedule.

After the speech of the Senator from Oregon is concluded, I expect to place in the RECORD the up-to-date repayment schedule of the Bonneville project, including all its flood-control programs. Bonneville Dam alone is about 42 percent paid back. On an expenditure of more than $1 billion in our area, we have already paid back to the Government, in the short period of the tenure of many of us in this body, in excess of $500 million. At the same time, the value of the projects has been inestimable. I shall place the schedule in the RECORD. It is up to date. I have to leave now for a committee meeting.

Mr. MORSE. I want to say to the Senator from Washington that I appreciate his putting that material into the RECORD, because it is needed in the RECORD, in view of the false propaganda which has been spread in recent weeks to the effect that the great Pacific Northwest multipurpose projects are not paying for themselves. That is private utility propaganda. The propaganda even is that the power is being sold below cost. The official records of the Government are clearly to the contrary. These great projects, of course, are returning to the Treasury of the United States not only their costs in terms of years, but they are going to return to the Treasury of the United States great profits for the taxpayers.

Mr. MAGNUSON. And hundreds of millions of dollars in taxes.

Mr. MORSE. They will be great producers of taxes because of the private industry they are going to bring into the economic shadows of the low-rate power which is generated by the dams.

Mr. President, I shall be very brief in what I shall say, but I think it needs to be said today in view of the comments of the Senator from Texas and because of the historic debate which is to take place in this Chamber in the days immediately ahead when the symbolic Hells Canyon Dam issue will be before the Senate. In my judgment, Mr. President, Hells Canyon is the symbol not only of the need for flood control and water storage for flood control, but also of the need for full river development.

This afternoon I make a plea to the President of the United States, and my plea is that he study this problem, because I refuse to believe that the lack of information and knowledge the President has shown to date in regard to this great conservation water resource need can be explained on any other basis than

that he does not know, that he has not taken the time to read and study, that he has not exerted himself, when off the putting green, long enough to find out what the facts are about this great domestic issue of conserving water and protecting the people from the devastating dangers of floods.

I want to say most respectfully to the President of the United States from the floor of the Senate this afternoon, "Mr. President, you owe it to the American people to demonstrate that you know the facts about this problem, because, as President of the United States, you have no moral right to write in your administration the sorry chapter in resource history you are writing, and I do not want to see history give you the black mark it is going to give you, by way of criticism because of your failure to protect the heritage of the American people in their water resources."

That is why I say to the President of the United States, from my desk in the Senate Chamber this afternoon, "You cannot justify, on moral grounds, following a course of action in the Pacific Northwest, in relation to our water resources, that would sacrifice about 50 percent of the flood storage potentialities from which the people of that section would benefit if we built Hells Canyon Dam."

So I say it is about time that someone dared stand up and say to the President of the United States, "You simply do not know the facts." I do not want to see my President regarded as a "know-nothing" President, but if he does not change the pronouncements which he has made thus far on the Pacific Northwest project, he will have to go down in history as a President who is entitled to have the label attached to him of a "know-nothing" President in regard to this great issue.

When I am talking about the conservation of water I am referring to the greatest need of future generations of Americans in relation to maintaining a high level of civilization. Mr. President, we cannot waste our water. We cannot continue as a people to let America's water table go down—and it is going down—and expect our civilization to continue to rise, because civilizations do not rise on falling water tables. A civilization to be high has to have also a high water table.

What is happening as the result of the Eisenhower shortsighted natural-resource policy is that we are sacrificing the interests of future generations of Americans to the right to a high-water table. That is why I think what the Senator from Texas has said this afternoon in regard to the flood problem happens to be so apropos.

I believe the time has come now for the American people to recognize that the greatest domestic issue they really face, in terms of America's history, is the issue of water, because it happens to be the greatest economic source for the energy of our civilization. Unless it is protected, irreparable loss will be suffered by future generations. This administration cannot justify the great giveaway of this resource to the privateering and profiteering interests of a few private monopolies who are willing, in order to make a quick buck in our time, to sacrifice the maximum potential, for example, of various reaches of our rivers—to use a classic example, the Hells Canyon reach of the Snake River.

So, Mr. President, with respect, I say to the President of the United States, "Get busy and study this problem. Stop relying upon the kind of misinformation which obviously has been given to you by some very selfish interests that have not been telling you the whole story."

Mr. President, I now ask unanimous consent to have printed in the RECORD, as a part of my remarks, a series of communications I have received from a large number of organizations in my State, such as granges, building and construction trades councils, individuals, cooperatives, REA's, and farm organizations, urging support for the Hells Canyon Dam, because they recognize the importance of maximum development of the rivers of the Pacific Northwest, and not underdevelopment, as the propagandists who are advising the President of the United States, and who apparently are able to get to him, have been standing for, for so long past.

I ask unanimous consent that this material be printed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

EASTERN STAR GRANGE, No. 482,
Bend, Oreg.

Senator WAYNE MORSE,

DEAR SIR: At our regular grange meeting held April 22, 1957, our grange voted in favor of Hells Canyon Dam.

We feel that this dam will be a great help to the people of Oregon and we hope that you will continue to fight for it. We of the Eastern Star Grange are behind you.

Mrs. IRENE PEALMAN,
Secretary.

BUILDING AND CONSTRUCTION TRADES COUNCIL,
Eugene, Oreg., April 24, 1957.

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORSE: It was our opinion that on November 6, 1956, the people wanted a full development program of the rivers of this Northwest. The people so indicated when they marched to the ballot box on November 6. We believe the Congress should now deliver in accordance with the wishes of the people and the question of the Hells Canyon Dam is up to the Congress—no one else.

We cannot conceive of our Congressmen letting us down by permitting legislation on this issue which will provide less than the high dam at Hells Canyon. We appeal to you to carry out the mandate of the people and to assist in this fight by talking to your coworkers in the Senate and the Congress and asking them to support you in this vital phase of legislation which the people have sent you to Washington to enact.

This, Mr. Senator and Mr. Representative, Mr. Speaker and Mr. President, is not politics—this is economics. Without the Hells Canyon our Northwest suffers severely. Please, may we have your support until the Hells Canyon bill becomes a reality? Thanking you in advance, we are,

Yours very truly,
EUGENE BUILDING AND CONSTRUCTION TRADES COUNCIL,
JOE L. WILLIS, *Secretary.*

PORTLAND, OREG., *April 25, 1957.*

Senator MORSE.

DEAR SIR: Spare no effort in securing passage of the Hells Canyon Dam bill. I believe in conserving and protecting the water resources of America.

Yours truly,

ELLIS SHINALL.

STANFIELD GRANGE No. 657,
Stanfield, Oreg., April 24, 1957.

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SIR: Stanfield Grange members want a high Federal dam at Hells Canyon. We need it for flood control, cheaper power, and to firm up power at downstream dams.

At the general election last fall Northwest voters showed strong preference for legislators and governors who were favorable to federally built dams.

We, therefore, respectfully ask you to support legislation favoring construction of a federally built high dam at Hells Canyon.

Very truly yours,
STANFIELD GRANGE No. 657.
RUTH BURNETT,
Master.
RUBY MCLAUGHLIN,
Secretary.

COUNTY OF MULTNOMAH,
OFFICE OF THE CONSTABLE,
Portland, Oreg., April 23, 1957.

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MORSE: We, the undersigned members of the constable's office for Multnomah County, Portland, Oreg., urge you to spare no effort in securing passage of the Hells Canyon Dam bill.

Without the Federal high dam, our region will have no opportunities for industrial expansion, no new jobs or new markets.

The Federal high dam at Hells Canyon is the only means left to us to protect our region from permanent affliction of high-priced power from other sources.

The outcome of the Hells Canyon vote in Congress will determine once and for all the economic future of our entire region. We urge its passage.

Yours truly,

John Bain, Constable; C. N. Rumola, Chief; Roy F. Garrison; Scott W. Bennett; Charles Edwards; E. J. Nesbitt; G. J. Van Hoomissen; James Callas; John F. Erickson; Geo. M. Ferguson; Vernon J. Oberg; Harry J. Grant; Melvin S. Komp; Oellet Carvell; Grant W. James.

MORO, OREG., *April 23, 1957.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.:

We want your support on Hells Canyon Dam bill. We of the Northwest need that dam.

(Signed) Mrs. LAURA SATHER.
Miss LEONA M. SATHER.

VALE, OREG., *April 22, 1957.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.:

Whereas it has come to our attention that there is still an opportunity of saving Hells Canyon for the people of the Pacific Northwest; and

Whereas this high Federal Hells Canyon Dam is urgently needed and wanted by the majority of the people, industry and farmers of the Pacific Northwest; and

Whereas this Hells Canyon Dam, like Bonneville, would pay for itself and not cost the taxpayers a dollar in the long run; and

Whereas this is admittedly the best undeveloped, multipurpose dam site left in the United States; and

Whereas the tremendous potential of this dam site is on the verge of being wasted on pitifully inadequate development: Therefore be it

Resolved, That the Vale Grange, No. 696, goes on record as urgently requesting all forward-looking United States Senators and Representatives to do all they can to save this dam site for the people of America.

THE EXECUTIVE COMMITTEE,
VALE GRANGE 696,
L. H. JACOBSON, *Master.*
ALLAN T. WESTCOTT,
WM. G. ROSS,
RUBY GERVIN,
Secretary pro tempore.

SHERWOOD, OREG., *April 23, 1957.*

Senator WAYNE MORSE.

DEAR SENATOR: We are very much in favor of Hells Canyon Dam.

We need it for flood control and power here in our beautiful Northwest, and we know you will cast your vote to help get it built. Thank you.

We have written to all the others from Oregon, also Lyndon Johnson, Sam Rayburn, and Dwight Eisenhower.

Mr. and Mrs. ADOLPH F. CHON.

LONGVIEW, WASH., *April 24, 1957.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I want to thank you for your support of the high dam at Hells Canyon. Half million kilowatts is too much to let go to waste. To us who live on the lower Columbia River the flood control possible by the high dam is also very important. Don't give up.

Very truly yours,

LACY M. PEOPLES.

PORTLAND, OREG.

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SIR: Please spare no effort in securing passage of the Hells Canyon Dam bill.

Yours truly,

CARL V. NEWBILL.

ST. HELENS LOCAL, No. 166,
INTERNATIONAL BROTHERHOOD PULP,
SULPHITE AND PAPER MILL WORKERS,
ST. HELENS, OREG., *April 25, 1957.*

Senator WAYNE MORSE,
Washington, D. C.

DEAR SIR: I am writing this letter at the request of our local union concerning the coming Hells Canyon Dam legislation. Our members are very much concerned with this issue.

Some time ago we went on record as being in favor of the high Hells Canyon Dam. Now that it is at the stage of a last-ditch fight, we would like to request your full support in favor of a high Hells Canyon Dam.

We believe it would be to the best interests of the common man.

Thanking you beforehand for your cooperation and support,

Respectfully submitted.

DARREL W. MARTIN,
Corresponding and Recording Secretary.

PILOT ROCK, OREG., *April 19, 1957.*

Senator WAYNE MORSE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WAYNE MORSE: The members of White Eagle Grange, No. 683, of Umatilla County, Oreg., have passed a resolution requesting your support in the construction of a high dam at the Hells Canyon site.

Yours truly,

BERTHA M. BAKER,
Secretary.

Mr. MORSE. Mr. President, I ask unanimous consent that there may be printed in the body of the RECORD an address I delivered April 23, 1957, before a Maryland co-op meeting.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR MORSE'S REMARKS AT MARYLAND CO-OP MEETING

I am greatly pleased to be with you tonight at your annual meeting and to talk to you about some of the problems of the cooperatives as they appear to a Member of the United States Congress.

Perhaps the essential problem of the cooperatives, be they organized by producers or consumers, is the competition they present to orthodox, capital investment businesses. When we hear talk about competition being the life blood of the free enterprise system, too often it boils down to some sort of tacit understanding among economic giants that they will live with each other but that small businesses and forms of business organization other than for profit-making are not entitled to equal opportunity for life and growth.

The campaign that has been waged against the cooperative movement for many years under the guise of eliminating an alleged tax iniquity has been sponsored chiefly by big business, just as big business has worked hard to defeat legislation aimed at maintaining the competitive position of small, independent business. Cooperation is a form of business activity that is important to the American economy. It is a highly effective and desirable way for producers to get the greatest possible price for what they produce, and for consumers to get the most merchandise for their dollar. It avoids many of the features of investment for profit that are not in the best interest of consumer or producer groups. There is no reason at all why economic interests beside the investors should not form business organizations for purposes other than profitmaking, and I regard the cooperative movement as a healthy and invigorating element in our economic life. It furnishes a diversity to our economic system that gives meaning and vitality to the term free enterprise.

Cooperatives have been the salvation of many farmers not only for the marketing of their products but in obtaining electric power and consumer goods at rates and prices they could afford. They have proved themselves economically useful and desirable for consumers in urban areas. But they do compete with investment businesses, and they do form a yardstick, whereby the customers of private business can measure what they are getting. And so they continue to be under attack from such big-business-sponsored groups as the National Tax Equality Association.

One of the most scurrilous pieces of literature that has come to my attention recently is a script of a television program produced by the National Tax Equality Association which it is seeking to peddle to television stations and to other businesses for sponsorship.

This show portrays an alleged campaign for reelection by a United States Senator in which his opponent appears to favor tax equality while the incumbent does not. The Senator is depicted as the captive of mysterious economics agents identified as cooperatives, credit unions, and savings and loan associations. These are called favored groups with an unwarranted, un-American opportunity to use income tax-free money to cause the sudden death of members of the business community. In this version of a Senate race as seen by the National Tax Equality Association, the incumbent Senator ducks the issue entirely because of pressure from these so-called favored groups, and when he is defeated, he is made to confess the error of his ways with the comment that: "Nothing is politically right that is morally wrong." The sum total of this show is that mutual and cooperative businesses do not pay taxes as a result of tax favoritism and that Members of Congress who have favored the tax law as now written are the political handmaidens and water carriers of such organizations.

Now I do not know how successful the National Tax Equality Association has been in getting this film shown. But I do know that it is completely untrue in its facts, as well as in its allegations.

Probably most of you here know that in the 1951 amendments to the Internal Revenue Code, cooperative and mutual businesses were included under the same tax provisions as apply to profit corporations. The big issue was the treatment of net margins not paid or allocated to patrons. Since 1951, cooperatives have paid the same tax rate on this income as any other form of business pays. What the opponents of co-ops do not point out—and what most people who parrot their propaganda do not know—is that any corporate business would receive the same tax treatment as a cooperative if it returned its profit to its patrons, as a co-op does.

The distinction comes not in different treatment of corporations and cooperatives under the law but in the difference between their method of operation. When one adopts the business practices of the other, it will be taxed as the other is taxed. I think it is important to the cooperative movement that this fact be presented more widely to the American people to counteract the kind of campaign being made against cooperatives.

One wonders what underlies such a concerted drive against cooperatives, when Members of Congress including myself receive letters continuously from business concerns in our States complaining that cooperatives are enjoying a tax favoritism which gives them a competitive advantage, even though the number of co-ops in many of these States is negligible.

For cooperatives do only between 2 and 3 percent of the Nation's business. They are essentially small businesses. There are exceptions, of course, like the extensive marketing operations of some dairy and other farm co-ops. But these have no tax advantage over their competitors. Since the chief opposition to co-ops comes from big business, it seems evident that the small extent of competition between big business and cooperatives and the yardstick they provide to consumers do not explain why the National Tax Equality Association and other big business groups continue to attack the right of co-ops to exist and grow.

One fact which casts light on the basis for this campaign is the absence of any recommendation from the administration to alter substantially the tax treatment of cooperatives. In the 82d Congress and the 83d Congress the drums were beaten loudly for elimination of this so-called favoritism for cooperatives, yet the Treasury had no suggestion at all for revising the treatment of cooperatives when the Internal Revenue Code was extensively revised in 1954. There was the opportunity for big business—as represented by Treasury Secretary Humphrey—to remove the "favoritism" for co-ops it had been claiming existed in the Internal Revenue Code. But it made no recommendation because there was none to make. It was not until the 84th Congress was ready to adjourn its first session that the Treasury Secretary made any suggestion for amending the tax law relative to co-ops, and that came only as a result of court interpretation of the 1951 amendments as they dealt with noncash allocations. Since this minor revision was proposed to the House Ways and Means Committee by the Secretary in 1955, nothing more has been heard from the Treasury De-

partment about any tax "favoritism" for co-ops.

Yet the attack continues. Another fact which sheds light on its purpose is the defeat of a tax cut for small corporations. Many of us in Congress who have been fighting the administration's tight-money policy—and I was the first to denounce the increase in interest rates instituted by the administration just 9 days after it took office—have been watching our predictions come true. Business failure have risen from 29 per 10,000 in 1952 to 48 per 10,000 in 1956. Small businesses rely more on borrowing from commercial institutions to finance expansion of current operations and have been priced out of the loan market in increasing numbers by rising interest rates.

In order to help small corporations with earnings of less than $25,000 I have joined Senator FULBRIGHT and other Senators in proposing a change in the corporate tax rate that would have reduced the tax load for this bracket by about 25 percent while raising it slightly for the very top brackets. After helping to defeat our bill last year, the White House endorsed exactly the same thing last fall during the campaign. When the administration had an opportunity last month to make good on this promise to give small-business men some tax relief, the Treasury Secretary came to Congress personally to testify against it, even though it would not have resulted in any loss to the Treasury. The pressure was so great that 4 Republicans who had cosponsored it when it was introduced withdrew from cosponsorship 2 days later and only 5 Republicans voted for it on rollcall. The 28 Democrats who voted for it were not enough to stem the tide of administration opposition.

I think this administration's performance bears out the boast made in 1953 by an Eisenhower Cabinet member that big business is in the saddle. Big business is indeed in the saddle and has trampled small business as ruthlessly as it has trampled consumers, working people, and the public interest.

It is undoubtedly useful for the dominant business interests to have a scapegoat, and what better scapegoat than cooperatives? By blaming cooperatives for an allegedly unfair type of competition to small business, the corporate giants who do 85 percent of the Nation's business are trying to make small business afraid of cooperatives rather than of the real dangers it faces.

One example cited by the Cooperative League showing the ridiculous extent to which this campaign has gone is in Wisconsin, where a bakers' association claims that 50 percent of the independent bakers have gone out of business because of the unfair tax advantage of co-ops, although there is only one cooperative bakery in the State doing only a tiny fraction of the State's bakery business.

Small-business men must pay so much more to borrow money that half the small and medium sized companies which had bank credit lines in March 1955, had been cut off in March 1956. That is where the pinch is coming from; not from the competition from cooperatives.

Small corporate enterprises and cooperative enterprises have more in common to unite them than they have differences to divide them. Both forms of business must be strong if our economy is to be strong. Once corporate giantism dominates, we will be susceptible to the economic depressions which monopoly and cartelism have brought us in the past.

I would want to say before I close, that the cooperative movement itself is not entirely free from overexpansion. A co-op has an obligation to its members and to all who patronize it to keep its operation within the limits of their interests. It should not seek merely size or control of markets any more than any other business organizations should. If it does, it becomes a threat to the public interest rather than a servant of its participants.

I am a great believer in cooperatives, as I am in credit unions and in savings and loan associations. I expect to fight in Congress for their right to conduct their business operations without penalty and without harassment. That is what free enterprise is all about. I would like to see co-ops started in sections of the country where they are now almost unknown, and in areas of the economy where they are nonexistent.

The consumer co-ops in this neighborhood are among the most vigorous in the country, and I would like to see your excellent example followed more widely. You can be proud of what you have accomplished in strengthening the cooperative movement in America and by so doing, in strengthening our free-enterprise economy.

ADJOURNMENT TO MONDAY

Mr. MORSE. Mr. President, pursuant to the order previously entered, I move that the Senate stand adjourned until 11 o'clock on Monday morning.

The motion was agreed to; and (at 3 o'clock and 21 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, until Monday, May 20, 1957, at 11 o'clock a. m.

NOMINATIONS

Executive nominations received by the Senate May 17, 1957:

DIPLOMATIC AND FOREIGN SERVICE

Earl E. T. Smith, of Florida, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Cuba.

FEDERAL HOME LOAN BANK BOARD

Albert James Robertson, of Iowa, to be a member of the Federal Home Loan Bank Board for the term of 4 years expiring June 30, 1961—reappointment.

PUBLIC HEALTH SERVICE

The following candidates for personnel action in the Regular Corps of the Public Health Service subject to qualifications therefor as provided by law and regulations:

To be senior surgeons

Henry C. Huntley.
Kazumi Kasuga.

To be senior assistant surgeon

Edward V. Evarts.

To be senior scientists

F. Earle Lyman.
George W. Pearce.

To be senior assistant scientist

Alfred L. Brophy, Jr.

To be senior assistant nurse officer

Ava S. Dilworth.

EXTENSIONS OF REMARKS

Prayer Pilgrimage for Peace

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. JAVITS. Mr. President, it is appropriate that there should be noted here today the presence in Washington of some thousands of Americans who will meet in front of a national shrine, the Lincoln Memorial, this afternoon as a Prayer Pilgrimage for Freedom.

There are some who have doubted the wisdom and others the efficacy of this pilgrimage. But I have every expectation that it will be truly a pilgrimage for prayer by patriotic Americans exercising their right to peaceably assemble and to petition the Government for a redress of grievances, as provided by the first amendment to the Constitution.

We would be remiss, I believe, if we did not recognize this pilgrimage as the expression of the agonizing trial of a people among the American people. Violence and defiance of the law in some areas and the struggle over the Supreme Court's decision on desegregation of public schools have dramatized and intensified their struggle. I know the deep and sincere concern with which some here from the South, and millions whom they represent, regard this issue, and I have no doubt that an equally great prayer pilgrimage, equally sincere, could come here from that quarter. The point is that it is this marshaling of forces within the terms of the Constitution and our laws which has for almost a hundred years resolved domestic issues, deep and serious as they may be. I feel, therefore, that the Prayer Pilgrimage for Freedom should be regarded with respect; for what it represents is to bring home to all of us the deep suffering caused by the denial of civil rights, wherever they may be denied, to a broad section of the American people, notwithstanding the Constitution and the laws.

I ask unanimous consent that there be printed in the RECORD a message to the pilgrimage from the Senator from Pennsylvania [Mr. CLARK] and myself.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

WASHINGTON, *D. C., May 17, 1957.*

PRAYER PILGRIMAGE FOR FREEDOM, NAACP,
Washington, D. C.:

Deeply regret our schedules prevent addressing prayer pilgrimage today. We send greetings and best wishes to all in attendance at prayer pilgrimage for freedom. The right of our citizens to peacably assemble and petition the Government for redress of deep grievances is one of the most precious rights secured by our Constitution and citizens are entitled to respect as well as protection in its exercise. The spirit of your meeting reflects what we believe to be the spirit of a great majority of our country to support the achievement of civil rights legislation this session of Congress. There is a real fight here both for minimal civil-rights measures and to change the Senate

rule which allows filibusters that have killed the chances for civil-rights legislation before. We both assure you that we will give these measures our strong support on a bipartisan basis. We present our respects to Roy Wilkins, A. Philip Randolph, and Rev. Martin L. King and to the great audience at the Lincoln Memorial today.

JOSEPH S. CLARK,
United States Senator,
JACOB K. JAVITS,
United States Senator.

Let's Get Everybody Pitching Hay

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. DWORSHAK. Mr. President, the senior Senator from Utah [Mr. WATKINS] was one of the principal speakers at the Western Water and Power Conference, conducted at Salt Lake City, May 9 to 11, by the Utah Cooperative Association.

The Senator from Utah stoutly defended the administration's partnership approach to water resource development and received a warm round of applause at the conclusion of his remarks from the delegates who represented National Farmers Union organizations in more than a dozen States.

I ask unanimous consent that the speech delivered by the Senator from Utah be printed in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S GET EVERYBODY PITCHING HAY

(Address by Senator ARTHUR V. WATKINS, Republican, of Utah, before the Western Water and Power Conference in Salt Lake City, Utah, May 11, 1957)

Mr. Chairman and friends of western water and power development, when it was announced that I had accepted an invitation to be a speaker at this session, I ran into some criticism for doing so. To those who were dubious about my participation, I said, in effect, "I don't know many of the spokesmen for the National Farmers Union, but I do know Doug Simpson, the Utah president, a friend of many years, and some of the other Utahans in responsible positions in the Utah Farmers Union. In fact, a number of them are Republicans. So I feel that I can expect a bipartisan reception for my remarks. Furthermore, it will be a group of farmers, and being a farmer myself, I am sure that this group will respect and listen to a man who speaks his mind honestly and openly."

And that's what I expect to do here today. Furthermore, I believe that it won't take long for you to recognize that even with a prepared text—to keep me somewhere within the time limit—you will have little difficulty in recognizing that even though I have been in the Congress for 10 years, in spirit and in speech, I am not very far removed from my fruit farm in Orem, Utah.

Since I have identified myself as a fruit farmer from that fruitful oasis on Provo Bench, some of you may be wondering if I got a little mixed up on my use of metaphors in the title of my talk. Perhaps you are wondering why I didn't entitle my remarks, "Let's Get Everybody Filling the Berry Cups," or "Let's Get Everybody on a Ladder With a Picking Bag." Either of these alternative titles would have applied, but I felt that in any farm group there was a little more affinity, a little more general acquaintance with the hayfork—at least among my generation—than with the pruning knife. Furthermore, some of my off-the-cuff remarks—which I warn you have sometimes exceeded the text itself—may get a little corny, and I thought that this product would mix a little better with alfalfa.

Seriously, I have been greatly impressed with the program outlined for this meeting. Inasmuch as I have been kept extremely busy on other matters during this weekend visit, I have not been able to participate in your other sessions, as I would have liked to do. However, I have been impressed that you have assembled here some of the top authorities in Utah and the Nation on water and power development. And I will be pleased to report to your organization's critics that sitting beside me and Dr. Leland Olds on the platform here today is Ed Naughton, president of Salt Lake City Chamber of Commerce and of Utah Power & Light Co.

Also I am pleased that your other Congressional guests included my colleague, Senator WAYNE MORSE, and Congressman MIKE KIRWAN. Senator MORSE and I are on opposite sides of the fence on the high Hells Canyon issue, but I can assure you members from the upper Colorado River Basin that the senior Senator from Oregon has not joined other spokesmen for the Northwest in their unfair and unrelenting attacks upon the Colorado project, which has as its primary objective not the production of low-cost power but the production of water for four-State desert area and low-cost byproduct power. MIKE KIRWAN also deserves plaudits from the upper Colorado Basin States because of his public pledge to increase appropriations in the House for the Colorado project. I hope that he is successful in these pledged efforts. You may be assured that I am publicly pledged to make the same effort in the Senate.

This reference to appropriations needs for just one river basin of the country leads directly into the first major premise I wish to offer to you today. It is: Our needs for water and power development in this country now and in the foreseeable future are tremendous.

This is a point with which I am sure you have been amply impressed during your deliberations during the past day and a half. Hence, I will implement this statement only briefly.

The President's Cabinet-level Committee on Water Resource Development estimated that the total demand for water in the Nation will almost double by 1975. This tremendous need is based upon this breakdown of the major uses:

Municipal and rural water supplies: Estimated need in 1975 of 25 billion gallons per day, as contrasted to 17 billion gallons per day used in 1950. This is an estimated increase of 50 percent.

Direct industrial uses: Estimated need in 1975 of 215 billion gallons of water per day, as contrasted with 80 billion gallons per day in 1950. An increase of 170 percent.

Irrigation: Estimated need of 110 billion gallons per day in 1975 as contrasted with 88 billion gallons per day in 1950. An increase of 25 percent.

The Hoover Commission Task Force on Water and Power reported that while Congress had appropriated only $693,400,000 on water and power development up to 1910, its appropriations up to and through 1954 totaled $14,300,000,000. Furthermore, the task force estimated that projects now authorized by Congress will cost about $18,494,000,000, providing they are all built. Estimates by the task force of projects under discussion but not authorized would bring the total up to over $84 billion.

In the current U. S. News and World Report, Secretary of the Interior Fred A. Seaton reported that the Federal Government, under the partnership program, is trying to promote the construction of $40 billion worth of electric generating facilities in the next 10 years, and $94 billion worth in the next 20 years. This estimate includes transmission lines and distribution facilities as well as generating plants.

Appropriations requested in the current budget for Federal natural resource development amount to slightly over a billion and a half, so we are doing something in this field in spite of the astronomical defense spending needs.

And to this farmer, all these amounts in multimillions and billions still remain astronomical—even after 10 years of exposure to them.

Make no mistake about it, then. Our needs for water resources and power development are tremendous, and they are going to cost us considerable money over the next half century. This hard, economic fact must be kept in mind while we consider the needs for and the economic justification of the many projects before us.

This program not only is vast, but it is one that demands advance planning and a continuing program of construction. Our population and our needs for water and power grow every day, and if we don't get on with the job of building new facilities, we can suffer serious social and economic losses. We must keep our construction and rehabilitation program ahead of the needs.

I am convinced that anyone who studies this problem will agree that the needs are vast and pressing. The problem that immediately presents itself, therefore, is "Can we get the money for it?" That, gentlemen, is the eighty-four or the ninety-four billion dollar question, and leads to my second major premise, which is: Barring an armistice in the cold war—which does not seem likely—appropriations for public works will face continuing and intensive competition with other important governmental activities and with heavy defense costs.

In other words, the chances are good that in the foreseeable future, we will not be able to get the public money that we would like to see devoted to resource development. This is reflected in current Congressional consideration of the 1958 budget. And prospects for improvement for fiscal 1959 are not more favorable, if we are to succeed in further reducing the national debt and providing for tax reduction. And this is a bipartisan observation, because pressures for reductions are coming from both major parties.

With respect to resource development, this places the National Government in much the same position that many farmers find themselves in. They recognise needs for improving the facilities on the farmstead to create new income and make the farm operation more efficient, or even to keep it from bankruptcy. At the same time, the farmer faces the problem of mounting costs and increased competition for the dollars that remain, if any, after taxes and other costs are paid.

Now what does the farmer do under such circumstances?

If he is not as conservative as most farmers are in this part of the country, he might consider that the nedeed improvements are so important that it is worth a gamble on the future, even to the detriment of some other activities that he might otherwise finance.

But I think that most farmers would resist the temptation to plunge into large-scale investments without heed to inflationary or other budgetary ill effects, especially if they were in debt to the same extent as is Uncle Sam. I believe that most farmers still have the problem I do of comprehending the size of a $275 billion national

debt. But I think that nearly all of us appreciate that while building up that tremendous debt, we have reduced the purchasing power of the dollar to 50 cents or less. It will be difficult enough to pay for needed resource development with 50-cent dollars, without making it more difficult by letting higher debt and accompanying inflation further reduce the purchasing power of the dollar.

The course, therefore, that I think the average farmer would take toward solution of such a problem is to first assess the needs and determine the costs, and then to weigh the first priority improvements with all the other program expenditures proposed in the Presidential budget. In such an evaluation, I think that most farmers, if given the opportunity, could figure out a way to eliminate waste and reduce spending for nonessentials and to find money for a long-range improvement program.

Such a process is going on in the executive branch, and in the Congress, and I think there are enough farmers in both branches to help the nonfarmer member come up with a sound answer in due time, assisted by considerable coaching from individuals and organizations such as those represented here today.

The next thing that a farmer would do in such circumstances, I believe, would be to get everybody into the act—to get everybody pitching hay—or picking fruit, if you will. Farm improvements are not paid for by idle men or machinery. The whole farm plant must produce to its capacity if it is to prosper to the maximum degree possible.

This is an oversimplification of the position taken on water and power development by the Eisenhower administration.

Since his selection in 1952 as a candidate for President, Mr. Eisenhower not only has been conscious of the tremendous need for water resource development, but also he has been sold on the importance of having all levels of government and private enterprise contribute to the desired results.

I had the pleasure of discussing water with Candidate Eisenhower in Denver in the summer of 1952, and I have had many other rewarding conversations with him on this subject since that time. Hence, I can testify to you that probably no other President has been more concerned with or better informed on the need for water resource development. We in the upper Colorado River Basin are especially grateful to the President, because his firm and consistent support was absolutely decisive in obtaining authorization of the Colorado River storage project in 1956. And this project, as most of you are aware, was supported by all of the States involved and by the public power interests and the privately owned public utilities of the region.

In May of 1954, the President initiated a Cabinet-level study of water resource development. His letter of May 26, ordering the study, contained this estimate of the need for adequate water resource development:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens. If we are to continue to advance agriculturally and industrially, we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans."

In the next paragraph, after expressing the need for a comprehensive review of water policies and programs, he stated: "We must do this with a full realization that the States, communities, and private citizens are vitally concerned with the policies and actions of the Federal Government."

The Cabinet-level committee's 1956 report on this study recognized the President's request by this statement in the referral letter:

"The policies set out in the report embody a framework within which the Federal Government, with State and local governments and other non-Federal interests, may cooperate to develop our water resources."

This reaffirmation of the President's partnership policy follows a furrow plowed nearly a century ago by another distinguished President—a Midwest lawyer-farmer named Abraham Lincoln. One of Lincoln's basic policies was set forth in this quotation: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves in their separate and individual capacities. But in all that people can individually do as well for themselves, government ought not to interfere."

I don't think there are many in this group, or in any other farm organization, that would disagree with either of these basic positions.

It may be possible, although the Communist experiment seems to disprove it, to produce wheat or livestock more efficiently by breaking up our little farms, which are frequently economically hard pressed, and letting the corporate state run large collective farms. But tough as our problems are and become, as farmers, I think it will be a long time—if ever—before any of us suggests that we should end private agriculture and turn everything over to the Federal Government. And I don't believe that anyone in this or any other farm organization is seriously suggesting that we are ready to abandon the free enterprise system.

Of course not. And what the President is doing in his partnership program is recognizing that privately owned public utility power—the only kind of power we knew in our pioneer days—is here to stay and inviting it to join all levels of government in utilizing our water resources.

The name of another Republican President, who served a half century ago, is being used increasingly these days. And lest some people have come under the misapprehension that our great trust-busting President Teddy Roosevelt was opposed to private enterprise, I would like to read this quotation from a statement by that great President in the historic Conference of State Governors on May 13, 1908.

In discussing the regulation of corporations, he said: "Take such a matter as charging rent for waterpower. My position has been simply that where a privilege, which may be of untold value in the future to the private individuals granted it, is asked from the Federal Government, that the Federal Government shall put on the grant a condition that it shall not be a grant in perpetuity. [Applause.] Make the term long enough so that the corporation shall have an ample material reward. The corporation deserves it. Give an ample reward to the captains of industry, but not an indeterminate reward."

So you can see that he, too, was suggesting a partnership approach to water resource development. It is significant that he, too, was favoring the FPC licensing program of the type authorized by the Federal Power Commission in the Hells Canyon case. The power permit there is granted for only 50 years.

In my estimation, as a long-time supporter and admirer of Teddy Roosevelt, I believe that Teddy Roosevelt would have endorsed the Hells Canyon decision made by the FPC and sustained later by the Supreme Court. That action was an outgrowth of the far-reaching Federal Water Power Act of 1920, which his forward-looking resource utilization policies helped create. But more about this later.

In order to show the bipartisan flavor of these remarks, I would like to call to your attention the remarks of another well-known American President on the partnership policy. In a statement to Congress on January 19, 1953, President Truman stated:

"This job of getting our land and water developed, I repeat, is so big that we must enlist the participation of all agencies—Federal, State, community, private enterprise. The results can be timely and economical only if States and communities invest their dollars, as well as the Federal taxpayer."

So you can see that Republicans and Democrats alike are on record for more than half a century favoring the general purposes of the "partnership approach" to water resource development. I hope that this group will follow suit, even if you feel impelled to call it by some other, nonpolitical and noncontroversial term. Let's get everybody pitching hay—not just Uncle Sam.

Now, before closing, I would like to review briefly with you my stand on two major water-resource developments of recent years. I believe you will agree, if you examine the entire record, that my stand is consistent and is not incompatible with a sound program for water-resource development.

The two projects, of course, are the Colorado River storage project and the high Hells Canyon project. I dealt with this subject at some length in the Senate last year, and the statement is available for reference in the CONGRESSIONAL RECORD. Hence, I will hit only the highlights at this time. I link the two projects here not only because of their intense regional interest, but also because in seeking approval of high Hells Canyon, many of that project's supporters have been seeking to discredit the Colorado project, which won approval by the Congress.

First of all, the Colorado River storage project is an extremely well-planned program for comprehensive water-resource development to benefit a four-State semidesert area. It will make it possible for the people of these four States to develop their last remaining major water resource, a renewable water and energy resource made possible by watersheds in the upper basin which gather 90 percent of the water that flows down the Colorado. The four upper basin States were allocated roughly half the flow of the river in an interstate compact drafted in 1922, but they have been able to develop only one-third of their allocated half. Failure of the upper States to develop their allocated share of the river would mean that the water will be put to use in southern California or Mexico and the upper basin States forever denied access to it.

The upper Colorado legislation provides for an integrated program of reservoirs and water delivery facilities, planned on a basin-wide basis. This planning was financed by $10 million raised by the upper basin States through revenues from Hoover Dam power receipts and through State contributions. Roughly 99 percent of the project's capital costs will be reimbursed by area water and power users, with interest paid on two-thirds of the project costs, allocated to municipal and industrial water and power production.

Power will be produced as a byproduct at the tremendous storage dams required to guarantee downstream delivery commitments to the lower basin and Mexico. Costs of power at the largest project producer—Glen Canyon Dam—are estimated at 4.7 mills per kilowatt-hour, but project power will be sold at 6 mills per kilowatt-hour to help provide revenues for water development.

State rights to the waters involved are protected by 2 interstate compacts, 1 for the entire river, and another 1 for the upper basin only. Operation of the project to meet these compact provisions is one of the major deterrents to development of this program by private enterprise.

Construction is already under way on Glen Canyon Dam, where costs are working out at 20 percent less than the engineers' estimates, based on the first two project contracts.

Now let's take a look at the high Hells Canyon project.

This is not a comprehensive, basinwide water-development project. It is primarily a power project, with associated flood-control benefits. The legislation authorizes no reclamation projects as such, and provides no funds for reclamation development until after the power features are paid for in 50 years. I might add that such funds also could be made available from the 3-dam development in 50 years, because that is the extent of the licensing period.

The Corps of Engineers in 1948 recommended a flood-control reservoir of 2,300,000 acre-feet at this site. The proposed capacity of the high dam, however, is approximately 4 million acre-feet.

Water user groups in the State of Idaho have protested against the building of a 4-million-acre-foot storage vessel on the Snake River at that point, because it is located too far downstream to permit any possible diversion for consumptive use of water in Idaho. Furthermore, they feel that this large storage body, used to regulate river flow for power production at several large hydro plants downstream, would be a threat to Idaho's water rights and future expansion of uses. Idaho has been demanding ratification of an interstate compact to protect her rights on the Snake River, but Washington and Oregon steadfastly refuse to grant such protection, in spite of the precedent-setting action on the Colorado River in the 1920's.

The power head of 602 feet on that section of the river can be utilized either by construction of a single dam or by use of multiple dams that accomplish substantially the same purpose. In either case, power output and costs are comparable. Flood-control storage capacity is less on the 3-dam plan, but it is deemed adequate if supplemented by water storage elsewhere in the basin.

After the Federal project was proposed, a privately owned public utility, the Idaho Power Co. announced that the people of Idaho badly needed power and that the company would like to build the 3-dam project in the Hells Canyon reach of the river. Applications for licenses were filed under the Federal Water Power Act of 1920, a far-reaching conservation law proposed by President Theodore Roosevelt and passed during the Wilson administration, and expanded in its powers during the Franklin Roosevelt administration.

The FPC studied the Idaho Power proposal for 2 years and issued the customary 50-year license for the 3-dam project. This action was reviewed and sustained recently by the Supreme Court.

Idaho Power began construction of two of the dams shortly after the FPC license was awarded. Some 20 to 30 million have been invested in this project and power production is scheduled for 1958.

In spite of this reasonable and legal procedure, some people are now demanding that we stop that federally authorized and supervised program, and throw away the time, money, and effort that has been expended so far. This would be adding many millions of dollars to the costs of the Federal project, because I presume that Idaho Power would have to be compensated both for the investment made and for the delay the company would suffer in obtaining the needed power that it is providing legally and could have on the line in 1958.

In addition, the taxpayers of the country—and that means you and me and our neighbors—would have to put up more than a half billion dollars to build a Federal dam and necessary transmission lines in the same area. Does that make good sense to you?

And lest anyone here may be under the misapprehension that our good neighbors in the Northwest have been discriminated against in the area of water-resource development, let me put your fears at rest. Quite the contrary is true. The two States of Oregon and Washington are only one twenty-fourth of the 48 States, but they have received one-fifth of all reclamation construction funds and one-seventh of all flood-control and navigation-construction funds. In addition, these two States have a backlog of $1,828,717,000 in authorized flood-control and navigation projects—one-fourth of all the outstanding authorized projects in the 48 States. Furthermore, Oregon and Washington were given an additional $133,012,000 in new or expanded projects in the omnibus flood-control and navigation bill recently passed by the Senate.

The Northwest Public Power Association has recommended appropriation of $2½ billion for Federal power construction in the Northwest during the next 20 years. To fully develop the power resources of the Columbia River, it will require investment of another five to six billions.

Yes, they have a genuine need for much water resource development in the Northwest and I have supported their projects for many years and expect to continue doing so. But I balked when, in addition to the largess granted, we were asked to tear down a private project under construction at Hells Canyon and spend a half-billion dollars we do not have to spend for a Federal project that accomplishes little more than the private project. In addition to this wasteful destruction of a going project, we would be forgoing nearly a half-billion dollars in tax revenues that could well go toward paying for vital water-resource projects in the Northwest and elsewhere. To this farmer, that just doesn't constitute good horse sense.

The three-dam project will produce almost as much power at the project site and at about the same cost or less than at the high dam. This may surprise you, because you have heard a lot about 2-mill power at Hells Canyon, and you have heard derogatory comments on the high costs of producing private power. But don't let anyone kid you.

It is true that power from the proposed high Hells Canyon Dam would be sold for a little more than 2 mills per kilowatt-hour. But it will be sold below actual cost, because the costs of generation at the dam site and transmission facilities will make the true costs of high Hells Canyon power more than twice the proposed 2-mill sales price.

How can they do this? Well, I believe that they accomplish this by putting the power into the Bonneville system and applying a system wholesale rate, established at or near the 2-mill level largely because power from depression-built projects on the Columbia River produced energy for less than that amount. Since completion of those early dams, however, virtually every project built on the Columbia has produced power at a cost greater than 2 mills, and the added energy has been sold therefore below actual cost. This sales policy has largely nullified the low-cost advantage of those early subsidized projects, which otherwise might have yielded excess revenues for water development.

As an example of such below-cost sales I cite the Hungry Horse project, a very good project built on a Columbia River tributary in the State of Montana. Power from this project costs 3.76 mills to generate and transmit. But what is it sold at? Why most of the power—$1½ million worth—is sold to Anaconda Aluminum Co. for 1.72 mills a kilowatt-hour, or less than half cost. Another million dollars' worth of power is sold to Montana Power Co. at 2.49 mills, or one-third less than cost.

You people will be interested to learn that power pricing for co-ops and REA's is more realistic. These groups, which you farmers own, by and large, and all of which use relatively small quantities of power, pay an average of from 3.24 to 3.55 mills per kilowatt-hour, or roughly twice what the great Anaconda Aluminum Co. pays.

Similar pricing policies would, I presume, apply at high Hells Canyon, because power from this proposed project would be sold through the same Bonneville system.

There has been a considerable outcry recently about the so-called subsidy given the Idaho Power Co. in the rapid amortization granted by the Office of Defense Mobilization. Now I did not come here to defend this tax amortization program, or to defend any private utility. But the facts are that this law was instituted by a Democrat Congress, and it has been perpetuated by the Democrat 84th Congress, and, so far at least by the Democrat 85th Congress. I believe there undoubtedly are needs for changes in this legislation, beyond the curtailments made voluntarily by the agency, and it may be that these changes now will be made.

But lest you become too indignant at what is being done for Idaho Power, let me tell you first that some 900 private utilities have had the same kind of treatment. Also let me tell what is done for big corporation in the Pacific Northwest, apparently with the knowledge and approbation of the Northwest supporters of the high Hells Canyon project.

The below-cost power concession granted by the Bonneville power system to Anaconda Aluminum Co., to which I referred previously, amounts to a subsidy of more than $100 million over the 50-year repayment period, based upon the price at which this power is sold in relation to actual costs at Hungry Horse. In addition, the Federal Government granted this firm a rapid tax amortization of $55,378,000, or 85 percent of the total cost of the aluminum plant built by Anaconda at Butte, Mont.

From the same project, Montana Power gets a million dollars' worth of power at a rate one-third below actual cost. This represents a 50-year subsidy to that private utility of roughly $16 million. This firm also received rapid tax amortizations, three to be exact, between 1951 and 1956. The total amount amortized was $11,285,000, or nearly half of the firm's investment in new power facilities.

It is also significant that both of these large corporations have firm contracts for this power—with no withdrawal provision for recall of the contract energy to meet the needs of preference customers downstream. This, too, apparently is satisfactory to the Northwest groups backing high Hells Canyon and damning Idaho Power, except that they won't offer the same terms at Hells Canyon to the State of Idaho.

Farther down on the river, similar advantages have been granted to Harvey Machine Co., which built a large aluminum plant at The Dalles, Oreg. This company was aided by a grant of a rapid tax amortization certificate for $55,462,000, or 85 percent of the cost of the plant. This was objected to by no one, so a charitable Bonneville power system granted the firm a rate of 1.72 mills per kilowatt-hour for power that costs 3.4 mills per kilowatt-hour to generate and transmit. Hence, in addition to the so-called subsidy reflected in the rapid tax amortization, Harvey Machine received a below-cost power subsidy which will amount to something like $300 million in 50 years.

This type of public generosity apparently is fine in the States of Montana, Oregon, and Washington, but reprehensible in the State of Idaho.

In referring to these power pricing subsidies, I do not wish to reflect any criticism upon the companies or the Federal agencies involved. So far as I know, this was all done legally and aboveboard. In fact, I believe that the backers of Federal power in the Pacific Northwest will be able to give you convincing explanations of how it is both reasonable and necessary to pour into the system large quantities of 4.5 mill power from high Hells Canyon and sell it for slightly over 2 mills. My farmer's mind has not been able

to comprehend how that can be done and continued in project after project on the Columbia River, without ultimately penalizing the REA's, municipal power system, private utilities and all other nonindustrial users of power in the Pacific Northwest system. I have given notice that I plan to ask for a review of Bonneville pricing policies to ascertain that the smaller power users in that area are being given the benefits to which they are entitled.

I could go on and amplify this subject at greater length, but it is scheduled for future airing on the Senate floor, so I will resume this continuing debate in Washington.

In closing, I wish to commend your organization for its merited interest in water resource and power development. Let us all maintain and expand that interest, seeking always for the facts, and supporting movements on the basis of principle and need, and not from uninformed bias or misdirected emotion. And as we work and study in this field, let us give heed to the wise admonition of President Eisenhower, which I repeat because of its timeliness and significance:

"The conservation and use which we make of the water resources of our Nation may in large measure determine our future progress and the standards of living of our citizens. If we are to continue to advance agriculturally and industrially, we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans."

I also wish to commend to you another admonition on water resource development, which I first saw carved into a plaque on a monument erected on the Holland coast to commemorate the closing of the last gap in the great Zuider Zee dike, which reclaimed from the sea a tremendous acreage in that low country. The monument contains this motto of an industrious people who have met and overcome the world's greatest problems in land reclamation.

"A nation that lives builds for the future."

Let us emulate our ancestors who conquered the desert and the equally courageous Dutch people, who have to conquer the raging seas themselves to permit adequate utilization of their natural resources. Let us have the vision and the courage and the tenacity to develop the resources of the good earth, and to build for the future that our children and their children deserve.

Thank you very much.

Challenge to Mideast Policy—The Suez Canal

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, May 17, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an exchange of correspondence with Under Secretary of State Christian Herter concerning the United States position in the Suez Canal. It relates to Senate Resolution 120, sponsored by myself, and the Senator from Maryland [Mr. BEALL], the Senator from Illinois [Mr. DOUGLAS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from New York [Mr. IVES], and the Senator from Oregon [Mr. NEUBERGER].

I shall seek in every way open to me to get our Government to back Great Britain, France, the Netherlands, Italy, Norway, West Germany, Australia, and all other major users of the Suez Canal in finding alternate means for transit of their essential commerce. The key to Mideast peace and hope is to see that Colonel Nasser does not control alone the jugular vein of free Europe—the Suez Canal, but instead shares control with the principal users. The free world dare not relinquish this position. It is the outstanding challenge to our leadership in the Mideast.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

LETTER FROM SENATOR JAVITS TO UNDER SECRETARY OF STATE CHRISTIAN HERTER

APRIL 8, 1957.

DEAR CHRIS: Enclosed herewith you will please find resolution introduced last Thursday urging our Government to consult with the major Suez Canal users "for the purpose of considering collective action to establish and internationalize alternate means and routes for assuring to the free world its normal petroleum supplies and conduct of its commerce normally moving through the Suez Canal." The sponsors have already requested hearings before the Senate Foreign Relations Committee.

I am enclosing herewith from the CONGRESSIONAL RECORD the remarks made upon the occasion of the introduction of this resolution.

I deeply believe that Colonel Nasser's political control of the Suez Canal is a most active threat to United States peace objectives. It is also a major overt manifestation of Communist machinations. The resolution was introduced with the hope that every agency of government may help to see that we are not found wanting in meeting this challenge.

Sincerely,

JACOB K. JAVITS,
United States Senator.

LETTER FROM UNDER SECRETARY OF STATE TO SENATOR JAVITS

MAY 6, 1957.

The Honorable JACOB K. JAVITS,
United States Senate.

DEAR JACK: The Department wishes to thank you for your interest in the Suez Canal problem and your desire to be of help in seeking a satisfactory settlement. The Department notes that the resolution which you have introduced (S. R. 120) has two objectives, the convening of a "conference of nations engaged in international trade for the purpose of considering collective action to establish and internationalize means and routes for assuring to the free world its normal petroleum supplies," etc., and to "support an effective action within the United Nations to preserve freedom of transit through the Suez Canal for the peaceful commerce" of all nations.

The United States Government has been giving extensive study to the petroleum requirements of the free world; it has attempted to assess carefully the anticipated growth of these requirements, the significance of the Middle East in meeting these needs, and the adequacy of existing and planned transport facilities for the movement of Middle East petroleum into free world markets. All available information indicates that the bulk of the additional petroleum required to meet the anticipated growth of free world petroleum requirements will have to come from the Middle East where most of the world's proven reserves lie. Therefore, the Department believes that not only must Middle East transit facilities be expanded, but that the construction of new pipeline routes with new port outlets appears to be necessary.

The subject of free world petroleum requirements is being studied intensively by a great many other governments, particularly in Western Europe, and some aspects of the problem are already being jointly considered by the Organization for European Economic Cooperation. These governments and international petroleum producers generally share the views set forth above. A number of international petroleum producers are now actively considering the construction of a major pipeline system from the Persian Gulf to an outlet in Turkey on the Mediterranean.

With particular reference to the Suez Canal, the United States has actively sought, in and out of the United Nations, agreement on ways to establish an internationally acceptable arrangement for its operation. In particular, we have urged that any system envisaged for the canal meet the six requirements approved by the Security Council on October 13, 1956. In view of the reopening of the Suez Canal and the release by the Government of Egypt of a set of proposals to govern its operations, the United States thought it appropriate to request a meeting of the Security Council on April 24, 1957, at which time the United States and other members of the Council could express their views on the regime now proposed by Egypt for the Canal. As noted in these discussions, the United States does not believe the Egyptian declaration in its present form adequately meets the six requirements of the Security Council; in particular, it lacks provisions for organized and systematic cooperation between Egypt and the users. There is no assurance that the six requirements will in fact be implemented. The United States recognizes, however, that the manner in which the Egyptian declaration is implemented and interpreted will determine Egypt's intent and whether confidence among the users of the Canal can be established. The United States believes that the system proposed by Egypt should be considered provisional at this time and that the Council should remain seized of this matter while the system is tried out in practice.

I believe that the action which the United States Government is taking to meet the problems arising from Egypt's seizure of the Suez Canal Company is consonant with the objectives of your resolution, but that it can be accomplished without a conference of nations as you suggest.

Most sincerely,

CHRISTIAN A. HERTER,
Acting Secretary.

Address by the Secretary of Agriculture Before the Iowa State Club

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, May 17, 1957

Mr. HICKENLOOPER. Mr. President, on May 6 the Secretary of Agriculture, Hon. Ezra Taft Benson, made a speech before the Iowa State Club in Chicago. In the speech he discussed some important facets of the situation in connection with agriculture. I ask unanimous consent that his speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE SECRETARY OF AGRICULTURE

It is good to be here.

The invitation to address your Iowa State Society has brought many happy memories.

It seems only yesterday—although my grandchildren make me realize it must have been longer than that—when Mrs. Benson and I first went to Iowa. We had been married only a few days when I enrolled as a graduate student at Iowa State Agricultural College.

My modest scholarship of $70 a month seemed adequate for a young couple who had heard somewhere that two could live as cheaply as one.

I recall that our household budget was helped somewhat by the vegetables and other farm produce which were available for the gathering at the experimental plots at the college.

I remember that it was during my first year at Iowa State that I rode on a special 4-H Club train which brought me to the international show here in Chicago. On that train trip we sang the proud Iowa song, That's Where the Tall Corn Grows.

The corn stalks with which we kept time to the music, as I recall, were tall enough and husky enough to discourage any who might have doubted our claim.

Today, the cornstalks in Iowa may not be as tall as those we remember but they produce more bushels to the acre. And the farmers have the same vision and the same quiet faith which gave strength to their ancestors who pioneered the rich fields of Iowa.

I am proud to claim some kinship with those hardy pioneers. It was in Iowa that my grandfather was born in a rain-soaked wagonbox some 111 years ago, as his parents were moving with the first caravan of Mormon pioneers in their long, hard journey westward.

For as far back as I can trace, the people of my family have been farm folk like myself. I am proud of that heritage.

I propose to speak plainly tonight. I intend to talk about agriculture, in which everyone has an interest, whether or not he is especially trained in this field. I shall speak frankly and as honestly as I know how. Specifically, I shall talk about the problems of the Corn Belt, the great heartland of the United States, which stretches east to west from Ohio to Nebraska and from Minnesota on the north to Missouri on the south. This is the feed grain-livestock area, the great region which converts feed grain and roughage into nutritious, wholesome meat, milk, and eggs. Iowa is the geographic center of that economy and the seedbed of ideas regarding it.

The feed grain-livestock segment is the giant among our agricultural enterprises. Meat animals alone bring in 27 percent of our farm income. When we add dairy and poultry, livestock brings in 53 percent of the gross receipts from farm marketings. So we are talking about the biggest receipt item in the farm account book.

Since 1920, profound changes have occurred in crop production, the consequences of which are equivalent to an enormous increase in the amount of cropland available for domestic food production. And this in spite of the fact that the actual acres of cropland were virtually unchanged during this period.

Permit me to cite just a few of these great changes:

Crop production per acre has risen more than 25 percent since 1920.

Mechanization has released for food production about 80 million acres that formerly were used to grow feed for horses and mules. This is equivalent to an increase of about 23 percent in our cropland.

The reduction, through Government programs, of cotton and wheat acreage has greatly increased the cropland available for the production of feed and forage.

Since 1920, tremendous changes have occurred in the livestock business as well as in crop production. These are primarily the result of better breeding, better feeding, and better sanitation. Production per breeding unit—that is per cow, per sow, and per hen on an aggregate basis—has gone up 72 percent.

There has been a great increase in population, of course, about 60 percent since 1920. But the combination of mechanization, better yields, and higher production per animal has boosted food marketing even faster, by about 78 percent.

Hence, per capita marketings of food are now 13 percent greater than in 1920.

Never before have American consumers had so bountiful a supply of wholesome, tasty, nutritious food at so reasonable a cost—only 25 percent of their incomes. Never before have so few farmers produced such abundance for so many.

Perhaps in no other large area of the United States has the impact of the technological revolution wrought such profound changes as here in the Corn Belt. Hybrid corn, increased rates of fertilization, almost complete mechanization, the rapid advance of nutritional science, the conquest of plant and animal diseases, and now supplemental irrigation in many areas—these are some of the most striking changes.

Much attention has been focused on the huge stocks of farm products owned by or under loan to the Government—stocks which now represent an investment of $8.3 billion. Agriculture is faced not only with the necessity of reducing these stocks; there is the even greater challenge of using constructively the abundant production which, year after year, is likely to flow to market from American farms.

This great outpouring of agricultural abundance is the result of improved technology, of course. But it is also partly the result of a prolonged period of incentive prices—incentives supplied first by the market place and then by law. Agricultural production expands its productive plant readily in response to such incentives, but is slow to shrink its plant when market outlets dwindle and prices decline. Agricultural output is like taffy, which stretches out readily but is difficult to squeeze back.

Price support policies of the past are responsible, to a degree, for the presently overexpanded agricultural plant. While the technological revolution undoubtedly supplied the means for increasing output, the support program helped provide the incentives; and while these policies increased production on the one hand, they choked off consumption on the other. The result is an accumulated stock and a continuing production of farm products greater than our growing population can assimilate unless adjustments are made.

How can we best make the adjustments called for by the prospect of agricultural abundance?

Can we reduce production? For 25 years we have tried to control production by restricting the acreage of a few selected crops. Yet total production has increased even more rapidly than the increase in our population. The evidence of the past quarter century is that farmers offset acreage controls by fertilizing more heavily, increasing the yield per acre. And they use the acres diverted out of one crop to produce other crops. So total production is not decreased; in fact, in the long run, it probably is increased by the control programs.

Shall we sell these commodities abroad? Yes; we should and we are. Agricultural exports this year are at an alltime high. We sell our commodities for dollars, both for cash and for credit. We sell them for foreign currency, and we barter them for strategic materials. Yet there are limits—and we may be approaching them—to what we can do in the way of selling our abundance abroad. Production has also increased sharply in other countries. If we were to unload our stocks irresponsibly we would depress prices in world markets and we would jeopardize our friendship with other exporting nations. With prices for certain commodities supported substantially above world levels, exports are very expensive. We now subsidize wheat to an amount of about 80 cents a bushel in order to reach the world market, and we subsidize cotton by about 6 or 7 cents a pound. Exports sales are part of the answer to our agricultural abundance, but not the whole answer.

Shall we give the commodities away? Yes; we should and we are, to the extent that we can do so constructively. This past fiscal year we donated more than 2 billion pounds of farm products to public agencies, charitable organizations, and needy persons at home and abroad. Forty percent of these donations went to people in our own land. But if we push donations beyond a certain point we only displace what would otherwise be purchased; we achieve no net increase in food use. And, as anyone knows who has worked with charitable organizations, it is far from easy to develop programs that are genuinely helpful in the long run, both to him who gives and him who receives.

Shall we put our excess productive capacity into the soil bank? Yes; and we are doing this, chiefly through the acreage-reserve program. But this is temporary and costly. It would be difficult to justify the continued payment of such sums as would be needed to operate a permanent acreage-reserve program. And a permanent program which subsidizes nonproduction is contrary to our tradition.

Shall we destroy food, or let it spoil? No; we should not, and we have exercised every safeguard to prevent spoilage. Our people would not condone such moral bankruptcy or such economic waste. The capacity to produce abundantly is a blessing; the challenge is to make wise use of this abundance.

Is there any way out of this impasse? After we have sold what we can for export, after we have given away whatever we can donate constructively, after we have put the soil bank into operation and still have more farm products than we can use, is there anything else we can do?

I am convinced that the answer is "Yes."

We can so price our products that we reduce the incentive for overproduction.

We can price our products so they will move into use.

We can move away from acreage-control programs that do not control.

We can expand markets for industrial and nonfood uses—as we are doing in our increasingly vigorous research programs.

We can give special attention to the problems peculiar to small farmers—as we are doing in the rural-development program.

We can, above all, build up our markets for livestock products—milk, meat, and eggs—wholesome, tasty, nutritious foods that people can and will purchase in greater quantities if the price is attractive.

If we consume more of our food in the form of livestock products, then we need the output of many more acres.

When we move from producing an acre of corn used as corn to an acre of corn fed to hogs, we greatly reduce the caloric output.

When we move from using the acre for corn and hogs to using it for grass and beef, we reduce the caloric output even more.

Livestock condense about 7 pounds of dry matter in the form of grain and other feed

to about 1 pound of dry matter in the form of meat, milk, and eggs. The other 6 pounds are used for heat and energy or are wasted and cannot be recovered by man. Thus, far more agricultural resources are needed to provide a diet which contains a high percentage of livestock products.

Increasing and decreasing the livestock population is the time-honored method of adjusting the food supply to changing needs. The amount of flexibility provided by this system is tremendous.

The American consumer has been increasing his consumption of livestock and poultry products. But on a per capita basis he is still behind the Australian, the New Zealander, or the Argentinian in meat consumption. We can go further in shifting consumption to milk, eggs, and other highly nutritious livestock products.

Markets for more animal products must be potentially available before we begin producing for them. Expansion in output of meat animals, poultry, and dairy products should occur only gradually; sharp increases can be disastrous, as we found a little over a year ago with hogs. But we have been moving toward an animal agriculture during the past 20 years and we can move further.

The present mandatory price-support acreage-control program for corn, based on legal formulas, has the opposite philosophy. Its objective is scarcity. Corn acreage, cut back by the control program, is now at the lowest level in 66 years. This program has reduced corn acreage in the Corn Belt and increased it in California, Washington, Oregon, and other areas. To a degree the Corn Belt has foregone its natural advantage in feed-grain production and has defaulted to the West, the South, and the Northeast. The corn-producing areas has been spread out and diluted. Nineteen years ago, when the commercial corn area was laid out for acreage-control purposes it included parts of 12 States. Now it includes parts of 24. Originally it included 566 counties; now it includes 894.

But even more amazing is the size of the corn allotment in the commercial area. In 1938 the allotment totaled 40,491,279 acres; for 1957 the allotment is 37,288,889 acres. With a smaller pie being cut into more pieces, is it any wonder that most corn producers here in the Corn Belt prefer to ignore their allotments?

Corn is the major feed grain, far exceeding in importance all the other feed grains combined. But the other feed grains are moving up. By cutting back on corn, the program has provided an opportunity for an expansion in the acreage of competing feed grains such as barley and sorghum grain.

The program has also caused serious and costly storage difficulties. Since early this year, the Department of Agriculture has been carrying out a broad reconcentration program to move Commodity Credit Corporation stocks out of the Corn Belt. We faced special problems in handling 1956 crop loan stocks of corn which will be turned over to the Corporation this summer.

Some CCC corn has been moved out of the area into commercial storage in nearby regions. Some has been sold locally, including corn from the bin sites which was classified as nonstorable. Some has been sold for export. Altogether, about 245 million bushels of CCC corn have been involved in this movement. In addition, from 50 to 60 million bushels of wheat and other small grains have been moved to the Southwest, to make more storage available near the Corn Belt.

We have now nearly met the objectives of this special movement of CCC stocks.

I cite this as just one of many pressing problems occasioned by the present price-support acreage-control program.

Are corn farmers willing to move in the direction of competitive pricing, more freedom, and growing markets?

It appears that they are. More than 61 percent of the corn farmers who voted in last fall's referendum expressed a preference for greater freedom to plant, coupled with greater flexibility of price supports. Yet, because the law required a two-thirds vote to carry, corn farmers today continue under a program which the majority of them have disapproved.

We now have this interesting situation:

A clear majority of the corn farmers have expressed a willingness to move toward greater freedom of operation and greater reliance on our marketing system. Yet the law has not been changed.

Clearly, the corn farmers have given leadership in the direction of freedom and enterprise, the institutions which have made America great.

Do we lack the courage to strike a legislative blow for freedom when the people directly concerned have, in effect, requested it?

We have heard, until now, that economic freedom is lost because the people most concerned bargain it away in exchange for security. The leaders of the people, we are told, cannot stand against the strong popular urge for what is considered to be economic security. That this does in fact occur I readily acknowledge.

But how shall we then explain a circumstance in which the people themselves request less Government interference, but their Government will not relax its paternalistic grip?

We have come a far way indeed, in this land of liberty, when we continue to impose on a particular group of farmers, against the will of the majority, control programs which do not control, and support programs which pile up surpluses and lose markets.

There are more than 200 farm products for which we are authorized to provide price supports. For 6 of these, corn among them, programs are in effect to control production and to support prices according to a legal formula.

These 6 commodities bring in only 25 percent of our farm income.

Yet for these 6 commodities, surpluses are greater, costs are higher, infringements on individual liberty are more extensive, international relations are placed in greater jeopardy, and farmer complaints are more vociferous than for all the other of the 200 commodities combined.

Experience has demonstrated the shortcomings of the present control programs.

Farmers who produce certain commodities, such as soybeans and livestock, have demonstrated that realistic pricing can build markets and increase net income.

Half the corn farmers choose to ignore the supposed benefits of the control program. They plant in excess of their allotments.

Corn farmers have asked, in a referendum, that the paternalistic grip of Government be relaxed.

Is there, then, any good reason for maintaining the corn program in its present form?

The price-support program for basic commodities was originally designed to combat a general depression, and had considerable justification on that basis.

The program was overhauled during the war for the purpose of expanding production, a need which it served in acceptable fashion.

Our present need is not that of combating a general depression, nor of stimulating production to meet the demands of war. Our need is for agricultural adjustments to accommodate the tremendous technological revolution through which agriculture is passing. And it is time to make the program changes called for by these new conditions.

The largest farmer organization in the country, the American Farm Bureau Federation, has said so.

Most of the professional research institutions which have studied the problem have said so.

The corn farmers, voting with both their corn planters and their referendum ballots, have said so.

These voices are being heard in a growing crescendo.

What judgment will history record of leaders who fear to move as far in the direction of freedom as those whom they represent?

We should ever lend our ears to voices raised in behalf of freedom, responsibility, and enterprise. The most glorious pages of history result from giving audience to the plea for freedom; the darkest pages result from its denial.

God grant that we hear the voice of freedom, that we give leadership to it and that we act upon it in the best tradition of liberty-loving people everywhere.

Report to the People of New York

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 17, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a report by me to the people of the State of New York on the 1st session of the 85th Congress.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE OF NEW YORK, 85TH CONGRESS, 1ST SESSION, SPRING 1957

Our republican form of government imposes upon a representative of the people in the National Legislature the responsibility to seek to ascertain the thinking of the voters of his State and also to report to them his own thinking and record of performance. This is the first of a series of such semiannual reports which I propose to make to the people of New York as their Senator.

PROSPECTS FOR PEACE AND FOREIGN AFFAIRS

While the United Nations still remains man's great hope for peace, the United States must continue its position as the leader for world peace both within and without the United Nations.

Early in the session, the Congress passed the President's Mid-East doctrine, which I actively supported, stating American interest in the active preservation of peace in the Middle East. The dispatching of the 6th Fleet to the eastern Mediterranean in the Jordan crisis and the extending of financial aid to bolster the Jordan Government illustrate the first successful operation of this doctrine. There can be no doubt that the maintenance of a firm peace in the Middle East is essential to United States security. The United Nations emergency force has helped to maintain the peace in the sensitive Gulf of Aqaba, and in the Gaza area and to discourage Fedayeen guerrilla raids from there. I am supporting the effort to make permanent this U. N. peace force.

In recognition of the importance of an unimpaired and continued flow of vital oil to the Free World, which constitutes 60 percent of the traffic through the Suez Canal, 5 of my Senate colleagues joined with me in the sponsorship of a resolution expressing the sense of the Senate that our Government should consult with major users of the Suez Canal for the purpose of considering collective action to establish and internationalize

alternate means for traffic now moving through the canal. Pointing up the importance of the adoption of such a resolution, the State Department has informed me that the Department is doubtful of the adherence by Egypt to the six principles for operation of the canal which was adopted by the United Nations and to which Egypt agreed and that the United States, in concert with Great Britain and France, is already actively considering the feasibility of alternate routes.

I am constantly opposing the restrictions against the admission to our own Dhahran Air Force base of United States citizens and soldiers of Jewish faith on the basis of religious faith in Saudi Arabia.

I have introduced legislation and am working otherwise to aid the victims of religious and Communist inspired persecution in Egypt and there is hope that a reasonable number of these persecuted people will be admitted into the United States through administrative means utilizing the parole provision of the Immigration and Nationality Act.

American tourists are once again permitted to visit Israel. United States aid to Israel, which has so dramatically demonstrated its role as an effective and strong ally of the Free World in the Mid-East, is being resumed after having been temporarily suspended due to the Suez-Sinai hostilities. Above all, I am working for achievement of an effective and permanent peace solution in the Middle East to end the blockade and boycott of Israel, resettle the Palestine Arab refugees in Arab lands, bring about security for the borders of the nations in that area and secure freedom of transit for all, including Israel, through the Gulf of Aqaba and the Suez Canal.

I shall support the programs for foreign military, economic and technical assistance and for the United States Information Agency as proposed to the Congress. They should be developed and implemented as vital to peace and United States security. American private investment abroad, now standing at over $32 billion and increasing at the rate of $2.5 billion annually, offers us an excellent opportunity to supplement and eventually to replace at least some of our foreign economic and technical aid. I am readying some constructive programs to implement participation of the private sector in foreign aid.

The Congress passed the Agricultural Trade Development Act authorizing barter transactions of surplus agricultural commodities to distressed peoples in Poland and other satellite nations, implementing our Government's program of seeking to help any such satellite nations which show an indication of independence.

I have opposed the effort to liquidate and return to Germany and Japan certain assets vested during World War II. The question of return of vested enemy alien assets should not be confused with Germany and Japan's postwar roles as partners in Free World defense and in assuming their responsibilities as democratic nations nor be identified with our friendship for these nations. Many claims of American citizens against Germany and Japan for losses which occurred during the war remain still unsettled. No matter what the status of these individuals at the time of their loss, the fact that they are presently American citizens merits our Government's support in obtaining redress and I am vigorously supporting the effort to gain just compensation for these persons.

I joined Senator IVES in his resolution calling for self-determination for the people of Cyprus, and also worked in the effort to secure mercy for some of the young pro-Greek patriots being tried by the British administration there.

AGRICULTURE

In the past 10 years while the price of food at retail has risen 16 percent, prices paid to the farmer have in contrast declined 14 percent. It is essential that the farmer receive his fair share of the food dollar.

The difficulties experienced in the milk crisis have abated, and a single marketing order has now been recommended for the New York metropolitan area, northern New Jersey and upstate New York. The net result of this order, it is hoped, will be to eliminate the longstanding inequities which have faced the milk producers of our State and could result in substantial improvement in their returns.

Together with my colleague, Senator IVES, I am cosponsor of S. 1808 to provide Federal assistance for rehabilitation of orchards destroyed or damaged by natural disaster. I voted for the $25 million drought-relief measure which passed the Senate, but opposed the increased corn-acreage bill which failed of passage in both the House and the Senate as this bill would increase the burden of Government expenditure while offering no definite relief in corn prices.

BUDGET AND TAXES

Our people have properly expressed a deep interest in the $73 billion budget ($71.8 expenditure in 1957–58) submitted to the Congress, economy in Government operations, minimizing the effect of Federal spending on inflation and reducing the tax burden insofar as possible. But the issue of our national security—which includes our Armed Forces and foreign military economic and technical assistance and information programs cannot be compromised in the interests of all our people. So, too, urgent measures like emergency Federal aid to school construction where States cannot effectively help themselves, compel our attention. Our duty here is to be responsible to the Nation's urgent needs.

A budget cut of in the range of $2 to $3 billion is, I believe, possible without endangering the national security and essential programs. The recommendations of the Hoover Commission offer opportunities for increased Government efficiency. I am a cosponsor of S. 1585 which passed the Senate on April 4. This measure establishes a Joint Committee on the Budget which would enable Congress to better analyze and act on the literally tens of thousands of items in the 1,100-page Federal budget. In the interests of reducing unnecessary expenditures I am also opposed to appropriations required for the $1.5 billion "pork barrel" rivers and harbors bill which passed the Senate and is presently pending in the House.

The Tax Rate Extension Act of 1957 (Public Law 85–12) was enacted into law extending for 18 months excise and corporate income tax rates. I am looking forward to the reduction of these temporary levies imposed as a wartime emergency measure. I was 1 of 7 Senators willing to vote on registering opposition to the 27.5 percent depletion allowance extended to producers of petroleum whom I believe should no longer be extended so much in special tax exemption privileges passing the burden to other segments of the national economy.

I have again introduced the bill, originally suggested by a constituent, which would grant to the physically handicapped the same $600 tax exemption now given the blind. As Federal expenditures can be reduced, the savings thus attained should be passed on in the form of selective tax relief, especially to families of modest income, small businesses, older citizens, and the handicapped, and for national debt reduction.

In recognition of the competition with private investment and savings faced by Government bonds, the Congress enacted legislation which raised the interest rate on the Series E Savings Bonds generally acquired by small investors from 3 percent to 3.26 percent.

CONSUMERS

While the cost of living has risen to an all-time high of 118.9 (1947–49=100) prices have remained relatively stable as compared with the period of runaway inflation experienced prior to 1952. Employment and personal income remain at peak levels although there are soft spots in some individual industries and areas which merit special attention.

Under authority of Senate Resolution 64, of which I was a cosponsor, the Senate has been investigating the high prices of oil and gasoline and the Department of Justice has since instituted an inquiry of its own to determine whether there have been any violations of our antitrust laws.

The Congress passed the poultry inspection bill which gives the housewife and her family the same assurances of sanitary protection on poultry that the American consumer has enjoyed for years on meat. I have introduced a measure authorizing the Senate Committee on Interstate and Foreign Commerce to conduct a study of the consumer services rendered by the Federal Establishment and how these might be best coordinated and expanded for the maximum public benefit.

CIVIL RIGHTS AND CIVIL LIBERTIES

As a member of the Senate Rules Committee, I sought the establishment of a special ad hoc committee to consider modification of rule XXII, the so-called filibuster rule, which is the key to passage of civil rights legislation. In addition to being a member of this subcommittee, I am also a cosponsor of the Douglas amendment to end the filibuster on terms of fair debate. So far even the President's civil rights proposals—a modest, indeed a minimal program—have been bottled up in the Senate Judiciary committee, but they seem on the way to passage in the House. As a sponsor of several civil rights measures, I testified before both the House and Senate committees and have pledged to join in an effort to discharge the Senate committee from consideration of the President's civil rights program in order that it might be brought to the Senate floor for debate and passage. It will be a fight all the way.

The case of Canada's Ambassador Norman has again pointed up the necessity for rules of procedure for Congressional investigating committees. To this end, I am the sponsor of Senate Resolution 123 which would establish rules of procedure for Senate investigating committees, based on recommendations submitted by the Bar Association of the City of New York and recommendations contained in Senate Resolution 17 which, after lengthy hearings in the last Congress, was approved by the Rules Committee but failed to gain consideration in the Senate itself.

EDUCATION, HEALTH, AND SOCIAL SECURITY

Of the 1,400,000 young Americans graduating from high schools throughout the country this year, some 200,000 who are of college caliber will not be able to continue their education due to financial reasons. I am the sponsor with other Senators of the Education Loan Act of 1957 which would establish an 8-year $1 billion program of Federal loan insurance and loans to aid these young people who merit it. I also joined in the sponsorship of S. 1728 to extend Federal help to State maritime colleges and the Kings Point Academy in our State.

Acting on the suggestion of a constituent, I introduced S. 1475 to increase from 18 to 21 years the age limitation for receiving social security orphan benefits where the individual concerned continues in school. Although the Congress last year enacted a comprehensive revision of the social security law, the realities of the increased cost of living make necessary a continuing reappraisal of social security statutes. Readjustment of benefit payments, simplification of the ac-

counting procedure so as to permit one annual report by employers instead of four quarter-annual reports and other improvements merit early Congressional action.

I joined in sponsoring the Juvenile Delinquency Control Act which would carry out the recommendations of the President authorizing grants to assist States in fighting juvenile delinquency and also three bills bolstering the efforts in the States to deal with narcotic drug addiction.

HOUSING

Housing starts for April, the latest reporting date, were at a rate of 940,000 annually. In order to meet new family formations and to replace outmoded housing, 1.5 million housing starts annually are required. In order to alleviate the housing shortage and hold down rising interest rates, Congress increased by $50 million the capitalization for the Federal National Mortgage Association (FNMA) which has the effect of increasing by $500 million that agency's borrowing authority, thus providing some immediate relief of the home loan funds shortage through secondary mortgage market operations. Also increased from $200 million to $250 million was the money allotted FNMA to purchase military housing mortgages. In addition, the Federal Housing Administration, acting under Presidential authority, lowered by 2 percent the downpayment requirements for homes having FHA loan guaranties.

Also I am cosponsoring for middle-income housing a measure establishing a $1 billion loan fund for families of moderate income. A bill just passed by the House of Representatives and coming over to the Senate proposes a decrease in FHA downpayments, placement of the GI home loan program under FHA so as to permit its effectual continuation after the GI loan program's scheduled expiration next year, increases FNMA funds for secondary mortgage market operations by $1 billion, increases slum-clearance authorization by $250 million and strengthens the military housing and urban renewal programs.

Veterans are experiencing great difficulty in obtaining GI home loans and the pressure to raise the interest rate on VA-guaranteed home loans continues strong. I joined in sponsoring and testified in committee urging passage of the Johnson bill which would make available for direct lending for GI homes $1.3 billion of national service life insurance funds. Before increasing mortgage interest rates for VA-guaranteed loans, we should make this effort to relieve the pressures in the home loan money market.

IMMIGRATION

The McCarran-Walter Act still stands on the statute books as a refutation of our traditional American ideals of justice and hospitality. The administration is supporting legislation in which I have joined and I am also sponsoring independent legislation which would rewrite this law so as to eliminate its injustices and make more realistic the admission of immigrants to our shores, permitting a pooling of quotas and utilizing the 1950 instead of the outmoded 1920 Census. Under this legislation the overall number to be admitted would be 220,000 against the present 154,000 under the quota provisions of the law only about 80,000 of which are used; plus provisions for refugees and escapees.

Although some 26,000 Hungarian refugees have come into the United States under the emergency parole provisions of the law (plus 7,000 under the Refugee Relief Act now expired), the Congress still must act to give status to these refugees and those who are still coming in and to enable the United States to take our fair share of these and similar refugees, such as the victims of Colonel Nasser's persecution who have been ejected from Egypt. I have joined in introducing legislation to accomplish this as well as to facilitate the adoption by United States families of children orphaned by war and disaster abroad.

LABOR

The current investigations by the Select Senate Committee on Improper Activities in the Labor or Management Field (the McClellan committee) have disclosed abuses which should be redressed, but these revelations should not be misused by those who would destroy the gains made by the rank and file of labor to enact negative legislation like the so-called right-to-work laws. I am supporting the President's proposal for protective regulation of union welfare and other funds as a constructive means to assure honest and effective administration of these moneys for the benefit of the working people for whom they were originally established. But I am opposed to right-to-work laws. These laws have a deceptive name for they would seriously prejudice the normal processes of collective bargaining and the maintenance of trade unionism as a means to bring about collective bargaining agreements.

The Congress is presently considering the administration's recommendations for amendments to the Fair Labor Standards Act to extend the provisions relating to minimum wages and hours to retail and service establishments above a stated size. It must be kept in mind that in New York State there is already considerable effective work in respect of minimum wage standards established by boards under the State's laws. I shall seek protection for employees in retail and service establishments as to standards of minimum wages and maximum hours but giving recognition to State laws where they maintain adequate standards using the test of the Federal wage and hour law.

I have joined in the sponsorship of S. 1067 which would extend the unemployment compensation program to Puerto Rico.

NIAGARA POWER AND NATURAL RESOURCES

At a cost approximating $600 million, the Niagara power project will be the largest project of its kind in the Nation. I have supported its development by the Power Authority under New York State law for the benefit primarily of rural and domestic consumers in the project's economic market area; with full protection to the field of cooperative and municipal systems and the use of existing transmission systems.

I joined in sponsoring S. 1144 to amend the Federal Highway Act so as to provide inclusion of parkways in federally aided highways and have favored billboard controls on Federal roads similar to those in effect in New York State.

In the interests of conservation as well as economy, I opposed authorization of construction of the Bruces Eddy Dam which measure passed the Senate. However, before the dam can be built it will still be necessary for Congress to appropriate the necessary funds.

There has been much protest from our citizens concerning the Kinzua Dam which would affect the Cornplanter and Alleghany Indian Reservations. The rights of the Seneca Indians should be given full weight in this controversy.

POST OFFICE AND CIVIL SERVICE

The public must be assured of a postal service commensurate with our power, dignity and national needs. It is the duty of Congress to see that the Post Office Department is operated at proper efficiency and minimum cost and that postal employees are justly dealt with. The 1956 postal deficit of $433,900,000—an increase of 27.9 percent from 1945—imposes serious problems. Legislation is presently being considered in the House of Representatives which would increase first-class mail rates for the first time in a generation; the Senate committee is undertaking a comprehensive study of the entire theory of Government postal operations, the need for this study having been dramatically pointed up by the recent crisis in post office funds which brought on temporarily serious curtailment of services. Any increase in postal rates must be given due effect as to all classes of mail and their capacity to pay their own way.

The pressures that the increased cost of living imposes upon both civil service and postal workers and retired employees who can look only to the Congress for relief is getting intolerable. Consequently I am working hard for legislation for adequate pension and pay for postal employees and for civil-service employees to be enacted without delay. I sponsored S. 1476 which would permit postal employees to enjoy at least one State holiday, such as Columbus Day, annually.

SMALL BUSINESS

In addition to appropriating $45 million in order that the Small Business Administration could continue its lending operations until the end of this fiscal year, June 30, 1957, Congress also increased by $80 million the business loan authorization of the SBA.

I joined in the sponsorship of legislation establishing the Small Business Administration as a permanent agency, and also S. 1563 which would permit many small businesses to take a straight 10-percent deduction on their income tax for routine deductible items, as is done on the personal income tax, thus saving the expense of enumerating the numerous individual items.

I voted against the Fulbright amendment, offered ostensibly as a small business tax-reduction rider for corporations only to the Tax Rate Extension Act which sought to maintain corporate tax rates at present levels as otherwise the law keeping them at that level would have expired. As the situation stood, it was a matter of hours in order to pass the measure and a controversial amendment would have delayed enactment with serious consequences to the country; also only about 12 percent of small businesses are incorporated—the remaining 88 percent would have been discriminated against. I fully expect to support tax relief for small business just as soon as we have established our right to it with some budget reduction.

Hearings are presently in progress on S. 11, amending the Robinson-Patman Act to provide that the so-called good-faith defense is not a substantive defense in some cases. Small business, for which this law was originally enacted, must continue to have consideration in any amendment, but consumers need to be protected as well. An essential element in maintaining our economy is the facility with which competition may be pursued.

VETERANS

I am supporting the measure to create a Veterans' Committee in the Senate which is presently pending before the Rules Committee of which I am a member.

As long as we have compulsory military service, the GI bill educational benefits should be extended to include those presently entering the Armed Forces. I joined in sponsoring S. 1088 to permit World War II and Korean war veterans to obtain national service life insurance if they had neglected to apply for it previously or if their policies had lapsed. The high cost of living impels a reappraisal of pensions and benefits for disabled veterans and their families. Such adjustment measures are now under active consideration in the Congress.

MATTERS OF ESPECIAL INTEREST TO NEW YORK STATE

The efforts in which I joined to continue the essential commuter services of the Hudson & Manhattan Railway were successful; unfortunately, similar efforts in behalf of the Ontario & Western Railroad could not be consummated due to the unsalvageable condition of that road's economic structure.

I continue my efforts on behalf of station WRGB and to preserve television service for the people of Schenectady and the surrounding area. I joined in the sponsorship of legislation for additional Federal judges to relieve the overcrowded court dockets in New York, to provide $165,000 for construction of a water-filtration plant at Highland Falls, and to provide for Federal sharing of relocation costs in the case of home occupants and small businesses displaced as a result of the Federal highway-construction program.

Many of our citizens have written me concerning the proposed Lincoln Square urban-renewal project in New York City. I continue my work for fair relocation practices for tenants and small business. The inclusion of a portion of Fordham University as a part of the proposed project is a matter presently pending in the courts and will be decided in accordance with judicial concepts of the appropriate constitutional and legal principles involved.

MISCELLANEOUS ISSUES

I have introduced legislation creating a United States Arts Foundation which would help foster the development of the performing arts in areas of the Nation where they are not now adequately available by giving some help to nonprofit groups—including colleges and universities—but engaging in no production on its own. The cultural resources of our Nation should be developed and encouraged at a time of our greatest prosperity and when the cost can be minimized.

As a member of the Senate Committee on the District of Columbia, my experience as New York State attorney general is proving of some help in bringing into being for the District of Columbia laws which have proven successful in our own State, such as controls to prevent charity rackets. Measures once enacted into law in the District of Columbia have in the past served as models for similar State statutes throughout the country.

CONCLUSION

I trust that you will continue to write me about your views and suggestions on matters of national interest. I shall endeavor to respond always, and as fully as time and staff permit.

SENATE

MONDAY, MAY 20, 1957

The Senate met at 11 o'clock, a. m.

Maj. Fay Gaugh, of the Salvation Army, southern territory headquarters, Atlanta, Ga., offered the following prayer:

Eternal God, our Father, we humbly approach Thee to ask Thy blessing upon the purposes and work of this assemblage. We thank Thee for these of our citizenry who have consecrated their temporal and spiritual powers to our country's highest good and who are helping to protect and enlarge our hallowed privileges and freedoms.

Guide them in their tasks, that through their deliberations our Nation may continue to enjoy a greater measure of human health, happiness, and prosperity. Strengthen their sense of duty, and aid them in upholding the sacred trust that has been placed upon them. May their minds be made sensitive to Thy will and their ears attentive to Thy voice.

Grant that no hate, pain, or any love of earth shall blind us to our heavenly heritage.

With humility we bow our hearts in deep gratitude, realizing that despite our faults You love us still. Give us grace to serve Thee faithfully day by day.

This we pray in the name of the Father, the Son, and the Holy Spirit. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Journal of the proceedings of Friday, May 17, 1957, was approved, and its reading was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

LEAVE OF ABSENCE

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator from Georgia [Mr. TALMADGE] be given leave of the Senate from today through Saturday, May 25, to attend the Inter-American Trade Conference in Rio de Janeiro, Brazil, as a representative of the Senate Committee on Agriculture.

The VICE PRESIDENT. Without objection, leave is granted.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Post Office and Civil Service was authorized to meet during the session of the Senate today.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Judiciary Subcommittee of the Committee on the District of Columbia was authorized to meet during the session of the Senate today.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Permanent Subcommittee on Investigations of the Committee on Government Operations was authorized to meet today during the session of the Senate.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business, for the purpose of considering the nominations on the Executive Calendar, beginning with the nomination of United States Alternate Governor of the International Monetary Fund.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF A COMMITTEE

The following favorable reports of nominations were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

Harold K. Wood, of Pennsylvania, to be United States attorney for the eastern district of Pennsylvania, vice W. Wilson White, resigned;

Lloyd H. Burke, of California, to be United States attorney for the northern district of California;

Frederick W. Kaess, of Michigan, to be United States attorney for the eastern district of Michigan;

John O. Henderson, of New York, to be United States attorney for the western district of New York;

Howard C. Botts, of Ohio, to be United States marshal for the southern district of Ohio;

Bernard A. Boos, of South Dakota, to be United States marshal for the district of South Dakota;

Clement W. Crahan, of Iowa, to be United States marshal for the northern district of Iowa;

George W. Beach, of New Mexico, to be United States marshal for the district of New Mexico;

William E. Smith, of New York, to be United States marshal for the eastern district of New York;

William Budd Parsons, of Washington, to be United States marshal for the western district of Washington; and

Saul Hale Clark, of Idaho, to be United States marshal for the district of Idaho.

By Mr. WATKINS, from the Committee on the Judiciary:

A. Pratt Kesler, of Utah, to be United States attorney for the district of Utah.

By Mr. O'MAHONEY, from the Committee on the Judiciary:

Noah W. Riley, of Wyoming, to be United States marshal for the district of Wyoming.

The VICE PRESIDENT. If there be no further reports of committees, the nominations on the calendar will be stated, beginning with the nomination of United States Alternate Governor of the International Monetary Fund.

INTERNATIONAL MONETARY FUND AND THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

The Chief Clerk read the nomination of C. Douglas Dillon, of New Jersey, to be United States Alternate Governor of the International Monetary Fund and the International Bank for Reconstruction and Development for the term of 5 years.

The VICE PRESIDENT. Without objection, the nomination is confirmed.

DIPLOMATIC AND FOREIGN SERVICE

The Chief Clerk proceeded to read sundry nominations in the Diplomatic and Foreign Service.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that these nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations in the Diplomatic and Foreign Service will be considered en bloc; and, without objection, they are confirmed.

NOMINATION OF JOSEPH S. FARLAND TO BE AMBASSADOR TO DOMINICAN REPUBLIC

Mr. REVERCOMB subsequently said: Mr. President, earlier in the day the Senate confirmed the nomination of Mr. Joseph S. Farland, of West Virginia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Dominican Republic.

This action affords me a great deal of pleasure. Mr. Farland is an outstanding citizen of my State. He has served with distinguished ability as an adviser in the State Department. I take this opportunity not only to express my personal pleasure, but to say that I know of many citizens of the State of West Virginia who know Mr. Farland, and who are pleased by the action, and who feel certain that when he goes to the Dominican Republic he will render a great service on behalf of his country in the post to which he has been appointed and in which he is now confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to announce, for the information of the Senate, that it is our purpose to have the Senate consider the third supplemental appropriation bill today, and then to take a recess or adjourn, in the hope that two other appropriation bills will be available this week, namely, the appropriation bill on general Government matters and the Department of the Interior appropriation bill. I do not know whether the Senate will be able to take up those bills before Friday; but I should like to have the Senate on notice that we hope it will be possible for the Senate to consider them on Friday, or even on Saturday, if that becomes absolutely necessary.

I expect to have the calendar called sometime during the middle of the week, depending upon the progress the Senate makes today on the third supplemental appropriation bill.

Mr. President, I should like to announce that I am informed that some Members on the minority side of the aisle will request yea-and-nay votes in connection with certain matters to be taken up today. I should like the attachés of the Senate to be informed of that fact, so that all Senators now absent from the Chamber may have advance notice that their presence may be desired later in the day.

Mr. President——

The VICE PRESIDENT. The Senator from Texas has the floor.

TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour, for the introduction of bills and the transaction of other routine business. In that connection, I ask unanimous consent that statements be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

AUTHORIZATION FOR CERTAIN PERSONS TO WEAR RESERVE OFFICERS' TRAINING CORPS UNIFORM

A letter from the Secretary of the Air Force, transmitting a draft of proposed legislation to authorize certain persons to wear the uniform of a reserve officers' training corps (with an accompanying paper); to the Committee on Armed Services.

AMENDMENT OF FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT OF 1949, AS AMENDED

A letter from the Administrator, General Services Administration, Washington, D. C., transmitting a draft of proposed legislation to amend the Federal Property and Administrative Services Act of 1949, as amended, and for other purposes (with accompanying papers); to the Committee on Government Operations.

PUBLICATION ENTITLED "FEDERAL POWER COMMISSION REPORTS, VOLUME 11"

A letter from the Chairman, Federal Power Commission, Washington, D. C., transmitting, for the information of the Senate, a copy of its newly issued publication entitled "Federal Power Commission Reports, Volume 11" (with an accompanying document); to the Committee on Interstate and Foreign Commerce.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Three letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

GRANTING OF STATUS OF PERMANENT RESIDENCE TO CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders granting the applications for permanent residence filed by certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien, and the reasons for granting such applications (with accompanying papers); to the Committee on the Judiciary.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Acting Archivist of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution of the House of Representatives of the State of Missouri; to the Committee on Post Office and Civil Service:

"House Resolution 117

"Whereas salary increases provided in the recently enacted Public Law 68 are totally inadequate and postal employees are steadily falling farther and farther behind the ever increasing cost of living; and

"Whereas this inadequacy is demonstrated in many ways and in particular in that post-office jobs go wanting; and

"Whereas salaries of postal employees have for several years lagged far behind the salaries of comparable jobs in private industry; and

"Whereas the workload of postal employees has increased tremendously in the past few years without proportional increase in the number of employees indicating that their production has also shown considerable increase: Therefore be it

"*Resolved*, That the Missouri House of Representatives go on record as endorsing the salary adjustment for postal employees commensurate with that in private industry and which will give adequate recognition of the increased productivity of postal employees, and to that end urges the Congress of the United States to vote for and support H. R. 2474; and be it further

"*Resolved*, That duly inscribed copies of this resolution be transmitted to the Presiding Officers of the Senate and House of Representatives of the United States, to the Missouri Congressmen and to the two Missouri Senators."

Two concurrent resolutions of the legislature of the Territory of Hawaii; to the Committee on Interior and Insular Affairs:

"Senate Concurrent Resolution 55

"Concurrent resolution requesting the Congress of the United States to amend the Hawaiian Organic Act so as to raise the maximum debt limitation

"Whereas the economy of the Territory of Hawaii has developed and expanded greatly in recent years; and

"Whereas for the further development and expansion of its economy, the Territory requires extensive public improvements; and

"Whereas the limitations imposed by section 55 of the Hawaiian Organic Act unnecessarily delay the undertaking of needed public improvements; and

"Whereas the present and foreseeable future economy of Hawaii can readily provide for the repayment of general obligation bonds in amounts substantially larger than those now permitted under the provisions of the Hawaiian Organic Act: Now, therefore, be it

"*Resolved by the Senate of the 29th Legislature of the Territory of Hawaii (the*

House of Representatives concurring), That the Congress of the United States be and it is hereby respectfully requested to enact legislation amending the Hawaiian Organic Act so as to raise from 10 percent of the assessed value of property in the Territory to 15 percent of such value, the maximum limitation on the total amount of bonded indebtedness of the Territorial government; and be it further

"*Resolved*, That duly authenticated copies of this concurrent resolution be transmitted to the Delegate to Congress from Hawaii, the Secretary of the Interior, and the Senate and House of Representatives of the Congress of the United States."

"Senate Concurrent Resolution 61

"Concurrent resolution requesting the Congress of the United States to provide for a Federal contribution to the Hawaiian home loan fund for other purposes

"Whereas there has been little progress in the development of Hawaiian home lands under the Hawaiian Homes Commission because of a lack of funds; and

"Whereas the Hawaiian Homes Commission has been unable to adequately finance any program to aid in the development of Hawaiian Homes Commission lands; and

"Whereas there is presently under the jurisdiction of the Hawaiian Homes Commission much land that can be made available to the Hawaiians if funds are available to improve the lands in question: Now, therefore, be it

"*Resolved by the Senate of the 29th Legislature of the Territory of Hawaii (the House of Representatives concurring)*, That the Congress of the United States of America is respectfully requested to enact into law H. R. 577 introduced by our honorable Delegate to Congress, JOHN A. BURNS, in the 1st session of the 85th Congress, to insert the sum of $10 million as the amount to be appropriated under the quoted portion of subsection (a) of section 2 of the bill and to insert the sum of $10 million as the amount to be appropriated under subsection (b) of section 2 of the said bill introduced as H. R. 577; and be it further

"*Resolved*, That certified copies of this concurrent resolution be transmitted to the President of the United States of America, the President of the Senate and the Speaker of the House of Representatives of the Congrss of the United States, the Secretary of the Interior and to the Delegate to Congress from Hawaii."

The petition of Kathryn Bush, of Washington, D. C., relating to Federal expenditures; to the Committee on Appropriations.

UNIFICATION OF GERMANY—RESOLUTION

Mr. CARLSON. Mr. President, yesterday I spoke at the fifth German-American Day sponsored by the Federation of American Citizens of German Descent at Schuetzenpark, North Bergen, N. J.

This was a great gathering of American citizens of German descent. The motto of the federation is, "I believe in the United States of America as a government of the people, by the people, and for the people."

On this occasion the day was dedicated to the honor of Gen. Peter Muhlenberg, who was born in Montgomery County, Pa., on October 7, 1746, and played a very prominent part in the early history of this Nation. He served as a general in the Continental Army, as a Member of the First Congress in 1789 and was elected to the Third and Sixth Congresses. In 1801 he was elected to the United States Senate.

In speaking to this gathering, I stressed the fact that we have a magnificent heritage and are indebted to those who gave us this great Nation for the free-enterprise system, with its equality of opportunity.

This organization adopted a resolution urging that one of the main postulates of the foreign policy of the United States be the unification of Germany as a nation.

I ask unanimous consent that the resolution be printed in the RECORD, and appropriately referred.

There being no objection, the resolution was referred to the Committee on Foreign Relations and ordered to be printed in the RECORD as follows:

Whereas the Federation of American Citizens of German Descent in the United States of America, Inc., and cooperating societies throughout the United States are the representative and recognized voices of a large group of American citizens; and

Whereas of late certain groups have issued statements that the insistence of the expelled population of Germany's eastern territories on the return of their ancestral homelands would endanger peace; and

Whereas on the contrary, in the light of history, any violation of territorial rights only tends to poison the political atmosphere between nations, leading sooner or later inevitably to universal catastrophe: Therefore

Resolved, That the federation and cooperating societies assembled at North Bergen, N. J., on German-American Day, May 19, 1957, address an appeal to the Government of the United States to the effect that the indisputable inviolability of German rights to the undiminished territories beyond the Oder Neisse line be made and remain one of the main postulates of the foreign policy of the United States; and further

Resolved, That the secretary of the federation be instructed to transmit a copy of this resolution to the Honorable John Foster Dulles, Secretary of State, United States State Department, Washington, D. C.

NATIONAL CEMETERY IN NEW ENGLAND—RESOLUTION

Mr. KENNEDY. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, a resolution which was unanimously adopted by the voiture of West Middlesex County, Mass., and subsequently adopted unanimously by the Grand Voiture of Massachusetts, concerning a national cemetery in the New England area.

There being no objection, the resolution was referred to the Committee on Interior and Insular Affairs and ordered to be printed in the RECORD, as follows:

LA SOCIETE DES 40 HOMMES
ET 8 CHEVAUX, VOITURE 1418,
West Middlesex County, Mass.

Whereas at the present time there is a definite need for a national cemetery in the New England area; and

Whereas legislation has been initiated in the Congress of these United States of America to establish and procure such a national cemetery: Therefore, be it

Resolved, That West Middlesex Voiture One Four One Eight hereby goes on record as favoring the site of the national cemetery in the central Massachusetts areas; and further

Hereby petitions, The Grand Voiture of Massachusetts and Voiture Nationale to present our views in a favorable light through our legislative representatives of the Forty and Eight in Washington, District of Columbia.

Voted and subscribed unanimously by voyageurs of this voiture on this 5th day of February in the year of our lord 1957 at their regular monthly promenade.

MICHAEL B. GORMELY, Jr.,
Chief de Gare, 1957.

Official:

JOHN J. SHEEHAN,
Correspondant Locale.

Unanimously adopted by the Grand Voiture of the Department of Massachusetts at the Grand Cheminto held in Boston, March 3, 1957.

THE INDUSTRIAL CRISIS IN NEW ENGLAND—RESOLUTION

Mr. KENNEDY. Mr. President, I present for appropriate reference, and ask unanimous consent to have printed in the RECORD, a resolution which was adopted by the elected officials of the city of Lowell, Mass., in regular meeting held on Tuesday, August 28, 1956, relating to the industrial crisis in New England.

There being no objection, the resolution was referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

CITY OF LOWELL,
COMMONWEALTH OF MASSACHUSETTS.

Whereas we the elected officials of the city of Lowell, acting for and in behalf of the employees of the Merrimack Manufacturing Co., recently laid off, and for the entire population of the city, express deep concern over our industrial future; and

Whereas we feel, in view of other curtailments in local plants, that the time has come for drastic governmental action to save Lowell and New England from industrial disaster; and

Whereas it is charged that the main cause of the most recent layoff is due to Japanese imports into this country; and

Whereas unless the Federal Government and the Tariff Commission raise present tariffs and also reduce quotas of foreign importations; this part of the country faces further curtailments and possible complete liquidations of many factories: Now, therefore, be it

Resolved, That the Lowell City Council in regular meeting held on Tuesday, August 28, 1956, appeals to our representatives in Congress to unite in behalf of Lowell and other Massachusetts cities in halting this menace to our industrial life; and be it further

Resolved, That the council adopts these resolutions by a standing vote, and that a copy be inscribed in the permanent records of the council, with other copies to be sent to United States Senators LEVERETT SALTONSTALL and JOHN F. KENNEDY and Representative EDITH NOURSE ROGERS in Washington, D. C.; and be it finally

Resolved, That the council recommends and urges immediate and remedial action

to protect and save our industries and the people who depend on them for their living.

SAMUEL S. POLLARD,
Mayor and Chairman of City Council.
GEORGE A. AYOTTE,
Councilor.
JOHN J. DURESHIRE,
Councilor.
JOHN JANAS,
Councilor.
SAMUEL A. SAMPSON,
Councilor.
RAYMOND J. LORD,
Councilor and Vice Chairman of City Council.
BART J. CALLERY, Jr.,
Councilor.
ROGER S. HOAR,
Councilor.
GEORGE B. MURPHY, Jr.,
Councilor.

Approved:

FRANK E. BARRETT,
City Manager.

A true copy.
Attest:
[SEAL] WILLIAM H. SULLIVAN,
City Clerk.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 80. A bill for the relief of Maria Adelaide Allessandroni (Rept. No. 338);

S. 153. A bill for the relief of Tsui Yung Wong (Rept. No. 339);

S. 160. A bill for the relief of Georgios Ioannou (Rept. No. 340);

S. 164. A bill for the relief of John G. Michael (Rept. No. 341);

S. 499. A bill for the relief of Daniela Renata Patricia Zei (Rept. No. 342);

S. 583. A bill for the relief of Stanislav Maglica (Rept. No. 343);

S. 755. A bill for the relief of Athena Nicholas Euteriadou (Rept. No. 345);

S. 788. A bill for the relief of Thelma Margaret Hwang (Rept. No. 346);

S. 798. A bill for the relief of Giuseppe Baffo (Rept. No. 347);

S. 833. A bill for the relief of Vida Letitia Baker (Rept. No. 348);

S. 834. A bill for the relief of David Ajuelo, Roza Ajuelo, Victoria Ajuelo, and Lizet Ajuelo (Rept. No. 349);

S. 849. A bill for the relief of Sydney Douglas Catchpole (Rept. No. 350);

S. 908. A bill for the relief of Kuo York Chynn (Rept. No. 351);

S. 988. A bill for the relief of Satoe Yamakage Langley (Rept. No. 352);

S. 1112. A bill for the relief of Matsue Harada (Rept. No. 353);

S. 1147. A bill for the relief of Kiyoshi Takahashi, Kyoko Takahashi, and Nosomu Takahashi (Rept. No. 354);

S. 1376. A bill for the relief of Chong You How (also known as Edward Charles Yee), his wife, Eng Lai Fong, and his child, Chong Yim Keung (Rept. No. 355);

S. 1833. A bill for the relief of Janos Schreiner (Rept. No. 356); and

H. R. 1400. A bill for the relief of Mitsuko A. Hachita (Rept. No. 357).

By Mr. EASTLAND, from the Committee on the Judiciary, with an amendment:

S. 525. A bill for the relief of Rhoda Elizabeth Graubart (Rept. No. 358);

S. 526. A bill for the relief of Tikva Polsky (Rept. No. 359);

S. 553. A bill for the relief of Oleg Antonowycz (Rept. No. 360);

S. 592. A bill for the relief of Anton Revak (Rept. No. 344);

S. 785. A bill for the relief of Helga Binder (Rept. No. 361);

S. 1035. A bill for the relief of Alice Eirl Schaer (Mi On Lee) (Rept. No. 362);

S. 1089. A bill for the relief of Salvatore Pantano (Rept. No. 363); and

S. 1390. A bill for the relief of Roberto Mario Bettinzoli (Rept. No. 364).

By Mr. EASTLAND, from the Committee on the Judiciary, with amendments:

S. 614. A bill for the relief of Heui Sik Min and his wife, Mary Pu Keui Min, and their children, David Pyong Wha Min, Susan Pyong Soon Min, Sally Pyong Min, George Pyong Yun Min, William Pyong Soo Min, and daughter-in-law Gloria Yong Hiu Min (Rept. No. 365);

S. 749. A bill for the relief of Loutfie Noama (Rept. No. 366);

S. 1589. A bill for the relief of Nina Maslova Greenberg (Rept. No. 367);

H. J. Res. 247. Joint resolution for the relief of certain aliens (Rept. No. 336); and

H. Con. Res. 69. Concurrent resolution approving the granting of the status of permanent residence to certain aliens (Rept. No. 337).

By Mr. GREEN, from the Committee on Foreign Relations, without amendment:

H. R. 1983. A bill to provide for the conveyance of the reversionary interest of the United States in certain lands to the Clint Independence School District and the Fabens Independent School District in the State of Texas, or to either of them, and for other purposes (Rept. No. 369).

HOUSING ACT OF 1957

Mr. SPARKMAN. Mr. President, from the Committee on Banking and Currency, I report favorably, with an amendment in the nature of a substitute, the bill (H. R. 6659) to extend and amend the laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes, and I submit a report (No. 368) thereon.

The VICE PRESIDENT. The report will be received and the bill will be placed on the calendar.

Mr. SPARKMAN. Mr. President, I ask unanimous consent that a section-by-section digest of the bill be printed in the RECORD following my statement.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. SPARKMAN. Mr. President, during the past year, one of the most crucial problems brought to the attention of Congress in the field of housing was the decline in housing starts. The major provisions of this bill were therefore designed to assist in keeping housing starts at a level which will meet the ever-increasing housing needs of our people.

Among the major recommendations contained in the bill are provisions affecting the operation of the Federal National Mortgage Association. The amendments proposed to the FNMA's secondary market operations will go a long way to bolster the production of housing units and should help to prevent further decline in the number of housing starts.

In addition, the bill broadens and extends the FNMA's special assistance operations in the military and cooperative housing fields and permits the Association to make construction advances for all projects falling within its special assistance operation.

The bill would further broaden the program for slum clearance and urban renewal and place this program on a 4-year basis. The amendments to this vital program would have the effect of assuring those towns and cities which contemplate the use of this program that it is the intent of Congress to continue the program on a long-range workable basis.

Furthermore, the bill provides for a more comprehensive program under section 221 of the National Housing Act for certain groups, such as displaced persons, moderate-income persons, elderly persons, minorities, and large families. The provisions of this extended program would permit the FHA to insure mortgages for these groups without a down-payment, with an interest rate of 4 percent, with a 40-year maturity for single-family dwellings and with mortgage insurance up to 100 percent of value on multifamily rental projects if the mortgagor is a nonprofit organization. A new special assistance category within the FNMA for the financing of this type of mortgage is provided.

Provisions are also included in the bill which would expand the college housing program to provide housing for students of divinity colleges, and for nurses and interns at nonprofit hospitals.

The committee increased existing income limits for eligibility and continued occupancy of families in low-rent public housing. The bill removes the workable program requirement, and increases the maximum cost limits per unit.

In addition to the major changes, the bill also contains a number of minor amendments to perfect already existing programs or to clarify existing statutes of the various housing acts.

The section-by-section analysis presented by Mr. SPARKMAN is as follows:

SECTION-BY-SECTION ANALYSIS

TITLE I—FHA INSURANCE PROGRAMS

Section 101: Amends section 2 of the National Housing Act by adding a new subsection (g) to revise the title I (home improvement) law to establish a 2-year statute of limitations on the time during which FHA may demand the return of insurance payments on grounds of technical ineligibility.

Section 102: Repeals section 203 (d) of the National Housing Act, an obsolete provision pertaining to insurance of mortgages on farm properties.

Section 103: Amends section 203 (1) of the National Housing Act (low-cost suburban housing) to increase the maximum permissible mortgage amount from $6,650 to $8,000.

Section 104: Amends section 204 of the National Housing Act to authorize the FHA to permit certain mortgagee expenditures on foreclosed property, and to terminate payment of insurance premiums when application for insurance claim debentures is filed.

Section 105: Amends sections 204 (d), 207 (1) and 803 (f) in order to delete obsolete provisions fixing maximum interest rates on FHA debentures.

Section 106: Amends section 207 of the National Housing Act (regular FHA rental housing program) to make the high-cost area allowance ($1,000 per room) applicable without regard to the number of rooms in the unit.

Section 107: Amends section 207 (c) to increase from $8,100 to $8,400 the maximum

mortgage amount per unit for elevator-type rental housing for elderly persons, and to add a special provision making it clear that single persons, as well as families, are eligible for occupancy.

Section 108: Repeals section 207 (q) of the National Housing Act which has become obsolete by the enactment of sections 213 and 206 (e), relating to cooperative housing.

Section 109: Amends section 213 of the National Housing Act by adding a new subsection (i) to make existing structures eligible for management-type cooperative housing mortgages.

Section 110: Conforms sections 213 (e), 220 (f), 221 (g), and 222 (e) of the National Housing Act to section 204 which permits FHA to terminate payment of mortgage insurance premiums when the mortgagee forecloses and gives written notice that it does not intend to convey the property to FHA in exchange for debentures.

Section 111: Amends section 219 of the National Housing Act to permit the transfer of FHA section 221 and section 222 mortgage insurance funds in the same manner as the law now permits in the case of other FHA insurance funds.

Section 112: (a) Amends section 221 of the National Housing Act, which now covers housing for persons displaced by urban-renewal activities, to make the following additional groups eligible for mortgage insurance: Persons of moderate income; persons whose inability to obtain adequate living accommodations in privately financed housing is attributable to race, creed, or color; elderly families and single persons; and persons having five or more dependents. The maximum mortgage amount is increased from $9,000 to $12,500 (from $10,000 to $15,000 in high-cost areas). A maximum interest rate is established at 4 percent.

This section also amends section 221 of the National Housing Act to make 2-, 3-, and 4-family dwellings eligible under the sales housing program for families being relocated as a result of urban renewal activities. In the case of a 2-family dwelling, the maximum mortage amount would be $18,000 ($20,000 in high-cost areas); for a 3-family dwelling, the maximum would be $25,000 ($27,500 in high-cost areas); for 4-family dwellings, it would be $32,000 ($35,000 in high-cost areas). The minimum downpayment would be $200 for each unit in the dwelling. The FHA would prescribe procedures under which the owner of the 2-, 3-, or 4-family dwelling would give a priority in renting the units not occupied by him to persons displaced by urban renewal activities.

(b) Amends section 305 of the National Housing Act (FNMA special assistance) by adding a new subsection (g) to authorize the Federal National Mortgage Association to establish a $250-million revolving fund for purchases and purchase commitments covering the expanded section 221 program.

Section 113: Amends section 223 of the National Housing Act to include section 222 (servicemen's mortgage insurance) within the provision covering the sale of Government-owned housing.

Section 114: Amends section 226 of the National Housing Act to authorize FHA to furnish the homebuyer with its estimate of replacement cost, where a mortgage is based on replacement cost.

Section 115: Amends title II of the National Housing Act by adding a new section 229 to authorize the FHA Commissioner to insure on an "acceptable risk" basis, rather than on an "economic soundness"' basis, mortgages on single-family dwellings, the need for which is certified by the Secretary of Defense. The houses would be held for rental for a period of not less than 4 years unless released by the military for sale. Priority in rental or sale is given to essential military and permanent civilian personnel of the armed services as evidenced by certification issued by the Secretary of Defense.

TITE II—FEDERAL NATIONAL MORTGAGE ASSOCIATION

Secondary market operations

Section 201: (a) and (b) amends sections 303 (d) and (e) of the National Housing Act to increase by $50 million the amount of FNMA preferred stock held by the United States Treasury. This would increase FNMA borrowing authority by $500 million.

Section 202: Amends section 304 (c) of the National Housing Act to increase from $1.35 billion to $2.1 billion the amount of FNMA obligations that may be purchased by the United States Treasury. This authorization permits the Treasury to provide interim financing for FNMA secondary market operations, until FNMA is ready and able to sell its debentures in the private market.

Special assistance functions

Section 203: Amends section 305 (b) of the National Housing Act to extend for 1 year the requirement that FNMA purchase special assistance mortgages at a price of 99 percent of par. In addition, FNMA's fees and charges on special assistance mortgages would be limited to a maximum of 1 percent. These provisions would be applicable to commitments entered into after March 31, 1957, and outstanding at the time of enactment of the Housing Act of 1957.

Section 204: Amends section 305 (c) of the National Housing Act to increase from $200 million to $450 million the amount of purchases and commitments of special assistance mortgages subject to the discretion of the President, and to delete the Presidential authority to use $100 million for the purchase of participation loans.

Section 205: Amends section 305 (e) of the National Housing Act to increase from $100 million to $350 million the revolving fund for purchase by FNMA of FHA-insured cooperative housing mortgages. The existing $10 million limitation on outstanding commitments per State is increased to $35 million per State. One-half of the authorization would be reserved for consumer-sponsored cooperatives.

Section 206: Amends section 305 (f) of the National Housing Act to increase from $200 million to $400 million the revolving fund for purchase by FNMA of FHA-insured military housing mortgages, and earmarks up to 7.5 percent of this amount for mortgages insured under section 809 of the National Housing Act which relates to sales housing for essential civilians at military research and development centers.

Section 207: Amends section 305 of the National Housing Act by adding a new subsection (h) to authorize FNMA, under its special assistance functions, to make construction advances for housing projects where FNMA has issued a commitment to purchase the mortgage on the project, and where the advances are insured by the FHA. FHA insures construction advances only in cases of rental housing projects and cooperative housing projects.

TITLE III—SLUM CLEARANCE AND URBAN RENEWAL

Section 301: Amends section 103 (b) of the Housing Act of 1949 to increase by $1 billion (from $900 million to $1.9 billion) the capital grant authorization for slum clearance and urban renewal, to be made available at the rate of $250 million a year over a 4-year period.

Section 302: (a) Amends the Housing Act of 1949 to increase from two-thirds to 75 percent the Federal share of the net project costs of slum-clearance and urban-renewal projects. The section also provides for an alternative formula for calculating the Federal share of such costs.

(b) Amends section 314 of the Housing Act of 1954 to increase the Federal share of net project costs from two-thirds to 75 percent.

(c) Provides for the revision of capital grant contracts under the new formula for Federal participation if the projects have not yet been completed.

Section 303: Amends section 106 (e) of the Housing Act of 1949 to increase from 10 percent to 15 percent the proportion of urban renewal capital grant authorization that can be allocated to 1 State.

Section 304: Amends section 106 (f) of the Hcusing Act of 1949 to (1) permit the Urban Renewal Administrator to establish maximum payments for moving expenses without requiring proof of the actual costs of such expenses by individuals and families, and (2) increase the maximum relocation payments to business concerns from $2,000 to $3,000.

Section 305: Amends section 110 (b) of the Housing Act of 1949 to permit a local community to indicate in a submission separate from the urban renewal plan, the relationship between the urban renewal plan and certain overall local planning objectives. As now worded, this provision requires this relationship to be indicated in the urban renewal plan.

Section 306: Amends section 110 (c) of the Housing Act of 1949 to permit commercial and industrial redevelopment, without application of "predominantly residential" test, up to 7.5 percent of the total capital grant authorization.

Section 307: Amends section 110 (d) of the Housing Act of 1949 to extend to slum clearance projects, under the 1949 act, the provision now applicable to urban renewal projects under the 1954 act, whereby the estimated costs of facilities offered as noncash grants-in-aid shall be deemed actual costs, if the construction of these facilities is not complete (and actual costs not known) at the time of final disposition of land in the project area.

Section 308: Amends section 2 (5) of the United States Housing Act of 1937 to permit a local public housing agency to furnish administrative facilities to the local urban renewal agency, at economic rent, in localities where the same agency administers both programs.

Section 309: Establishes a fellowship program for graduate training in urban planning and related fields, authorizing $500,000 for a 3-year period.

TITLE IV—PUBLIC HOUSING

Low-rent housing

Section 401: (a) Amends section 15 (8) (d) of the United States Housing Act of 1937 to permit overincome tenants to remain in public housing if the local housing agency determines that there is in the vicinity an inadequate supply of suitable housing, and if the families remaining in public housing pay in rent at least 20 percent of their net income, or an amount equal to private accommodations, whichever is less.

(b) Amends section 2 (1) of the Housing Act of 1937 to permit families seeking admission to public housing an exemption of $100 for each adult with no income and up to $600 of the income of each member of the family other than the principal wage earner; for continued occupancy exemptions would be permitted of $100 for each adult having no income, and up to $600 of the income of any member of the family other than the principal wage earner. (Present exemptions: For admission, $100 for each minor; for continued occupancy, $100 for each minor or all or any part of the income of each minor.)

(c) Amends sections 101 (c) of the Housing Act of 1949 and section 10 (i) of the United States Housing Act of 1937 to remove the "workable program" requirement.

(d) Amends section 15 (5) of the United States Housing Act of 1937 to raise the unit cost limits from $1,750 to $2,000 for regular

units, and from $2,250 to $2,500 for elderly persons' units.

(e) Amends section 15 (5) of the United States Housing Act of 1937 to require public housing plans and specifications to follow the principle of modular measure.

Housing for disaster victims

Section 402: Authorizes the PHA Commissioner to contract, on a standby basis, for production and delivery of housing and equipment in the event of a major disaster and to make such facilities available without charge to local public agencies, the American Red Cross, or other nonprofit relief organizations; and to use for this purpose up to $5 million of funds made available by the United States Housing Act of 1937.

Disposition of war housing projects

Section 403: (a) Extends until July 1, 1957, the time in which war housing project Conn-6029 may be sold to the Housing Authority of Wethersfield, Conn.

(b) Authorizes the directs HHFA to sell and convey housing project Nev-26021 to the Housing Authority of Las Vegas, Nev., for price of $452,200. A downpayment of 5 percent would be paid at closing and the balance secured by mortgage to be paid over 20-year period at an interest rate of 4½ percent.

(c) Directs the HHFA to convey to the State of Louisiana war housing projects La-16011 and La-16012 for $300,000 payable in three equal annual installments, and extends until 60 days after enactment of this provision the time for payment of the first installment.

(d) Authorizes and directs the HHFA to sell war housing project Utah-42015, known as Verdeland Park, to the city of Layton, Utah, for $580,000 under a mortgage payable over a 10-year period, at a 4½ percent interest rate.

TITLE V—MILITARY HOUSING

Section 501: Amends section 80 (a) of the National Housing Act to extend the military-housing program for 1 year. The present program expires on June 30, 1958.

Section 502: Amends section 608 (b) of the National Housing Act to (1) make the maximum insurable amount of $16,500 (average) on military-housing projects apply to the project as a whole rather than to each mortgage, (2) establish a maximum cost of $25,000 for new individual-housing units, and (e) redefine "eligible" bid to mean a bid with a reasonable relation to the FHA estimate of replacement cost (the FHA estimate is now a ceiling on acceptable bids).

TITLE VI—MISCELLANEOUS

College housing

Section 601: (a) Amends section 401 (d) of the Housing Act of 1950 to increase the revolving fund for college-housing loans from $750 million to $950 million, with $25 million reserved for projects to house nursing students or interns.

(b) Amends section 404 (b) of the Housing Act of 1950 to permit the HHFA to make college-housing loans to (1) divinity schools, (2) hospital dormitories for student nurses or interns, and (3) State authorities established to construct dormitory facilities for schools within a State university system.

Voluntary home mortgage credit program

Section 602: Amends section 610 (a) of the Housing Act of 1954 to extend the Voluntary Home Mortgage Credit Program for 3 years. The present program expires on June 30, 1957.

Farm-housing research

Section 603: Authorizes the HHFA Administrator to make research grants up to $300,000 annually during the fiscal years 1958 and 1959 to land-grant colleges for the purpose of developing methods by which more attractive and more functional farmhouses can be provided at a lower cost and with better financing.

Exchange of housing data with foreign countries

Section 604: Directs the Housing Administrator to exchange housing data with foreign countries.

BILLS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JOHNSON of Texas:

S. 2120. A bill to authorize the Secretary of the Interior to construct, rehabilitate, operate, and maintain the lower Rio Grande rehabilitation project, Texas, Mercedes division; to the Committee on Interior and Insular Affairs.

By Mr. DIRKSEN (by request):

S. 2121. A bill to authorize the restoration of times taken from patents covering inventions whose practice was prevented or curtailed during certain emergency periods by service of the patent owner in the Armed Forces or by production controls; to the Committee on the Judiciary.

By Mr. SALTONSTALL:

S. 2122. A bill for the relief of Harvey Whipple, Inc.; to the Committee on the Judiciary.

By Mr. HILL:

S. 2123. A bill for the relief of Frances Monteleone; to the Committee on the Judiciary.

By Mr. EASTLAND:

S. 2124. A bill for the relief of Tasia J. Somas; to the Committee on the Judiciary.

By Mr. O'MAHONEY:

S. 2125. A bill for the relief of Jesse R. Chamberlin and Ester Chamberlin; and

S. 2126. A bill for the relief of Jean Goedicke; to the Committee on the Judiciary.

By Mr. JOHNSTON of South Carolina:

S. 2127. A bill to amend section 3 (d) of the Federal Employees' Group Life Insurance Act of 1954, relating to the reduction in amounts of insurance of persons over the age of 65; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. JOHNSTON of South Carolina when he introduced the above bill, which appear under a separate hearing.)

By Mr. JOHNSTON of South Carolina (by request):

S. 2128. A bill to amend certain provisions of law in order to provide for the reimbursement of the Post Office Department for expenses incurred in performing certain services for other agencies, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MAGNUSON (by request):

S. 2129. A bill to amend the Interstate Commerce Act to provide for the preservation of competitive through routes for rail carriers; to the Committee on Interstate and Foreign Commerce.

AWARD TO SMALL BUSINESS CONCERNS OF FAIR SHARE OF CERTAIN CONTRACTS MADE BY THE MILITARY SERVICES

Mr. SPARKMAN. Mr. President, I have before me a document issued by the Office of the Assistant Secretary of Defense for Supply and Logistics which must be a matter of the gravest concern to everyone who is interested in the welfare of small business. Under date of April 12, 1957, this report presents statistical information showing the extent to which small companies have been awarded prime contracts by the military departments for work performed and services rendered within the continental United States during the first 8 months of fiscal year 1957.

It came as a shock to me to learn that small business, which comprises more than 95 percent of all business establishments throughout the Nation, received only 16.7 percent of the $12,755,000,000 in contracts awarded during this period.

It is even more disturbing, Mr. President, to realize that, low as this percentage is, the bottom has not been reached. I am informed the Department of Defense estimates that the final figures for fiscal 1957 may show a further reduction in the share of military contracts awarded to small business.

The gravity of this situation can best be judged from a brief consideration of the extent to which the small-business share of military contracts has shrunk in recent years. In fiscal year 1954, small firms were successful in obtaining 25.3 percent of defense contracts awarded by the Department of Defense. In fiscal year 1955, the small-business share declined to 21:5 percent. This was followed in fiscal year 1956 by a further shrinkage to 19.6 percent. We are now informed that when the totals are added up for the full fiscal year of 1957, there exists a strong possibility that small-business participation in military procurements may dwindle to the lowest point ever recorded since the Department of Defense started to keep count of the contracts awarded to small business in the 1951 fiscal year.

There are many theories advanced and many excuses offered, Mr. President, in efforts to explain away the undeniable fact that our largest business concerns are being awarded the lion's share of defense prime contracts. To me, however, no amount of such reasoning fully takes into account the most important fact of all, which is, that after very careful deliberation the Congress on numerous occasions has stated and emphasized its desire that small business receive a "fair share" of military prime contracts.

The amplitude of the record on this point leaves no room for disagreement. Typical of some of the congressional expressions on this subject are those set forth in the Armed Services Procurement Act of 1947, the Universal Military Training and Services Act of 1948, the Defense Production Act of 1950, and the Small Business Act of 1953, as amended.

In the Armed Services Procurement Act of 1947, the policy is enunciated that "a fair proportion of the total purchases and contracts for the Government shall be placed with small-business concerns." The Universal Military Training and Services Act of 1948 provided that "small business shall be granted a fair share of the orders placed." The Defense Production Act of 1950 stressed that it is "the sense of the Congress that small-business enterprises be encouraged to make their greatest possible contribution to achieve the objectives of this act." And as recently as August of 1955, in Public Law 268, amending the Small Business Act of 1953, the Congress again reiterated its oft-expressed intent that

small companies should receive a "fair proportion" of Government contracts.

When the Congress thus advised the procuring agencies of the Government that the national interest required small business to obtain a "fair share" of the contracts awarded, it was left to the judgment of purchasing agencies to determine for themselves what amount of their yearly purchases would constitute a "fair share." Unfortunately, perhaps, the Congress then had no way of knowing that within the short space of 4 years the small-business share of military prime contracts should decline from a high of more than 25 percent to a current low of less than 17 percent.

It has occurred to me, Mr. President, that because the Congress stated its desires regarding the share of small business in Government contracts in general terms, the contracting officers of the Department of Defense may have a concept of what constitutes a "fair share" which permits them to be satisfied when small concerns are able to obtain in the neighborhood of only 16 percent of the billions of dollars spent every year for goods and services by the military departments. If this is the case, then I am certain that a grave misunderstanding exists. I know of no Member of this body who is of the opinion that the more than 4 million small-business enterprises of this Nation are not capable of supplying a substantially greater proportion of the Government's requirements.

For this reason I feel that some clarification of the intent of the Congress regarding the place of small business in the military procurement picture is desirable. I wish, therefore, at this time to submit, for appropriate reference, a resolution which contains the following provisions:

Resolved, That it is the sense of the Senate—

(1) that, if reasonable progress is to be achieved toward the ultimate goal of obtaining for the small-business segment of our economy a fair share of the purchases and prime contracts made or entered into by the military services, small-business concerns should receive from such purchases and prime contracts not less than 25 percent of the procurement dollars expended each year by the Department of Defense;

(2) that, in the procurement of supplies and services which small-business concerns are readily capable of furnishing, the military services should award a much higher percentage of their prime contracts to such concerns in order to compensate for procurements which by their nature are beyond the capabilities of small-business concerns;

(3) that, in order to achieve an increase in the percentage of procurement dollars going to small-business concerns by way of prime contracts, the military services should review the products not now considered to be within the production capabilities of small-business concerns with a view to determining whether some of these products cannot in fact be obtained from such concerns;

(4) that the research and development program of the Department of Defense affords one of the greatest areas available for increasing the participation of small business in military procurement; and

(5) that more emphasis should be given to the set-aside program for small business, provided in the Small Business Act of 1953, in order that small-business concerns will participate to the maximum extent in the award of prime contracts for supplies and services now considered by the Department of Defense to be within their capacity to furnish.

I wish to stress that this resolution contains no mandatory features. Clearly, it is not possible, in the nature of the procurement function, to specify a fixed percentage of the dollar value of all contracts below which the share of small business shall not be allowed to fall. Rather, the primary purpose of the resolution is to service notice on the Department of Defense that, after due allowances are made for the type of products currently being procured, this body has concluded that the present percentage of small-business contract awards is inadequate, and to establish a reasonable percentage standard for the more precise guidance of Government purchasing agencies.

I am pleased to state that joining me in the submission of this resolution are Senators THYE, BARRETT, BIBLE, CARROLL, CASE of New Jersey, CHAVEZ, CLARK, ERVIN, GOLDWATER, HILL, HUMPHREY, HRUSKA, IVES, KENNEDY, KUCHEL, LONG, MCNAMARA, MONRONEY, MORSE, NEUBERGER, PASTORE, PAYNE, SMATHERS, SMITH of New Jersey, SYMINGTON, TALMADGE, and AIKEN.

The VICE PRESIDENT. The resolution will be received and appropriately referred.

The resolution (S. Res. 138), submitted by Mr. SPARKMAN (for himself and other Senators), was received and referred to the Committee on Banking and Currency, as follows:

Whereas the Congress of the United States on numerous occasions has expressed its interest that small-business concerns be given a fair share of the procurement dollars spent by the Department of Defense; and

Whereas Congress, in the First War Powers Act of 1941, as amended in 1951; the Defense Production Act of 1950; the Small Business Act of 1953; the Armed Services Procurement Act of 1947; the Federal Property and Administrative Services Act of 1949; the Universal Military Training and Services Act of 1948; and the Department of Defense Appropriation Act of 1957, has declared that small-business concerns should receive a fair share of the purchases and prime contracts for supplies and services made by the Government; and

Whereas of the $17,750,084,000 spent in fiscal year 1956 by the Department of Defense in the continental United States small-business concerns received only $3,475,315,000, or 19.6 percent, and such concerns have received only 19.2 percent of the $144,225,000,000 spent in the continental United States in the past 6 years; and

Whereas the percentage awarded to small-business firms in the current fiscal year, 1957, according to current estimates, will decline to approximately 16.5 percent: Now, therefore, be it

(1) that, if reasonable progress is to be achieved toward the ultimate goal of obtaining for the small-business segment of our economy a fair share of the purchases and prime contracts made or entered into by the military services, small-business concerns should receive from such purchases and prime contracts not less than 25 percent of the procurement dollars expended each year by the Department of Defense;

(2) that, in the procurement of supplies and services which small-business concerns are readily capable of furnishing, the military services should award a much higher percentage of their prime contracts to such concerns in order to compensate for procurements which by their nature are beyond the capabilities of small-business concerns;

(3) that, in order to achieve an increase in the percentage of procurement dollars going to small-business concerns by way of prime contracts, the military services should review the products not now considered to be within the production capabilities of small-business concerns with a view to determining whether some of these products cannot in fact be obtained from such concerns;

(4) that the research and development program of the Department of Defense affords one of the greatest areas available for increasing the participation of small business in military procurement; and

(5) that more emphasis should be given to the set-aside program for small business, provided in the Small Business Act of 1953, in order that small-business concerns will participate to the maximum extent in the award of prime contracts for supplies and services now considered by the Department of Defense to be within their capacity to furnish.

AMENDMENT OF FEDERAL EMPLOYEES' GROUP LIFE INSURANCE ACT OF 1954, RELATING TO REDUCTION IN AMOUNTS OF INSURANCE OF PERSONS OVER AGE 65

Mr. JOHNSTON of South Carolina. Mr. President, the Federal Employees' Group Life Insurance Act will soon have been on the statute books 3 years. I think there is general agreement that it was a wise and needed piece of legislation. Furthermore, it has proven actuarially sound. The program is solvent and the reserve fund is growing at a more rapid pace than anticipated by many. These facts are rather well known and understood.

However, what many do not know, and I dare say some Senators may not know, is that the insurance policies reduce rapidly when the insured reaches the age of 65. That is true whether the insured continues to be employed in the Federal service or is in a retired status.

The rate of reduction is 2 percent a month until the amount of insurance is only 25 percent of the original face value of the policy. Let me give an example of how the reduction operates. An employee whose salary is between $4,000 and $5,000 would have a policy with a face value of $5,000. At attainment of age 65 the automatic reduction starts. Three years and three months later, or when he is just past 68, his insurance, which once amounted to $5,000, is reduced to 25 percent of what it was, or $1,250.

The Post Office and Civil Service Committee is making a study of the Federal employee insurance program. I would like for all to know that the study is completely nonpartisan. It is directed toward finding out how the program is working and how it can be improved. I think it worthy of note that the need for and value of such a study was recognized by the distinguished Senator from Kansas [Mr. CARLSON], and that we jointly supported the resolution under which the study was authorized.

The study has progressed to the point that I am convinced a measure of liberalization can safely be adopted without further delay. Perhaps as the study

progresses further additional improvement in the program will be suggested.

Mr. President, I introduce, for appropriate reference, a bill, which if enacted, will cut in half both the rate and extent of reduction. The bill, if enacted, will cut the rate of reduction from 2 to 1 percent a month, and instead of continuing until the policy has been cut to 25 percent of face value, it will stop when the policy has been reduced to 50 percent of its face value.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2127) to amend section 3 (d) of the Federal Employees' Group Life Insurance Act of 1954, relating to the reduction in amounts of insurance of persons over the age of 65, introduced by Mr. JOHNSTON of South Carolina, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

EVALUATION OF CERTAIN RECREATIONAL BENEFITS—AMENDMENTS

Mr. CASE of South Dakota submitted amendments, intended to be proposed by him to the bill (S. 1164) to make the evaluation of recreational benefits resulting from the construction of any flood control, navigation, or reclamation project an integral part of project planning, and for other purposes; which were ordered to lie on the table and to be printed.

PREVENTION OF CERTAIN PRACTICES BY PERSONS ENGAGED IN COMMERCE IN MEAT AND MEAT PRODUCTS—AMENDMENTS

Mr. DIRKSEN. Mr. President, I submit amendments, intended to be proposed by me, to the bill (S. 1356) to amend the antitrust laws by vesting in the Federal Trade Commission jurisdiction to prevent monopolistic acts or practices and other unlawful restraints in commerce by certain persons engaged in commerce in meat and meat products, and for other purposes. I ask unanimous consent that a summary of the effect of the amendments may be printed in the RECORD.

The VICE PRESIDENT. The amendments will be received, appropriately referred, and printed; and, without objection, the summary will be printed in the RECORD.

The amendments were referred to the Committee on the Judiciary, and ordered to be printed.

The summary presented by Mr. DIRKSEN is as follows:

SUMMARY OF THE EFFECT OF THE ATTACHED DRAFT OF AMENDMENTS TO THE PACKERS AND STOCKYARDS ACT

1. Amendment (1) changing the definition of packer would limit the persons subject to exclusive jurisdiction of the Secretary under the act as packers to those principally engaged (1) in buying livestock for slaughter, (2) manufacturing or preparing meat or meat food products (edible) for commerce, (3) a combination of the activities in (1) and (2), and (4) manufacturing or preparing livestock products (inedible) for commerce and in one or the other of the activities covered by (1) and (2).

The amendment eliminates the application of the packer provisions of the act to persons who are primarily engaged in some other activities but have acquired an interest in the packing industry which represents a relatively minor part of their operations; that is, grocery chains. Such persons who are presently subject to the Packers and Stockyards Act would under this amendment be subject to the Federal Trade Commission Act.

2. Under amendment (2) packers and live poultry dealers as redefined in amendments (1) and (3) would be subject to the jurisdiction of the Department of Agriculture as heretofore. Other persons heretofore subject to the jurisdiction of the Department under title II—Packers of the act would be subject to the jurisdiction of the Department with respect only to the buying of livestock and live poultry for purposes of slaughter and with respect to all other activities would be subject to the jurisdiction of the Federal Trade Commission.

3. Amendment (3) changes the definition of live poultry dealer so that for the purposes of title II of the act only persons principally engaged in the business or buying or selling live poultry in commerce for the purpose of slaughter will fall within the definition of live poultry dealers. The impact of this amendment on live poultry dealers is the same as that set forth in the second paragraph under 1 above on packers.

AMENDMENT OF FEDERAL POWER ACT, RELATING TO CERTAIN ALLOWANCES FOR INCOME TAX PURPOSES—ADDITIONAL COSPONSOR OF BILL

Mr. MAGNUSON. Mr. President, on May 16, 1957, on behalf of myself, and several other Senators, I introduced the bill (S. 2113) to amend the Federal Power Act, as amended, with respect to allowances in the cost of service and accelerated amortization and liberalized depreciation for income tax purposes. I ask unanimous consent that the name of the Senator from Colorado [Mr. CARROLL] may be added as an additional cosponsor of that bill, the next time it is printed.

The VICE PRESIDENT. Without objection, it is so ordered.

NATIONAL COWBOY HALL OF FAME AND MUSEUM—ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTION

Under authority of the order of the Senate of May 16, 1957,

The name of Mr. KNOWLAND was added as an additional cosponsor of the concurrent resolution (S. Con. Res. 32) favoring congressional recognition of the National Cowboy Hall of Fame and Museum to be located at Oklahoma City, Okla., submitted by Mr. ANDERSON (for himself and other Senators), on May 16, 1957.

PRINTING AS A SENATE DOCUMENT REPORT ENTITLED "INVENTORY REPORT ON REAL PROPERTY LEASED TO THE UNITED STATES THROUGHOUT THE WORLD, AS OF JULY 1, 1956" (S. DOC. NO. 41)

Mr. HAYDEN. Mr. President, at a meeting of the Committee on Appropriations on May 13, it was recommended that a committee print of the Inventory Report on Real Property Leased to the United States Throughout the World as of July 1, 1956, compiled by the General Services Administration, at the request of the committee, be printed as a Senate document, with illustrations.

I present the committee print and ask that it be so printed.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. HAYDEN. I ask unanimous consent that the correspondence relating to the report, together with a press release giving some of the facts on the inventory, be printed in the RECORD, as a part of my remarks.

There being no objection, the correspondence and press release were ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, D. C., May 9, 1957.

Hon. F. G. FLOETE,
Administrator, General Services Administration, Washington, D. C.

DEAR MR. FLOETE: The committee is in receipt of the inventory report covering real property leased to the United States Government throughout the world as of July 1, 1956, prepared by your agency pursuant to the additional request of the committee in the report on the independent offices appropriation bill for 1957. It is gratifying to note that this report, together with the report on federally owned properties, which was published on February 11, 1957, as Senate Document No. 25, will now for the first time furnish a comprehensive presentation of all real property holdings of the United States throughout the world.

The summary report, with supporting charts and tables, is being issued as a Senate document and made available to all Federal agencies as well as the public generally. We recommend that a set of the detailed supporting inventory listings be furnished to the Senate and House Appropriations Committees and Government Operations Committees, to the Bureau of the Budget and the General Accounting Office, and to the reporting agency for pertinent use, and that file and working copies of these listings will be available also in your administration for reference.

The additional information in this first governmentwide inventory on leased property will serve as a further budgetary aid as well as a management tool on property utilization, and the committee believes that proper use of such information can effect substantial economies in budget requests from the various agencies of the Government.

The committee is well pleased with the compilations prepared by you and your organization.

Yours very sincerely,

CARL HAYDEN.
STYLES BRIDGES.

GENERAL SERVICES ADMINISTRATION,
Washington, D. C., May 7, 1957.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations, United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: We are pleased to submit the attached summary report covering the inventory of real property leased to the United States Government throughout the world, as of July 1, 1956. This inventory was prepared pursuant to the request of the Senate Committee on Appropriations in Senate Report No. 2041, dated May 24, 1956.

This report together with its companion report on federally owned properties, which

was published as Senate Document No. 25, February 11, 1957, furnish a comprehensive presentation of all real property holdings of the United States throughout the world.

Pertinent data relative to 38,523 Federal leases for property in the United States and 2,270 leases of civil agencies for property outside the United States are summarized in this report. The report contains only overall summary data for acreage and annual rental, as reported by the Department of Defense for its military installations overseas.

The total annual rental for real property leased to the United States Government throughout the world amounts to $112.8 million. This total is comprised of (a) $94.7 million for property in the United States; (b) $1.2 million for property in United States Territories and possessions; and (c) $16.9 million for properties in foreign countries.

In addition to the attached summary inventory report, detailed supporting inventory listings of leased real property are being submitted under separate cover.

This is the first governmentwide inventory of leased properties, and consequently the report will undoubtedly contain some inaccuracies. Considerable work will be required to refine the data contained herein, and the records from which such data are obtained.

The preparation of this report was greatly facilitated by the cooperation of all participating agencies, and the counsel and assistance of Mr. Earl Cooper of the committee's staff.

Sincerely yours,

FRANKLIN G. FLOETE,
Administrator.

The first report ever prepared on real property leased to the Federal Government was published today by the Senate Committee on Appropriations. A companion report, which inventoried properties in Federal ownership, was released as a Senate Document on February 11, 1957. Together, the two publications provide a comprehensive presentation of all real property holdings of the United States, both at home and abroad.

The new report will become available as a Senate Document under the title "Inventory of Real Property Leased to the United States Throughout the World." It will contain, as the preliminary print does, pertinent data on leases administered by 23 Federal agencies as of July 1, 1956. On that date, 38,523 leases on domestic property were in effect. Civil agencies of the Government also held 2,270 leases on property outside continental United States. The report contains only overall summary data on acreage and annual rental on overseas military installations.

In releasing the report, Senator CARL HAYDEN, chairman of the Senate Committee on Appropriations said, "Our initial effort in bringing significant Federal lease information together under one cover is, I believe, a successful one. The committee has produced a document which can help the legislative and executive branches in the preparation and evaluation of budget requests and in effecting economies in leasing operations."

Graphs and charts are used profusely throughout the report to show the nature and extent of the Government's leasing operations measured in terms of building space, land acreage, and dollar value. Lease information also is presented geographically, by city, State, country, and continent, through a series of special tables in the back of the report.

According to the report the total annual rental paid by the Government on real property is $112.8 million. Of this total, $94.7 million is for properties located in the United States, $1.2 million in United States territories and possessions, and $16.9 million in foreign countries.

In the United States, the General Services Administration handles leases amounting to $47.3 million, or 50 percent of the total in dollar value. The Post Office Department is the second most active tenant, spending $32.2 million in annual rentals. The Defense Department ranks third within the country, with $10.6 million.

The largest single share of the $94.7 million spent to rent properties in the United States, $12.1 million, goes into New York State. California property owners receive $8.4 million and those in Illinois, $5.9 million.

On real property located outside of the United States, the Departments of Defense and State pay annual rentals of $9.8 million and $5.8 million respectively. These amounts combined represent 86.2 percent of the $18.1 million total.

The Federal Government, which owns 774.6 million acres of land rents only 1.8 million acres, computed on a worldwide basis. Acreage figures shown in the report are, for the most part limited to land leased separately and land specified in a lease when rented in conjunction with building space.

The total acreage rented to the Federal Government in the United States, some 1.6 million acres, is approximately equal to half the size of the State of Connecticut. Of this amount, rural areas provide 1,259,000 acres and urban centers 349,000.

Ninety-four percent of land leased to the Federal Government in the United States is for military purposes; 4 percent is used for agriculture and grazing.

Federal agencies other than the Department of Defense lease 87.8 million square feet of building space throughout the world. Of this amount, 80.8 million square feet, or 92 percent is located in the United States; 0.6 million square feet, or 0.7 percent in United States territories and possessions, and 6.4 million square feet, or 7.3 percent, in foreign countries. In addition, the Department of Defense leases 7.6 million square feet of building space in the United States.

The total building space rented in this country by both civilian and military agencies is 88.4 million square feet or 13 times the gross floor area in the Pentagon Building. The Post Office utilizes 43.6 million square feet, or approximately the same floor area rented by all other Federal agencies combined.

The material in the Senate report has been compiled and edited to provide easy access to specific leasing data. It summarizes the contents of thousands of individual reports which the General Services Administration, acting as coordinating agent for the sponsoring Senate committee, spent several months combining and refining.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows

By Mr. McNAMARA:

Jefferson-Jackson Day dinner address delivered by Senator MORSE in Detroit, Mich., May 18, 1957.

By Mr. KEFAUVER:

Article entitled "Atoms In Our Future," written by Senator ANDERSON and published in the magazine the Western World.

By Mr. McCLELLAN:

Correspondence and newspaper article dealing with Democratic practices within the labor movement, with reference to the hearings being conducted by the Select Committee on Improper Activities in the Labor or Management Field.

ANNOUNCEMENT OF BEGINNING OF HEARINGS ON PENSION AND WELFARE LEGISLATION

Mr. KENNEDY. Mr. President, I should like to draw to the attention of the Members of the Senate the fact that the Special Subcommittee of the Labor and Public Welfare Committee on Welfare and Pension Fund Legislation will begin hearings next Monday, May 27, 1957.

We all have become aware that existing Federal legislation is inadequate to cope with the problem of conserving welfare and pension funds for the exclusive use of the employee beneficiaries. Moreover, there is little evidence that the States, with the exception of Washington and New York, have undertaken to address themselves to the problem of regulation of welfare and pension funds as separate legal entities. It is apparent that the growth of these plans since the beginning of World War II has resulted in a gigantic, highly complex operation which has outrun and, to a certain extent, outmoded existing Federal and State laws and controls.

The investigations into these plans conducted by a subcommittee under the able leadership of the distinguished Senator from Illinois [Mr. DOUGLAS], in the 84th Congress concluded that legislation was needed to protect the interests of the beneficiaries and the public interest involved. Certainly the current investigations of the select committee of which the able Senator from Arkansas [Mr. McCLELLAN], is chairman reinforces the conclusions to which the Douglas committee came last year. Legislation to regulate welfare and pension funds is long overdue.

While regulation of welfare and pension funds is a pressing first order of business, there are other areas where some regulation is needed. When the committee finishes its work on welfare and pension matters, it expects to conduct hearings on legislation to provide improved standards for union practices.

POSITION OF THE UNITED STATES ON THE SUEZ CANAL ISSUE

Mr. JAVITS. Mr. President, this morning the Security Council of the United Nations will meet to consider the complaint of France as to the use of the Suez Canal and the compliance by Egypt with the six principles enunciated by the Security Council upon that subject. I express the hope that the Government of the United States will give full support to France in this effort. I also express the hope that the Government of the United States will back the right of Israel to send a ship through the Suez Canal, peaceably utilizing the right of passage guaranteed to all nations by the Constantinople convention.

Mr. President, I think we must be mindful of the fact that dictators always seem to misunderstand when we allow their forays in foreign policy and in treating solemn international agreements as scraps of paper to go undisputed; and Colonel Nasser is behaving like a dictator.

The free world cannot rest secure so long as Colonel Nasser proposes to regard the Suez Canal as his ditch. He thereby asserts his grip on the jugular vein of Europe, through which essential oil must flow for some time yet before alternate means for its transport may become available.

By our action in the British-French and the Israel hostilities in Sinai and Suez, we have ruled out the use of force to deal with Colonel Nasser. This makes our responsibility all the greater to utilize effectively all other means short of force to insure peace and security in the Middle East and performance of solemn obligations by Egypt respecting the Suez Canal.

We can never forget the lessons of the thirties of Hitler's march into the Rhineland and his later appeasement by Chamberlain; imperial Japan's attack on Manchuria; and Mussolini's rape of Ethiopia.

We must learn from these examples that the opposition to the actions of dictators, even if we cannot stop them immediately, must be unrelenting and continuous.

Mr. President, again we have our opportunity before the Security Council. The Soviet Union may, and probably will, veto any resolution the Council adopts; but it is one of the great sounding boards for world opinion. Colonel Nasser and his people will be listening to it as closely as anyone else. He has just been served notice by the heads of other governments in the Middle East that they will not tolerate interference in their affairs. I think we must serve notice that we will not let up on the Suez Canal; that it must be dealt with in full accord with international responsibility because of its importance as the jugular vein of free Europe in connection with free Europe's supply of oil, until the controversy is peaceably and fairly settled.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD two editorials on this subject, as published today in the New York Times and the New York Herald Tribune.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 20, 1957]

THE U. N. ON TRIAL

The Security Council of the United Nations meets today to resume consideration of a burning issue of transcendent importance to the whole world, and to the Western World in particular. The issue is:

Shall the Suez Canal be restored as the international waterway for which Egypt has ceded a perpetual right-of-way under a definitive system of international guaranties designed to keep it open to ships of all nations in peace and war and free from blockade or blockage even in Egypt's own self-defense, as provided by the Suez Convention of 1888?

Or shall this canal become the private waterway of President Nasser to be used, blockaded, or blocked at his arbitrary will for his own political purposes and profit, as decreed in his unilateral declaration of April 24?

The importance of this issue is self-evident. The Suez Canal is the lifeline of Western Europe, which depends on it for its major oil supply, and also a vital artery of world trade. Any interference with traffic through the canal has immediate and serious repercussions throughout the world, especially in Western Europe, which Nasser can now blackmail in peace and cripple in war. This is an intolerable situation which cries for remedy. As the United Nations has ruled out force, it is up to the United Nations to provide the remedy.

The Security Council has already provided a partial remedy by adopting six principles for a settlement. The most important of these is that the operation of the canal should be insulated from the politics of any country, including Egypt. But Nasser has simply ignored them, as he ignores the Security Council's previous injunction against his blockade of Israeli shipping. It remains to be seen whether the Security Council, or, in case it is paralyzed by a Soviet veto, the General Assembly, will take action to enforce Nasser's compliance with them, which puts not only Egypt but the United Nations itself on trial.

For lack of such action Nasser has thus far been able to boast of complete victory over both the West and the United Nations, at both of which he thumbs his nose. But the latest developments show that his position is far less strong than he tries to make it appear. Under the influence of the Eisenhower doctrine his wings have already been clipped by the three Arab Kings of Saudi Arabia, Iraq, and Jordan. By official statements and actions they have barred any further Egyptian interference in their own affairs and have thereby not only repudiated Nasser's pro-Communist policies but have also shattered his dream of an Arab empire under the suzerainty of Egypt to which all other Arab States are merely what little Austria was to Hitler. Being Arabs, the three Kings must continue to cling to the Arab shibboleths of Arab unity and hostility to Israel, but the crack of Nasser's bold facade can no longer be disguised.

At the same time Nasser is also beginning to find out what the West found out long ago—namely, that Soviet performance never matches Soviet promises. Instead of getting Soviet economic aid he faces Soviet efforts to exploit Egypt as just another satellite. The Soviets do not permit economics to interfere with their political purposes and he can and does get Soviet arms to replace those he lost. But the price is high, and Egypt's economic position is not strengthened thereby.

It is therefore all the more amazing that both the Western Powers and the United Nations Secretary General have adopted a defeatist attitude which may still give Nasser a victory by default. Some of the Western Powers hope, indeed, that a Soviet veto will put an end to the French appeal, and Mr. Hammarskjold seems to hold that a Security Council decision can stand without action. The fate of the League of Nations should warn against such a course.

[From the New York Herald Tribune of May 20, 1957]

DEALING WITH A DICTATOR

Despite the almost universal expectation that very little will come of it, a new discussion of the Suez Canal problem will be opened today in the United Nations Security Council. The debate is being launched at the instigation of France, which is the only major canal user still clinging to a boycott of the Nasser-run waterway. The importance of the French move is being discounted in some quarters on the grounds that the Mollet government is seeking to strengthen its own hand in a precarious political situation at home. Premier Mollet is also said to regard the debate as a means of demonstrating the futility of the U. N. or as an excuse, once the discussions have come to naught, for finally terminating the French boycott of the canal.

Any or all of these factors may have entered into the French decision to reopen the Suez matter at a time when most other nations were content to let sleeping dogs lie. And yet the significance of the move should not be underestimated, nor the opportunity it presents overlooked. For the ugly fact is that Nasser is now running the Suez Canal on his own terms. And the debate that starts today affords member nations of the Security Council one more chance to make it plain that the free world does not accept these terms as equitable, desirable, or permanent.

It is not particularly to the credit of the Suez Canal users that they have acquiesced—even under protest—to the terms laid down by Nasser last month. Nasser has made it perfectly clear that he intends to operate the canal as an exclusively Egyptian enterprise, with Egypt collecting all tolls and establishing the conditions of operation—with Israeli shipping excluded, despite a Security Council decision in 1951 to the contrary. The arbitration procedures he has proposed in cases of controversy are so complicated and confusing as to be virtually meaningless.

In permitting their ships to use the canal in these circumstances the United States, Great Britain, and the other maritime nations have bowed to a dictator, and it is useless to pretend otherwise. True, plans to employ alternatives such as new tankers and pipelines are under way, but these are long-range projects and in the meantime a principle has been sacrificed.

What the French intend to do in the debate starting today is to insist that the Egyptians negotiate a multilateral, permanent, binding convention for the free use of the canal by all nations on the basis of the six principles agreed upon by the U. N. last October. Foreign Minister Pineau, who is to present the French case, will argue that the Eyptian conditions under which the canal is now operating are provisional and unilateral, and that unless the U. N. acts a temporary situation may well be transformed into a permanent one.

This is plain talk, even strong talk for the Security Council to hear. But it is worth putting on record. The present tendency in both the United States and Britain is to delay, temporize, and procrastinate on the theory that it is necessary to proceed slowly for the time being in the Middle East to permit the situation to settle down. But it should not be forgotten that yielding to dictators only serves to sharpen their appetites and that Nasser may be even more difficult to deal with tomorrow than he is today.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SCOTT in the chair). The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SCOTT in the chair). Without objection, it is so ordered.

PROPOSED INTERNATIONAL ATOMIC ENERGY AGENCY

Mr. BUTLER. Mr. President, very shortly the Senate will be called upon to ratify the treaty creating an International Atomic Energy Agency. A controversy seems to be developing with regard to certain aspects of this proposition, and I therefore ask unanimous consent to have printed in the body of the RECORD, a very provocative article entitled "Atomic Giveaway" by William

Henry Chamberlin which appeared in the Wall Street Journal of Tuesday, May 14, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of May 14, 1957]

ATOMIC GIVEAWAY—THE GLOBAL AGENCY FOR PEACEFUL NUCLEAR DEVELOPMENT COULD POSE A SERIOUS THREAT TO UNITED STATES SECURITY

(By William Henry Chamberlin)

There has been far less discussion of the atomic giveaway program involved in United States membership in the International Atomic Energy Agency than the importance of the subject demands.

The alluring slogan, "Atoms for Peace," and the sponsorship of the Agency by the President and other high officials have tended to stifle doubts, or at least the open expression of doubts. But there are some disquieting features about this scheme, which seems better adapted to an age of far-reaching international confidence and good will than to the real world of the cold war and hostile coalitions.

Here are some of these disquieting features which, it is to be hoped, will be thoroughly canvassed during the current hearings and during the Senate debate preceding the vote on whether the United States should enter the Agency.

First, we shall be in the invidious position of a have nation subject to the voting control of a majority of have-nots. The Agency, to which 80 nations have given initial endorsement, is organized on the principle of one nation, one vote. The United States is expected to contribute to the Agency information, scientific and technical personnel, fissionable material and money.

Very few of the other member nations will be in a position to contribute any of these things. Yet their votes can control the distribution of our contributions. This might lead to consequences that would startle American public opinion, to say the least.

There is nothing to prevent the Agency, by majority vote, from admitting Red China to all the benefits of have-not membership. Nor is there anything to prevent part of the 11,000 pounds of enriched uranium, which the United States has already promised to make available to the Agency, from being shipped to the Soviet Union, to Red China, or to any Soviet satellite state.

GROTESQUE POSITION

It is somewhat grotesque that this country simultaneously imposes so many restrictions on exports of strategic material to the Soviet bloc and to Red China and leaves such a large loophole open for the shipment of uranium, surely the most strategic material of all.

Second, the difficult if not impossible problem of control is not clearly solved under the terms of establishment of the Agency. The enriched uranium which this Government has already promised to make available is supposed to be for nonmilitary use. But it is scientifically possible to convert uranium of this type into fissionable material for A-bombs.

The only safeguard against this would be a system of continuous close inspection to which Communist nations have been extremely allergic in the past. Nothing less than such inspection would afford any guarantee that the United States was not supplying its enemies with the deadliest kind of munitions.

Third, the sanctions which can be invoked in the event of breach of the agreement seem inadequate. All the Agency can do in the event of violation is to cut off the supply and report the affair to the United Nations. There have been many occasions when it was impossible to get a clear-cut decision from the United Nations. The Agency could do nothing if the nation guilty of violation should seize the material and throw out the Agency's inspectors.

Fourth, the establishment of an International Atomic Agency could set a precedent for other international bodies, dealing with electrical power, steel, wheat, cotton or almost any foodstuffs or raw material under the sun. In any such body the United States would have the same unfavorable position of a "have" among the "have-nots."

What makes United States membership in the International Atomic Energy Agency still less desirable is that there is an entirely safe means of realizing the benefits which are supposed to flow from the Agency. The United States has already concluded almost 40 bilateral agreements with friendly countries looking to cooperation in atomic research and in the construction of power reactors.

CHANCE TO CHOOSE

The advantages in the bilateral approach are that the United States is in a position to choose which countries may be helped without risk to American national security and to impose safeguards which seem adequate in the judgment of the men charged with responsibility for America's own atomic program. Both these advantages would be forfeited if the United States should enter the International Agency, which maintains complete control over all the fissionable material it receives.

An International Atomic Energy Agency of the type now proposed might well be a logical development in a world where national differences had been reduced to a minimum, where there was no fear that some nation or group of nations might have the design of using the terrific destructive power of nuclear weapons to achieve world domination. This is not the situation, at the present time.

It is a very curious sense of relative values that makes the administration throw as many roadblocks as possible in the way of American newspapermen going to Red China and haggle with other powers over what is permissible for exports to China and the Soviet bloc and at the same time support a scheme which could result in the transfer of such a vital nuclear material as uranium to Communist countries. If this is not possible under the constitution of the Agency, it is the obligation of its administration sponsors to explain why it is not possible.

SPEED IN MOSCOW

The suggestion is now being made that the recent Soviet ratification of this plan should hasten its approval by the United States Senate. But it could certainly be argued with equal plausibility that any scheme accepted with such unusual speed in Moscow should receive a long second look in Washington. Just because there has been so little advance discussion of the International Atomic Energy Agency, every detail of the project should receive a thorough going-over at the hands of independent-minded Senators.

The apparent defects should at least inspire some sweeping reservations, if it is not decided that they warrant the scrapping of the whole project.

VESSEL SANITATION—AWARD TO HARRY W. WARLEY

Mr. BUTLER. Mr. President, out of a desire to give recognition to an outstanding accomplishment in regard to vessel sanitation and to a most worthy person responsible for it, I desire to advise the Senate of the special citation just presented to Mr. Harry W. Warley, president of the Ore Navigation Corp.

The United States Department of Health, Education, and Welfare, through its Public Health Service, determined upon the award, the text of which succinctly states its purpose as follows:

Granted in recognition of the company's contribution to public health as evidenced by the award of a Public Health Service certificate of sanitation to each vessel operated in its fleet.

Mr. Warley has long since demonstrated his zeal in elevating all standards connected with the maritime industry. His lengthy service and sound judgment have stamped him as an outstanding official and citizen. His fellow members of the Ore Navigation Corp. have combined their efforts successfully in achieving the most desired results. How well they have acquitted themselves is demonstrated by the fact that each of the 8 ships in its fleet was brought to a rating of almost 100 percent on an official Public Health Service inspection involving 166 separate items of sanitation, construction, and maintenance.

Vessels operated by the Ore Navigation Corp. transport iron ore from Chile and Venezuela to Baltimore, Md. Therefore, it is most fitting that Mr. Warley's special citation was made at a ceremony held at the Maryland Club in Baltimore.

Fortunately, one of the leading figures in attendance was J. M. Willis, whose unexcelled record of shipbuilding at Bethlehem-Fairfield yards was of great benefit to this Nation in the recent emergency. The ceremonies were attended by other health officials and shipping representatives from various States.

Certainly Mr. Warley is entitled to the commendation and high praise of all who appreciate exceptional service, from which all segments of our population are benefited.

FEDERAL FLOOD INSURANCE

Mr. SYMINGTON. Mr. President, the people on areas subject to flooding live constantly with the thought of economic and financial loss during time of high water. They know that adequate flood protection in many areas is still years away.

To these people the Federal Flood Insurance Act passed by the last Congress is of vital importance because this program would enable them for the first time to buy partial insurance coverage against flood damage.

Therefore, there was considerable disappointment this year when the House of Representatives failed to implement this program by appropriating a sum deemed sufficient to put it into operation.

Typical of the reaction in Missouri is an editorial which appeared in the Kansas City Times of May 6, 1957.

I ask unanimous consent to have the editorial printed in the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER DELAY ON FLOOD INSURANCE

For a while it seemed that the long struggle to obtain Federal flood insurance had been won. But now the House Appropriations Committee has taken the plug out of the dike again by refusing to appropriate

the $50 million needed to launch the program authorized by the last Congress.

Certainly Congress has no reason for excessive pride in its reluctance to provide such coverage for the thousands who live in the exposed areas of the Nation. The drive began after the great Missouri-Kansas flood of 1951. Not until the closing minutes of the 1956 session did the legislators finally recognize the obvious need.

Since last July, Frank Meistrell, who is in charge of the program, has had the complete cooperation of the private insurance companies in setting up a premium schedule and tending to necessary preliminary details. Now all is ready to go. Except for one thing: Meistrell has no money. Meanwhile, the floods come.

Admittedly private companies want no part of the total risk involved in flood coverage. And countless American homeowners and businessmen live in the constant nightmare of being wiped out financially by water. Accelerated flood control is the best answer, of course. But it is a vast undertaking that will require many years.

That would leave a legitimate field for the Federal Government, and the 84th Congress, we had supposed, thought as much. Now the House appropriations people say otherwise. The most persuasive argument for voting the $50 million, we believe, is, in a strange coincidence, in the news. In the same issue of the Star were these two headlines: "'No,' on Flood Policies—New Flood in Texas."

Mr. SYMINGTON. Mr. President, in view of the importance of this program to those who live in or own property in the river valleys of Missouri, and the other States, action of the Senate Appropriations Committee in restoring $14 million to the supplemental appropriations bill for 1957, in order to initiate the Federal flood-insurance program is welcome news.

Mr. President, I now desire to refer to another subject.

The PRESIDING OFFICER. The Senator from Missouri has the floor.

REDUCTION OF THE FEDERAL BUDGET

Mr. SYMINGTON. Mr. President, an editorial appeared in the St. Louis Globe-Democrat of Wednesday, May 15, entitled "How To Reduce the Federal Budget." One sentence in the editorial, I believe, will be of interest to all who are interested in the budget presented by this administration this year. It reads as follows:

It is deplorable that the President's top-level committee, which produced a report which has the enthusiastic backing of the Defense Department, looking to a saving of $5 billion annually, and giving us more defense for each tax dollar, would find so little support from the administration that sponsored it.

I ask unanimous consent that the entire editorial be printed in the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW TO REDUCE THE FEDERAL BUDGET

The largest item in the Federal budget is the cost of the military establishment. This cost is increased vastly each year by the huge turnover of personnel among the officers, noncommissioned officers and enlisted men.

More than a year ago, the administration appointed a special committee to examine the problem of retention of military personnel. The chairman was one of the Nation's greatest industrialists, Ralph J. Cordiner, president of the General Electric Co. Its vice chairman was Carter L. Burgess, then Assistant Secretary of Defense and now president of TWA.

The Cordiner committee, composed of top business, professional and governmental officials, was backed by a carefully selected military staff.

After a full year of exhaustive study, the committee recommended measures designed specifically to retain for the armed services the skilled men who today are leaving the uniformed ranks in droves, and costing the taxpayers billions of dollars in the process.

The Cordiner committee recommendations were universally approved by the Secretary of Defense, the Secretaries of the Army, Navy and Air Force and the Joint Chiefs of Staff.

Further, the Defense Department offered to absorb the entire cost for the first year.

The Department believed that the committee's recommendations for increased compensation to the Armed Forces would not only save the Government $5 billion a year within 5 years but, in addition to these monumental savings, would achieve a 15 percent improvement in the combat capability of our Armed Forces, a sharp reduction in training accidents, a reduction in the number of military personnel required to produce a given level of national security, and a long-term solution to the basic manpower problems of the Armed Forces.

All of this would be accomplished by an incentive system whereby the Defense Establishment would become a truly career service for a professional, highly skilled force rather than an institution where men serve the minimum time and can hardly wait to be relieved of their service.

Senator SYMINGTON, speaking in support of the Cordiner committee recommendations in Kansas City Tuesday said:

"The military services must develop a more professional, highly skilled force. That force must be developed on the basis of a balance of the kinds of skills and knowledge it takes to meet changing technology and world conditions. That force must be developed so as to apply effective economies in the utilization of the Nation's financial, material, and human resources.

"The compensation practices of the Armed Forces are so clearly out of step with the times, so clearly inadequate to the needs of a technically advanced form of national defense, and so clearly contrary to all that has been learned about human motivations, that they can presently be called a major impediment to effective national security."

It is deplorable that the President's top level committee, which produced a report which has the enthusiastic backing of the Defense Department, looking to a saving of $5 billion annually, and giving us more defense for each tax dollar, would find so little support from the administration that sponsored it.

If the Armed Forces could cut their turnover of personnel to a figure which would be even close to that of private industry, the savings in dollars, and the increase in defense for the Nation, would be perfectly enormous.

Senator SYMINGTON has introduced a bill in the Senate implementing the Cordiner report. By his own admission, the bill may not be the final answer, but it deserves the thoughtful attention of the administration and the Congress.

The Cordiner report and Senator SYMINGTON's bill present an orderly, systematic solution of manpower turnover and reduction of a budget which has progressed beyond all bounds.

Instead, the administration's proposals are on a hit-and-miss basis, clipping a dollar here and a dollar there, and scarcely attacking the core of our expense problem.

The Eisenhower administration should support the report of its committee and put its backing behind Senator SYMINGTON's bill which holds such great promise for economy and, even more important, for military strength for America.

Mr. SYMINGTON. On May 19, 1957, an editorial entitled "To Save $5 Billion," was published in the St. Louis Post-Dispatch. I ask unanimous consent that this editorial also be printed in the RECORD at this point as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO SAVE $5 BILLION

There is every reason to believe that the Cordiner committee report, with its detailed plan for a complete overhauling of the armed services pay structure, would have solved the principal personnel problem of the Defense Department. Why, if Secretary of Defense Wilson and his service chiefs were for it, was the report practically cut to pieces in the Budget Bureau? Why should not Congress rescue the report and insist on seeing it put into effect?

Although the legislative proposals engendered by the plan had been worked out carefully after discussions with President Eisenhower, he did not come forward personally and support them. Had he done so it might have helped to eliminate the mistaken fear that the Cordiner report would increase military costs. It was admitted that the plan would increase costs during the first 2 years but it was promised that by 1962 savings would reach $5 billion annually. And Mr. Wilson even promised that the Pentagon would absorb within its present budget any immediate additional costs.

This plan was no visionary scheme suddenly conceived. Ralph J. Cordiner, president of the General Electric Co., headed the committee that for a year intensively studied the personnel problems of the services. In a nutshell, the committee found that the officers and men most valuable in the handling of the new and highly complex weapons and equipment are not being paid what they should be while other men are being overpaid under the present Methuselah system of rewarding for longevity of service.

As an example, it costs a bit over $600,000 to train a B–52 or B–47 bomber pilot and if he leaves the Air Force soon after he is trained—as about 20 percent of them do—to take a better paying civilian job, then the service loses heavily on its investment. The problem is the same for others—radar operators, mechanics, electricians, engineers, and the more promising young field grade and general officers. But the truckdrivers, cooks, file clerks, and others with less sensitive skills or with mediocre performance ratings stay on and on.

What does it take to convince the Budget Bureau that there would be economy in a determined weeding out of the men with no skills and no aptitudes and in proper rewarding of the technical and the promising men that are needed in this day of complex war machinery?

Secretary Wilson has been able to order into effect pay increases ranging from $12 to $50 a month for 360,000 enlisted men with special skills but this affects only 15 percent of service personnel. This is far less effective than the full concept of the Cordiner plan and is likely in the long run to do little good. It emphasizes the Cordiner report warning that the Pentagon "could not content itself with simply applying a few patches to the antiquated pay structure which has been inflated but not substantially changed since it was adopted from the British Navy in 1912."

For the best results it is necessary to find a way to adjust the incentives of private enterprise to the armed services. Until the

Methuselah system is dispensed with, the Nation is not going to get the full value of its military dollar.

TRIPARTISANSHIP IN FOREIGN POLICY

Mr. SMITH of New Jersey. Mr. President, during the past few years I have been one of those who have felt very strongly that we must approach our foreign affairs from the standpoint of bipartisanship. My warm friend and late colleague, the great Senator Vandenburg of Michigan, used the expression "nonpartisanship." He believed, as I do, that so far as possible we should try to find a common American foreign policy. I say that by way of introduction for an article which I wish to have printed in the RECORD today.

In yesterday's New York Times magazine section there was published an article entitled "A Senator Calls for Tripartisanship." The article was written by our distinguished colleague the junior Senator from Montana [Mr. MANSFIELD], who is a member of the Committee on Foreign Relations.

He has taken us a step further in constructive thinking regarding our foreign policy. He is suggesting not only that partisanship be eliminated, as between parties, and that there be bipartisanship in our foreign relations, but that we should bring the Executive Office into our planning, and that the Executive should bring the Congress into his planning, and that we should all work together in a spirit of what the Senator from Montana calls tripartisanship.

This article is in line with my own thinking. I have such high regard for the distinguished Senator from Montana that I, as a Republican, wish to follow his example by commending his article to the attention of my colleagues. I ask unanimous consent that the article be printed in the RECORD at this point as a part of my remarks, in order to illustrate a statesmanlike point of view in approaching our foreign relations legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR CALLS FOR TRIPARTISANSHIP

(By Hon. MIKE MANSFIELD, of Montana)

WASHINGTON.—With guided missiles overhead and the echoes of nuclear bomb tests in various parts of the world, we have little choice as a Nation but to stand together in foreign policy if we are to stand at all. If the warning of these weapons of mass destruction is lost on us, a defense budget of about $40 billion a year and foreign aid of over $50 billion in the past decade should serve to remind us that we are deeply involved in a highly volatile world. Either we will play our part as carefully and as unitedly as we can or there may be no world left in which to play.

Unfortunately, our capacity to maintain national unity in foreign policy seems to have declined, even as the urgency for it has increased.

During World War II, the imminent danger to all of us served as a catalyst for common action and this war-born unity persisted for a time after the conflict. It is not surprising, therefore, that the Senate in 1945 endorsed our adherence to the United Nations with only two dissenting votes. Nor is it surprising that the Marshall plan was approved by overwhelming majorities in both Houses of Congress in 1948.

There was more to this national unity during the war and postwar years, however, than common fear of danger or the common desire for peace. There was also concrete action taken within the Government to promote unity. During the war, President Roosevelt brought prominent Republicans into key positions. He appointed two Republicans to his Cabinet—Henry L. Stimson as Secretary of War and Frank Knox as Secretary of the Navy. He also recognized the need for close collaboration with Congress. In the preparations for establishing the United Nations, for example, Members of the Senate of both parties were consulted frequently by the Roosevelt administration.

Something similar took place after the war, in connection with the Marshall plan and the North Atlantic Treaty Organization. The idea of embarking on a program of aid to the war-ravaged lands of Europe was not sprung suddenly on the Congress. The late Senator Arthur Vandenberg, chairman of the Committee on Foreign Relations in the Republican-controlled 80th Congress, was consulted every step of the way by the Democratic administration. When it came to providing for a common defense for ourselves and Western Europe, it was the Vandenberg resolution in the Senate which pointed the way to NATO.

Bipartisanship served in these ways as an effective instrument of foreign policy. It enabled President Roosevelt and, for a time, President Truman to carry on our relations with other nations, secure in the knowledge that they had behind them a very substantial measure of support from both parties. United States policy commanded respect abroad because it was firmly rooted at home.

The cement of bipartisanship began to give way under the pressure of events in the Far East. In rapid succession came the Communist success in China, the inconclusive conflict in Korea and the dispute over General MacArthur. Unfortunately, the Democratic administration was not very successful either in promoting bipartisanship on these matters or in communicating an understanding of its actions or policies to the people of the United States. This failure provided an opportunity to extremists, long out of power, to pull all the political stops in attacks on foreign policy.

Extremism tended to beget extremism. With the undermining of the will to cooperate, bipartisanship in foreign policy became increasingly an empty word. It was invoked as though it were some kind of spell which, if repeated over and over, would insure popularity for unpopular programs. It was used as a club to silence responsible criticism of foreign policy. It was wielded as a whip in efforts by the executive branch to urge measures of foreign policy through Congress. Misuse of bipartisanship in these ways tended to promote in time precisely the opposite of the effect desired.

Bipartisanship is not a magic formula capable of producing national unanimity where there are deep divisions. Nor is it a convenient cloak under which to conceal these divisions from foreign eyes.

Americans differ on foreign issues no less than on domestic issues. Bipartisanship cannot exercise these differences. Properly understood and used, however, it can help to minimize them. It can act to produce the widest possible area of accommodation among sectional and party viewpoints in support of essential action abroad. And the need for this accommodation is very great in a world which has closed in rapidly on the Nation.

In domestic affairs, leadership from the majority party and a responsible opposition from the minority is normally sufficient to keep the country on a level keel. In foreign affairs, however, this political mechanism is no longer adequate for effective national action. It is not enough that foreign policy be led by the majority and opposed by the minority, even if the opposition is a responsible one. When there is partisan division on foreign problems, as there was in the case of Far Eastern policy, the country suffers thereby even though one of the parties may gain a temporary advantage.

The fact is that foreign relations are of transcendent importance to all of us, to Democrats and Republicans alike, and ought to be treated as such. If they are to be conducted in a fashion that safeguards the Nation, the policies decided on must have the greatest possible support, from both parties and from all sections of the country.

The formula for invoking this type of support is not to be found in leadership by one party coupled with opposition from the other. Rather it lies in a positive approach, in the approach of responsible collaboration. This involves not merely bipartisanship—which is collaboration between elements of the two parties—but what might be termed tripartisanship, which involves, in addition, collaboration between the executive branch and the Congress, notably the Senate.

Not infrequently, a lack of sympathetic communication or common purpose between the White House and Capitol Hill—a lack which may have nothing whatever to do with ordinary partisan considerations—places unnecessary obstacles in the path of some urgent foreign-policy objective. It must be recognized that our system of coordinate branches of government inevitably generates a certain basic conflict for dominance, particularly between the legislative and the executive branches. In general, this is good, but it must be taken into account in the working out of tripartisan collaboration on important issues.

As in bipartisanship, the President must be the key figure in the development of tripartisanship. He must supply the leadership and he must be prepared to assume ultimate responsibility. The President's decisive position derives primarily from the fact that he is the only elected figure in the Government with what is, in effect, a national constituency.

The President's key position also stems from his implied constitutional powers to conduct the foreign relations of the United States. I stress the word "implied," for the erroneous impression has long existed that the President's power to conduct foreign relations is explicit and total in the Constitution.

Finally, the President's key position in tripartisanship rests on the fact that he wields the executive power of the Nation. He alone has the resources in personnel and information necessary to the conduct of our relations with other nations.

Notwithstanding the key role of the President, Congress—especially the Senate—also has an important function in foreign policy. The most important of its powers related to foreign affairs are those of legislation and the appropriation of public funds. Congress provides for the Defense Establishment. Congress provides for the Department of State and other agencies concerned with overseas relations. Congress authorizes and appropriates money for foreign aid. Congress declares war and makes peace.

The Senate, in addition, has two special functions set forth in the Constitution. It confirms the appointment of Ambassadors and other Presidential agents and it consents to the ratification of treaties.

To the upper House also falls an implied constitutional power of vast importance. This power, not unlike the President's implied authority to conduct foreign relations, is the obligation to advise and consent in foreign relations.

The advice-and-consent function can be brought into play as a corrective, as seen in the use of the Eisenhower doctrine of the Middle East early this year. The President needed Congressional cooperation, but he neglected to consult in advance with the appropriate Congressional leaders. The manner in which his proposal was presented, moreover, suggested that it had been drawn up hastily and without careful consideration of its many implications. In the end the Senate revised and strengthened the resolution before approving it by a heavy nonpartisan majority.

Since the passage of the resolution, the Eisenhower administration has shown an increasing awareness of the need to preserve close working relationships on foreign policy with Members of both parties in Congress. The President and the Secretary of State have convened several meetings with party leaders to clarify aspects of the international situation. And they have done so before, not after, an irrevocable course was set by the administration.

Conversely, the meetings have helped to clarify for the administration the dimensions of acceptable policy. By assembling the Congressional leaders from time to time, the President and the Secretary of State have availed themselves of the advice of a group of men not only attuned to attitudes in both parties but also to popular sentiment in various parts of the country.

If the relationship between the executive and legislative branches of the Government is one leg on which tripartisanship rests, the relationship between the two political parties is the other. The need for responsible party cooperation is especially acute when, as at present, one party is in control of the executive and the other is in the majority in Congress. In these circumstances, the President must avoid at all costs seeking advantage for his party on foreign-policy measures, if for no other reason than because he is dependent upon the party in control of Congress for legislative leadership.

Similarly, the majority party in Congress cannot adopt a partisan attitude on foreign relations without endangering the welfare of the Nation. In the long run, a nonpartisan course is the course of enlightened self-interest for any party. There is no lasting political return to be gained from placing party advantage above the Nation's interests. Sooner or later, at the polls, the people of the Nation will assess responsibility for politically motivated actions which damage those interests.

The restraints that apply to the majority party apply with equal or greater force to the minority. It cannot seek refuge in its minority status and leave to the majority the sometimes difficult task of following the President's leadership. It cannot make political capital out of foreign policy, least of all when it is in control of the executive branch.

The need for responsible cooperation—for tripartisanship—in foreign policy is widely recognized both in the executive branch and in the Congress. What is still lacking, however, is generally accepted procedures for bringing about such a policy on a continuing basis. The need is most acute at two points: in the formulation of policy within the executive branch, and in its consideration prior to adoption as a national course of action.

The need in connection with policy formulation could be met in part if a principal assistant to the Secretary of State were to be designated, as a matter of regular practice, from the opposition party whenever the latter was in control of the Senate. This appointment could be supplemented by the addition of other members of the opposition party to policy-making positions in the Department of State.

The idea is not wholly a new one. Both President Roosevelt and President Truman followed it to a degree. Recently, President Eisenhower appointed the former chairman of the Senate Foreign Relations Committee, Senator Walter F. George, and the former chairman of the House Foreign Affairs Committee, James P. Richards, to posts in the Department of State. What is suggested here, however, is that this intermittent and informal practice be established on a continuing basis.

Responsible cooperation is also needed before major courses of foreign policy are set. Again, what is lacking is not a precedent but its acceptance and use as a regular instrument in the foreign-policy process. Until now, the practice of advance executive-legislative consultation has been a haphazard one. Presidents and their Secretaries of State have consulted at times with leaders of their own party, with the opposition party or with both parties. Sometimes they have chosen not to consult at all.

If there is to be effective cooperation in foreign policy, there is a need to formalize the procedure of tripartisan consultation. In the early days of the Republic it was fully expected that the President would seek the advice of the Senate in the conduct of foreign relations. This ancient constitutional concept should be revived and adjusted to the realities of the present.

It is, of course, impossible for the President to consult with the entire Senate. I suggest, however, that as a regular practice he might meet with the majority and minority leaders of the Senate, as well as the chairman of the Committee on Foreign Relations and its ranking minority member, prior to embarking on any major course of foreign policy. The comparable Members of the House of Representatives should be included whenever the matter under consideration is likely to involve action by the entire Congress.

Adequate procedural devices, however, are not a substitute for the will to cooperate in safeguarding the interests of the people of the United States. Procedures cannot replace leadership and the ultimate responsibility of the President, or the responsibility of each Member of Congress. What they can do is to enlarge the area of advance agreement on the course of foreign policy and reduce the partisanship factor. They can also mobilize the fullest possible weight of our resources in intelligence and experience for meeting the greatest of our national problems.

In short, in place of what is at best an ambiguous relationship known as bipartisanship these procedures can help to produce an effective tripartisanship with a firm base. Unless we move in this direction, we will have to face the prospect that each party, as well as the Executive and the Congress, may strike out on its own in foreign policy. This course would be an invitation to disaster.

IMPROVED MANPOWER MANAGEMENT AND COMPENSATION IN THE ARMED FORCES

Mr. SYMINGTON. Mr. President, on May 8 the distinguished junior Senator from Arizona [Mr. GOLDWATER] and I introduced a bill, S. 2014, to revise and improve manpower management and compensation throughout our Armed Forces.

S. 2014 is a bill to put into effect the recommendations developed by the Defense Advisory Commmittee on Professional and Technical Compensation, generally referred to as the Cordiner committee, named after its able chairman, Mr. Ralph J. Cordiner, president of the General Electric Co.

Last Saturday, here in Washington, Mr. Cordiner addressed the National Armed Forces Day dinner, sponsored by the Navy League, the Military Order of the World Wars, and the Air Force Association.

Mr. President, although I do not necessarily agree with all the points made in this thought-provoking speech, I do agree that vast savings in military manpower could be achieved if the recommendations of the Cordiner committee in that connection were followed. I ask unanimous consent that the address delivered by Mr. Cordiner be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POWER FOR PEACE

(By Ralph J. Cordiner, president, General Electric Co., and Chairman, Defense Advisory Committee on Professional and Technical Compensation, to eighth annual National Armed Forces Day dinner, Washington, D. C., Saturday, May 18, 1957)

Mr. Chairman, honored guests, ladies, and gentlemen, this evening, throughout the Nation, men and women are gathering to salute their fellow citizens who serve in the Armed Forces of the United States. I add my voice to many others in expressing, on this Armed Forces Day, the gratitude of a free people to those who, by standing guard, have helped to preserve the values of liberty and order in a troubled world.

The opportunity to offer a public tribute to the Armed Forces, before such an illustrious gathering, is especially welcome because I have come to know and respect the men and women of the Armed Forces more deeply than ever in the past year. As Chairman of the Defense Advisory Committee on Professional and Technical Compensation, I have had occasion to talk intimately with thousands of soldiers, sailors, airmen, marines, and their families, from the Commander in Chief and the distinguished military leaders at this table, to men and women of all ranks, at bases on this continent and overseas. It has been my privilege to visit with them at their homes and barracks and ships at sea, to eat with them, to observe their work and their working conditions, and to talk with them about their personal problems and aspirations. It has been, I assure you, an inspiring experience. In these people, one has a glimpse of the faith that sustains nations, the quiet dedication that will keep alive the ideals of peace and freedom in the world.

Wherever the Stars and Stripes fly today, there is power for peace. For this, the world owes a debt of gratitude to the loyal men and women of the United States Armed Forces. These are the dedicated citizens we honor tonight. They deserve, and I earnestly hope they will receive, greater understanding and support from their fellow citizens.

Such public understanding and support will be vital in the years ahead, because the United States is entering a new era in which the basic terms of the national defense are changing rapidly. Important public decisions must be made, decisions that are necessary if the United States is to have strong national defense, with minimum disturbance to the underlying strength of the national economy and the social structure.

It is difficult for anyone to conceive the magnitude of the effort required to maintain the defense of our country and to undergird its worldwide commitments in the cause of peace. The expenditures of the Defense Department alone now absorb approximately 9 percent of the total output of the Nation. Additional billions are being spent on atomic research and production, foreign aid, and other items that are aimed primarily at preserving world peace. A total defense activity that absorbs nearly 11 percent of the gross national output, year after year,

must indeed be managed with as much precision, purpose, and long-range planning as is humanly possible, or such expenditures will destroy the very Nation they are designed to protect.

There is perhaps a tendency for the businessman, or any other person who has not held direct responsibility for these vast defense operations, to oversimplify the problems. My years on the War Production Board in the 1940's, and my recent opportunity to survey the wide range of defense activities firsthand, has given me a deep respect for the complexity of your task. While I am personally convinced that any human undertaking can be kept manageable through proper organization and leadership, I realize that the problems of national defense pose unusual challenges to managerial skill—both in the size of the operations and in the number of factors that must be considered. This has not been fully recognized by the public or by the Government, because the top officers who must provide leadership in this great operation—here in Washington and in the field—are perhaps the most underpaid executives in the Nation. This must be obvious to everyone who stops to think of the difficulty, scope, and responsibility of their work.

Despite such handicaps, every member of the Department of Defense can take deep pride, on this Armed Forces Day, in the progress that has been made under the leadership of Secretary Wilson and our military leaders. The Nation is receiving excellent defense for its defense dollar. Cooperation with industry, which is vital to continuing strength in a period of rapidly changing military technology, has been improving steadily. The defense of the Nation is in good hands.

Yet everyone—civilian and military man alike—realizes that we can never let up in our efforts to improve the effectiveness and economy of the national defense. There are certain challenges in this field that must be met over and over again, without ever coming to any final resolution. Tonight I will discuss some of these continuing challenges, not as a military expert, but as a citizen-observer who has had an exceptional opportunity to see the work of the national defense at firsthand.

The first continuing challenge is to maintain our lead, in terms of quality, over the military might of potential aggressors. This country and her allies cannot hope to maintain armies that will outnumber the massed peasant armies of Russia, China, and their satellites. Our margin of superiority must necessarily be qualitative; that is, our Armed Forces must have the most advanced weapons and they must have the highest levels of skill and training.

There was a time, only a few years ago, when most Americans felt that the superiority of American arms and American skills could be taken for granted. The radioactive particles drifting out of Siberia have shattered that illusion, and we find to our astonishment that in 10 years, through an intensive concentration of Communist resources on military technology, the Soviet Union has nearly caught up with the United States in airpower. The outcome of the next phase—the race to develop missiles systems of intermediate and long range—is obviously of enormous consequence.

In this age of rapid, worldwide technological advance, every weapons system must be regarded as a temporary stage in the headlong rush of scientific discovery. Any tendency to allow strategic concepts to become fixed on obsolete weapons, or to divert research and development funds into the stockpiling of arms that are already obsolescent, must be avoided. Research and modernization, rather than stockpiling of equipment, is the key to continuing combat capability.

Advanced equipment requires advanced skills in all the services as well as in the civilian personnel associated with the national defense. Unfortunately, the Armed Forces are having great difficulty in developing and retaining personnel with the skills required. The facts are well known. The men with the critically needed skills, both officers and enlisted personnel, are leaving the Armed Forces at a shocking rate.

Among enlisted personnel, there is a 25-percent reenlistment rate in the common skills identified as "supporting services," such as truck drivers and cooks. The Armed Forces have more than enough of these skills which can be learned quickly and require little training investment by the Government. But among the electronic and other technical skills that require high investments in time and money, there is only a 13-percent reenlistment rate. It is an alarming fact that 87 percent of the people with these critical skills—the skills that count most in a technically advanced form of defense—are leaving the Armed Forces as fast as they can, for the greater incentives of civilian life.

Among officers the picture is equally discouraging. Too few junior officers are willing to remain on active duty beyond their minimum obligated tour. These capable young officers see no satisfying future in career military service, because the top positions are in no way comparable to their opportunities in civilian life. Thus, 73 percent of the junior officers completing obligated tours of duty during fiscal 1955 promptly returned to civilian life.

Indicative of the attrition rate in specialized, expensively produced skills is the fact that officer losses during fiscal 1955 included nearly 4,000 pilots whose departure represented a minimum training loss alone of $480 million. Not only has the taxpayers' money been essentially wasted, but during the time that their expensive replacements are in training, the combat readiness of the United States is weakened.

Let us give full credit to the Armed Forces. They are striving valiantly to train replacements as fast as they lose their experienced people. Thus, we now have the immensely wasteful expense of half a million men and billions of dollars' worth of equipment tied up in repetitive training, contributing little to an improvement of the Nation's ready combat capability. While some turnover in the Armed Forces is, of course, necessary and desirable, today's turnover of personnel is extravagantly wasteful of the Nation's human and material resources. Yet, under the present Federal laws governing the Armed Forces compensation structure, the Defense Department cannot undertake the necessary corrective action.

This manpower problem was the subject of study by the Defense Advisory Committee on Professional and Technical Compensation. The Committee has submitted a plan of manpower management and compensation, worked out in careful detail with the cooperation of the Defense Department, which would lead to a solution of the Armed Forces' deepseated and wasteful manpower problem. The Committee's proposals, if sincerely and fully implemented by Federal law, would achieve these four desired results:

First, about a 15-percent improvement in the combat capability of the United States Armed Forces without a change in the proposed budget. Or,

Second, savings and gains up to $5 billion a year by fiscal 1962, or sooner, in the cost of national defense.

Third, sharp reductions in training accidents now, and in military and civilian losses in the event of war.

And fourth, reduction in the number of military personnel required to produce a given level of national security.

Such significant improvements cannot be achieved by enacting only a few bits and pieces of the recommended program, or by attempting to retain outstanding personnel with watered-down incentives. The Committee stands foursquare behind its completely balanced program, which was carefully designed to produce positive and long-lasting results.

The challenge to stay ahead of potential aggressors means staying ahead in quality of men as well as equipment. The public has apparently assumed that advanced weapons alone will produce an adequate defense and deterrent to war. This is not true. Advanced weapons will be useless unless the armed services are enabled to make the investment in building the stable force of experienced, highly skilled officers and men that such weapons require. I am confident that, when this issue has been brought constructively before the public, they will enthusiastically support legislation that will simultaneously strengthen the national security, reduce the cost of national defense, save the lives of their sons in training and in combat, introduce greater justice into the pay system of the Armed Forces, and ultimately reduce the number of citizens required to maintain the national defense.

The next challenge I will discuss is the challenge to achieve, as President Eisenhower has phrased it, "security with solvency."

The resources of the United States are not unlimited. Defense Department budgets approaching $40 billion a year, and other expenditures related to past, present, and future defense, such as foreign aid, veteran expense, and interest on the national debt, are a tremendous burden even for these prosperous United States. Expenditures of such magnitude must be administered with maximum economy for three reasons.

First, while defense expenditures are necessary, they are for the most part a loss rather than a contribution to the national economy. Some have argued that defense expenditures are a necessary support for prosperity, but this is false reasoning. Defense expenditures drain away national resources which would otherwise be devoted to building up the Nation's capital structure and improving the people's levels of living. It is essential that this diversion of resources from productive purposes be limited to the minimum necessary for national security.

Second, $40 billion is so much money to take from the taxpayers that every responsible person must perpetually feel under obligation to save some of it and reduce the tax burden.

And third, careless practices in spending this much money will affect adversely the practices of industry and government in all other kinds of spending. The prices paid for military goods and services affect the prices of labor, materials, interest, and practically all other items, usually with inflationary results. When defense spending causes inflation, the people are obliged to pay twice for their national defense because they must pay the hidden tax of inflation on everything they buy.

The problems of obtaining full value from the taxpayers' investment in defense are not as simple as the problems of obtaining economy in a private business that is subject to the daily discipline of the market place. Besides the problems resulting from sheer size of the defense operation, it must be acknowledged that military considerations sometimes make economy a secondary factor, in the most critical projects. Yet the most critical projects nowadays are of such multi-billion-dollar magnitude that the Nation cannot afford to disregard the need for making every practical economy.

There is a difficult challenge here, as everyone in the Department of Defense and in industry is well aware: in order to make major technological advances, major financial risks must be taken, and some of the most expensive experiments may not necessarily be successful. This is one of the facts of life about research and development that is

not fully understood by the public. The tight controls that are necessary over defense expenditures must still be flexible enough to encourage and pay for bold technological experiments that may produce spectacular advances—or may produce nothing at all. The decision to attempt to produce an atomic bomb in World War II was a gamble that worked out, but other governments made the same decision and failed.

On such technical risks, there is room for honest disagreement as to whether the taxpayers will receive a fair return on their investment. But there is one principle of economy on which nearly everyone would agree, and it is this: Let us resist the temptation to play politics with defense.

When a government has $40 billion to spend on goods and services for the national defense, year after year, there will be a strong temptation to regard the defense budget as a huge WPA fund which can be used to make work in exchange for votes.

There will always be the temptation, for example, to award defense contracts without regard for economy to companies in the so-called depressed areas, usually in communities that are no longer able to hold industry because their costs are out of line. If the company that receives the award is actually the best qualified producer, in terms of price, quality, delivery dates, and other proper criteria, then of course the contract should be awarded. But where contracts are awarded unwisely in order temporarily to keep the voters happy in a community, that is no favor to the community involved. It simply postpones the necessary adjustments which will once again make the unhealthy community competitive with other communities in attracting and holding industry on its own merits.

There is likewise the political temptation to place defense contracts with failing companies large and small, or otherwise subsidize unqualified suppliers, in order to cater to particular communities whose votes are needed by the party in power. The armed services are certainly justified in maintaining more than one source of supply for a given item, for both economic and military reasons. But abuse of this principle for political reasons is a temptation that should be avoided. Let us keep politics and relief separate from defense.

Another familiar temptation is the tendency to overstate the concentration of defense business in companies with outstanding research and production facilities, in order to arouse prejudice against these companies or discredit their achievements. Usually this is done by citing prime-contract figures and ignoring the huge portions of these prime contracts that are carried out by small- and medium-sized firms on a subcontract basis. Subcontracting is one of the major services performed by the leading companies, in assuring that the full complement of the Nation's skills are economically mobilized in the national defense. Most of the key defense projects today are beyond the scope of small firms. But, through subcontracting, they get assignments they can handle when a large company takes the overall risks and responsibility.

Both the national security and the national economy are best served when the Defense Department is left free to place its contracts where it can expect the best results for the least investment. In this way, companies of all sizes are encouraged to take on those assignments where they can make the greatest contribution to the national defense, as prime contractors and as subcontractors.

It is difficult enough, in a $40-billion activity, for the Defense Department to do an efficient job of management and weigh all the significant military and economic factors. The additional confusion of political demagoguery is a luxury that this country cannot afford.

Next, let us discuss the challenge to utilize the incentives of a free society and a free economy in the service of national defense.

A free society like the United States depends on incentives, rather than coercion and centralized control, to achieve results. The outstanding success and productivity of the civilian economy is proof that free enterprise incentives produce superior results.

In the past, such incentives have not played a very important part in the defense effort. Government procedures in military procurement have had the objective of placing industry at the service of Government on a "crash" mobilization basis, then returning industry to its normal pursuits after the emergency. The Government has stood the expense of conversion, generally directed the work, and returned the factories to peacetime conditions with a modest profit for the use of the facilities and manpower.

This system is not only inefficient for meeting long-range defense requirements, but it would also be incapable of keeping the Nation abreast of technological advances in weapons systems. Today, industry must be encouraged to devote manpower and resources to the task continuously, and to take the great technological risks that bring great advances. Industry should have greater incentives to reduce costs, as it has in commercial business. In other words, defense should be conducted as a business instead of an interruption of business.

More continuous, dependable financing of defense is clearly a "must." Current trends in this direction are encouraging, but surges and lapses in procurement still occur because of the strict adherence to specific budget periods. As these problems are ironed out, and the country can look forward to greater continuity and balance in the defense effort, industry can consider investing more of its own capital in defense opportunities—with welcome effects on all concerned, including savings to the taxpayers.

General Electric, for example, has remolded its basic organization structure so that a substantial part of the company is concentrating specifically on serving the national defense. Instead of relying entirely on the Government for funds, General Electric's shareowners have invested several hundred million dollars in facilities and manpower for the defense business.

In Evendale, Ohio, and Lynn, Mass., for example, the company's privately owned facilities for research, development, and production of flight propulsion equipment have a replacement value of approximately $125 million. Of the 7½ million square feet of floor space in the company's aircraft gas turbine division, only 17 percent is Government owned. Substantial additional private investments are planned in the future, as a further expression of General Electric's long-range commitments to the permanent growth of airpower—both military and commercial.

With such private investments, a substantial portion of the defense outlay—that for capital additions—is lifted from the taxpayer, and the investing company has greater incentive than ever to achieve results that enhance the national defense.

To encourage such private investments, however, there must be the same incentives in defense business as are to be found elsewhere in this country's free economy. Shareowners in private enterprise must have the opportunity to earn a return sufficient to warrant their investing personnel, facilities, and money, and to warrant taking long-term business risks. Without this opportunity, the participation of private enterprise is likely to be limited to those who feel they can afford it as a "patriotic duty," and to opportunists who enter business entirely at the taxpayers' expense.

Regardless of whose money pays for the facilities, there is a need for greater incentives to cost reduction in defense contracts. The Department of Defense is to be congratulated for its progress in developing new incentive-type contracts in which both the taxpayer and the producer share in the savings achieved through cost reductions. I daresay, the situation is not entirely satisfactory when one agency offers incentives for cost reductions, and another agency can negotiate the incentives away after the cost reductions have been achieved. The possibilities of such contracts are worth further exploration, however, because the Nation needs maximum incentives for both cost reduction and rapid technological progress in the national defense.

Finally, let us discuss the challenge to take a long-range, statesman's view of the national defense.

A short-term, year-to-year approach to the needs of national defense would be dangerously inadequate. We must accelerate our progress in long-range planning if the defense program is to be purposefully managed. At the same time, everyone in a position of responsibility must minimize the natural tendency to allow his judgment to be swayed by short-term political considerations that have little or nothing to do with the defense problem.

In this respect, I feel that some congratulations are in order.

First, let us recognize the progress made by the present administration in coordinating defense policy with the rest of governmental policy. The work of the National Security Council, where it has been used, is particularly to be commended.

I have already indicated my deep admiration for the work of Secretary Wilson and his colleagues, in bringing greater continuity, purpose, and unity into the defense program.

The Joint Chiefs, too, have shown vision and courage in facing up to the realities of advancing technology and its strategic consequencies. I am no judge of military strategy, but the objectivity and thoughtfulness of the Chiefs as military managers has been impressive to me.

And the Nation has a great stabilizing force in the congressional committees under the leadership of Senator RUSSELL and Representative VINSON. Here one expects—and one finds—responsible statesmanship.

Great progress has been made toward recognizing the new demands of a new era of defense, and many of the people in this gathering can take great pride in their personal contribution. Now let us move forward to the next phase in national maturity—to a defense policy of truly bipartisan character.

It has been recognized that, in today's dangerous world, politics must stop at the water's edge. The Nation's most significant foreign policy decisions in the past two decades have been bipartisan decisions. In every case, these bipartisan decisions have won outstanding public support, which is heartening evidence that the people recognize and vote for statesmanship.

What is true for foreign policy should also be true for defense policy because the two are so intimately related. When the issue is national survival, and the cause is peace in the age of atomic weapons, it seems to me as a citizen that this country cannot afford what is called politics as usual in the national defense. The great leaders in both parties must, and I think they will, win public support for policies and legislation based on logic, fact, creative thought, and the highest ideals of the American people. Anything less would be a shameful evasion of responsibility.

As a people, we Americans face not one but a continuing series of public decisions to meet the challenges of the national defense: The decisions that will keep the Armed Forces ahead in the quality of arms and the quality of men; the decisions that

will bring security with solvency; the decisions that will put the incentives of a free society to work in the national defense. If these decisions are made with statesmanship by the Nation's leaders, and with responsibility by the Nation's citizens, then the United States will continue to be what it is on this Armed Forces Day—the leading power for peace in the world.

Mr. SYMINGTON. Mr. President, Mr. Cordiner's speech received front-page coverage in many of the country's outstanding newspapers. In this connection I ask unanimous consent that an article which appeared in the New York Times yesterday be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CORDINER FINDS DEFENSE WASTE—SCORES PENTAGON—GE CHIEF DECRIES POLITICS IN ARMS POLICY—IMPLIES ADMINISTRATION IS AT FAULT—PRAISES WILSON'S WORK—CALLS LOSS OF SKILLED MEN BY SERVICES SHOCKING—URGES MORE LONG-RANGE PLANS

(By Jack Raymond)

WASHINGTON, May 18.—One of the Nation's business leaders asserted today that there were waste, false reasoning, and politics in the Nation's defense program. He cited the Pentagon, some members of the business community and, by indirection, the administration in his accusations.

Ralph J. Cordiner, precident of the General Electric Co., reflected his disappointment over the failure of the administration to act on recommendations of his Defense Department committee about compensation for members of the Armed Forces.

The committee, after a study of more than a year, recommended 10 days ago that sweeping changes be made in the methods and rates of pay for skilled civilians working for the Armed Forces and skilled uniformed personnel. However, a plan to adopt most of the proposals was rejected by the Budget Bureau as not being opportune.

PENTAGON AIDES PRESENT

Mr. Cordiner was the chief speaker at an Armed Forces Day dinner that was attended by several high Pentagon officials. His speech covered many aspects of the Nation's military structure that he found faulty.

His assessment bore additional significance in view of the disclosure, on good authority, that recently he had been sounded out as a possible successor to Charles E. Wilson, Secretary of Defense. He was found to be not available.

Secretary Wilson is expected to leave the Cabinet sometime this summer.

He also praised the Armed Forces congressional committees, under the chairmanship of Senator RICHARD B. RUSSELL and Representative CARL VINSON, both Georgia Democrats; Secretary Wilson, and the Chiefs of Staff. Except for Secretary Wilson, he mentioned no administration leaders by name.

Mr. Cordiner cited the shocking rate at which skilled enlisted men and officers were leaving the services and said:

"It is an alarming fact that 87 percent of the people with these—electronic and other technical—skills—the skills that count most in a technically advanced form of defense—are leaving the Armed Forces as fast as they can, for the greater incentives of civilian life."

Four thousand pilots left in the fiscal year 1955, Mr. Cordiner said, representing a training loss alone of $480 million. This meant, he suggested, that the taxpayers' money was essentially wasted and that the combat readiness of the United States was weakened by expensive training of replacements.

"We now have the immensely wasteful expense of half a million men and billions of dollars worth of equipment tied up in repetitive training," he continued.

Mr. Cordiner reiterated the proposals he had made for a pay system based on skills to supplant the "Methuselah" system based on seniority. And he asserted again that adoption of his plan would save $5 billion a year by the fiscal year 1962 or produce a 15-percent improvement in combat capability.

"The challenge to stay ahead of potential aggressors means staying ahead in quality of men as well as equipment," he declared. "The public has apparently assumed that advance weapons alone will produce an adequate defense and deterrent to war. This is not true."

Turning to the problems of economizing on the huge defense budget, which is approaching $40 billion this year with the added defense support programs, Mr. Cordiner emphasized the following three points:

1. Although necessary, defense expenditures are a loss and not a contribution to the national economy. He rejected as "false reasoning" the argument that defense expenditures are a necessary factor in support for prosperity.

2. Forty billion dollars is so much money to take from the taxpayers that every responsible person must perpetually feel under obligation to save some of it and reduce the tax burden.

3. Inflation caused by defense spending obliges the people to pay twice for their national defense.

But the problem of obtaining full value for defense spending, Mr. Cordiner emphasized, is "not as simple as the problems of obtaining economy in private business that is subject to the daily discipline of the market place." Thus referred to criticisms that have been made by business and taxpayer groups.

Turning to the role of Government, Mr. Cordiner urged the Nation to "resist the temptation to play politics with defense."

He cited the "temptation" to award defense contracts to companies in "so-called depressed areas" in order "temporarily to keep the voters happy in a community."

He noted also a "political temptation" to place defense contracts with failing companies "in order to cater to particular communities whose votes are needed by the party in power."

He called attention to "another familiar temptation" to overstate the concentration of defense business in companies with outstanding research and production facilities.

With the Defense Department's task hard enough as it is, Mr. Cordiner went on, "the additional confusion of political demagoguery is a luxury this country cannot afford."

"We must accelerate our progress in long-range planning if the defense program is to be purposely managed," said Mr. Cordiner, in an apparent reference to his own proposals for utilizing manpower.

"Everyone in a position of responsibility must minimize the natural tendency to allow his judgment to be swayed by short-term political considerations that have little or nothing to do with the defense problem," declared Mr. Cordiner.

THE IMPORTANCE OF UTILIZING NEW WEAPONS IN MILITARY SCIENCE

Mr. WILEY. Mr. President, this morning's Washington Post and Times Herald contains a most interesting column by Mr. Roscoe Drummond with regard to the lessons which we should all learn from the life and career of the late Gen. William L. Mitchell.

The sum and substance of Mr. Drummond's presentation is that the military leaders of the Nation need to keep their minds far more open to new developments than they have often been in the past.

Back in the days when Billy Mitchell recommended paratroops, aerial bombardment of naval ships, aerial torpedoes, and other revolutionary new weapons and strategy, the closed minds of the military leadership of his time refused to pay the slightest heed to Mitchell's suggestions. But the military leaders of Imperial Japan noted Mitchell's suggestions, and so did the leaders of Nazi Germany.

Today, as has been stated many times, we are in a critical military race. We are in a race for survival, and we cannot afford to have any blind leaders, whether in the military field or in the foreign aid field or in any other field.

It is only a question of having the appropriate weapons, so that we may be adequately prepared. We need weapons. We need not the strategy of yesterday or yesteryear, but the strategy of today.

Whether or not the Air Force Board chooses to change the court martial record of Billy Mitchell is no longer really significant. History has long since vindicated him. We of the Congress have voted a posthumous medal in his honor—and I had something to do with that—an objective which I, for one, had long sought, and was happy to be a participant in obtaining.

Of course, I should like to see the military record corrected, so far as Billy Mitchell's court-martial is concerned, but infinitely more important is the fact that we should follow Mitchell's advice, because that is what he would have wanted, were he living.

Mr. President, I wish to take a little more time, and I ask unanimous consent that I may be permitted 3 minutes additional, under the rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILEY. Mr. President, I should like to read a few of the questions which were asked of Billy Mitchell, and his answers:

"The PROSECUTOR. You say that 'in future wars soldiers will invade by leaping in parachutes from airplanes.' Would you care to reveal who gave you this startling information?

"Mr. MITCHELL. Nobody gave it to me. It's quite obvious to anyone with the slightest foresight.

"The PROSECUTOR. Is it your actual belief that this country is vulnerable to attack from the air?

"Mr. MITCHELL. In the foreseeable future.

"The PROSECUTOR. Colonel Mitchell, do you have any idea of the width of the Atlantic Ocean?

"Mr. MITCHELL. Approximately 3,000 miles.

"The PROSECUTER. And the Pacific Ocean?

"Mr. MITCHELL. I know what you are getting at and I tell you that it won't be long before airplanes will fly nonstop across both oceans.

"The PROSECUTOR. You say that 'airships traveling 1,000 miles an hour will fight each other in the stratosphere.' Do you have any comprehension how fast 1,000 miles an hour is?

"Mr. MITCHELL. Of course, I do.

"The PROSECUTOR. Do you know it is faster than the speed of sound?

"Mr. MITCHELL. Approximately 250 miles faster than the speed of sound."

The prosecutor then reminded Mitchell that he foresaw an air attack on Pearl Harbor and had described in detail how it would take place. After his tea leaves and table-tipping remark, he asked with heavy sarcasm: "Does your crystal ball reveal by what enemy this mythical attack will be made. By whom, colonel, by whom?"

"Mr. MITCHELL. The attack will be made by the Japanese."

Then, Mr. President, Billy Mitchell, a Wisconsin man, was condemned for the vision that was his, for the ability to see what the future had in store for us.

Had we been alert, Mr. President, as Mitchell wanted us to be, we would have saved ourselves years of war, $100 billion in wealth, tens of thousands of human lives, and there would have been no Pearl Harbor, as we understand it. So, Mr. President, the point I am trying to make is, let us not be befogged in the so-called budget fight. If there is waste, let us find it. Let us get rid of it. But let us not be stampeded, so that we cannot see what is the real challenge.

As I have said before, when I came to Washington it took 45 days to go around the world. Recently, a man went around the world in 44 hours. This morning's newspaper carries an article with regard to a plane speeding from San Francisco to New York in 3 hours and 30 minutes.

When I came to Washington my State of Wisconsin was isolated, mentally and physically. Today the Nikes surround Milwaukee, a recognition of the fact that Milwaukee is nearer to attack, over the great circle route, than New York City.

We need Billy Mitchells today on the floor of the Senate and also in our economic and military life.

It is my hope, Mr. President, that we will be alert, that we will be adequate, that we will be competent, so there will not be a third world war. But if it comes, remember that after Pearl Harbor we had 2 years to get ready. Now we shall not have 2 hours. That is the judgment of the military men who know. If a third world war comes, it has been estimated it will take 70 million American lives—70 million.

The issue is war or peace. We must not become so entangled in the so-called budget matter that we who have been chosen to represent the people in the Halls of Congress will be put in the position the military men occupied when they were judging Billy Mitchell.

Mr. President, I ask unanimous consent that the article written by Roscoe Drummond be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BILLY MITCHELL: READ HIS TESTIMONY AND WEEP

(By Roscoe Drummond)

The Air Force retrial and certain reversal of the Army's court-martial condemnation of Brig. Gen. Billy Mitchell—because 37 years ago he was too right, too soon, too belligerent about the role of combat airpower—can serve a useful purpose.

It could promote a much needed, more effective integration of the armed services which today are about as integrated as three sovereign potentates surrounded by moats.

It could further a project, once supported by one very highly placed person, which would have the effect of vastly reducing interservice jealousies. This person was Dwight D. Eisenhower. Before he took up residence at 1600 Pennsylvania Avenue he once told me that he would like to see service identity—Army, Navy, Air Force—removed entirely at the lowest and highest levels; that is, privates in training and the Joint Chiefs of Staff.

Finally, it would provide a better understanding of what plagued sharp-tongued, sharp-minded Billy Mitchell, who had the temerity to prove—to the rage of the admirals of the day—that he could sink a battleship with a 1921 crate of an airplane. Perhaps the evaluation of today's fantastic weapons ought not to be left so exclusively to the military brass. It would be a helpful thing to take some of the mystery out of military science. Military science can't be so scientific if the top brass can be so wrong about Billy Mitchell's forecast of what was just around the corner.

I have just been rereading some of the proceedings of the Army court-martial which found General Mitchell's conduct—and ideas—"prejudicial to the good of the service" and cashiered him. It is fantastic reading. He was described by those who condemned him as having no better basis for his views than "palmistry, table tipping, and the reading of tea leaves."

And what was Bill Mitchell trying to persuade his colleagues and his country? Just look at these excerpts from the record:

"The PROSECUTOR. You say that 'in future wars soldiers will invade by leaping in parachutes from airplanes.' Would you care to reveal who gave you this startling information?

"Mr. MITCHELL. Nobody gave it to me. It's quite obvious to anyone with the slightest foresight.

"The PROSECUTOR. Is it your actual belief that this country is vulnerable to attack from the air?

"Mr. MITCHELL. In the foreseeable future.

"The PROSECUTOR. Colonel Mitchell, do you have any idea of the width of the Atlantic Ocean?

"Mr. MITCHELL. Approximately 3,000 miles.

"The PROSECUTOR. And the Pacific Ocean?

"Mr. MITCHELL. I know what you are getting at and I tell you that it won't be long before airplanes will fly nonstop across both oceans.

"The PROSECUTOR. You say that 'airships traveling 1,000 miles an hour will fight each other in the stratosphere.' Do you have any comprehension how fast 1,000 miles an hour is?

"Mr. MITCHELL. Of course, I do.

"The PROSECUTOR. Do you know it is faster than the speed of sound?

"Mr. MITCHELL. Approximately 250 miles faster than the speed of sound."

The prosecutor then reminded Mitchell that he foresaw an air attack on Pearl Harbor and had described in detail how it would take place. After his tea leaves and table-tipping remark, he asked with heavy sarcasm: "Does your crystal ball reveal by what enemy this mythical attack will be made? By whom, Colonel, by whom?"

"Mr. MITCHELL. The attack will be made by the Japanese."

Then, with Gen. Douglas MacArthur, for one, dissenting, the court-martial found Billy Mitchell guilty as charged.

He undoubtedly was guilty of provocative, extreme, aggressive advocacy. But he was in fact being tried by men who couldn't stomach his ideas.

Let's not do it again.

THE UNITED NATIONS AND RESPONSIBILITIES FOR THE FUTURE

Mr. WILEY. Mr. President, it was my privilege the other night to read a very fine address by a very humble public servant, one whom it was my privilege to serve with a member of the Committee on Foreign Relations, when he headed up the staff, Francis O. Wilcox. Mr. Wilcox is now the Assistant Secretary of State for International Organization Affairs.

I ask unanimous consent that the address which Mr. Wilcox gave, which we can all read with profit, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS AND RESPONSIBILITIES FOR THE FUTURE

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, Before the Foreign Policy Association of Pittsburgh, Pittsburgh, Pa., Friday, April 12, 1957)

I am happy to be in Pittsburgh again and to take part in the seventh annual Pittsburgh Public Forum on World Affairs. I recall with pleasure my visit here several years who when I was with the Senate Foreign Relations Committee.

In my talk today I should like to direct attention to the changing composition and role of the General Assembly of the United Nations. It is not surprising that our main focus should be on the General Assembly. A quick look at the events of the past decade leaves us with the impression that the United Nations today is a somewhat different organization from that conceived at San Francisco.

In 1945 the Security Council was hopefully expected to maintain and restore peace. In this Council power and responsibility were neatly combined. However, the 10 years of cold war, of sharp differences between the Soviet orbit, and the Free World, and in particular of repeated abuses of the veto by the U. S. S. R., have pushed the Council into a secondary role. The Council today, while still available, tends to be most useful primarily in situations where there is a possibility of East and West finding a common ground. In other situations it has been faced with increasing disuse.

In contrast the role of the General Assembly has outstripped the expectations of the framers of the charter. The General Assembly was designed to be the less powerful organ. It was scheduled to meet in regular annual sessions. It could not make decisions as could the Security Council—only recommendations. Its main weapon was discussion and debate. Power and responsibility were not realistically reflected in it—the vote of a small state equaled that of a large power. If increasing disuse has characterized the Security Council, quite the opposite is true of the Assembly.

THE ROLE OF THE GENERAL ASSEMBLY

If "past is prolog," then it would seem helpful to consider the implications for the future of the enlarged General Assembly and the greater responsibilities that have been assumed in the past few years by this body. These are changes which give new dimensions to the United Nations and which therefore pose for its members new problems and, I think, new opportunities.

In the last year and a half the United Nations has grown from 60 to 81 members. A preponderance of the increase, it is interesting to note, represents newly sovereign states in Africa, the Near East, and the Far East, commonly referred to as "Afro-Asia."

In the last 6 months the General Assembly has assumed and discharged unprecedented responsibilities under the uniting for peace resolution which was adopted in 1950 following the Communist aggression in Korea. The machinery provided by this resolution was used for the first time when the Security Council was prevented by negative votes of some of its permanent members from dealing

with the crisis in the Middle East and Hungary.

The increasingly important role played by the General Assembly and its greatly enlarged membership, taken together, are causing concern to some members of the United Nations and to some able students and critics of world affairs. Some of our staunch allies are wondering whether the Assembly can effectively face up to critical issues which threaten or break the peace.

I think it would be useful to review briefly some of these fears and warnings. Perhaps, in the process, we can form a judgment as to whether the Assembly is in fact in danger of becoming a Frankenstein monster about ready to destroy itself as some would have us believe.

First, the General Assembly, it is contended, is becoming more and more addicted to bloc voting, with loyalty to bloc taking precedence over any real attempt to meet issues objectively and on their merits. This is regarded as an irresponsible, even dangerous, development when a coalition vote of over one-third can be mustered by the Afro-Asian bloc alone.

Second, it is charged that there is an increasing tendency to water down resolutions in order to get a two-thirds supporting vote where important issues are under consideration. This tendency, it is contended, is producing diluted resolutions of little force or effect.

Third, the principle of sovereign equality under which each state has one vote has come in for renewed criticism as giving an unreal, and distorted, reflection of the relative power, and influence, of the several states in international affairs. Is it right, it is asked, for a small, economically and politically weak state to weigh equally in the balance with a large and strong state when the votes are counted? Does not this encourage a tendency to gang up on the larger state?

Fourth, it is argued that the General Assembly has a double standard of justice and morality; one for states which abide by its recommendations, another for states that defy them. This also raises the question as to whether we are at fault in resorting to the United Nations on issues which it is powerless to resolve and which, therefore, may result in a sense of frustration or loss of faith in the Organization itself.

A LOOK AT THE RECORD

These charges are serious ones and deserve our careful consideration. I believe a look at the record of the 11th General Assembly will help us determine their validity. With regard to all of them, I would like to make the general observation that they imply a greater authority and power than the General Assembly actually has. The composition and role of the General Assembly may be changing but its duties as set forth in the charter remain unchanged. It is a recommendatory body whose influence depends on the voluntary cooperation of its members.

BLOC VOTING

Let us take the matter of bloc voting. The only really consistent bloc voting in the General Assembly—and it is carried on with monotonous regularity—is done by the USSR and its satellite states. This is a pattern long established; it is not a new phenomenon. The fears currently expressed are that the Afro-Asian group of nations may, as a matter of agreed policy, vote together and control Assembly action on important matters in a manner contrary to our interests. This, in my opinion, is more a mathematical possibility than a logical expectation or certainty. The mathematical facts are as follows.

As presently constituted, when all 81 members are voting, 54 votes are needed for the Assembly to act on matters requiring a two-thirds majority. If all the Afro-Asian states were to combine they would have a blocking minority of 28 votes, sufficient to block action on matters requiring a two-thirds vote and enough to give them a major voice in deciding all important issues. By contrast, in the new Assembly, the Latin American states now have but 24 percent of the vote, non-Communist Europe 19 percent, the Soviet bloc 11 percent, and the old British Commonwealth countries 5 percent.

In practice, however, the Afro-Asian group does not regularly vote as a bloc and when it does it is apt to be on issues for which there is overwhelming support from states outside the Afro-Asian area. Again, I think we should look at the record of the last General Assembly.

Take first the vote on the principal resolutions relating to the Middle East crisis. Here, certainly, one might expect to see Afro-Asian solidarity. Yet out of 11 important resolutions approved between November 1, 1956, and February 2, 1957, this bloc voted as an entity on only 2, and in both these cases the resolutions received total votes of 74 in favor, 2 against, and 2 abstentions. Indeed, the general observation may be made that the Afro-Asian group displayed considerable unanimity in casting affirmative votes on the resolutions which were adopted by impressive or overwhelming majorities. In other words, they did not act as an irresponsible splinter group in opposition to the will of the majority.

The voting record on the Hungarian situation demonstrated less unanimity, although there was an increasing tendency for all United Nations members, including those from Africa and Asia, to be more sharply critical of brutal Soviet actions as they became revealed. On this issue, it might be observed, we would have welcomed a solid Afro-Asian bloc vote. But on only 3 out of 10 resolutions were more than 20 Afro-Asian votes cast affirmatively and these dealt with the less contentious issues of relief for the Hungarian refugees. The vote on the remaining seven resolutions reflected wide splits within the bloc. The point I want to emphasize is this: the Afro-Asian group does not constitute a monolithic bloc.

Of course, there is a tendency for states with common interests and problems to vote together when they think this will serve those interests. These tendencies, wherever they exist, present problems to all who wish to see international issues dealt with on their merits. At the same time, we should not exaggerate the extent to which such bloc voting prevails nor should we exaggerate the practical consequences.

WATERED-DOWN RESOLUTIONS

Let us consider the record on the watering down of resolutions. Now it is true that a resolution is seldom approved in committee in the form in which it was first submitted. This would be a remarkable thing not only for the General Assembly but for any political deliberative body. We have only to consider, for example, the tortuous course of a piece of legislation, or a simple resolution, in our own Congress.

This process of compromise is certainly a democratic process. It is an attempt to find common ground and secure the widest possible area of support. It is an essential step if the General Assembly is to comply with the charter injunction to harmonize the action of nations. It exercises a moderating influence on the action of states and places a premium on reasonable policies reflecting broad rather than narrow interests.

A good example of the wisdom and effectiveness of this process is the General Assembly's handling of the Algerian problem. You will recall that France a year ago withdrew her delegation when Algeria was inscribed on the agenda. This year, in the 11th General Assembly, France, while denying the Assembly's competence, did not oppose inscription. When the matter came up before the Political Committee in February 1957, a strong resolution drafted by 18 Afro-Asian states was introduced. While this resolution no doubt expressed the convictions of the drafters, it was obvious from the beginning that it could never receive the two-thirds vote necessary for adoption. Actually no vote was ever taken on this resolution as a whole.

On February 11, in an effort to reach a measure of agreement, a milder resolution was introduced by Japan, the Philippines, and Thailand. The following day a number of other powers tried their hand at drafting an acceptable resolution. Both these resolutions came to a vote in committee and were adopted. Neither, however, received a two-thirds majority.

On February 15 the General Assembly in plenary session heard the Political Committee report failure to secure two-thirds support for any resolution on Algeria. At this juncture, the powers which had fathered the two resolutions that received a simple majority in committee, introduced in plenary a moderate compromise resolution. This resolution, exercising the hope that a peaceful, democratic, and just solution to the Algerian problem would be found in conformity with the principles of the charter, was adopted by a unanimous vote. France refrained from voting in keeping with its position that the General Assembly is not competent to deal with the Algerian situation.

This result could be called, I suppose, an example of a watered-down resolution. I believe it more accurate to describe it as a practical compromise arrived at after exhaustive debate in which all sides had an opportunity to express their views. The debate cleared the air and substantive action by the Assembly which would have hampered rather than promoted a solution was avoided. It is clear from the unanimous vote that during this debate the states principally concerned had achieved understanding, if not approval, of each others attitudes and interests. All members faced the fact squarely that the General Assembly on its own could not provide a solution to the Algerian problem. Progress, however, was possible and progress was made because the Assembly acted responsibly in maintaining an atmosphere conducive to a practicable solution in the future by the parties directly concerned.

General Assembly consideration of the question of Cyprus followed very much the same pattern.

I believe that the Assembly's record on the disarmament question was also an example of responsible action. Assembly members recognized fully that before disarmament can be achieved the principal powers must reach agreement through quiet negotiations. The Assembly was aware that the 81-nation forum is not the right place to try to reach agreement on highly technical details involving the security of many peoples and many countries. For these reasons, it voted unanimously to refer all the disarmament proposals before it to the Disarmament Commission and its subcommittee for prompt, quiet, and detailed consideration. This is an excellent example of the Assembly realizing what it should or should not do in a given situation.

Of course, not all compromise resolutions passed by the Assembly are generally regarded as the best result that might have been achieved. For example, a good many delegations considered the Assembly's last resolution on the deployment of the United Nations emergency force in Egypt as something less than satisfactory. It would obviously have been preferable if the Assembly had been more precise in defining UNEF's role in the Gaza Strip or at the entrance to the Gulf of Aqaba. But here, as in other cases, the outcome was determined by the prevailing balance of interests in the As-

sembly, in this case by those who favored less precision. Nevertheless, the result, while not ideal, did make possible the effective interposition of the UNEF between Israeli and Egyptian forces.

Now I realize that such halfway measures will never satisfy those who expect the United Nations to make quick, clear-cut and enforceable decisions based on agreed concepts of right and wrong in a given issue. Nevertheless, such precise and complete solutions to problems are not always possible. International issues today often are susceptible of only modest solutions. The Assembly's willingness to face up to its limitations as well as its capacities in concrete instances represents a forward step toward even greater responsible action in the Assembly.

THE VOTING FORMULA

One of the very first actions that a newly sovereign state takes in the international field is to apply for admission to the United Nations. Membership in this body is looked upon as the final stamp of approval by the international community. Once admitted, the new state is anxious to demonstrate its ability to contribute to the objectives of the charter, and equally desirous, I think, to assert and maintain its new found independence and sovereignty. The new state tends to avoid actions which would make it appear that its vote is "in someone else's pocket."

I believe that, by and large, these new states, and the so-called small or weak states, have acted responsibly and in the common interest. There are occasions, of course, when a state or group of states advances proposals which are impossible or extremely difficult for the United Nations to carry out and which place the major powers in a difficult predicament. On such occasions, in particular, we may feel that the one-state one-vote formula is, in fact, an inequity and perhaps some consideration should be given to weighted voting devices.

But it is hard to blame these states for using the General Assembly, on occasion, as an opportunity to make the major powers sit up and take notice. Sometimes, when the latter are at loggerheads, such action may serve a decisively constructive purpose.

The General Assembly is as near as the world has come toward the creation of a parliament of nations. As an international institution it tends to reflect accurately the underlying political, economic, and social conditions in the world. It should draw upon, as does a democracy, the energy and intellectual resources of all its members. The atmosphere of equality which prevails encourages it to do this. We should also recall that the Assembly, as a recommendatory body, has built-in safeguards against the imposition of the will of the majority on an opposing minority, even if this is a minority of one. Its recommendations may be disregarded.

However, where the majority is overwhelming and the justice or good sense of a proposal is abundantly evident, opposition or noncompliance by one or more of the great nations will be at the peril of turning world public opinion against them. As the General Assembly has grown, this has been revealed as one of its great unwritten powers. No nation can lightly accept a position of defiance to its limited authority.

THE DOUBLE STANDARD

I would like to say a word now about the so-called double standard. The failure of the General Assembly to bring about the withdrawal of Soviet forces from Hungary, as contrasted with its success in the Middle East crisis, has become a cause of concern.

The record of Assembly action on these two issues does not support the charges made against it. The resolutions invoked against the Soviet Union and the Hungarian Communist regime were more strongly worded than in the case of the action in the Middle East. The Assembly climaxed its action with outright condemnation of the U. S. S. R.—a step which has blasted the underpinnings from the Soviet propaganda campaigns of the past years. Frustrating United Nations action has cost the Soviet Union dearly.

We must face the fact that the possibility for such frustration of United Nations action was written into the charter when great power unanimity was required for Security Council decisions. It was hoped, of course, that unanimity on questions of aggression or threats of aggression would prevail but we were as insistent as any other power in including this provision. It is true that the uniting for peace resolution empowers the General Assembly to act in cases where the Security Council fails to act. But this was a resolution, not an amendment to the charter. The fundamental responsibilities and authority of the Security Council and the General Assembly remain unchanged.

There are and there will remain those within the community, the state, and world who attempt to defy the law. In the absence of enforcement power or a "decent respect to the opinions of mankind" they may—at least in the short run—get away with it. It is true that this is a threat to the rule of law, but it is not its abrogation.

The Soviet Union remains charged by mankind with a brutal and flagrant violation of the charter in the case of Hungary. With regard to General Assembly action, I believe the cause of freedom was served within the capacity of that body to do so in the circumstances, and that the cause of Soviet communism was dealt a serious and irreparable blow.

I think we underestimate the telling and lasting effect on governments, and people throughout the world of the long days and nights of incisive debate and investigation of the Hungarian issue by the General Assembly. As the details of Communist ruthlessness, cynicism, and falsehood were revealed, the eyes of many were opened for the first time to the true meaning of Soviet imperialism. This was particularly true among the representatives of states who, for a variety of reasons, have tended to take a noncommittal or detached stand, particularly on issues with cold-war overtones.

By way of illustration, I would like to refer to an episode in the 11th General Assembly when the Hungarian matter had been under debate for nearly a month. A resolution of condemnation of the Soviet Union was before the Assembly. The delegate from Burma asked for the platform and spoke as follows:

"My delegation has listened with objective detachment to the arguments put forward by the Soviet Government and its allies in defense of the Soviet action in Hungary. We have hoped," he said, "that the truly modest steps proposed by this General Assembly, would have been unanimously adopted. We abstained and waited during the week of December 2, under the expectation that surely the Secretary General of the United Nations would be agreeably received in any member country, at any time. We abstained and waited, while the Secretary General told us that there was a chance that he would be received in Hungary at a stipulated date within the next few days." Then, in telling the Assembly that he was now prepared to vote condemnation of the U. S. S. R., the Burmese delegate said, "We do this to keep our self-respect. After all responsible waiting for action has passed, we can do no less." "There," he said, speaking of Hungary, "but for the Grace of God go we."

At the conclusion of this debate, Burma joined 14 other Afro-Asian nations in condemning Soviet violation of the Charter. In my opinion, this exposure and condemnation of Communist imperialism has served to strengthen the bonds of the Free World. It may well turn out to be one of the greatest blows suffered by the Soviet Union and the satellite system in the past decade. In any consideration of a "double standard" it must be weighed on the positive side of General Assembly accomplishment. For any measure that reveals the methods of despotism and suppression of freedom serves the cause both of the oppressed and of the free who wish to remain free.

PROBLEMS FOR THE FUTURE

In discussing the changing composition and role of the General Assembly I have attempted to place the problems encountered in the light of our experience to date. We will continue to have these problems and new ones will evolve as the resources within the General Assembly are developed.

In summation, I would like to suggest some guidelines for the future.

We should not assume that there will be solid bloc voting or mechanical majorities in the General Assembly except for the Soviet Union and its satellites.

We must remember that states generally act in what they conceive to be their own best interests. There are varying gradations of interests on various problems. There is much in international intercourse that tends to unify—and as much which causes disunity.

We should keep in mind that when a two-thirds vote is required it is often necessary to negotiate among the regional groups or blocs making up the Assembly. If, however, we continue to demonstrate constructive leadership and do our utmost to identify our interests with the interests of world peace and of progress, then I believe the General Assembly is not a body to be feared, now or in the future.

In discussing earlier the question of weighted voting, I did not mean to close or dispose of the issue. For it may well be true that the General Assembly does have a voting system which tends to give a distorted reflection of the power and influence in the world of the various members. However, as I indicated earlier, there is evidence of a responsible restraint exercised by members of the Assembly. This is due, in large part, to an awareness that a General Assembly resolution when passed is still only a recommendation and that its effectiveness depends upon the degree to which it is followed—particularly by the stronger and more influential powers.

The mere fact that a bloc of powers can muster a two-thirds vote on an important issue does not necessarily mean that they will do so. I cite as a case in point the reaction at the General Assembly to the question of the invoking of sanctions against Israel for failure to withdraw her forces. One of the Middle Eastern States had actually introduced such a sanctions resolution. It was very possible at the time that such a resolution could have passed by a two-thirds majority. But this potential majority exercised a commendable restraint and caution; they waited to learn in particular, what the position of certain powers would be whose support might be decisive. As it turned out, the resolution was never brought to a vote and Israeli forces were eventually withdrawn.

Such responsible action is an example of the General Assembly being used as an instrument through which our interdependent world realizes and accepts its interdependence.

The most influential states must recognize that power and responsibility go hand in hand and that their positions of leadership cannot be taken for granted.

The less influential states should take care not to impair or destroy by their actions the usefulness of the organization that protects them and gives them an equal voice in the councils of nations.

The United Nations should be recognized for what it is, an aid to progress toward a more peaceful world. It is complementary to traditional diplomacy not a substitute for it or for responsible international conduct. It is not a political Univac where you feed the problems in one side and take the answers out the other.

In this connection we have often recognized that there are certain international problems that can be more effectively handled outside the context of the United Nations. We have also recognized that we can never use the United Nations as a substitute for bold, imaginative, and realistic foreign policies and programs of our own—that we must continue to pursue many of our national interests and objectives through various regional arrangements and bilateral relationships.

I think there is no doubt that the United Nations must develop more effective pressures to get members to abide by its decisions and recommendations where threats to the peace are involved. In this connection, I believe the creation and use of the United Nations emergency force is an important step in the evolution of voluntary peace-enforcing devices. The experience gained through this current experiment may prove invaluable in the future.

I look to the future of the United Nations, and of the role of the General Assembly in it, with optimism. It has recently faced crucial issues and has emerged a stronger and in some ways a more mature organization. We and the other member states will be called upon to assess its limitations and exploit its resources if it is to discharge well the purposes for which it was founded. The United States will continue to contribute its full measure of support to this end.

THE UNITED STATES INFORMATION AGENCY

Mr. JOHNSON of Texas. Mr. President, in the various debates on the budget, we should not lose sight of the fact that economy is not the only goal. An equally important objective is efficiency in our Government.

Personally, I do not interpret the vote that was cast in this Chamber last week as a vote against an information program. I believe that a more important factor was the question of the kind of information program desired.

One of the principal issues is whether the United States Information Agency should become a part of the State Department or should remain independent. It was the belief of the Appropriations Committee that the first course should be followed.

The United States Information Agency's budget estimate for 1954 is very difficult to determine, because it was a part of the State Department budget; but the Agency was appropriated $83 million.

In 1955, the Bureau of the Budget asked for only $89 million for the Agency, and the Congress reduced the appropriation to $74 million.

In 1956, the Bureau of the Budget asked for only $91 million, and the Congress reduced it to $87 million.

In 1957, the request was increased from $90 million to $135 million. The House voted to appropriate $110 million, the Senate voted to increase the amount to $115 million. The conferees decided on $113 million.

The Press Division personnel in 1956 numbered 684, with an $87 million appropriation. In 1957, that 684 figure was jumped approximately 200, to 877, with an appropriation of $113 million. In 1958, had the request made been granted, the Press Division personnel would have been increased to 930.

Mr. President, the distinguished correspondent, James Reston, addresses himself to the question of the proper home for USIA in this morning's New York Times. He discusses the pros and cons of this basic issue.

I ask unanimous consent that his article be inserted in the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

USIA: QUO VADIS?—AN ANALYSIS OF THE CAPITOL HILL CONFLICT OVER THE INFORMATION AGENCY'S STATUS

(By James Reston)

WASHINGTON, May 19.—The troubles of the United States Information Agency are not over. The administration's propaganda bureau has been cut down in the budget fight more than any other agency of the executive, but it now is facing the prospect of losing its independent status by being moved into the State Department.

Senator MIKE MANSFIELD, of Montana, the Democratic whip in the Senate, is leading the fight to move it to State, where it operated from 1945 until 1953.

John Foster Dulles, Secretary of State, moved it out when the Eisenhower administration came to power on the ground that he wanted State to concentrate on policy matters and get out of foreign-policy operations. He still is adamantly opposed to its return. So is President Eisenhower.

Consequently, another power struggle is impending between the top administration leaders and the Democratic leadership of the Senate.

The issue will arise, and probably will be settled, in this session of Congress during the debate on a bill introduced by the Administration to create a permanent United States information service that would guarantee tenure of status to USIA employees. They do not have such job security at present.

DULLES STRESSES POLICY ROLE

Senator MANSFIELD agrees that some propaganda activities must continue for the foreseeable future. He also is in favor of giving job security to the propaganda officials, but only after the present personnel of the USIA is carefully relieved of its less competent officials and moved into the permanent Foreign Service in the State Department.

Secretary Dulles' arguments against the move are as follows:

State should concentrate on devising foreign policy and not be forced to add propaganda operations to its already formidable burdens.

Transfer of the Agency to State would harm both the policy and propaganda activities of the Government. It would divert policy officials from their primary job of policymaking and make the Secretary of State directly responsible for everything put out by the Voice of America and the other propaganda instruments of the Government. This inevitably would limit the propagandists in what they could say.

The State Department would become an unwieldy instrument with a vast and dissatisfied staff if vast numbers of propagandists, many of them foreign nationals, were added to its rolls. This also might add to the serious task of maintaining the security of its activities.

It also is argued that Arthur Larson, present head of the USIA, would be greatly weakened by being placed in a subordinate position in the State Department. He now sits on the administration's central foreign policymaking body, the National Security Council, and on the Operations Coordinating Board, which is charged by the President with seeing that all agencies carry out the President's decisions in the foreign policy field.

Nevertheless, Senator MANSFIELD, with the support of the Senate majority leader, LYNDON B. JOHNSON of Texas, believes that the amalgamation of the two agencies would cut costs, reduce and improve personnel in the foreign policy field at home and abroad, and greatly improve the coordination between the Government's policy and its propaganda.

SEES CONFLICT AVOIDED

One of his main arguments is that the Nation's propaganda is bad precisely because the policymakers in the State Department do not consider the propaganda aspects of policy as much as they should. He thinks they would be forced to do so if the USIA were back in State, where it could operate with a better knowledge of what the policy of the Government was.

Senator MANSFIELD also makes these points:

As an old and influential department of the Executive, State enjoys a power in the interdepartmental squabbles of the Government that the USIA never could achieve. Therefore, it would be able to influence the statements of other departments and relieve USIA of the constant embarrassment of having to carry contradictory statements by officials in various branches of the Government.

Transfer of the USIA would cut down the cost of maintaining liaison officers between State and USIA and would reduce the number of embassy press officers and information chiefs overseas.

In State the propaganda agency would be less conspicuous and therefore less subject to constant political harassment.

As part of the State Department the propaganda officials would be less subject to what some of them regard as incompetent direction by area chiefs and capricious administration, and more acceptable to many ambassadors in the field.

Under the proposed legislation for USIA there would be one more set of permanent officials operating not under the Foreign Service of the United States but under their own permanent service administered by different officials.

MANSFIELD FEARS INCOMPETENCE

All this, Senator MANSFIELD argues, makes for conflicting regulations and, he believes, an inferior set of propaganda officials who do not have the background or meet the standards of the State Department Foreign Service officers.

It is not so certain in this round of the battle that the Democrats will prevail. The support on Capitol Hill for amalgamation is not so powerful as the support for economy.

Senator MANSFIELD, however, is determined to block the creation of a permanent service for the present personnel of the USIA, even if he does not win his fight to transfer it to State.

He believes it has been a loose and wasteful agency, handicapped by being cut away from the main policymakers, and he does not want to see the situation made worse by giving permanence to what he regards as incompetence.

CALL OF THE ROLL

The PRESIDING OFFICER. Is there further morning business?

Mr. JOHNSON of Texas. Mr. President, before morning business is concluded, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Aiken	Frear	Monroney
Allott	Fulbright	Morse
Anderson	Green	Morton
Barrett	Hayden	Mundt
Beall	Hickenlooper	Murray
Bennett	Hill	Neuberger
Bible	Holland	O'Mahoney
Bricker	Hruska	Pastore
Bush	Ives	Potter
Butler	Jackson	Purtell
Capehart	Javits	Revercomb
Carlson	Johnson, Tex.	Russell
Carroll	Johnston, S. C.	Saltonstall
Case, N. J.	Kefauver	Scott
Case, S. Dak.	Kennedy	Smathers
Chavez	Kerr	Smith, Maine
Church	Knowland	Smith, N. J.
Clark	Kuchel	Sparkman
Cotton	Lausche	Stennis
Curtis	Long	Symington
Dirksen	Magnuson	Thurmond
Douglas	Malone	Thye
Dworshak	Mansfield	Watkins
Eastland	Martin, Iowa	Wiley
Ellender	McClellan	Williams
Ervin	McNamara	Young

Mr. MANSFIELD. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Tennessee [Mr. GORE], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from West Virginia [Mr. NEELY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Georgia [Mr. TALMADGE] is absent by leave of the Senate attending the Inter-American Trade Conference in Rio de Janeiro, Brazil, as representative of the Senate Agriculture Committee.

Mr. DIRKSEN. I announce that the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kentucky [Mr. COOPER], the Senator from Vermont [Mr. FLANDERS], the Senator from Arizona [Mr. GOLDWATER], and the Senator from Kansas [Mr. SCHOEPPEL] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Pennsylvania [Mr. MARTIN] is absent on official business.

The PRESIDING OFFICER (Mr. CHURCH in the chair). A quorum is present.

Is there further morning business? If not, morning business is closed.

MESSAGE FROM THE HOUSE—ENROLLED BILL SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the enrolled bill (H. R. 4897) making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1958, and for other purposes, and it was signed by the Vice President.

THIRD SUPPLEMENTAL APPROPRIATIONS, 1957

Mr. HAYDEN. Mr. President, I move that the Senate proceed to the consideration of House bill 7221, the third supplemental appropriation bill.

The motion was agreed to; and the Senate proceeded to consider the bill (H. R. 7221) making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes, which had been reported from the Committee on Appropriations with amendments.

Mr. HAYDEN. The amount of the bill as passed by the House was $79,840,788.

The amount of increase by the Senate committee is $62,501,257. But of the $62 million, $45 million represents items the Senate has heretofore adopted and which are still in conference on another bill.

If Senators will look at page 3 of the report, they will see the first item is Emergency Conservation Measure. This committee amendment, which was in the urgent deficiency bill, H. R. 4249, heretofore passed, amounts to $15 million. The conferees agreed to this amount in lieu of the budget estimate of $25 million.

The next item is the Disaster Loan Revolving Fund. The committee recommends $15 million, which is the amount agreed to in conference on the same bill, H. R. 4249 in lieu of the budget estimate which requested an increase of $25 million.

Under the same head there is an item for loan authorizations. The committee recommends inclusion of the provision to provide $26 million additional loan authorization for farm ownership loans, under title I of the Bankhead-Jones Act, as amended. This is the amount of the budget estimate, and was agreed to by the conferees on H. R. 4249.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. JOHNSON of Texas. As I understand, of the $62 million by which the committee increased the bill, $56 million is taken from a bill previously passed.

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. So the bill does not actually increase the appropriation to that extent. Where does the $6 million increase take place?

Mr. HAYDEN. There are some variations between what we allowed and did not allow. The principal item the committee added was $14 million for flood insurance. That accounts for a part of the increase.

Mr. JOHNSON of Texas. The committee is increasing the bill by $62 million; $56 million of that amount was taken by the committee from a previous bill which has already been passed. So that leaves a net difference of $6 million. Is that correct?

Mr. HAYDEN. That is correct.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. LAUSCHE. The bill contains an item of $25 million, in chapter VI, which contemplates the purchase of tungsten.

Mr. HAYDEN. The figure is $30 million.

Mr. LAUSCHE. Very well. That item was approved by the Senate in a previous bill.

Mr. HAYDEN. Yes; in a bill which was passed by the Senate.

Mr. LAUSCHE. But which is in conference, with the House disagreeing to the Senate amendment.

Mr. HAYDEN. We had the same difficulty about that item that we had with respect to the three other items I have just mentioned. The conference report never was signed, and, of course, was not submitted to the House. By following the procedure contemplated by the pending bill, all four items will go back to the House for consideration.

Mr. LAUSCHE. Then, I am correct in my understanding, am I not, that this will be a redeclaration, supposedly, of the Senate's purpose to spend $30 million, or at least a part of it, to buy tungsten?

Mr. HAYDEN. That is correct.

If there are no further questions, I might state that the total estimates considered by the Senate were $181,699,320. This bill is under the budget estimates by $39,357,275.

Mr. President, I ask unanimous consent that the committee amendments, with the exception of the amendment on page 10, following line 20, providing for the acquisition of strategic minerals, be agreed to en bloc, that the bill as thus amended be considered as original text for the purpose of amendment, and that points of order shall not be waived.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request?

Mr. WILLIAMS. Mr. President, reserving the right to object, and I do not think I shall object, it is my understanding that the granting of this unanimous consent will not preclude the right of any Member to offer an amendment to any part of the bill or to raise points of order. Is that correct?

Mr. HAYDEN. That is correct.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Arizona? The Chair hears none, and it is so ordered.

The amendments agreed to en bloc are as follows:

Under the heading "Chapter I—Department of Agriculture," at the top of page 3, to insert:

"*Agricultural Conservation Program Service*

"Emergency Conservation Measures

"For an additional amount to enable the Secretary to make payments to farmers who carry out emergency measures to control wind erosion on farmlands or to rehabilitate farmlands damaged by wind erosion, floods, hurricanes, or other natural disasters when, as a result of the foregoing, new conservation problems have been created which, (1) if not treated, will impair or endanger the land, (2) materially affect the productive capacity of the land, (3) represent damage which is unusual in character and, except for wind erosion, is not the type which would recur frequently in the same area, and (4) will be so costly to rehabilitate that Federal

assistance is or will be required to return the land to productive agricultural use, and for reimbursement to the appropriation to the President for 'Disaster relief,' for allocations to the Secretary of Agriculture for such purposes, $15 million: *Provided*, That this appropriation may be expended without regard to the adjustments required under section 8 (e) of the Soil Conservation and Domestic Allotment Act, as amended (16 U. S. C. 590h), and may be distributed among States and individual farmers without regard to other provisions of law."

At the top of page 4, to insert:

"Emergency Range Conservation

"For expenses necessary to carry out the provisions of the act of April 25, 1957 (Public Law 85-25), to remain available until December 31, 1958, $25,000,000, to be derived from funds available for purposes of the Soil Bank Act under section 120 of that act (70 Stat. 197)."

On page 4, after line 6, to insert:

"Farmers' Home Administration

"Disaster Loan Revolving Fund

"Not to exceed $15,000,000 of the disaster loan revolving fund established under the act of April 6, 1949, as amended (12 U. S. C. 1148a-1 to 1148a-3), may be used for emergency feed and seed assistance under section 2 (d) of said act in addition to, and under the same conditions as, the amount made available under this head in the Third Supplemental Appropriations Act, 1954 (68 Stat. 81, 88)."

On page 4, after line 15, to insert:

"Loan Authorizations

"For an additional amount for loans under title I and section 43 of title IV of the Bankhead-Jones Farm Tenant Act, as amended, $26,000,000: *Provided*, That not to exceed the foregoing amount shall be borrowed from the Secretary of the Treasury in accordance with the provisions set forth under this head in the Department of Agriculture Appropriation Act, 1952."

Under the heading "Chapter II—Department of Commerce," at the top of page 6, to insert:

"Panama Canal Company

"Panama Canal Bridge

"For expenses necessary for work preliminary to the construction of a high-level bridge across the Panama Canal at Balboa, C. Z., as authorized by the act of July 23, 1956 (70 Stat. 596), $1 million, to remain available until expended."

Under the heading "Chapter III—Department of Defense—Military Functions," on page 6, after line 15, to insert:

"Department of the Army

"Military Personnel

"For an additional amount for 'Military personnel,' $27,444,000, to be derived by transfer from the appropriation for 'Procurement and production,' Army."

Under the heading "Chapter IV," on page 7, after line 12, to insert:

"AMERICAN BATTLE MONUMENTS COMMISSION

"Construction of memorials and cemeteries

"To the extent that the Commission may find necessary or desirable, the appropriation granted under this head in the General Government Matters Appropriation Act, 1957, shall be available for the purposes of the act of April 2, 1956 (70 Stat. 84)."

Under the heading "Chapter V—Independent Offices," on page 8, after line 8, to insert:

"Administrative Expenses, Employees' Life Insurance Fund

"The limitation under this head in the Independent Offices Appropriation Act, 1957, on the amount made available from the 'Employees' life insurance fund,' for reimbursement to the Civil Service Commission for administrative expenses incurred in the administration of the Federal Employees' Group Life Insurance Act, is increased from '$117,500' to '$194,000.'"

On page 8, after line 17, to insert:

"Not to exceed $23,000 of the funds in the 'Employees' life insurance fund' shall be available for reimbursement to the Civil Service Commission during the fiscal year 1958, for administrative expenses incurred by the Commission during that fiscal year in the administration of said act, and such amount shall be in addition to any amounts otherwise made available from the fund for such expenses for the fiscal year 1958."

On page 9, after line 4, to insert:

"Operating Expenses, Federal Supply Service

"The limitation under this head in the Independent Offices Appropriation Act, 1957, on the amount available for expenses of travel, is increased from '$120,000' to '$130,000.'"

On page 9, after line 9, to insert:

"HOUSING AND HOME FINANCE AGENCY

"Office of the Administrator

"Federal Flood Indemnity Administration

"Payment for flood indemnity operations

"For payment of compensation for services rendered by private organizations and persons pursuant to section 13 (a) of the Federal Flood Insurance Act of 1956 (70 Stat. 1078), for services and facilities of the Federal Reserve banks and public agencies as authorized by section 13 (b) of said Act, $14 million, to remain available until expended."

Under the subhead "Veterans' Administration—Inpatient Care", on page 9, at the beginning of line 22, to strike out "Notwithstanding" and insert "For an additional amount for 'Inpatient care', $2 million, of which $1,450,000 shall be derived by transfer from the appropriation for 'General operating expenses', fiscal year 1957, and $550,000 shall be derived by transfer from the appropriation for 'Outpatient care', fiscal year 1957:"

Under the subhead "Bureau of Indian Affairs—Resources Management", on page 11, after line 2, to strike out:

"For an additional amount for 'Resources management', for emergency operation and maintenance of the San Carlos irrigation project on a nonreimbursable basis, $133,000, to be derived by transfer from the appropriation for 'Education and welfare services', Bureau of Indian Affairs, fiscal year 1957."

And, in lieu thereof, to insert:

"For an additional amount for 'Resources management', $283,000, to be derived by transfer from the appropriation 'Education and welfare services', Bureau of Indian Affairs, fiscal year, 1957: *Provided*, That $133,000 of the amount herein provided shall be for emergency operation and maintenance of the San Carlos irrigation project on a nonreimbursable basis."

Under the heading "Independent Offices," on page 12, after line 19, to insert:

"Alexander Hamilton Bicentennial Commission

"For an additional amount for 'Alexander Hamilton Bicentennial Commission,' $15,000."

Under the heading "Chapter VII—Department of Health, Education, and Welfare—Public Health Service—Hospitals and Medical Care," on page 14, line 5, after the word "for," to strike out "the cost of hospitalization" and insert "payments for medical care."

On page 14, after line 7, to insert:

"Foreign Quarantine Service

"Section 364, part G, title III, of the Public Health Service Act is amended by adding thereto the following subsections:

"'(c) Employees of the United States Public Health Service, Foreign Quarantine Division, performing overtime duties including the operation of vessels, in connection with the inspection or quarantine treatment of persons (passengers and crews), conveyances, or goods arriving by land, water, or air in the United States or any place subject to the jurisdiction thereof, hereinafter referred to as "employees of the Public Health Service," when required to be on duty to perform such duties between the hours of 6 o'clock postmeridian and 6 o'clock antemeridian (or between the hours of 7 o'clock postmeridian and 7 o'clock antemeridian at stations which have a declared workday of from 7 o'clock antemeridian to 7 o'clock postmeridian) or on Sundays or holidays, shall be paid, in lieu of compensation under any other provision of law, at the rate of 1½ times the basic hourly rate for each hour that the overtime extends beyond 6 o'clock (or 7 o'clock as the case may be) postmeridian, and 2 times the basic hourly rate for each overtime hour worked on Sundays or holidays. As used in this subsection, the term "basic hourly rate" shall mean the regular basic rate of pay which is applicable to such employees for work performed within their regularly scheduled tour of duty.

"'(d) (1) The said extra compensation shall be paid to the United States by the owner, agent, consignee, operator, or master or other person in charge of any conveyance, for whom, at his request, services as described in this subsection (hereinafter referred to as overtime service) are performed. If such employees have been ordered to report for duty and have so reported, and the requested services are not performed by reason of circumstances beyond the control of the employees concerned, such extra compensation shall be paid on the same basis as though the overtime services had actually been performed during the period between the time the employees were ordered to report for duty and did so report, and the time they were notified that their services would not be required, and in any case as though their services had continued for not less than 1 hour. The Surgeon General with the approval of the Secretary of Health, Education, and Welfare may prescribe regulations requiring the owner, agent, consignee, operator, or master or other person for whom the overtime services are performed to file a bond in such amounts and containing such conditions and with such sureties, or in lieu of a bond, to deposit money or obligations of the United States in such amount, as will assure the payment of charges under this subsection, which bond or deposit may cover one or more transactions or all transactions during a specified period: *Provided*, That no charges shall be made for services performed in connection with the inspection of (1) persons arriving by international highways, ferries, bridges, or tunnels, or the conveyances in which they arrive, or (2) persons arriving by aircraft or railroad trains, the operations of which are covered by published schedules, or the aircraft or trains in which they arrive, or (3) persons arriving by vessels operated between Canadian ports and ports on Puget Sound or operated on the Great Lakes and connecting waterways, the operations of which are covered by published schedules, or the vessels in which they arrive.

"'(2) Moneys collected under this subsection shall be deposited in the Treasury of the United States to the credit of the appropriation charged with the expense of the services, and the appropriations so credited

shall be available for the payment of such compensation to the said employees for services so rendered.'"

Under the heading "Chapter VIII—Public Works," on page 18, after line 16, to insert:

"DEPARTMENT OF THE INTERIOR

"Southeastern Power Administration

"Operation and Maintenance

"For an additional amount for 'Operation and maintenance, Southeastern Power Administration,' $35,000, to be derived by transfer from the appropriation for 'Operation and maintenance, Southwestern Power Administration,' fiscal year 1957."

Under the heading "Department of Defense—Civil Functions—Department of the Army," on page 19, after line 17, to insert:

"Rivers and harbors and flood control

"Construction, General

"That portion of title III of the act of July 2, 1956 (Public Law 641, 84th Congress, 70 Stat. 474, 480), that pertains to the purchase of lands and improvements in the Buford-Trenton Irrigation District in lieu of protecting said Buford-Trenton Irrigation District in connection with development, construction, and operation of the Garrison Dam and Reservoir project on the Missouri River, is amended to read as follows:

"'That in lieu of protecting the East Bottom of Buford-Trenton Irrigation District, the sum of $1,621,791 of the funds herein or hereafter appropriated for the Garrison Dam and Reservoir project on the Missouri River shall be available for the purchase of lands and improvements in and contiguous to the Buford-Trenton Irrigation District, exclusive of tracts Nos. H. H. 3170 and H. H. 3168, and not to exceed $2 million shall be available to the Corps of Engineers for protection of the intake structure of the pumping plant in Zero Bottom and for the construction of bank protection to prevent erosion in the Missouri River adjacent to the Buford-Trenton irrigation project. The substitution of land acquisition for protection shall be made and the Secretary of the Army shall acquire such land and improvements if all of the landowners, except Lester G. Larson, the heirs of Louis Morin, Jr., and the heirs of A. Desjarlais, on or before September 15, 1957, have offered to sell their property on the terms agreeable to said landowners, and within the amount provided for such land acquisition: *Provided*, That the Chief of Engineers, United States Army, is authorized to acquire by condemnation proceedings in the appropriate United States district court, tract 208 C of the Buford-Trenton project, Williams County, N. Dak., according to the recorded plat thereof which tract is owned by Lester G. Larson, the public domain allotment of A. Desjarlais, now deceased, described as Government lots 5 and 8 in section 19 and Government lot 1 in section 30, township 153 north of range 102 west of the fifth principal meridian, North Dakota, and the public domain allotment of Louis Morin, Jr., now deceased, described as the west half southwest quarter, section 16, and the north half southeast quarter, section 17, township 153 north, range 102 west, fifth principal meridian, North Dakota, in connection with the construction and operation of the Garrison Dam and Reservoir: *Provided further*, That in the event land acquisition is undertaken in lieu of protection of the East Bottom, that in recognition of the increased per acre annual operation and maintenance cost of the remaining lands in the Buford-Trenton Irrigation District, the construction charge obligation assignable to the remaining lands of said district pursuant to the act of October 14, 1940 (54 Stat. 119), as amended, and the proposed contract between the United States and the Buford-Trenton Irrigation District, approved as to form February 23, 1955, shall be nonreimbursable, and the Secretary of the Interior is authorized and directed to enter into a contract with the Buford-Trenton Irrigation District to transfer operation and maintenance responsibility for project works constructed by the Bureau of Reclamation for the benefit of the Buford-Trenton Irrigation District to such district.'"

Under the heading "Chapter IX—Department of State—Administration of Foreign Affairs—Salaries and Expenses," on page 22, at the beginning of line 11, to strike out "$500,400" and insert "$1,000,000."

At the top of page 23, to insert:

"DEPARTMENT OF JUSTICE

"Legal activities and general administration

"Salaries and Expenses, United States Attorneys and Marshals

"For an additional amount for 'Salaries and expenses, United States attorneys and marshals', not to exceed $300,000, to be derived by transfer from any appropriation available to the Department of Justice for the fiscal year 1957."

Under the heading "Funds Appropriated to the President—President's Special International Program," on page 24, at the beginning of line 25, to strike out "$1,300,000" and insert "$1,500,000."

Under the heading "Chapter XI—Legislative Branch," on page 28, after line 2, to insert: "Senate."

On page 28, after line 3, to insert:

"For payment to Jean K. McCarthy, widow of Joseph R. McCarthy, late a Senator from the State of Wisconsin, $22,500."

On page 28, after line 6, to insert:

"Contingent expenses of the Senate

"Senate restaurants: For an additional amount for Senate kitchens and restaurants, $30,000."

On page 28, after line 9, to insert:

"There is hereby established within the contingent fund of the Senate a revolving fund which shall consist of (1) the unexpended balance of the appropriation 'Contingent expenses, Senate, stationery, fiscal year 1957,' (2) any amounts hereafter appropriated for stationery allowances of the President of the Senate and of Senators, and for stationery for use of committees and officers of the Senate, and (3) any undeposited amounts heretofore received, and any amounts hereafter received as proceeds of sales by the stationery room of the Senate. Any moneys in the fund shall be available until expended for use in the same manner and for the same purposes as funds heretofore appropriated to the contingent fund of the Senate for stationery, except that (1) the balance of any amount appropriated for stationery for use of committees and officers of the Senate which remains unexpended at the end of any fiscal year and (2) allowances which are not available for obligation due to vacancies or waiver of entitlement thereto, shall be withdrawn from the revolving fund."

Under the subhead "Capitol Buildings and Grounds—Capitol Buildings," on page 30, at the beginning of line 21, to strike out "$13,500" and insert "$21,500."

On page 30, after line 21, to insert: "Not to exceed $25,000 of the amount of $60,000 under the heading 'Capitol Buildings' continued available for the fiscal year 1957 in the Legislative Branch Appropriation Act, 1957, for the installation of two additional elevators in the Senate wing of the Capitol, is hereby made available for expenditure without regard to section 3709 of the Revised Statutes, as amended, for repairs and improvements to the two elevators in the Senate wing located adjacent to the two additional elevators, and is continued available until June 30, 1958."

On page 31, after line 6, to insert:

"Senate Office Building

"For an additional amount for 'Senate Office Building,' $17,000."

"General Provision

"Notwithstanding the provisions of any other law, the unexpended balances of appropriations for the fiscal year 1955 and succeeding fiscal years which are subject to disbursement by the Secretary of the Senate or the Clerk of the House of Representatives shall be withdrawn as of June 30 of the second fiscal year following the year for which provided. Unpaid obligations chargeable to any of the balances so withdrawn or appropriations for prior years shall be liquidated from any appropriations for the same general purpose, which, at the time of payment, are available for disbursement."

Under the heading "Chapter XII—Claims for Damages, Audited Claims, and Judgments," on page 32, line 21, after the word "Congress," to insert "and Senate Document No. 38, 85th Congress," and in line 22, after the amendment just above stated, to strike out "$2,728,739" and insert "$4,437,896."

The PRESIDING OFFICER. The Senator from Arizona has the floor.

Mr. CARLSON. Mr. President, will the Senator from Arizona yield?

Mr. HAYDEN. I yield.

Mr. CARLSON. I notice, by the report, that the committee is recommending $14 million for flood insurance. I understand the budget request was $50 million. The basic legislation, as the Senator from Arizona knows, was passed following the 1951 flood in Kansas, Missouri, and Oklahoma, and of more recent flood disasters in New England, since which time there have been serious floods in the States of Kansas and Texas. I wonder if the Senator will assure us this amount is sufficient to start the work and get it under way.

Mr. HAYDEN. The committee recommended a figure to which we thought we could reasonably ask the House to consent. The House appropriated no money for this purpose. Instead of asking for the full $50 million, it was thought the Senate should request $14 million, which will start the program and pay for the services of the private insurance companies which have been cooperating in preparing it.

Mr. CARLSON. I appreciate that information, because we in the Kansas River Basin in Kansas have a deep interest in the matter. I was there last week, and the hope was expressed that the work would be started promptly. With the assurance that this amount will at least enable work on the program to be started, I shall go along with it.

The PRESIDING OFFICER. The Clerk will state the committee amendment which has been passed over and which appears on page 10, after line 20.

The LEGISLATIVE CLERK. Under the heading "Chapter VI—Department of Interior," on page 10, after line 20, it is proposed to insert:

Office of the Secretary

Acquisition of Strategic Minerals

For an additional amount for "Acquisition of strategic minerals," $30 million, to remain available until December 31, 1958.

Mr. WILLIAMS. Mr. President, does the chairman of the committee wish to

make a statement in support of this provision?

Mr. HAYDEN. I do not think I can make any better statement than the committee placed in the report filed by it. In recommending the approval of this item, the committee stated in its report on the previous appropriation bill:

In recommending approval of this item in the urgent deficiency bill, the committee stated in its report (S. Rept. No. 65, 85th Cong.):

"The committee considered funds for this program during the latter part of the last session of Congress. In recommending an appropriation of $25 million, the committee stated in its report (S. Rept. No. 2770, 84th Cong.):

" 'The budget estimate for this program—$91,670,000—the estimated cost of the program for 2½ years. It is the view of the committee that the sum recommended is adequate to carry out the program through January of 1957. The committee expects the Department to submit a supplemental request for funds, through the Bureau of the Budget, when additional funds are required.'

"In recommending the initial appropriation ($21 million was agreed to in the conference committee) the committee gave its approval to the intent of the authorizing act, which is to grant interim relief to the producers of tungsten, asbestos, acid-grade fluorspar, and columbium-tantalum until such time as a long-range nondefense minerals policy is submitted to and acted on by the Congress.

* * * * *

"It is the view of the committee that if this program is discontinued at this time the resulting loss to many of the producers will be so great that they will not be able to recover. The effect of such action would be directly opposite to the intent of Public Law 733, which was to maintain our domestic sources of these minerals."

I might state, Mr. President, that I received a letter not long ago which I think is strictly applicable to this situation. I should like to quote a paragraph from it:

A mine is unlike a store. Once production halts and pumps are removed, a mine usually floods. Often it is lost to further production forever. At a minimum, it costs huge sums of money and a considerable length of time, sometimes years, before a mine can be placed back in operation. It certainly is dangerous folly to treat in this manner an industry producing strategic materials. Also, shutdowns mean that part of the national wealth is post permanently. It is a terrible waste.

In order that we may have an interim strategic minerals policy, we should try to carry on this program, with the understanding that the present administration will, at an early date, submit a strategic minerals program for consideration by the Congress. This is an interim program only.

Mr. WILLIAMS. Mr. President, I should like to ask the Senator from Arizona why it is felt necessary to continue the procurement at $55 a ton, which is so far above the prevailing market price on even the domestic production. Why set a price with such a large margin of profit for producers who are always coming forward to ask the Government to bail them out?

Mr. HAYDEN. The Senator speaks of a large margin of profit. The figure mentioned was determined by the proper authorities of this administration as the amount necessary to be paid in order to have tungsten mined in the United States.

Mr. WILLIAMS. I beg the Senator's pardon. The figure was determined during the war when tungsten was very high in price, both from the world market standpoint and the domestic market standpoint, at a time when we needed the material and there was a great shortage. Why are we carrying those prices over? No other commodity is being treated that way.

Mr. HAYDEN. All I can tell the Senator is that that is the price recommended by those who are responsible for the administration of the act. They suggested no lowering of the price. If it were lowered, we probably would not get the American production we are seeking.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WILLIAMS. Mr. President, has the Senator from Arizona concluded?

The PRESIDING OFFICER. Does the Senator from Arizona yield the floor?

Mr. HAYDEN. I yield.

Mr. WILLIAMS. Mr. President, I wish to have the floor in my own right.

The PRESIDING OFFICER. The Senator from Delaware has the floor in his own right.

Mr. WILLIAMS. Mr. President, I do not know of any better argument to be used against this amendment than once again to read the testimony on this question made by Mr. Flemming, the chairman of the Office of Defense Mobilization, before the House committee this year.

I might add that this proposal has been rejected three times by the House of Representatives, and I think properly so.

Mr. Flemming said before the House committee:

Tungsten on hand exceeds both the minimum and long-term stockpile objectives. The inventory plus orders is larger than the total 5-year wartime requirements. * * * There is clearly no defense justification for a continuation of this program because even without any access to either domestic or foreign sources of supply in the event of war, we would have enough in the stockpile to meet total requirements for approximately a 5-year period.

Continuing to read from the House report, the House committee submitted this statement, on page 12 of the report:

Under the new subsidy program, the Government has purchased, since August 1, 1956, over $15 million worth of tungsten from domestic producers at $55 per unit while the United States market price was approximately $35. It should be noted that while it was contended that about 700 domestic producers might benefit from this program, only 49 producers have participated, 9 of whom have received 87 percent of the funds.

The largest purchase during this period was from a group of 3 affiliated companies and totaled $2,875,730, representing 19 percent of the total. A top executive of these companies testified previously that the authorizing legislation was needed in order that the domestic mines can survive foreign competition. The committee was astounded to discover through its own investigation that a dominant company in this group has the largest contract to supply tungsten to the Government from foreign mines. The committee is advised that this contract, for the purchase of over $39 million of tungsten at $55 a unit, will not terminate until December 1959.

In the light of these facts, there can be no sound justification for continuing in peacetime a subsidization program for the sole benefit of a very limited segment of the industry at such an exorbitant cost to the taxpayers of the Nation.

Mr. President, the testimony on behalf of the military establishment and other defense establishments is to the effect that this subsidy program is not needed from the standpoint of the national defense.

Mr. President, we are dealing here today with House bill 7221, which is a bill making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes.

The language of the committee amendment provides for an additional amount for the acquisition of strategic minerals, $30 million, to remain available until December 31, 1958. This is obviously in contradiction of the purposes of the bill; therefore, I make a point of order that the committee amendment is out of order and that it is legislation on an appropriation bill.

Mr. HAYDEN. Mr. President, I concede the point of order and offer an amendment.

The PRESIDING OFFICER. The point of order is sustained. The amendment will be received and stated.

The LEGISLATIVE CLERK. On page 10, after line 20, it is proposed to insert:

OFFICE OF THE SECRETARY

Acquisition of strategic minerals

For an additional amount for "Acquisition of strategic minerals," $30,000,000.

Mr. HAYDEN. Mr. President, I think I should explain to the Senate that the deletion of the phrase, "to remain available to December 31, 1958" from this paragraph does not accomplish anything.

In the Second Supplemental Appropriation Act, 1957, the sum of $21 million was appropriated for the "Acquisition of strategic minerals," and the paragraph included the phrase "to remain available until December 31, 1958." The amendment pending provides for "an additional amount of $30,000,000 for the acquisition of strategic minerals," which in effect amends the parent paragraph in the Second Supplemental Appropriation Act of 1957, therefore all conditions and limitations contained in the parent paragraph apply to the funds provided in the pending amendment. This position was sustained in a decision by the Comptroller General in 1940, and can be found in volume 20, Decisions of the Comptroller General, page 769.

Mr. WILLIAMS. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were not ordered.

Mr. DOUGLAS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, my friend, the Senator from Delaware [Mr. WILLIAMS], and my friend, the Senator from Illinois [Mr. DOUGLAS], desire to have the yeas and nays ordered. I think they should be ordered. I hope a rollcall will be ordered so that the Senator from Delaware and the Senator from Illinois and all other Senators will be aware of the action to be taken.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Arizona [Mr. HAYDEN], on which the yeas and nays have been requested. Is there a sufficient second?

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, I should like to have the attention of the distinguished chairman of the Committee on Appropriations. As I understand, the measure the Senate has under consideration proposes to amend the bill as passed by the House of Representatives, to provide an increase of $62,501,257.

Mr. HAYDEN. It does.

Mr. JOHNSON of Texas. Of the $62,501,277, $45 million has been taken from a deficiency bill previously passed by this body. Is that correct?

Mr. HAYDEN. Forty-five million dollars.

Mr. JOHNSON of Texas. Of the $45 million, $15 million is for emergency conservation measures, and $30 million is for acquisition of strategic minerals. Is that correct?

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. The other items are: The Panama Canal Bridge, $1 million; the Alexander Hamilton Commission, $15,000; and flood insurance, $14 million. Is that correct?

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. The budget estimate in that connection was $30 million.

Mr. HAYDEN. It was $50 million.

Mr. JOHNSON of Texas. And the House allowed nothing.

Mr. HAYDEN. The House allowed nothing.

Mr. JOHNSON of Texas. The Senate committee restored $4 million.

Mr. HAYDEN. Yes.

Mr. JOHNSON of Texas. The State Department salary increase is $699,600. Is that correct?

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. As I understand, that is the result of the mandatory benefits under Public Law 828, for 1957. We passed Public Law 828, and as a result of the mandatory requirements of the act, for 1957, this $699,600 must be provided.

Mr. HAYDEN. It is necessary to comply with the law.

Mr. JOHNSON of Texas. Then there is a claims item of $1,709,157.

Mr. HAYDEN. Those are audited claims, which we always pay.

Mr. JOHNSON of Texas. There is also a legislative item of $77,500.

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. That makes a total of $62,501,000.

Mr. HAYDEN. That is correct.

Mr. JOHNSON of Texas. The Senate has previously acted with respect to $45 million of that sum.

Mr. HAYDEN. The Senator is correct.

Mr. LAUSCHE. Mr. President, will the Senator yield for a further question?

Mr. HAYDEN. I yield.

Mr. LAUSCHE. With respect to the chapter dealing with the Public Health Service, and hospital and medical care, there is a provision dealing with employees of the United States Public Health Service, requring that for ordinary overtime they shall be paid time and a half, and work on Sundays and holidays they shall be paid double time. My question is, What is the general rule with reference to the scale of pay which is applied to employees generally throughout the country? Is it not generally time and a half? If it is, why is this provision being made for double time for holidays and Sundays?

Mr. HAYDEN. This is a subject with which the Senator from Alabama [Mr. HILL] is more familiar than anyone else. I will ask him to answer the question.

Mr. HILL. Mr. President, I will say to the distinguished Senator from Ohio that this provision follows the general rule of time and a half for ordinary days, and double time for Sundays and holidays.

Mr. LAUSCHE. Why is it that this question has arisen at this time?

Mr. HILL. Under the existing statute, when ships come into port, say, in the afternoon, and they cannot be checked out of quarantine by 6 o'clock, that means that they must lie over until the next day. The shipping interests are very much interested in obtaining this service around the clock, or after 6 o'clock in the afternoon, so that ships will not lose time lying in port waiting for the service. The shipping association is very strongly in favor of this provision. The House conferees and the Senate conferees unanimously agreed on a similar provision in connection with a previous bill, which did not become law because that particular bill was one of the appropriation bills which the House did not finally act upon. But so far as I know, all parties interested in this question are in agreement about desiring this provision of the bill.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. HAYDEN. I yield.

Mr. PASTORE. Am I correct in making the statement that the expense incurred under this provision does not represent money paid by the American taxpayer? It is money with respect to which there is reimbursement by the interests which require this special treatment.

Mr. HILL. The shipping companies themselves will pay the extra costs. They are perfectly willing to pay them. In fact, they are so eager for the service that they are glad to have the opportunity to pay the costs of the service.

Mr. LAUSCHE. It is my understanding that the present rule is that the pay is time and one-half for holidays and Sundays. Is it the understanding of the Senator from Alabama that the rule calls for double time for Sundays and holidays?

Mr. HILL. It is my understanding that this provision follows the regularly prescribed rule, which is double time for Sundays and holidays. As the Senator from Rhode Island has well pointed out, these expenses will not be borne by the taxpayers. They will not come out of the Federal Treasury. The costs will be paid for by the shipping companies. They are saying to us, "Give us this service. We are willing to pay for it."

Mr. PASTORE. As a matter of fact, that is the rate of pay for those who work at these terminal points for other organizations, not connected with the Government.

Mr. HILL. Other organizations and other services in connection with our shipping.

Mr. LAUSCHE. The purpose of the question is to make certain that we are not establishing a precedent which will subsequently be used in making demands such as those covered by the language of this bill, which would establish a rule which is not presently applicable generally.

Mr. HILL. The Senator's question is a good one, and a very pertinent one. I think we are establishing no precedent which will arise in the future to trouble us.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. HAYDEN].

Mr. JOHNSON of Texas. Mr. President, may we have the amendment stated?

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 10, after line 20, it is proposed to insert the following:

OFFICE OF THE SECRETARY

Acquisition of strategic minerals

For an additional amount for "Acquisition of strategic minerals," $30 million.

Mr. LAUSCHE. Mr. President, this subject has been discussed at some length in the Senate. There exists at present an impasse between the House and the Senate concerning the item as it was written by the Senate into the urgent deficiency bill.

About 3 days ago there came to my office an official of one of the tungsten companies. He told me that this program of the Senate, subsidizing the manufacturers of tungsten when we already have at least a 5-year supply available, would bring profit to his company. However, he stated to me that, as an American citizen, he did not want that profit, knowing that the program was wrong.

Every bit of testimony offered on this subject indicates that we have more tungsten than we need. We are talking about reducing the budget. I know of no better place to begin than in connection with a subject with respect to which the testimony proves that we are merely continuing a program to purchase supposedly strategic materials, of which we already have an overabundance. Mr. Flemming testified on the subject, and his testimony was quoted by the Senator from Delaware. He said that the tungsten on hand exceeds both the minimum

and long-term stockpile objectives, and the inventory plus orders is larger than the total 5-year wartime requirements.

I simply cannot understand how, in the face of the huge tax burden, the huge budget, and the huge national debt, we can justify investments of this type.

Mr. HAYDEN. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. HAYDEN. The Senator was quoting Mr. Flemming. However, with respect to tungsten, Mr. Flemming had this further to say:

> In view of the fact that the purchase program is about to terminate and that all defense needs have been met, we believe that this also is a situation where Congress should take appropriate action to assist the industry by providing for the purchase of specified amounts from nondefense funds until Congress has had time to consider recommendations from the Department of the Interior for a long-range program.

In other words, if it were a permanent program, or if we were to continue it for a long time to come, that would be one thing. However, if it is a matter of keeping faith with people who have engaged in the mining of tungsten for only a brief period, as specified in the bill, pending the time when the administration can develop a strategic-mineral program, that is a very different thing. That sheds a different light on Mr. Flemming's first statement.

Mr. LAUSCHE. I appreciate deeply the fact that Dr. Flemming did make that statement. However, that statement was made a year ago. The subject has been under discussion for 2 years. Two years ago it was stated that the quantity of tungsten available was adequate to the wartime needs of this country. My query is: "How long are we to continue to have this transition from a wartime situation to a peacetime situation? Two years have now passed. How much longer will be needed?"

ACCESSIBILITY OF CRITICAL MATERIALS—HIGHER TEMPERATURE ALLOYS

Mr. MALONE. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. MALONE. I have before me a letter from R. H. Thielemann, chairman of the department of metallurgy, Stanford Research Institute in California.

The Stanford Research Institute led by Mr. Thielemann, has been conducting research on the metallurgy of high heat resistant alloys. This is Mr. Thielemann's conlusions—excerpts from his letter of May 15:

> Until less than a year ago the effort was to engineer tungsten out of military programs.

I shall put the entire letter in the RECORD later.

Mr. President, for 20 years we did not produce any domestic tungsten because we were in direct competition with the sweatshop labor throughout the world. All that is needed to have domestic production of most of the critical, including tungsten, is to pay the difference between the cost of labor and the general cost of doing business in the United States and abroad. Therefore, in this legislation the effort was made to adjust the price to meet that additional cost.

Mr. Thielemann goes on to says:

JET SPEED, GUIDED MISSILES, AND HIGHER TEMPERATURES

> Our whole technocracy today is aimed at higher temperatures. This is true in both commercial and military fields. At the present time the jet engine presents the important challenge, but missiles and other applications where high temperatures are involved are becoming increasingly important. As you know, we are spending very large sums to develop a commercial use of atomic energy but the program is bogging down badly because the reactors cannot be operated at high enough temperatures to make them economical.

Mr. President, our current annual use of tungsten has been around 8 million pounds. If we had 90 million pounds in the stockpile it would mean around 11 years' supply under present conditions.

However, if what the metallurgists of the Theilemann type say is true, then the annual use might easily become thirty to forty million pounds, which would reduce the stockpile to 2 to 3 years—and the security of this Nation could be endangered.

MILITARY PROGRAM CAN BE DEFEATED—COMMERCIAL USE OF AIRCRAFT RETARDED

Therefore I would say to the Senator from Ohio, who I know has the best intentions in the world, that we can defeat the military program by quoting testimony of an expert after laboratory work and research has made such testimony obsolete.

Mr. President, I would say to the distinguished junior Senator from Ohio that by quoting a former Secretary of the Interior, Mr. Ickes, when he continually stated over the years of his incumbency that we did not have any critical materials, including tungsten.

He died thinking that we must remain dependent upon Burma and northern China for the necessary tungsten.

It never meant anything to him that if the Congress either fixed a price on domestic tungsten or returned to the Constitution in the regulation of foreign trade by adjusting the duty to make up the difference in cost of production here and abroad—that we would produce all of the tungsten we need.

Mr. LAUSCHE. Mr. President, in reply to the Senator, I should like to read from the report of the committee:

> The Director of the Office of Defense Mobilization assured the Congress in June 1956, that there was no defense justification for further domestic purchases of any of these four materials.

Mr. MALONE. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

WORLD WAR II AND KOREAN WAR USE OF TUNGSTEN RETARDED

Mr. MALONE. I should like to say that last fall the Committee on Interior and Insular Affairs asked Mr. Quarles, Secretary of the Air Force, to come before the committee and tell the members of the committee why the Government was restricting the amount of tungsten being used in jet engines beyond the point of safety and thereby curtailing the life of the engines. Mr. Quarles replied: "Because we do not have the tungsten."

We said, "We asked you to come before the committee to tell you you are not informed that we are producing more tungsten now than is actually being used in this country."

Within 2 weeks he took the restriction off and let the designers use the required amount of the indispensable metal in the manufacture of jet engines.

Did the distinguished Senator from Ohio know that there was a restriction all during the Korean war on the amount of tungsten that could be used, simply because we were not supposed to be able to produce it in this country and we could not get it from across major oceans?

Mr. LAUSCHE. I deeply appreciate the comments made by the distinguished Senator from Nevada. However, what he says does not at all alter the word that has come from the person who is in charge of Defense Mobilization. He said that we have more tungsten than we could use in a period of war.

Mr. MALONE. Mr. President, will the Senator yield further?

Mr. LAUSCHE. I yield.

PROGRESSIVE METALLURGY

Mr. MALONE. I would say that this metallurgical investigation is progressing progressively. We are trying to create a higher heat resistant alloy. The writer of the letter I have before me says that the only alloy that will stand above 2,000° heat resistance in tungsten. Therefore, that fact alone would several times over increase the use of tungsten.

It is apparent that anything said even 6 months ago with reference to jet engines may not be true as of now. The designers will tell you that with the improved alloys often an airplane or engine designed today may be obsolete before it goes into production.

Mr. LAUSCHE. That statement still does not alter the fact that the person who is in charge of the program tells us we have all the tungsten we need.

Mr. MALONE. I would merely say that that was said a year ago and that the gentleman he quotes is no longer in charge of the program.

Mr. LAUSCHE. Mr. President, I yield the floor.

Mr. BIBLE. Mr. President, I desire to make only a few observations on the pending amendment. It seems to me that since the institution of this program we have had a situation which, boiled down, may be expressed in this way: Is Congress prepared to keep faith with the commitment it made in Public Law 733 last year?

I recognize full well that there are Senators who have a different opinion than I about the particular legislation referred to. However, Public Law 733, authorizing the continuance of the strategic minerals program, was passed by an overwhelming vote. Later on, implementing funds were provided, in the amount of approximately $21 million. The Committee on Appropriations at that time sent to the floor, in the closing days of the session, a statement that it was anticipated that further funds would be forthcoming in the 1st session of the 85th Congress.

Unquestionably, the miners in the field acted upon that representation, as they

had every right to act upon it. They continued the mining, they continued their investments, and they even went out looking for new prospects, thinking that Congress was going to keep faith.

Then in the first supplemental appropriation bill of this session there was a difference of opinion between the House and the Senate. However, the Senate was very clear on that particular point, and by a vote of 64 to 17 it said, in my opinion, "We shall keep the faith"—and we did keep the faith, so far as the Senate of the United States was concerned.

Without laboring the point, without extending the argument, I point out to my beloved friend, the distinguished junior Senator from Ohio [Mr. LAUSCHE], who has constantly mentioned the testimony of Dr. Flemming, that I am familiar with Dr. Flemming's testimony of 2 years ago. But I am familiar also with Dr. Flemming's testimony of February 26 of this year—just a short 90 days ago. The proponents of Public Law 733 did not put the issue on a defense basis, nor did Dr. Flemming do so in his well-reasoned report to the committee. On February 26 of this year, Dr. Flemming, in explaining why the ODM was supporting Public Law 733, said:

> We are supporting it on the ground that there is a long-term policy that the administration is going to present and that the Congress is going to consider, and we feel that during this interim period between now and the time there is agreement on the long-term policy it just does not make good sense from any point of view to permit these mines to close down and the water to flood the mines, and so on, and to put the miners out of work.

Dr. Flemming said further:

> We feel that Public Law 733 represents sound public policy under all of the circumstances that confront us at the present time.

In direct reference to tungsten, to which the Senator from Ohio alluded, Dr. Flemming said:

> We should avoid weakening this particular segment of our economy by permitting it to close down, as a weakened segment of the economy weakens the foundations on which our whole defense mobilization program rests. To that extent there is a defense relation. Then to the additional point I have just made we are also in a strong position from a defense point of view if we have a going concern rather than something that is shut down when there is also a possibility that the military requirement figures may change and we may need to acquire additional material.

Dr. Flemming added, in the same testimony, at the same hearing, on February 26 of this year, just a short 90 days ago:

> I want it to be clearly understood that we favor Public Law 733, and naturally favoring the public law we favor the appropriation of the funds necessary to carry out the policies set forth in that public law.

Dr. Flemming said also:

> We do believe that it is important for Congress to follow through on the policy that was reflected in Public Law 733 as passed by the Congress and signed by the President.

So I say to my good friend from Ohio that, to me, what is involved is keeping faith with a solemn obligation of Congress, passed less than a year ago, and upon which the people of my State rely. Nevada, with 79 producers, is the second largest tungsten-producing State. We have several large mines, 5 in number, the largest of which employs 225 men. That certainly would not be called big by any of the standards which would apply in a great State, such as Ohio, having vast industrial development.

Before I close, I wish to make one further point. As the record will show, there are outstanding some $62 million in contracts to purchase tungsten from foreign producers at an average price of $55 a unit. I am advised that those contracts are legal, that they are enforcible, and that the foreign producers can collect on them. Yet now, at this very moment, are we to say to our domestic producers, "We did not say that. We will not carry out the word we gave you last July"?

I think the problem is that simple. I believe the amendment should be overwhelmingly adopted.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. BIBLE. I yield to my amiable, but probably differing, colleague from the great State of Delaware.

Mr. WILLIAMS. The Senator's flattery has almost made me forget what I was going to ask him.

Mr. BIBLE. I shall be glad to enlarge upon my compliment.

Mr. WILLIAMS. Is it not a fact that some of the same domestic producers to whom the Senator from Nevada has referred are also foreign producers?

Mr. BIBLE. Some of them are foreign producers. The answer is "Yes."

Mr. WILLIAMS. And are not some of them importing material, as well as producing it in this country?

Mr. BIBLE. The answer is, that there are several on the list who produce both in the foreign field and in the domestic field.

Mr. WILLIAMS. Is not $55 a ton about the highest price they have ever received, even in wartime?

Mr. BIBLE. I cannot answer that it is the highest price.

Mr. WILLIAMS. From $55 to $65 was the range during the war; but these contracts were made at $55 a ton during the height of the Korean war and are being carried over now into the peacetime economy.

Mr. BIBLE. I think the table shows that there is one foreign contract to purchase at $59 a unit, rather than $55.

Mr. WILLIAMS. That is correct.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. BIBLE. I yield to the Senator from Colorado.

Mr. CARROLL. The distinguished Senator from Nevada has put his finger on the key argument in the whole debate.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Colorado speak louder? I should like to hear what he has to say.

Mr. CARROLL. I was a member of the committee that listened to Dr. Flemming. His testimony was exactly as the Senator from Nevada has outlined it within the last few minutes. Moreover, the most important part of the discussion before the committee was based upon this point, not upon the wisdom of the 84th Congress in passing an appropriate piece of legislation. Having passed it, Congress is now confronted with the question of whether the tungsten industry has changed its financial position because of its faith in a law which Congress passed, as I understand, in July 1956.

As a matter of fact, in Colorado, a very small group of people are affected by the tungsten industry, so I am not making any special plea for the industry in my State. However, I received a telegram from one of our producers, a small one, in Boulder County, who asked: "Why didn't you say this to us in 1956? I have now changed my financial position, and I have been relying on this particular legislation."

As the able Senator from Nevada has so clearly stated, the legislation originally may not have been wise, but now we are no longer confronted with a theory, but with a condition. The question now is, having caused some of those folks to change their position, what are we going to do about it?

Let us look at the record. I will ask the Senator from Nevada if I correctly understand the record to be that the House Committee on Appropriations granted some money for this purpose for fiscal 1957. They did, did they not?

Mr. BIBLE. They did; in July 1956, they granted $21 million.

Mr. CARROLL. Is it not true that the Department of the Interior is asking for additional money in order to round out this fiscal year?

Mr. BIBLE. That is true. I might even go further and say that one agency of the Government, the General Services Administration, which is in charge of the act, gave instructions to those in the field as to what they should do on the lapse of the $21 million appropriation, thus giving every indication that they were going forward. At the very beginning of this session of Congress, the GSA sent to Congress a regular budget request.

Mr. CARROLL. I wish to commend the distinguished junior Senator from Ohio for looking into these matters. They ought to be checked; yes, they ought to be watched. Perhaps this is the time now, in fiscal 1957 and before we begin fiscal 1958, to say to domestic tungsten producers, "Watch out for the temper of Congress." Unless the administration comes forward with an intelligible, comprehensive, practical program, as it ought to have done, and as I understand it has not done, I think we can throw up some warning signals. But clearly, Congress is not in a position today to repudiate what has been done before, because to do so would be to the detriment of those who have changed their financial position.

Mr. BIBLE. I thank the Senator from Colorado. I yield the floor.

Mr. WILLIAMS. Mr. President, the Senator from Colorado has claimed that this is an obligation of the United States Government. He has suggested that if the item for this additional $30 million is not included in the bill, as enacted, the Congress will be reneging on certain contracts. That is not correct, Mr. President. Congress did pass an authorization bill, but contracts with the mine producers are only negotiated on the

basis of appropriations. Congress always has the right to lower appropriations below authorizations.

When the authorization was made, the Office of Defense Mobilization was not authorized to make firm contracts except as made later after he got the money. The Director of Mobilization now has on hand sufficient funds for the carrying out of every contract which has been signed by the United States Government.

The pending amendment would provide $30 million, so as to enable the Office of Defense Mobilization to sign another $30 million worth of new contracts for the purchase of tungsten at $55 a ton. Inasmuch as the contracts will be new contracts, it is obvious that if the committee amendment is rejected, we shall not be reneging on any contracts.

In conclusion, I ask unanimous consent that the complete text of the House report be printed at this point in the RECORD. It clearly demonstrates the lack of need for the $30 million.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE INTERIOR

ACQUISITION OF DOMESTIC MINERALS

The committee has disallowed the supplemental budget request of $30 million to continue, under Public Law 733, the domestic purchase of tungsten, asbestos, fluorspar, and columbium-tantalum for the remainder of the current fiscal year. Considering that there is clearly no defense justification for further acquisition of these minerals, the committee feels that continuation of this subsidy program at an estimated total cost of $91 million is entirely unwarranted.

The Director of the Office of Defense Mobilization assured the Congress in June 1956, that there was no defense justification for further domestic purchase of any of these four minerals, pointing out that in each instance the amount on hand and on order met both the minimum and long-term stockpile objectives. For example, Mr. Flemming testified as follows concerning tungsten, for which $68,750,000 has been proposed, representing 80 percent of the total purchase program:

"Tungsten on hand exceeds both the minimum and long-term stockpile objectives. The inventory plus orders is larger than the total 5-year wartime requirements. * * * There is clearly no defense justification for a continuation of this program because even without any access to either domestic or foreign sources of supply in the event of war, we would have enough in the stockpile to meet total requirements for approximately a 5-year period."

The committee believes there is even less justification for continuing this subsidy program at this time than there was on August 14, 1955, when the President vetoed H. R. 6373 which would have directed the continuation of the existing domestic minerals purchase programs under the Defense Production Act for certain minerals, including at least 3 of the 4 in question. In his veto message, the President said:

"* * * Finally, the provisions of H. R. 6373 would apply to only a small segment of the domestic minerals industry and would not reach the fundamentals of the program. Indeed, this bill would make solution of the overall problems of the industry more difficult. * * * The interests of the domestic minerals industry will be better served by proceeding with the careful development of a long-range minerals program than by approving a stopgap measure extending substantial Government aid to only a segment of the industry."

It is obvious that no longer-range program has yet been developed by the administration. This is best evidenced from a review of the situation prevailing in the tungsten industry. Since 1951 the Government has purchased from domestic producers, at $63 per unit 3 million short-ton units under Defense Production Act authority at a total cost of $187,562,751. During this period, the Government also awarded certificates of tax necessity and provided assistance under defense minerals exploration programs to many of these same producers.

During the first half of 1956 almost all of the domestic production was being delivered to the Government under the purchase program at the price of $63 per unit, while industrial needs were being supplied from imports at about $43 per unit. As the amount on hand and on order exceeded even long-term stockpile objectives, it was necessary in June 1956 to discontinue defense purchases from domestic producers.

Under the new subsidy program, the Government has purchased since August 1, 1956, over $15 million worth of tungsten from domestic producers at $55 per unit while the United States market price was approximately $35. It should be noted that while it was contended that about 700 domestic producers might benefit from this program, only 49 producers have participated, 9 of whom have received 87 percent of the funds.

The largest purchase during this period was from a group of 3 affiliated companies and totaled $2,875,730, representing 19 percent of the total. A top executive of these companies testified previously that the authorizing legislation was needed in order that the domestic mines "can survive foreign competition." The committee was astounded to discover through its own investigation that a dominant company in this group has the largest contract to supply tungsten to the Government from foreign mines. The committee is advised that this contract, for the purchase of over $39 million of tungsten at $55 a unit, will not terminate until December 1959.

In the light of these facts, there can be no sound justification for continuing in peacetime a subsidization program for the sole benefit of a very limited segment of the industry at such an exorbitant cost to the taxpayers of the Nation.

Mr. MAGNUSON. Mr. President, I shall speak only briefly.

The Senator from Colorado raised the question as to whether the committee amendment is meritorious. I do not wish to discuss the details in connection with the tungsten item, because the Senator from Colorado and I have heard a great deal of testimony on that subject. We have just concluded hearings on the stockpiling program, and the hearings covered the list of strategic metals which are absolutely vital to the defense of our country. Some of them become less and less vital as technological changes are made in our economy. However, Mr. President, today the economy of the United States is moving into a high-temperature age; that is the best way I can describe the jet age and the missile age. In that connection, the list includes tungsten, chromium, and stainless steel. As everyone knows, tungsten is becoming more and more important. Anything the Congress can do legitimately and equitably to assure that the Government will have the best type of contracts is, I believe, well worthwhile and highly desirable in the case of our stockpiling program and in connection with the use of tungsten in commercial activities.

Without discussing the details, let me say that, although perhaps we should examine the program again, nevertheless, tungsten is becoming very important. Some of the contracts may not be of the best value to the Government. However, last Friday I discovered that in the case of our Government's acquisition of scarce strategic metals, if all the Government's present holdings, now in the stockpile, were sold for what the Government had paid, it would, on the basis of the world market price, make a profit of approximately 40 percent.

As I have suggested, tungsten is vitally important. I hope the Congress will vote to continue this program, even though perhaps some of the details should be examined. Tungsten is one of the strategic metals in the high-temperature age, and tungsten is becoming more and more valuable to our defense and to our commercial uses.

Mr. LAUSCHE. Mr. President, I am somewhat bewildered by the division in the reasons advanced by the proponents of the amendment in their arguments advocating its adoption.

The Senator from Nevada and the Senator from Washington have stated that because of the need for materials which will withstand high temperatures, tungsten must be purchased by the Government. Other Senators argue that there is a moral obligation on the part of the Government to pay those who have kept their plants open, in relying upon the authorization voted by the Congress in 1956.

However, there is no contract between the Government and those persons. Furthermore, it is admitted that tungsten is being imported at the present time. On the one hand, the Government is paying a profit of $20 on every ton of tungsten that is imported. On the other hand, the Government is proposing to subsidize the domestic producers, by means of the pending $30 million amendment. So there is a division of opinion among the proponents. I assume that the division of opinion has developed as a consequence of the weakness of their position.

Mr. President, I shall not vote for the pending amendment. I repeat that to my office came an official of a company which purchases tungsten from abroad and manufactures domestic tungsten. He said to me, "We stand to profit. However, I cannot take that profit from my country. So I urge you to fight the measure."

Mr. MAGNUSON. Mr. President, I do not wish to discuss the details of this proposal. The Appropriations Committee has done that. My point is that I think there is involved a little of both the matters the Senator from Ohio has mentioned.

If tungsten were not so scarce a metal, the situation might be somewhat different.

I do not know what contracts will be made in the future. I do know that after some days of testimony, it became apparent that the more the domestic producers are helped—and in that con-

nection I hope the contracts are fair to the Government—and the more the domestic production can be encouraged, and the more importations can be avoided, the better off our country will be in the case of this very important metal.

PUBLIC LAW 733 PURCHASES DOMESTIC MINERALS, FOREIGN PURCHASES SEPARATE CONTRACTS

Mr. MALONE. Mr. President, I should like to say to my distinguished friend, the Senator from Ohio [Mr. LAUSCHE], that there is a difference.

The pending amendment calls for an appropriation for the purchase of domestic critical materials, including tungsten. What the Senator from Ohio has in mind are those who sell to the Government under the Domestic Minerals Act, Public Law 733, which includes tungsten, but who also have contracts with the GSA for foreign production.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a table showing the outstanding contracts to which the distinguished Senator from Ohio has referred.

This table in part was offered for the record in the committee hearing, by my colleague from Nevada [Mr. BIBLE].

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Active contracts with foreign tungsten producers as of Dec. 31, 1956

Contract No., GS-OOP	Contract date	Contractor	Origin	Undelivered balance (STU) Dec. 31, 1956	Contract unit price in effect Dec. 31, 1956, per STU	Estimated value undelivered quantity [1]	Termination date
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
614 (SCM)	Feb. 6, 1951	King Island Scheelite	Australia	101,250	$55.00	$5,568,750	Apr. 8, 1958
724 (SCM)	June 22, 1951	Wah Chang Corp.	Brazil	414,460	55.00	22,795,300	Dec. 4, 1959
1068 (SCM)	May 1, 1951	Minerales y Metales	Argentina	179,140	50.00	8,957,000	June 30, 1958
1336 (SCM)	Oct. 11, 1951	S. A. Fermin Malaga	Peru	118,250	46.739	5,526,886	Dec. 21, 1958

2610 (SCM)	Dec. 31, 1951	Bolivian Tin & Tungsten	do	58,333	[2] 59.00 [3] 55.00	3,348,256	Dec. 31, 1957
3727 (SCM)	Jan. 27, 1953 [4]	African Metals Co.	S. Africa	3,000	53.00	159,000	Feb. 28, 1957
2857 (SCM)	Apr. 22, 1952	Storeys Creek Tin Mining Co.	Tasmania	5,130	55.00	282,150	Apr. 21, 1957
18034 (D)	Aug. 29, 1952	Minerales de Compostela	Spain	10,300	53.00	545,900	Mar. 20, 1957
12224 (D)	Mar. 18, 1952	Beralt Tin & Wolfram	Portugal	39,000	47.50	1,852,500	Sept. 30, 1957
Total				1,160,076	53.60	61,957,368	

[1] Based on contract unit price in effect Dec. 31, 1956.
[2] Grade A.
[3] Grade B.
[4] Offer actually accepted by the Government Sept. 5, 1952.

Columbite, 800,532 pounds, at $2.411=$1,929,282.
Fluorspar, 169,322 short dry tons, at $65.03=$10,672,395.
Asbestos, all grades, 2,883 short tons, at from $250 to $832=$1,722,587.

WAGES LESS THAN AMERICANS PAY IN INDUSTRIAL INSURANCE AND SOCIAL SECURITY

Mr. MALONE. Mr. President, in the case of 2 of the contracts, $59 a unit is paid—or an average of $53 a unit for the tungsten contract, the source of which include Australia, Brazil, Argentina, Peru, Canada, Bolivia, South Africa, Transylvania, Spain, and Portugal.

The wages paid to tungsten miners in most of those countries are not as large as the amounts paid in the United States for industrial insurance and social security in the case of each of these critical materials miners. Yet it is argued by some that United States labor should compete with such low-paid foreign labor.

If that is the position of the Senator from Ohio, I think he should vote against the amendment.

R. H. THIELEMANN, STANFORD INSTITUTE

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a letter from Mr. R. H. Thielemann, chairman of the department of metallury, of Stanford Research Institute, in California.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STANFORD RESEARCH INSTITUTE,
Menlo Park, Calif., May 15, 1957.

The Honorable GEORGE W. MALONE,
United States Senator from Nevada,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MALONE: I am in receipt of your office newsletter of April 18, 1957, stating that the $30 million item for domestic purchase of tungsten and other critical materials has been deleted from the 1957 deficiency appropriation bill. As you are well aware, unless the domestic mining industry has a market for their product at a price which is commensurate with the cost of their operations, they have no other alternative but to close down. Because of the fact that large quantities of tungsten from foreign sources can be mined with cheap labor and delivered to this country at a price far below the cost of the domestic mined tungsten, there is no market for the domestic tungsten since the existing duties and tariffs do not make up for the difference in cost. It follows that, unless some long range policy can be adopted to make it possible for the domestic mines to operate, they will soon be out of business.

From the strictly technical point of view this situation could have a very serious effect on our efforts to develop the high temperature alloys which are so urgently needed for many of the military and commercial programs. As you know, it wasn't until recently that metallurgists and engineers in this country realized that there could be tungsten available for a large scale usage. Until less than a year ago the effort was to engineer tungsten out of military programs. It was my personal experience to use substitute alloys in the J-57 engine to keep the usage of tungsten within the military requirements. Now that we know we can have tungsten in large quantities, programs have been started to develop new high temperature materials based on the use of tungsten and some of these are presently being tested in advanced jet engines. You know as well as I do that if there is no domestic production of tungsten, the price of foreign material will again be raised to whatever the traffic will bear and tungsten will once again be looked at as an expensive material that has to be imported from foreign shores and, hence, should not be used in jet engines and other military applications. For this reason it seems imperative that we maintain a sufficient domestic tungsten industry to stabilize both the price and the supply of tungsten.

Although it may take a year or so for this to become obvious to all concerned, there are many of us who are working on high temperature alloys who now realize that tungsten is the only metal we have which can be used for the high temperature applications that are so important. Our studies indicate that tungsten is the only one of the high melting point metals that can be alloyed so that inherent oxidation resistance will be developed at temperatures over 2,000 degrees Fahrenheit. A lot of work still remains to be done to develop techniques for processing tungsten base alloys but I am convinced that we will be successful. When this happens the usage of tungsten will be greatly increased and if there is no domestic supply you know what will happen if we are dependent on foreign sources.

Our whole technocracy today is aimed at higher temperatures. This is true in both commercial and military fields. At the present time the jet engine presents the important challenge but missiles and other applications where high temperatures are involved are becoming increasingly important. As you know, we are spending very large sums to develop the commercial use of atomic energy but the program is bogging down badly because the reactors cannot be operated at high enough temperatures to make them economical. It follows that the most important factor in our technological planning is the one of developing high temperature materials and tungsten is certainly going to be important in this overall picture. It is for this reason that I hope that something can be done to keep a domestic tungsten industry in operation.

Very truly yours,

R. H. THIELEMANN,
Chairman, Department of Metallurgy.

Mr. MALONE. Mr. President, I wish to read a part of the letter from Mr. Thielemann, for the information of the Senate, as follows:

Although it may take a year or so for this to become obvious to all concerned, there are many of us who are working on high-temperature alloys who now realize that tungsten is the only metal we have which can be used for the high temperature applications that are so important.

SPEED OF JETS DEPEND UPON HIGHER TEMPERATURE ALLOYS

Mr. President, I have already stated in the debate that the metallurgists are trying to increase the heat resistance of the alloys used in the manufacture of jet engines. The attempt is to raise them to an average of 2,000° higher, and some believe that 3,000° may be reached. Upon the heat resistance of such alloys depends the speed and effectiveness of the jet engine and the missiles programs.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Nevada yield to me?

Mr. MALONE. I am glad to yield to the distinguished senior Senator from Texas, the majority leader.

Mr. JOHNSON of Texas. Mr. President, the Senator from Nevada is a distinguished engineer and is one of the outstanding authorities on this subject, he having been for many years chairman of the Minerals and Materials Subcommittee, and having made a close study of the facts.

I am aware of the shortage of tungsten which frequently has occurred in the United States in connection with its military needs; and I am familiar with the authorization the Congress has made in this field.

I should like to know the difference between the pending committee amendment, which calls for the appropriation of $30 million, and the $30 million item the Senate voted on February 18, 1957.

Mr. MALONE. There is no difference but I would like to have the distinguished senior Senator from Arizona [Mr. HAYDEN], the chairman of the Appropriations Committee, answer the Senator's question.

Mr. JOHNSON of Texas. Let me point out that on February 18, 1957, the Senate, on a yea-and-nay vote, adopted by a vote of 64 to 17, an amendment, offered by the Senator from Arizona (Mr. HAYDEN), on page 7, in line 21, reading as follows:

For an additional amount for "Acquisition of strategic minerals", $30 million, to remain available until December 31, 1958.

Is not this identically the same amendment we voted on then?

Mr. HAYDEN. The Senator from Delaware made the point of order with respect to the last words the Senator from Texas read, "to be made available."

I concede the point of order, pointing out that on the original legislation the Comptroller General handed down a decision that that language was not necessary. We could leave it out of the bill and still get the same result.

Mr. JOHNSON of Texas. But my question is: Is not this in effect the same vote we had on February 18, 1957, when we had a yea-and-nay vote on putting the $30 million item for strategic minerals in the bill, and adopted its proposal by a vote of 64 to 17?

Mr. HAYDEN. That is exactly the question pending now. It is the same basic question.

Mr. JOHNSON of Texas. The Senator has answered my question.

Mr. MALONE. Mr. President, on March 7, 1944, the infamous Harry Dexter White, a Communist of the first order, sent a memorandum to the then Secretary of the Treasury, at his request; recommending that we finance Russia to finance their operations in furnishing critical materials to the United States. These materials included petroleum, manganese, tungsten, zinc, lead, chrome, and mercury.

This would, of course, mean that we would become dependent upon Russia for the critical minerals, without which we could not fight a war or live in peace. I ask unanimous consent to have printed in the RECORD at this point the marked excerpt from Senate Report No. 1627, 1954, starting on page 370.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

APPENDIX IV

HARRY DEXTER WHITE MEMORANDA OBTAINED FROM PRINCETON UNIVERSITY LIBRARY AND FILES OF TREASURY DEPARTMENT

MARCH 7, 1944.

Subject: Proposed United States loan to the U. S. S. R.

To: Secretary Morgenthau.

From: Mr. White.

The following memorandum is in reference to your request that the feasibility of the extension of a large credit to the U. S. S. R. in exchange for needed strategic raw materials be explored. Your opinion that such an arrangement might well be feasible appears to us to be supported by our study of the possibilities.

1. Recent confidential reports on our raw material resources prepared for the Under Secretary of Interior disclose an increasing dependence of the United States on foreign sources of supply for stratgic raw materials because domestic reserves have been seriously diminished or virtually depleted.

2. The following table indicates the extent of United States current reserve supplies for some important strategic materials which can be produced in quantity in the U. S. S. R., in terms of prewar and current war, domestic requirements:

Reserve domestic supplies

	On basis of our 1938 domestic consumption	On basis of our current consumption, 1943
Petroleum	16 years' supply	13 years' supply.
Manganese	9 years' supply	3 years' supply.
Tungsten	23 years' supply	Do.
Zinc	17 years' supply	8 years' supply.
Lead	7 years' supply	6 years' supply.
Chrome	No record	Less than 1 year's supply.
Mercury	3 years' supply	2 years' supply.

3. It is evident from the above table that, although our domestic reserves of petroleum, tungsten, and zinc may suffice to meet consumption requirements for the next decade, they will be almost entirely dissipated by the end of that period; in the case of manganese, chrome, mercury, and lead our resources are too limited to satisfy even probable domestic requirements of the next 10 years. The number of strategic materials for which our reserves are very low and which can be produced in the U. S. S. R. is greater than indicated above, and includes platinum, vanadium, graphite, and mica.

4. Although our reserves of strategic materials could be somewhat expanded, given an increase in price to make possible further development of marginal resources, the necessity of growing United States dependence on foreign sources of supply in order to satisfy anticipated postwar industrial requirements and to maintain adequate security reserves, is inescapable. (See attachment I for complete table on United States metal reserves.)

U. S. S. R. UNTAPPED RAW MATERIALS RESERVOIR

1. The U. S. S. R. is richly provided with a wide range of strategic raw materials, including metals, minerals, timber, and petroleum, but the unequal degrees to which these have been developed will limit the number and volume that may be available for export in the immediate postwar years.

2. Rapid economic reconstruction and expanded resources development could greatly enhance the export surplus of the U. S. S. R., could sustain large-scale exports of metal and metallic ores, petroleum, and timber at an average annual value of at least $500 million, not including exports of other materials such as furs and semimanufactures.

3. It therefore appears that a financial agreement whereby the United States would extend a credit of $5 billion to the U. S. S. R. for the purchase of industrial and agricultural products over a 5-year period, to be repaid in full over a 30-year period, chiefly in form of raw material exports, would not only be advantageous to the United States, as well as helpful to the U. S. S. R., but would be within the limits of feasible trade between the two countries, since the amount we would wish to purchase would be in excess of the repayment which the U. S. S. R. would be required to make under the proposed loan terms. (See attachment II for suggested terms of U. S. S. R. repayment for United States credits.)

IS THE PROPOSED FINANCIAL AGREEMENT PRACTICAL AND DESIRABLE?

The proposed financial agreement appears practical because:

1. The prewar restricted pattern of trade should not be used to define the potentials of postwar trade between the United States and U. S. S. R. since both economies have been fundamentally restructured by the war. In both the United States and U. S. S. R. the accelerated expansion of production capacity and national output which has been achieved during the last 3 years indicates the new and larger dimensions which foreign trade can assume in both economies in the postwar period. (See attachment III for a summary of United States-U. S. S. R. trade relations during the interwar period, 1918–38.)

(a) The low level of prewar international trade relations were both a symptom and a cause of deteriorated economic and political international relations. It is realistic to assume that as compared with prewar years a decreasing proportion of expanding Soviet resources will be devoted to war industries, thereby creating an enlarged export potential through the release of resources.

3. Since the U. S. S. R. has completely state-controlled economy, the extent and character of its surpluses and deficits (i. e., imports and exports) are largely determined by planning decisions covering the allocation of manpower, materials, and equipment, it will be possible for the United States to influence the Soviet pattern of anticipated national surpluses and deficits.

4. If United States trade plans are premised on an expanded volume of trade and a correlative increase of United States import requirements, the expansion of trade between the United States and U. S. S. R. need not necessarily involve a reduction in total United States imports from other areas.

The proposed financial agreement appears desirable because:

1. The United States will obtain access to an important source of strategic raw materials which are expected to be in short supply in the United States after the war.

2. The United States will also be assured an important market for its industrial products since the U. S. S. R. represents one of the largest single sources of demand in Europe and is ideally suited to supply us with a large and varied backlog of orders for both producers' and consumers' goods. Such a sustained demand could make an important contribution to the maintenance of full em-

ployment during our transition to a peace economy.

3. Moreover, the United States will not only be assured a desirable market because of the anticipated volume of demand the U. S. S. R. will exercise, but because of its superior repayment potential compared with other foreign buyers of American products.

4. An arrangement of this character would provide a sound basis for continued collaboration between the two governments in the postwar period.

HARRY DEXTER WHITE,
WILLIAM HENRY TAYLOR.
IRVING S. FRIEDMAN.
SONIA GOLD.

Mr. MALONE. Mr. President, in that excerpt it is shown that Harry Dexter White, then a dominant figure in our Treasury Department, sent the memorandum to the Secretary of the Treasury, at the request of the Secretary of the Treasury, recommending that five to ten billion dollars be sent to Russia to buy the very materials we are discussing today, which would have meant that we would be dependent on Russia for those materials.

Now we are depending on India and other nations, a list of which I just read into the RECORD, which includes Brazil and South Africa. Many of those nations are across major oceans.

It would be absolutely impossible to secure those materials if a war started, and we would become dependent on those countries in peacetime, which means that we could be blackmailed into any agreement which the nations supplying those materials wanted to propose.

Mr. President, the 24-year program, beginning in 1934 with the 1934 Trade Agreements Act, was the program furthered by the two probably best known Communists—Mr. Harry Dexter White, who became a very influential Assistant Secretary of the Treasury, and Mr. Alger Hiss, a very influential member of the State Department; the one who will be long remembered as leading our distinguished leaders around by the nose in San Francisco in 1945 in the organization of the United Nations, where we have only a fraction of the votes of Great Britain and Russia.

White is dead and Hiss served time for his nefarious actions, but the Congress of the United States still carries on their program.

Mr. President, all we have to do is to just sit still in 1958 and let the 1934 Trade Agreements Act—so-called reciprocal trade act—expire in June 1958 and we workingmen and small-business men are back in business.

Mr. President I have in my hand certain communications. Without taking the time of the Senate to read them, I ask unanimous consent that they may be printed in the RECORD at this point as a part of my remarks.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

THE PALMER & DECKER CO.,
Reno, Nev., April 25, 1957.

Hon. GEORGE W. MALONE,
United States Senate,
Washington, D. C.

MY DEAR SENATOR MALONE: I wish to take this opportunity to express my appreciation for the support you have given to maintain a domestic mining industry, in spite of heavy opposition. I had hoped to be able to see you personally when you were in Reno, Nev., this last week, but I was out of town at that time on a drilling job near Geriach, Nev.

I would like to take a little of your time by presenting in this letter some of the facts as to how the curtailment of funds has affected just one small operator, myself, and my company.

For the past 3 years we have operated a tungsten mine near Bishop, Calif., selling the ore to Union Carbide Nuclear Co. Our mine is situated in the Sierra Nevada Mountains at an elevation of between twelve and thirteen thousand feet. Even with a short season, high milling charges and payment of royalties, we have made a small profit, which has been put back into the mine in the form of development and equipment.

At the time General Services Administration stopped accepting concentrates from Union Carbide Nuclear Co. in November of 1956, we had approximately 2,000 units of tungsten at the mill which is worth about $60,000 at Union Carbide Nuclear Co.'s price under the stockpile program, but adjusted to the open-market price, this ore would bring hardly enough to pay for the milling charges, not including the mining and trucking costs.

Union Carbide Nuclear Co. has held these concentrates for us since November 1956, in the hope that the Congress would appropriate the additional funds to meet the obligation set down in Public Law No. 733.

In order to pay for development, labor, hauling, etc., it was necessary for me to borrow money and mortgage all of my drilling and mining equipment. It now seems that I am faced with bankruptcy, unless you and your fellow Senators are able to put some sort of appropriation through and make such funds available to buy up those concentrates that myself and other small operators were not able to sell to the General Services Administration in 1956.

Regardless of the outcome of your struggle to help the mining industry, you may rest assured that you will have our support in 1958, and my wife and I feel that the United States needs more statesmen like yourself, and fewer politicians.

Very truly yours,

ALBERT P. DECKER.

PIOCHE, NEV., *May 7, 1957.*

Hon. GEORGE W. MALONE.

DEAR FRIEND MOLLY: I have been going to write to you for several weeks and congratulate you on your work on the tungsten appropriations and the free gold market. However, I have everything I can see in the papers and I feel that we're fighting a losing game in the mining industry.

Tonight the Tribune announces a cut of 1½ cents in the price of zinc.

Most mines are fighting to exist and make their payrolls and many have lost.

If lead and zinc are cut many more are doomed.

Pioche is a marginal camp. Tempuite is very shaky, but may survive if money is put up for your program.

Many miners have talked to me lately and they argue that in their time, say 30 years, they have never seen any prosperity in the mining industry under a Republican President. I have argued on the point but they insist that there has been no prosperity.

This long-range program is a laughing matter. Why can't they take some advice from some good, sound mining men.

Your free gold program would help all mining and, I believe, would be a boom to the Western States.

I don't see why the Government should at any time buy foreign metals to place in our stockpile. You have studied this very thoroughly and have a good view on the subject.

However, let them pay plenty tariff to ship in their metals and maybe we can keep operating.

Thanking you very kindly, I remain,
Very truly yours,

JIM HULSE.

PIOCHE, NEV., *May 7, 1957.*

Hon. GEORGE W. MALONE,
United States Senator from Nevada,
Washington, D. C.

DEAR FRIEND MOLLY: I have been going to write to you for several weeks and congratulate you on your work on the tungsten appropriations and the free gold market. However I have read everything I can see in the papers and feel that we are fighting a losing game, in the mining industry.

Tonight the Tribune announces a cut of 1½ cents in the price of zinc.

Most mines are fighting to exist and make their payrolls and many have lost. If lead and zinc are cut many more are doomed.

Pioche is a marginal camp. Tempuite is very shaky but may survive if money is put up for your program.

Many miners have talked to me lately and they argue that in their times say 30 years they have never seen any prosperity in the mining industry under a Republican President. I have argued on the point but they insist that there has been no prosperity.

This long-range program is a laughing matter. Why can't they take some advice from some good sound mining men.

Your free gold program would help all mining and I believe would boom the Western States.

I don't see why the Government should at any time buy foreign metals to place in our stockpile. You have studied this very thoroughly and have a good view on the subject.

However let them pay plenty tariff to ship in their metals and maybe we can keep operating.

Thanking you very kindly, I remain,
Very truly yours,

JIM HULSE.

ZINC SLUMPS TO 12 CENTS, CUT HITS UTAH PRODUCERS

(By Robert W. Bernick)

Price of zinc was cut 1½ cents a pound, East St. Louis, Mo. base, Monday. Quotation is now 12 cents a pound. The reduction was a serious blow to the underground lead-silver-zinc mines in the Western States.

And, coming as it did in one fell swoop, raised among some operators the question of political action within the industry which is demanding tariff protection from a world-trade-bent Republican administration.

"It knocks hell out of us," commented J. William Stoner, secretary of United Park City Mines Co., which reported a loss on 1956 operations as it was.

"Well, that cleans us out," was the remark of Clark L. Wilson, vice president of New Park Mining Co.

NEW PARK, CHIEF OFFICIALS LIST VIEWS

New Park, which also reported a loss in 1956 from Park City district operations, is now "just managing to squeeze by" said Mr. Wilson.

A spokesman for United States Smelting Refining & Mining Co. said he could make no statement in the absence from the city of Oscar Glaeser, vice president of western operations.

"I can tell you one thing. We don't like it," he added.

Cecil Fitch, Jr., president of the Chief Consolidated Mining Co., Eureka, said the reduction was obviously a result of the world oversupply of zinc.

"I guess Washington doesn't need a lead-zinc industry," he commented.

He estimated that the blow wouldn't be as hard on the Chief, largely "because we've already had it."

(The firm is mining only from its upper levels at present on a reduced basis. Last year, pumps were pulled because of rising costs of operations from the main ore body in the Chief No. 1.)

Mr. Fitch added "there are even some big consumers who believe we can live forever in this country on foreign produced lead and zinc—or so I was informed at the recent Zinc Institute meeting in Chicago."

Mr. Fitch figured the reduction would cost the Chief $1,000 a month. The company has been reporting earnings losses.

UNITED PARK SEES $100,000 ANNUAL LOSS

United Park City stands to lose about $1.20 a ton for every ton mined at its operations—or a total of nearly $100,000 annually. The firm produces about 7,500 tons of ore monthly.

New Park, which aims to produce around 75,000 tons during 1957, said its losses would average about $1.50 a ton as a consequence of the cut. This would bring a reduction of $112,500 annually in ore receipts.

Otto Herres, Salt Lake City, chairman of the National Lead and Zinc Co., said the price changes on custom smelter basis results from alltime high in imports of slab zinc and zinc ores.

It exposes the fallacies of the barter program and the inadequacies of stockpiling, both of which have served to stimulate foreign imports, he noted.

It is his view that the Federal Government cannot effectively reduce the mounting surpluses of zinc moving into the country by these devices.

"If we're going to have a domestic mining industry in the United States, we are going to have to put into effect a program (tariff or import control) which recognizes the differentials in the lower wages in foreign countries, their higher ore grade and their tax benefits," Mr. Herres said.

IS THERE POLITICAL MOTIVATION? UTAHANS ASK

Mr. Wilson said he could not "figure out why the reduction was so heavy. Ordinarily, changes in the prices in these metals amount to one-quarter or one-half cent at the most one time," he pointed out.

"Is there some political motivation behind this situation? Are the American producers going to be forced into accepting some meager program from Washington, rather than the tariff and import controls we need?" he asked.

Dow-Jones Service reported Monday the zinc price reduction came in two rapid stages. There was "an initial cut of a cent to 12½ cents a pound and a quick out of a half cent to the 12-cent quotation."

"The action follows concern by the industry over the fare of the United States Government stockpile programs. The Government's stockpile buying has been a major supporting factor in zinc's price stability for more than a year," said the financial service.

Dow-Jones contacted the Office of Defense Mobilization, where a spokesman reiterated last week's statement from ODM chief Gordon Gray that he expects purchases of lead and zinc to continue at least for a while.

PRODUCERS NOTE SAG IN GOVERNMENT BUYING

(Utah producers insisted Monday, however, that the volume of buying had declined by the Government in recent months. They also said that if ODM had been sopping up excesses as claimed, there wouldn't have been a price reduction Monday. They again pointed out that foreign-produced metal was flowing in, replacing some domestic output which went to Government stockpiles. Government buying has not overcome these surpluses, they added.)

Agricultural Department officials declined comment on the zinc price cut, other than noting that USDA is not "formally concerned" with domestic markets for metals. They said no action is likely before late this week—at the earliest—on the agency's reappraisal of its barter program.

USDA has suspended consideration of new barter offers with a view toward curtailing the program.

METALS POLICY NEARS, SEEN BLOW TO WEST

NEW YORK.—The Journal of Commerce reports the administration is completing finishing touches to its long-term minerals policies.

"However, sources familiar with the policy's formulation feel, in general, that the mining interests may be disappointed with it. This indicates, observers feel, that no large scale direct program of the Government buying of vital metals and materials will be involved," the Journal reports.

"It also is believed that, although detailed analyses of supply and demand reportedly have been worked out for a long list of vital minerals, only a 'skeleton' program will be produced. This is expected to be sent to Congress later this week. This would leave it to Congress to work out the details," says the Journal.

"To encourage domestic production, the administration is just about limited to three possible areas of action: tax benefits, price supports, or direct purchase programs and trade restrictions on the lower-priced imports. A guaranteed purchase price arrangement is considered in some quarters as more logical. However, there was no hint from the administration sources that this will be urged. The administration has such a program for wool."

(This latter type program is opposed by Western States mining people.)

The Journal of Commerce adds that the Federal Government is reported "apprehensive over growing United States dependence on foreign sources of many of the 75 materials and metals on the critical list, even though domestic sources will mean high prices as lower grade deposits are tapped."

GABBS EXPLORATION CO.,
Gabbs, Nev., May 14, 1957.

Hon. GEORGE W. MALONE,
United States Senator for Nevada,
Senate Office Building,
Washington, D. C.

In regard to the further appropriation for Public Law 733 to purchase tungsten, and relying upon the Government representation therein contained, we wish to state that our company stands to lose $194,000 in concentrates already produced and an additional $25,000 in improvements unless Congress appropriates additional funds. We will further have to lay off 15 men. It seems incredible that the Government, honoring foreign commitments costing approximately $100 million, will not honor the promises contained in Public Law 733 for interim support. We urge your every effort to restore this appropriation.

LEE D. DOUGAN, *President.*

Mr. MALONE. Mr. President, the proof is overwhelming that we must become self-sufficient in the production of the critical materials in the Western Hemisphere without which we cannot fight a war or live in peace.

Senate Report 1627 of the 83d Congress and Senate Document 83 of the 84th Congress prove conclusively that can be done if the Congress fixes a policy of setting a price per unit enough higher than the world price to make the difference in labor and the general cost of doing business here and abroad.

Mr. ALLOTT. Mr. President, I should like for a few moments, if I may, to try to recapitulate the situation as I see it with respect to the $30 million strategic mineral appropriation. We are all fully aware of the great pressures which exert themselves today to reduce the budget. On the other hand, there are certain pressures which come upon us all, as citizens of this country, and the strongest of these pressures, in my opinion, is that for the preservation of our own lives.

One of the most vital necessities for the preservation of human life in this country is not alone the building up of a great corps of scientists, or great corps of engineers, or providing the money to enable scientists and engineers to work, but, corollary to that is the necessity of providing the materials which the scientists and engineers need to carry on their work.

When the Senate passed the bill last year, it said in effect to the miners of this country—we said it absolutely on the floor and in the report—that we intended to return in January and appropriate the remaining amount necessary for the strategic-minerals program.

I am fully aware of the arguments which my good friend, the Senator from Delaware [Mr. WILLIAMS]—and he is my good friend—uses in opposition to this appropriation. Nevertheless, the fact is that the use of these strategic materials, particularly tungsten, has increased to such an extent in the past few years that the estimates made by witnesses before the committee as recently as 2 years are absolutely obsolete. The present anticipated use of these strategic minerals in our technological development has just started to get under way.

I pointed out on the floor of the Senate a few weeks ago that one of the uses for which we need tungsten is jet engines. The United States provides a few jet engines for its fighter and bomber planes, but we have yet to see even the beginning of the development of jet engines and their use in transport and passenger planes. But more important than that is the necessity to provide protection for ourselves over a period of years. We cannot any longer put ourselves in the position of depending upon minerals from the Far East or from Communist Russia, or any other place, particularly when we know that Russia has several times the number of submarines Germany had when World War II commenced.

Many Members of the Senate, including myself, have seen ships with American supplies inside them burning and sinking off the shores of the United States. Within the past 6 months we have seen the commercial activity of the world, and particularly of Europe, slowed down by the threatened lack of oil. At the same time, this very Congress, a year ago and 2 years ago, gradually tightened the strangle hold upon the development of processes which would have brought oil shale and the production of oil from oil shale into a competitive position with crude oil. With at least 900 billion barrels of oil locked up in the shale of Colorado, Utah, and Wyoming, indeed we are foolhardy if we apply the same policies to strategic minerals that we apply to oil shale; and we nearly got caught flat 6 months ago.

In effect, we have promised the miners who have invested so much money in the tungsten industry that we will provide funds. I may say to my distinguished friend from Delaware that we should act affirmatively not merely because of that promise, but because it is simply logical and good sense not to pitch in all our chips—to use a term which I am told is used in poker—but to retain some of the power in our hands to protect ourselves, so that when we come to the time when we will need such production—and we will come to it—we in America will have the potential mineral production to meet not only the demands of our allies, but certainly the demands of ourselves, for the high-tensile strength, high-temperature resistant metals which are needed in all the scientific fields into which we are now probing.

This may be a very poor and inadequate attempt to recapitulate this matter, but it seems to me that if we are to retain and not lose the great advances and strides we have made in this area in the past few years, and if we are to protect ourselves against dangers of the future, there can be only one vote on the pending amendment, and that is in support of the appropriation.

Mr. KNOWLAND. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Frear	Monroney
Allott	Fulbright	Morse
Anderson	Green	Morton
Barrett	Hayden	Mundt
Beall	Hickenlooper	Murray
Bennett	Hill	Neuberger
Bible	Holland	O'Mahoney
Bricker	Hruska	Pastore
Bush	Ives	Potter
Butler	Jackson	Purtell
Capehart	Javits	Revercomb
Carlson	Johnson, Tex.	Russell
Carroll	Johnston, S. C.	Saltonstall
Case, N. J.	Kefauver	Scott
Case, S. Dak.	Kennedy	Smathers
Chavez	Kerr	Smith, Maine
Church	Knowland	Smith, N. J.
Clark	Kuchel	Sparkman
Cotton	Lausche	Stennis
Curtis	Long	Symington
Dirksen	Magnuson	Thurmond
Douglas	Malone	Thye
Dworshak	Mansfield	Watkins
Eastland	Martin, Iowa	Wiley
Ellender	McClellan	Williams
Ervin	McNamara	Young

The PRESIDING OFFICER. A quorum is present.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSON of Texas. What is the pending question?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. HAYDEN].

Mr. JOHNSON of Texas. I ask that the pending amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. On page 10, after line 20, it is proposed to insert the following:

OFFICE OF THE SECRETARY

Acquisition of strategic materials

For an additional amount for "Acquisition of strategic materials" $30 million.

Mr. JOHNSON of Texas. Mr. President, a further parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSON of Texas. Have the yeas and nays been ordered on the pending amendment?

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. ALLOTT. Mr. President, I do not wish to labor this point with Members of the Senate, but I invite attention to the fact that in the CONGRESSIONAL RECORD for February 18 there is reported the action of the Senate upon this question. There is only one slight difference. The word "minerals" was used in the amendment at that time. The word "materials" is used in the pending amendment.

On that occasion the Senate voted on the same question, 64 yeas, 17 nays, and 15 not voting. So the question we have to determine today is the identical question, in almost the same language, that was determined on February 18.

Mr. WILLIAMS. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. WILLIAMS. The House has rejected the Senate amendment.

Mr. ALLOTT. The House has not come around to viewing this question with the same enlightenment with which the Senate has viewed it.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. HAYDEN]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Tennessee [Mr. GORE], the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from West Virginia [Mr. NEELY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Georgia [Mr. TALMADGE] is absent by leave of the Senate attending the Inter-American Trade Conference in Rio de Janeiro, Brazil, as representative of the Senate Agriculture Committee.

On this vote, the Senator from Virginia [Mr. BYRD] is paired with the Senator from West Virginia [Mr. NEELY]. If present and voting, the Senator from Virginia would vote "nay" and the Senator from West Virginia would vote "yea."

I further announce that if present and voting, the Senator from Missouri [Mr. HENNINGS], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Georgia [Mr. TALMADGE], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kentucky [Mr. COOPER], the Senator from Vermont [Mr. FLANDERS], the Senator from Arizona [Mr. GOLDWATER], and the Senator from Kansas [Mr. SCHOEPPEL] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Pennsylvania [Mr. MARTIN] is absent on official business.

If present and voting, the Senator from Maine [Mr. PAYNE] would vote "nay."

On this vote, the Senator from Kansas [Mr. SCHOEPPEL] is paired with the Senator from Vermont [Mr. FLANDERS]. If present and voting, the Senator from Kansas would vote "yea" and the Senator from Vermont would vote "nay."

The result was announced—yeas 61, nays 17, as follows:

YEAS—61

Allott	Hickenlooper	Monroney
Anderson	Hill	Morse
Barrett	Holland	Morton
Bennett	Hruska	Mundt
Bible	Ives	Murray
Butler	Jackson	Neuberger
Carlson	Javits	O'Mahoney
Carroll	Johnson, Tex.	Pastore
Case, S. Dak.	Johnston, S. C.	Russell
Chavez	Kefauver	Saltonstall
Church	Kennedy	Scott
Clark	Kerr	Smathers
Dirksen	Knowland	Sparkman
Dworshak	Kuchel	Stennis
Eastland	Long	Symington
Ellender	Magnuson	Thurmond
Ervin	Malone	Watkins
Frear	Mansfield	Wiley
Fulbright	Martin, Iowa	Young
Green	McClellan	
Hayden	McNamara	

NAYS—17

Aiken	Cotton	Revercomb
Beall	Curtis	Smith, Maine
Bricker	Douglas	Smith, N. J.
Bush	Lausche	Thye
Capehart	Potter	Williams
Case, N. J.	Purtell	

NOT VOTING—17

Bridges	Hennings	Payne
Byrd	Humphrey	Robertson
Cooper	Jenner	Schoeppel
Flanders	Langer	Talmadge
Goldwater	Martin, Pa.	Yarborough
Gore	Neely	

So Mr. HAYDEN's amendment on page 10, after line 20, was agreed to.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the amendment was agreed to.

Mr. KNOWLAND. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER (Mr. CHURCH in the chair). The question is on agreeing to the motion of the Senator from California.

The motion to lay on the table was agreed to.

Mr. WILLIAMS. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The CHIEF CLERK. On page 4, before the period at the end of line 15, it is proposed to insert a colon and the following:

Provided, That no part of this appropriation shall be used in any State for the purpose indicated unless such State has appropriated an amount equal to 25 percent of the sum proposed to be expended by the Federal Government in such State.

Mr. WILLIAMS. This amendment provides for State participation on all drought relief feeding programs. I ask for the yeas and nays while most of the Members of the Senate are still on the floor.

Mr. HAYDEN. Mr. President, first I should like to inquire whether the amendment is in order.

Mr. WILLIAMS. I shall withhold my request for the yeas and nays for the moment. I believe the Senator will find that the amendment is in order.

Mr. HAYDEN. Mr. President, I make the point of order that the amendment seeks to legislate on an appropriation bill.

Mr. WILLIAMS. The amendment is in the form of a proviso, and therefore I contend it is not legislation.

The PRESIDING OFFICER. The Chair understands that the amendment constitutes a limitation on an appropriation bill, and therefore is in order.

Mr. HAYDEN. The Chair states that the amendment is in order. Is that correct?

The PRESIDING OFFICER. As a limitation.

Mr. SALTONSTALL. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Massachusetts will state it.

Mr. SALTONSTALL. It is my understanding that the authorization bill provides that the Federal Government shall pay the cost involved until 1959, and that thereafter the provision shall be subject to State participation. Since that provision is contained in the authorization bill, I should like to inquire why the amendment offered by the Senator from Delaware is not subject to a point of order.

Mr. WILLIAMS. My amendment applies only to the $15 million appropriated in the pending bill. That is why it is not subject to a point of order. If the suggestion of the Senator from Massachusetts were accepted, my amendment would be subject to a point of order.

Mr. President, may we have the yeas and nays ordered on my amendment?

The yeas and nays were not ordered.

Mr. WILLIAMS. Mr. President, I do not wish to delay the Senate, but I am confident we could make much better progress if we could have the yeas and nays ordered at this time. We are certainly entitled to a vote on the question of whether the States shall participate. This is something the administration has been urging for the past 2 or 3 years. Congress has been putting off a decision on the matter. Let us face the issue. We should have a vote on the question, and vote it up or down. Certainly we are entitled to a vote. I renew my request for the yeas and nays.

The yeas and nays were not ordered.

Mr. WILLIAMS. I shall renew my request.

Mr. HAYDEN. The committee passed on this question, and I should like to give the committee's judgment on it:

> The committee has concluded that there was no legislative intent under Public Law 875, or Public Law 115, as amended, which are the respective authorities used to designate a disaster area, or to provide emergency Federal assistance thereunder, which requires a commitment for State participation of a fixed percentage of program costs. It is the opinion of the committee that such a requirement would establish an unsound precedent by the Government in rendering Federal assistance to areas affected by natural disasters.

Mr. WILLIAMS. Mr. President, I again renew my request for the yeas and nays, and I certainly hope the Senators will extend to me an opportunity to have a vote on this amendment based upon its merits. I emphasize that I am not going to sit back and be brushed off. I again make my request for the yeas and nays.

The yeas and nays were not ordered.

Mr. WILLIAMS. I call the attention of the Senate to page 22 of the standing rules of the Senate, rule XVI, paragraph 2, as follows:

> The Committee on Appropriations shall not report an appropriation bill containing amendments proposing new or general legislation or any restriction on the expenditure of the funds appropriated which proposes a limitation not authorized by law if such restriction is to take effect or cease to be effective upon the happening of a contingency, and if an appropriation bill—

I call particular attention to this language:

> And if an appropriation bill is reported to the Senate containing amendments proposing new or general legislation or any such restriction, a point of order may be made against the bill, and if the point is sustained, the bill shall be recommitted to the Committee on Appropriations.

I call the attention of the Chair and of the Senate to the fact that on page 3 of the bill before the Senate the language of the bill is unquestionably legislation. That is the language dealing with the question of Agricultural Conservation Program Service, Emergency Conservation Measures.

Again, on page 4 of the bill is the provision for the emergency range conservation, which appropriates $25 million, "to be derived from funds available for purposes of the Soil Bank Act under section 120." This is the proviso which implements the legislation passed by Congress as recently as April 25, 1957. I think this item constitutes legislation in that it goes beyond the date of June 30.

Also, on page 9, beginning with line 10 and continuing through line 20, is another proviso authorizing appropriations for $14 million. Again, this language is obviously legislation on an appropriation bill.

On page 19, beginning with line 18 and extending through line 5, page 22, is another committee amendment which obviously is legislation on an appropriation bill.

Mr. President, I make the point of order under rule XVI, paragraph 2, that the bill contains language which is legislation and is therefore subject to a point of order. I make the point of order against the bill.

Mr. HAYDEN. Mr. President, with respect to the first item upon which the Senator from Delaware makes the point of order, I will offer a substitute, as follows:

> For an additional amount to enable the Secretary to make payments to farmers who carry out emergency measures to control wind erosion on farmlands damaged by wind erosion, floods, hurricanes, or other natural disasters, in accordance with existing law, $15 million.

That language certainly is in order. The Senator from Delaware made the point of order against the whole paragraph.

Mr. WILLIAMS. No; I pointed out that in the bill's language constituting legislation. I referred to language on certain pages of the bill as constituting legislation, and I am making my point of order not against any part of that particular amendment, and I am not making it against the amendment. I am making the point of order against the bill under rule XVI, paragraph 2, on the basis that the bill contains legislation.

Mr. HAYDEN. What would the Senator have us do—send the bill back to the committee?

Mr. WILLIAMS. Yes, that will be the result. The bill will go back to the committee to have that language stricken out if the point of order is sustained.

But if I could get a yea and nay vote on my amendment I would be willing to have the measure considered on its merits. I am perfectly willing to discuss the bill on its merits, but I am not willing to have a bill steamrollered through on the basis that the Senate refuses to answer a roll call.

We are hearing a lot of talk about economy. Let us show the American people by our vote just who is for economy. The bill already provides $30 million more than the amount recommended by the House under the tungsten amendment just agree to.

The bill also provides, on page 4, $25 million to carry out the provisions of the new grazing bill, which many Senators feel was never justified in the fist place.

The bill also provides $15 million for additional disaster relief. Therefore I want a decision on my amendment requiring the States to put up at least 25 percent of the relief funds provided for in the bill.

If the Senate is not willing to answer "yea" or "nay" on the question of whether the States shall put up 25 percent, I shall insist on my point of order that the bill be recommitted to the committee.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. BUSH. Is it not true that what the Senator is saying, in effect, is that he is perfectly willing to withdraw his point of order if a yea-and-nay vote can be had on the item on page 4?

Mr. WILLIAMS. Yes, I want a record vote on the issue of whether the States should participate in the cost of these relief feeding programs. I am not insisting that the Senate agree with me, but I do feel that we can answer to a yea-and-nay vote and decide the question.

Mr. BUSH. Since the Senator from Delaware has yielded to me, I desire, with his cooperation, to ask once more for the yeas and nays on this amendment.

The yeas and nays were ordered.

Mr. WILLIAMS. Mr. President, I appreciate the enthusiastic cooperation of

the Senate and since a yea-and-nay vote is now ordered I withdraw my point of order.

The PRESIDING OFFICER (Mr. FREAR in the chair). The question is on agreeing to the amendment offered by the senior Senator from Delaware [Mr. WILLIAMS], on which the yeas and nays have been ordered.

Mr. WILLIAMS. Mr. President, I wonder if the absence of a quorum could not be suggested. I am willing to vote now. The issue is very clear. The pending amendment provides that the States shall put up 25 percent of the cost of the relief program. There is not a single State in the Union which is not in better financial condition than is the Federal Government.

I will vote to provide Federal assistance to States in the disaster areas, but if those States are not willing to contribute 25 percent of the cost they do not need the relief.

This proposal of required State participation has been recommended by the President, the Secretary of Agriculture, and others having charge of the program on the basis that, if adopted, it will not only result in the States paying 25 percent of the cost, but also result in limiting the requests for relief to States actually needing it.

Many glaring examples have been called to the attention of members of the committee and other Senators that the disaster relief program is being misused. As long as there is not some form of local participation and local responsibility there will be a misuse of the program. I think if there could be some local interest and responsibility it would be of benefit to those who are receiving aid, as well as to those who are disbursing it. This can only be done by getting State participation.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. WILLIAMS. I yield.

Mr. YOUNG. If the Senator's proposal were to apply to this particular appropriation item, how could the States handle it? The legislatures in all the States are not now in session. The money is needed now; in fact, it is overdue. To attach this rider to the appropriation would mean that most of the people needing the funds badly would not be able to get them.

Mr. WILLIAMS. Mr. President, I recognize the point the Senator from North Dakota [Mr. YOUNG] has made, and it would have meant more were it not for the fact that the same argument has been made at least five times before on the floor.

I have offered the same amendment on several occasions and always with the understanding that it would not be applicable until the first day of January following the election period, which would mean that every State legislature would have been in session. It was rejected just the same.

I offered the amendment in the Senate on approximately January 15 of this year. At that time, every one of the 48 State legislatures was in session. But the Senate said, in effect, "We do not want to act on it at this time; we will act on it later in the session."

Mr. President, let us not deceive ourselves about this matter. Senators either favor this principle of State participation or they are opposed to it. If any State does not need this assistance sufficiently to be willing to call its legislature into session in order to have the enabling State legislation passed, then such a State does not need the proposed assistance very much.

This year the President has called for State participation; and the Governors' Conference went on record in favor of participation, and the governors were perfectly willing to have their States pay 25 percent of the relief needed by their States.

So I do not think the argument against the amendment is a valid one.

Mr. SALTONSTALL. Mr. President, will the Senator from Delaware yield to me?

The PRESIDING OFFICER (Mr. FREAR in the chair). Does the Senator from Delaware yield to the Senator from Massachusetts?

Mr. WILLIAMS. I yield.

Mr. SALTONSTALL. Will the Senator from Delaware accept to his amendment an amendment stating that it shall apply after January 15 or February 1, 1958?

If such an amendment to the amendment should be included, then it seems to me the amendment as thus amended should be given very careful consideration by the Senate; and, personally, I would vote it.

However, as the amendment now reads it would be difficult of application. Other Senators have stated that if the money is needed, it is needed now.

If the amendment I have suggested to the amendment of the Senator from Delaware were agreed to, then I believe a valid precedent would be established for the future.

Mr. WILLIAMS. Mr. President, if the chairman of the Appropriations Committee will accept the amendment——

Mr. HOLLAND. Mr. President, I object.

Mr. HAYDEN. Mr. President, first I should like to have the amendment read. I do not think the Senate knows exactly what the pending proposal is.

Mr. HOLLAND. Mr. President, I object to any amendment to the pending amendment, inasmuch as I understand that the yeas and nays have been ordered on the question of agreeing to the amendment, and therefore the amendment is not subject to amendment at this time, except by unanimous consent.

I also object because, this is a very clear instance of the kind of foolishness inserted in appropriation bills when legislative riders are attached on the floor of the Senate, without study and without very much knowledge of what is contained in such riders.

I thoroughly object to such a process, and there could not be a better illustration of it than the present instance.

Mr. WILLIAMS. Mr. President, I agree with the Senator from Florida in principle; and what he has said almost tempts me to ask the Senate to recommit to the committee this bill which his own committee reported inasmuch as it is absolutely full of legislation which has never been properly considered by the Senate.

However, Mr. President, the pending amendment is merely a restrictive provision in the case of the $15 million, and it is in order.

Mr. President, it is perfectly in order for the Senate to vote whether it desires to have some form of State participation. If we do not, then let us tell the States to come forward and get their share of the gravy boat as long as it is full.

I hope my amendment will be adopted.

Mr. HAYDEN. Mr. President, again I ask that the pending amendment be stated.

The PRESIDING OFFICER. The amendment of the Senator from Delaware will be stated.

The LEGISLATIVE CLERK. On page 4, before the period at the end of line 15, it is proposed to insert a colon and the following:

Provided, That no part of this appropriation shall be used in any State for the purpose indicated, unless such State has appropriated an amount equal to 25 percent of the sum proposed to be expended by the Federal Government in such State.

Mr. HAYDEN. Mr. President, when this matter was pending before the committee, it was carefully considered; and the following is the recommendation of the committee:

The committee has concluded that there was no legislative intent under Public Law 875 or Public Law 115, as amended, which are the respective authorities used to designate a disaster area, or to provide emergency Federal assistance thereunder, which requires a commitment for State participation of a fixed percentage of program costs. It is the opinion of the committee that such a requirement would be an unsound precedent by the Government in rendering Federal assistance to areas affected by national disasters.

For that reason, the committee is opposed to this amendment.

Mr. HOLLAND. Mr. President, this subject matter has been subjected to long study at this session by a subcommittee of the Senate Committee on Agriculture and Forestry, of which, at the time, the Senator from Florida was serving as chairman. The Senator from North Dakota [Mr. YOUNG] was a member of the subcommittee. I believe that the Senator from Minnesota [Mr. THYE] also was a member—although I am not positive as to that. In addition, two other Senators on this side of the aisle were members.

The occasion of our study was an attempt by us to work out for the drought areas a deferred grazing bill which would tend to solve that part of the problem, and at the same time we wanted to have in the law a sound provision relative to the feed program in the drought areas. We studied the matter for a long time; and we had it worked out, for instance, so that the giving of assistance, by way of providing feed at reduced prices, would be based wholly on need—a basis which is highly desirable.

We also went into the subject matter of participation by the States. The distinguished majority leader, the senior Senator from Texas [Mr. JOHNSON], advised us that the present Governor of the

State of Texas, formerly Senator Daniel, and the previous Governor, Governor Shivers, both had given the consent of the State of Texas for the inclusion of a 25-percent factor of participation in the case of that State. The governors of some of the other States had likewise given such consent. The governors of some of the other States had refused to give it. Some had called attention to the fact that they would not have sessions of their legislatures for some time in the future.

I recall distinctly that the distinguished Senator from North Dakota was not in accord with the percentage which was used. I believe he suggested 10 percent or 15 percent. He is now on the floor, and must speak for himself.

Mr. YOUNG. That is correct.

Mr. HOLLAND. But finally we found ourselves in relative accord on that section of the deferred grazing bill.

Then there arose the question of what we could hope to have by way of cooperation with the House of Representatives; and I was instructed to confer with the House Members on that very point. We found that the House was willing to go along with us on the other parts of the program, but that in the case of that section—I believe it was section 5, which dealt with the feed program—the House had already agreed with large groups of producers who were interested in the matter, producers both in the drought States and those who were raising poultry and those who had dairy farms, and the like, that the House would conduct hearings at which every point of view would be given an opportunity to be heard; and the Members of the House made it very clear that they would not accept legislation on this point until they could hold the hearings, because they felt that their good faith was involved in view of the promise by them.

Senators who were members of the full Committee on Agriculture and Forestry will recall that the members of the subcommittee reported that situation to them. So, Mr. President, the section on this particular subject was deleted. It was deleted, first, because there is no prospect of agreement by the House of Representatives until the House committee has held its hearings; and it was deleted, in the second instance, because there had not been full accord in the subcommittee, much less in the full committee, regarding the percentage of contribution to be required of the several States.

Mr. President, therefore it is so much idle gesture to waste time on the pending amendment, during the debate on the appropriation bill, when the amendment is suggested as a rider.

Mr. SALTONSTALL. Mr. President, will the Senator from Florida yield to me?

Mr. HOLLAND. I yield.

Mr. SALTONSTALL. Do I correctly understand that the pending amendment is the language which was worked out by the conference committee? I was a member of the conference committee, but I do not recall whether this is the exact language which was worked out then.

Mr. HOLLAND. I was not a member of the conference committee. I am speaking now of the work of the subcommittee of the Senate Committee on Agriculture and Forestry, later followed by debate and discussion in the full Committee on Agriculture and Forestry, when we were trying to work out a measure of this sort. I think we would have worked it out, and I think it would have been a much more carefully drawn proposal than the pending amendment, because it would have given some protection to States which do not have funds on hand now. It would have given them a chance to have action taken at the next session of their legislature, whether regular or special, and would have included other safeguards which cannot be included in a hastily, longhand-written amendment offered by way of a rider proposal to an appropriation bill.

Mr. President, so far as I am concerned, I am one of those who was committed to the idea of State contribution, and worked hard to get such a provision into that particular bill. But when we were faced by the fact of life that the House would not accept any provision on that subject until further hearings had been held, and the further fact that our own committee was divided on certain aspects of the matter, we deleted that provision from the bill.

It is my judgment that the provision we deleted was a vastly better one, more considerate of the States and the growers, than this hastily drawn, longhand-written provision, which ignores most of the questions of detail which would arise in conjunction with the proposal.

So, Mr. President, I think the amendment should be rejected, and made the subject of proper research, hearings, and study by the legislative committee. Particularly in view of the fact that the House is committed to holding public hearings on this subject before it will take action, I think the Senate, recognizing that, should waste little time in rejecting the proposal.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. SALTONSTALL. It is my understanding that, in answer to the question I asked the Senator from Florida, from information given me by the chairman of the Appropriations Committee, this is language worked out in the conference between the House and the Senate, with the exception of the amount, which is $15 million instead of $25 million in the budget estimate. So this is language which was agreed upon in the deficiency bill, which went to conference prior to the Easter recess.

Mr. HOLLAND. The Senator is exactly correct. I thought he was speaking to the amendment offered by the distinguished Senator from Delaware. That language is unlike any other proposal which the Senator from Florida has ever seen. The language which was put into this bill by our Appropriations Committee does utilize completely the language agreed upon between the House and the Senate at the time of the long debates in conference some time ago on the urgent deficiency bill.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the distinguished Senator from Colorado.

Mr. CARROLL. I commend the Senator for a very fine speech. There are 20 Senators who are interested in the matter. There are 10 drought States involved. If the precedent is established, we will be denied the right to present evidence, have our governors come before the committee, and have our people represented.

Mr. WILLIAMS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator from Florida has the floor.

Mr. HOLLAND. Mr. President, I ask unanimous consent that I may yield to the Senator from Delaware for the purpose of asking a question.

Mr. WILLIAMS. The Senator from Colorado has stated he would like to have opinions from the governors presented before he is ready to vote on this question. The governors have already gone on record as recommending that there be some kind of State participation. They have pointed out that some of the abuses will be embarrassing not only to the States but to the program itself if there is not some form of local control. We hear a great deal from certain areas of our country about States rights. They are always complaining about the Federal Government's infringing on the rights of the States. I most respectfully suggest to those who join with me in supporting the principle of States rights that we recognize that those rights carry certain responsibilities.

As long as States insist upon the Federal Government underwriting all their responsibilities they can expect Federal controls.

Mr. HOLLAND. I might say I would not claim to exceed the distinguished Senator from Delaware in advocacy of anything, but I would certainly equal him in my approval of the doctrine of States rights. It happens that my own State is not involved in the drought. We have been happy not to have had a serious drought. It has been my feeling that the matter is serious enough, first, that we should give consideration to the people affected, by hearing those who are affected, and, second, that we should give consideration to the hearings and findings of the committees. The Appropriations Committee is the largest committee the Senate has. The Senate Committee on Agriculture and Forestry is a 15-member committee. It has had the experience of trying to frame proper wording and to bring about a proper handling of the matter, and it abandoned the method suggested when it learned that the House was definitely committed on assurances given to important industries and various States that it would not agree to any action in this field until it has held public hearings.

If we are not going to pay attention to the Appropriations Committee and to the Agriculture and Forestry Committee of the Senate, and to similar committees of the House, whose position on this matter has already been stated, and if

we are going to permit a hastily drawn, carelessly drawn, longhand-written amendment on this important subject to be written as a rider onto an appropriation bill before the Senate, at least I, as one Senator, will not vote for it. The Senator from Florida will retain his good humor, but he cannot conceive of that being orderly procedure in any sense of the word. The Senator from Florida will not vote for it, and hopes the amendment will be rejected.

Mr. THYE. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the distinguished Senator from Minnesota.

Mr. THYE. No State can have emergency relief extended to it other than through certification of the governor that there is an emergency and that a disaster exists. Only then will the Department of Agriculture, and also the national administration, give consideration to an application for assistance through a disaster loan.

Mr. HOLLAND. The Senator is correct.

Mr. THYE. There is merit in the amendment which has been offered by the Senator from Delaware. I think all of us who have served on the committee recognize that. Therefore, the proper procedure now is to proceed through proper legislative committee hearings and determine when participation on the part of the States will commence.

If the amendment were to be adopted at this time I think it would work a serious hardship on many of the States which today are receiving Federal assistance. That is one reason why, I say to the distinguished Senator from Delaware, I shall vote against the amendment offered by him.

Mr. HOLLAND. I thank the distinguished Senator from Minnesota. I may say, because I find myself so frequently in accord with the distinguished Senator from Delaware, I was one of the Senators—and I am still one—on the Senate Committee on Agriculture and Forestry who feels that the particular form of disaster with which we are now dealing is perhaps different from one that is sudden and hits an area or a State or a great region almost overnight, such as a hurricane, a terrific flood, a great fire, or an earthquake. I would never agree that in such cases the State should be required to convene its legislature and put up some money, when it was the hardest hit of any part of the United States. But when there is a long-continued drought, and when the program requires joint handling and joint participation of both Federal and State authorities to prevent abuse, I am of the opinion that contribution by the State is on a different basis.

I have taken that position in the subcommittee and in the full committee. I see the chairman of the committee, the Senator from Louisiana [Mr. ELLENDER], present. He will recall that that has been my position. But that is a far cry from saying I am willing to see a rider, carelessly drawn, without hearings, attached to an appropriation bill to cover a subject matter so difficult of handling as we have already shown this to be.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. ELLENDER. As I recall, the provision requiring assistance to be matched by the States was deleted.

Mr. HOLLAND. I think just before the Senator from Louisiana reached the floor I had related that the subcommittee——

Mr. ELLENDER. I was present. I heard the Senator.

Is it not a fact that, as to all relief measures, under the present law the Secretary has the right to fix a percentage of his own choosing with respect to mandatory local participation, and there is no limitation?

Mr. HOLLAND. The Secretary of Agriculture has the right to fix a percentage of participation in agricultural relief measures.

Mr. ELLENDER. The Senator is correct.

Mr. HOLLAND. I do not believe such a provision exists with reference to certain kinds of disasters. Whether that is so or not, I am not certain. I have not reviewed the act lately.

Mr. ELLENDER. My recollection is that as to any kind of disaster relief, such as the furnishing of seed and feed, the Secretary of Agriculture has the right to request or to require the States to put up a percentage, such as 25 percent, 30 percent, or even higher, if he sees fit, as a condition of Federal aid.

Mr. HOLLAND. All forms of relief, where an agricultural subject matter of this kind is involved, and where the Federal official handling the program is the Secretary of Agriculture, are subject to the provision that the Senator from Louisiana has stated.

Mr. ELLENDER. As I recall, the Senator from Delaware—and I should like to have his attention—did not seek to impose his amendment upon, or try to present the so-called 25 percent amendment, to the bill, after we deleted that part of it which provided for direct relief. Am I correct in making that statement?

Mr. WILLIAMS. I supported a 25 percent State participation on several occasions, and I have also offered such an amendment several times here on the floor.

The Senator from Florida [Mr. HOLLAND] has made the statement that he would not go along with State participation as a requirement in some sudden emergency but that he would go along with State participation in a long-range emergency seed and feed assistance program.

I point out to the Senators that the amendment, which I have presented and which is now pending, accomplishes exactly that result with which the Senator from Florida states that he is in accord.

It deals only with the type of program which the Senator from Florida says he is in complete agreement should require State participation.

In other words, as I understand the Senator from Florida [Mr. HOLLAND] and the Senator from Louisiana [Mr. ELLENDER], they are both for my amendment, except they do not want to vote for it.

Mr. ELLENDER. Mr. President, the Senator is incorrect in that statement.

Mr. HOLLAND. Perhaps it would be more accurate for me to state the attitude of the Senator from Florida in this way: He thinks there is some merit to the idea of States contributing, but he would like the States to have something to say about what the form and amount of the contribution is to be.

Mr. WILLIAMS. The States have already said that it should be 25 percent and are willing to participate in the cost.

Mr. HOLLAND. The Senator from Florida would like to have the industry which is directly affected by it afforded some chance to be heard. He would like to have the industries which are secondarily affected, such as the poultry and dairy industries, afforded a chance to be heard.

He would like to have the opinion of the Committee on Appropriations and its labors recognized, and the opinion of the Committee on Agriculture and Forestry and its labors recognized, and the opinion of the very sincere Members of Congress on the other side of the Capitol shown consideration.

He would like to get away from this shadow boxing, because he knows, and the Senator from Delaware knows, that that is all this is.

If we put anything into this bill with regard to this subject matter—and I do not believe there will be more than a half dozen Senators who will wish to do so—we will be merely slowing down the legislative process because we know already what the attitude of the other body is at this time. When we are handling measures of such great importance, which are urgently necessary, why should we impose a handicap to speedy appropriations, and by so doing delay our consideration of other matters which deal with the long-range problems of the Nation?

Mr. WILLIAMS and Mr. DOUGLAS addressed the Chair.

Mr. HOLLAND. I yield to the Senator from Delaware.

Mr. WILLIAMS. The Senator has talked about the various segments of the industry which should be heard. The Senator mentioned the poultry industry and the dairy industry.

The poultry industry and the dairy industry are not the least bit affected by the proposed amendment, either as it was before the committee or as presented here, except as the program is misused in financing competition. The drought relief is not for the poultry industry. Neither are the dairy people affected as such. This drought relief only provides for keeping the herd flocks of feeder cattle or dairy cattle intact during the emergency.

The Senator from Florida says that we should not engage in shadow boxing. I agree with him and assure him that I am sincere in offering this amendment.

On his suggestion that we should adopt on this side of the Capitol only those proposals which meet with the approval of the House and its committees, I may say that is in direct contradiction of the preceding vote, which I think the Senator supported. The

House has three times turned down the proposal with regard to tungsten.

Mr. HOLLAND. In brief reply to my distinguished friend, I may say that in the first instance the dairy producers and the poultry producers are tremendously interested in this matter. They have asked for the right to be heard.

They are afraid if grain is sold in large quantities and at part value in other parts of the Nation, the supply will be more sparse where they have to pay for it, and the price will go up. They have asked for hearings before our committee and have asked for hearings before the House committees.

Though generally I respect the attitude of the distinguished Senator from Delaware when it comes to voicing the opinion of poultry producers, I know from the direct approaches that our committee received from the poultry people that they feel they are definitely concerned in this matter. With reference to the tungsten item, I should like to say, very briefly, the difference between that proposal and this one is that the Senator from Delaware is trying to do something in spite of what the committees which were affected have done. The Senate Committee on Agriculture and Forestry and the Senate Committee on Appropriations, and the House of Representatives have considered this matter. In the tungsten case, we were simply trying to honor and respect a commitment made by an act passed by this body and by the House, and signed by the President last year. Surely there is considerable difference between those two matters.

I do not care to debate further with the distinguished Senator on the details, but he certainly must admit that by adopting the proposed amendment the Senate would be ignoring what the Committee on Appropriations, with its 23 members, has done, and would be ignoring what the Committee on Agriculture and Forestry, with its 15 members, of whom one is the distinguished Senator from Delaware, has done.

Mr. WILLIAMS. Mr. President, will the Senator yield at that point?

Mr. HOLLAND. And the Senate would be ignoring the commitment made by the other body, that there will be public hearings permitted in this field before the House will approve such legislation.

Mr. ELLENDER. Mr. President, will the Senator yield so that I may ask a question of the Senator from Delaware?

Mr. HOLLAND. I yield to the Senator from Louisiana.

Mr. ELLENDER. I wonder if the Senator from Delaware can point to any law wherein the Secretary of Agriculture is permitted to furnish relief, either by way of seed or feed assistance, or any other form of relief, in connection with which he does not have the authority to state a fixed contribution of 10 percent, 25 percent, or even a higher percentage, as he sees fit?

Mr. WILLIAMS. The Senator is correct. The Secretary has that authority under the law, and has stated he wants to use it if Congress will support him.

Mr. ELLENDER. Exactly.

Mr. WILLIAMS. That is correct.

Mr. ELLENDER. If the Secretary is in favor of 25 percent, I ask, Why does the Secretary not fix the amount at 25 percent, since he has the authority to do so?

Mr. WILLIAMS. Frankly, I join in asking the same question, and each time I have been told that the reason that he has not demanded State participation is that Congress refuses to support him. Here today is an opportunity for us to show him our support. All that we have to do is vote for the amendment pending. He does have the authority, however.

Mr. ELLENDER. That is my position, as the Senator knows.

Mr. WILLIAMS. If the Senator will yield, I will complete my statement.

The Secretary has taken the position that he feels, first, that while he does have the authority, such authority was granted first with the definite understanding that it would not be implemented at that time. The Secretary has requested before our committee, in his testimony—and I was there, and so was the Senator from Louisiana—an expression of our endorsement of State participation. He said that he felt that he should have an expression in support of that principle on the floor of the Senate and on the floor of the House, and that then he would be glad to implement it immediately.

The Secretary if we reject this amendment here today is being told by the Senate that we do not intend for him to require any State participation. This is our decision.

Mr. ELLENDER. The Senator concedes that we have given the Secretary of Agriculture the right to fix the percentages. I ask him, why does the Secretary not fix such percentages? He has the authority to do it now.

As I pointed out a while ago in a discussion with the distinguished Senator from Florida, in any case where relief of any kind is contributed by the Department of Agriculture, the Secretary of Agriculture has the right and the power to fix the contribution to be made by the States.

Mr. WILLIAMS. There is no question about his having the right, but the reason he has not fixed a required percentage is because too many Senators and Congressmen tell him not to do so. Here today several Senators have expressed support of the principle of the amendment—but—they do not want to vote for it. The committee reported one bill to the Senate, in which bill the committee approved the principle of requiring a minimum contribution by States, but the Senate rejected the amendment.

Mr. ELLENDER. It was 15 percent, as I remember, and not 25 percent.

Mr. WILLIAMS. It was 15 percent. The Senator is correct.

Mr. ELLENDER. Fifteen percent.

Mr. WILLIAMS. But we did adopt the principle. We have had hearings on the question. We voted on it in the committee. As I said before, when I was engaged in colloquy with the Senator from Florida [Mr. HOLLAND], practically everybody is for this proposal but does not want to vote to support it.

Mr. ELLENDER. Except that the Secretary of Agriculture has the power to require a contribution.

Mr. WILLIAMS. Then let us indicate here our support, which can be done by voting for the amendment.

Mr. ELLENDER. It strikes me that if the President is for the 25 percent participation and if the Secretary of Agriculture is for the 25 percent participation, and the Secretary of Agriculture has the power to fix a participation percentage, then he ought to exercise that power.

I say to the Senator from Delaware that I am opposed to fixing a hard and fast percentage in the law because doing so fails to take into consideration the varying abilities of disaster-stricken communities or areas or States to contribute the required percentage. Some States suffering from drought might not be able to pay a full 25 percent; others could. I fear that the Senator from Delaware is of the opinion that he is the only statesman in the Senate.

Mr. HOLLAND. Mr. President, I yield the floor.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware [Mr. WILLIAMS].

Mr. PASTORE. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Allott	Fulbright	Monroney
Anderson	Green	Morse
Barrett	Hayden	Morton
Beall	Hickenlooper	Mundt
Bennett	Hill	Murray
Bible	Holland	Neuberger
Bricker	Hruska	O'Mahoney
Bush	Humphrey	Pastore
Butler	Ives	Potter
Capehart	Jackson	Purtell
Carlson	Javits	Revercomb
Carroll	Johnson, Tex.	Russell
Case, N. J.	Johnston, S. C.	Saltonstall
Case, S. Dak.	Kefauver	Scott
Chavez	Kennedy	Smith, Maine
Church	Kerr	Smith, N. J.
Clark	Knowland	Sparkman
Cotton	Kuchel	Stennis
Curtis	Lausche	Symington
Dirksen	Long	Thurmond
Douglas	Magnuson	Thye
Dworshak	Malone	Watkins
Eastland	Mansfield	Wiley
Ellender	Martin, Iowa	Williams
Ervin	McClellan	Young
Frear	McNamara	

The PRESIDING OFFICER (Mr. MORTON in the chair.) A quorum is present.

Mr. JOHNSON of Texas. Mr. President, what is the pending question?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware [Mr. WILLIAMS].

Mr. JOHNSON of Texas. Mr. President, I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 4, before the period at the end of line 15, it is proposed to insert a colon and the following:

Provided, That no part of this appropriation shall be used in any State for the purpose indicated unless such State has appropriated an amount equal to 25 percent

of the sum proposed to be expended by the Federal Government in such State.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JOHNSON of Texas. I understand that, under the amendment, none of the money would be available to a State unless it had already appropriated 25 percent of the sum requested. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

On this amendment the yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Tennessee [Mr. GORE], the Senator from Missouri [Mr. HENNINGS], the Senator from West Virginia [Mr. NEELY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Georgia [Mr. TALMADGE] is absent by leave of the Senate attending the Inter-American Trade Conference in Rio de Janeiro, Brazil, as representative of the Senate Agriculture Committee.

I further announce that on this vote the Senator from Virginia [Mr. BYRD] is paired with the Senator from West Virginia [Mr. NEELY]. If present and voting, the Senator from Virginia would vote "yea" and the Senator from West Virginia would vote "nay."

I also announce that the Senator from Missouri [Mr. HENNINGS], and the Senator from Texas [Mr. YARBOROUGH], if present and voting, would each vote "nay."

Mr. DIRKSEN. I announce that the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kentucky [Mr. COOPER], the Senator from Vermont [Mr. FLANDERS], the Senator from Arizona [Mr. GOLDWATER], and the Senator from Kansas [Mr. SCHOEPPEL] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Pennsylvania [Mr. MARTIN] is absent on official business.

The Senator from Vermont [Mr. AIKEN] is detained on official business.

The Senator from Vermont [Mr. AIKEN] is paired with the Senator from Maine [Mr. PAYNE]. If present and voting, the Senator from Vermont would vote "yea," and the Senator from Maine would vote "nay."

Also on this vote the Senator from Vermont [Mr. FLANDERS] is paired with the Senator from Kansas [Mr. SCHOEPPEL]. If present and voting, the Senator from Vermont would vote "yea," and the Senator from Kansas would vote "nay."

The result was announced—yeas 27, nays 50, as follows:

YEAS—27

Beall	Butler	Dirksen
Bennett	Capehart	Douglas
Bricker	Cotton	Dworshak
Bush	Curtis	Frear
Hickenlooper	Martin, Iowa	Smith, Maine
Hruska	Morton	Smith, N. J.
Knowland	Potter	Thurmond
Kuchel	Purtell	Watkins
Lausche	Revercomb	Williams

NAYS—50

Allott	Hill	Monroney
Anderson	Holland	Morse
Barrett	Humphrey	Mundt
Bible	Ives	Murray
Carlson	Jackson	Neuberger
Carroll	Javits	O'Mahoney
Case, N. J.	Johnson, Tex.	Pastore
Case, S. Dak.	Johnston, S. C.	Russell
Chavez	Kefauver	Saltonstall
Church	Kennedy	Scott
Clark	Kerr	Sparkman
Eastland	Long	Stennis
Ellender	Magnuson	Symington
Ervin	Malone	Thye
Fulbright	Mansfield	Wiley
Green	McClellan	Young
Hayden	McNamara	

NOT VOTING—18

Aiken	Gore	Payne
Bridges	Hennings	Robertson
Byrd	Jenner	Schoeppel
Cooper	Langer	Smathers
Flanders	Martin, Pa.	Talmadge
Goldwater	Neely	Yarborough

So Mr. WILLIAMS' amendment was rejected.

Mr. JOHNSON of Texas. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. MANSFIELD. I move to lay on the table the motion to reconsider.

The PRESIDING OFFICER (Mr. MORTON in the chair). The question is on agreeing to the motion of the Senator from Montana to lay on the table the motion of the Senator from Texas.

The motion to lay on the table was agreed to.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed, without amendment, the following bills of the Senate:

S. 358. An act to authorize the conveyance to the State of Wyoming of about 37¾ acres of land comprising a part of Francis E. Warren Air Force Base; and

S. 1274. An act to amend the act of March 3, 1911 (36 Stat. 1077), to remove restrictions on the use of a portion of the Springfield Confederate Cemetery, Springfield, Mo., and for other purposes.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H. R. 6700) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1958, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. PRESTON, Mr. THOMAS, Mr. ROONEY, Mr. YATES, Mr. SHELLEY, Mr. FLOOD, Mr. CANNON, Mr. CLEVENGER, Mr. BOW, Mr. HORAN, Mr. LAIRD, and Mr. TABER were appointed managers on the part of the House at the conference.

OKLAHOMA'S WORST FLOOD

Mr. KERR. Mr. President, I am glad the Senate has just rejected an amendment which would have impaired the ability of the Federal Government to meet a part of its responsibility in connection with disasters suffered by our people.

I have just returned from Oklahoma, where I spent a good part of the last 2 days in flying over those areas of Oklahoma which are suffering disaster from floods.

In Sunday's Washington Star, on the front page, was a glaring headline: "Thousands in Oklahoma Flee State's Worst Flood, Wide Area From Tulsa Southward Menaced; Eight Dead, Damage in Millions."

Mr. President, this article is at best a brief summary, telling of only a part of the devastation and disaster which since last Thursday has hit my State of Oklahoma and which is continuing its devastation and destruction. Dover, Coyle, and Perkins, Okla., along with many other communities, were completely inundated. In one area, 20 inches of rain fell in 6 hours. The State administrator of civil defense has estimated $25 million damage in the State of Oklahoma, including $5.6 million to highways and bridges. Before the final chapter is written, the damages will continue to mount.

I want to express publicly my deep appreciation of the vigilance of the American Red Cross and the Civil Defense Administration in hurrying to the scene of this disaster and administering aid to those in trouble. I want to pay tribute to the thousands of Oklahoma men, women, and children who worked day and night watching and reinforcing levees and otherwise combating angry floodwaters.

The story in the Washington newspapers told of the flood coming out of the Cimarron River and converging with the Arkansas River upstream from Tulsa, and estimated that this would be the highest stage flood experienced on the Arkansas River. This was avoided only by the heroic efforts of thousands of people and by an act of Providence. Miles of levees heretofore built kept the floodwaters confined, making a millrace that speeded up the flow of water. This resulted in dredging out 5 feet or more of sediment in the river, thus deepening the channel until the flood crest was several feet below what had been estimated.

This morning an article in the Washington Post and Times Herald reported that 2,300 people were forced from their homes at Bixby, 20 miles from Tulsa. The damage in Tulsa and Bixby, and from there on down the Arkansas River will total many millions of dollars. Mr. President, what happened is bad, indeed, but the tragedy is that had the Keystone Reservoir, which was authorized by Congress in 1946, been constructed and in operation, there would have been no flood at Tulsa, at Bixby, or beyond. This fact was confirmed only Saturday by the Chief of Engineers, Maj. Gen. E. C. Itschner.

A Federal levee project at Tulsa was 100 percent effective, preventing millions of dollars in damages.

After years of fierce opposition and delay, this year the Bureau of the Budget made a request for funds to initiate the major construction of the Keystone Dam project. The funds which will be allowed for this project are small compared

to the damage that will be caused by the current flood.

Mr. President, the Cimarron and Arkansas Rivers are not the only rivers causing devastation at this very moment. If the six authorized projects on the Verdigris River and its tributaries had been in operation, they would have prevented further millions of dollars worth of damage. Among these projects is the Oologah Reservoir.

On the Chikaskia River is located one of our very finest Oklahoma communities—Blackwell. The report in the Sunday Star indicates that 23 square blocks were flooded in this town. Had the Caldwell and Corbin Reservoirs been constructed, there would have been no flood at Blackwell. In the President's budget are funds for making a survey of these two reservoirs—mighty little, mighty late.

In the southern part of Oklahoma, the fine city of Waurika is again having to dig out from under high-flood flows. More than 50 families were forced to leave their homes for the third time in a month, as Cow and Beaver Creeks converged on this town with their devastating floodwaters. Again, Mr. President, the President's budget contains funds for a survey report of the Waurika Reservoir on Beaver Creek. Had this reservoir been constructed, there would have been no flood at Waurika.

Reports that I have received this morning indicate that many major highways in Oklahoma are blocked by floodwaters and washed-out bridges. Rail service is impaired. Many towns are depending upon water that has to be hauled in trucks, because their water supplies have been destroyed or contaminated by this great disaster. Gas lines which furnish heat for domestic and industrial use throughout the State are impaired or endangered. Enid, Okla., is digging out from floods that would have been controlled by the proposed Enid Floodway.

Hundreds of farm families in the dozens of flooded valleys are moving livestock to higher ground and are evacuating their homes because of the disastrous floods. One such is the valley of the Washita. One of its tributaries is Rock Creek. Again, in the President's budget there is a request for funds to finish a survey recently started on this project.

This afternoon Oklahomans will appear before the Appropriations Committee of the House of Representatives, seeking construction funds for the Foss and Cobb Creek Reservoirs on the Washita. Had these projects been constructed, the floods on the Washita could have been controlled or drastically reduced.

Mr. President, this is a small part of the awful story of neglect of conserving the soil and water resources and controlling the floods in my State. The irony of it is that up until this spring, for 5 long years, Oklahoma has suffered drought even more devastating than the floods now are. Farmers and townspeople alike have been forced to ration water because of its scarcity. Yet, at this very moment, millions of acre-feet of this precious resource is devastating our lands and towns and flowing onward to damage other States without any possible opportunity of beneficial use in times of need. What is true in Oklahoma is true throughout the Nation. Each year vast areas of our country suffer drought or flood disaster or both.

We have been appalled at the disasters which have occurred in our neighboring State of Texas to the south, and in parts of Arkansas and Louisiana to the east and southeast. From Texas to New England; from the everglades of Florida to the great Pacific Northwest; in the valleys of Pennsylvania, West Virginia, and Kentucky; from the great Southeast to the valleys of the San Joaquin and the Sacramento; the story is the same.

Right here in the District of Columbia a lack of conservation and pollution control of the waters of the Potomac bedevils our minds and insults our nostrils. Yet every time an appropriation or an authorization bill comes up, there are those who fiercely oppose and cry "pork barrel."

Mr. President, I know of no more adequate answer to that than the following telegram which I received this morning:

TULSA, OKLA., *May 18, 1957.*

Senator ROBERT S. KERR,
Senate Office Building,
Washington, D. C.:

My 7-year-old son went to bed in tears tonight because the Keystone Dam will not be finished by Sunday to keep his school from being flooded. Hurry up.

BETTY W. STRONG.

Mr. President, a few weeks ago the Chief of Army engineers was in Oklahoma, where he made a speech in regard to conservation of soil and water. In the speech he made to significant statements, which I should like to quote. The first is as follows:

> The droughts of the past few years, which have so seriously affected large portions of the Arkansas basin, as well as similar periods of deficient rainfall throughout much of the Nation, have focused attention on the importance of conserving our precious supply of water for tomorrow's infinitely greater requirements for domestic use, irrigation, and industry.

A little later in the speech he made this most significant statement:

> Last month I flew over a part of far-off Iran, which formerly was known as Persia, south of the capital city, Teheran. Centuries ago a Persian poet walked some 200 miles across that land, and he described how not once did he step from beneath the shade of trees which grew along the irrigation ditches. He told about flowers and fields full of grain and melons. As I passed overhead, I searched, but could see only one shadow, that of the plane, on the hard desert floor. Two hours later we came to the green fields and orchards surrounding Baghdad, on the Tigris River. Having seen how badly water was needed and lacking in the region, I expected to find the Tigris little but a dried stream bed. Instead, there below us was a large river. Then I understood why the valley that gave birth to the earliest civilizations provided sustenance to ancient Babylon, and prospered until its irrigation works were deliberately destroyed by the descendants of Genghis Khan, was now, save for isolated spots, a barren desert. The reason is simple: The modern inhabitants are utilizing only a small fraction of the capacity of the water that flows through the parched land. We must make sure that in our country, unlike Iran and Iraq, we will develop to the fullest our water resources as we need them.

Mr. President, those words constitute one of the sternest warnings I have ever heard from the lips of a responsible person or public official. They point to the sad truth that throughout history, civilizations have failed and fallen when they have failed to conserve their natural resources.

Mr. President, I believe the words I have quoted should echo in the ears of Members of the Senate who today, or every time an appropriation bill or authorization bill comes before the Senate, challenge it and oppose it, and accuse it of being "pork barrel."

FLOOD CONTROL AND RECLAMATION FEDERAL POLICIES

Mr. MALONE. Mr. President, will the Senator from Oklahoma yield to me?

Mr. KERR. I yield.

Mr. MALONE. The subject the Senator from Oklahoma is discussing is of very great interest to me. Do I correctly understand that he is referring to the principles laid down by the Congress during approximately the past 75 years, in the case of flood control?

For 75 years the Federal Government has provided funds for the construction of flood-control projects without repayment when the Army engineers have reported that the benefits would exceed the costs.

Mr. KERR. Yes.

Mr. MALONE. And under the Reclamation Act, the Federal Government has advanced the necessary funds, to be repaid over a definite amortization period, without interest, but to be repaid in full. That policy of the Congress is 55 years old.

Mr. KERR. Yes.

Mr. MALONE. Are those the principles involved in the debate the distinguished Senator from Oklahoma is advancing?

Mr. KERR. They are two of the principal programs with reference to which I am trying to call attention to the need and necessity for a stepped-up rate of development of projects which have to do with, or which have for their purpose, the conservation of water for flood control, irrigation, navigation, power, recreation, and municipal and industrial water.

Mr. MALONE. Mr. President, if the Senator from Oklahoma will further yield, let me say that means that Congress must appropriate, each year, the sum of money the Army engineers believe to be necessary for the investigation of projects which either are before them or are likely to come before them, which they believe may be feasible, and the funds which the Department of the Interior also believe necessary to investigate the facts in the case of projects that may be feasible. Is that not true?

Mr. KERR. I am trying to indicate my very vigorous support of such proposals.

Mr. MALONE. Mr. President, I join the Senator in that position.

Mr. MONRONEY. Mr. President, will my colleague yield to me?

Mr. KERR. Mr. President, I am very glad to yield to my distinguished colleague.

Mr. MONRONEY. Mr. President, I should like to associate myself with the

remarks of my senior colleague on the tragedy of the multi-million-dollar devastation which floods have caused in almost every part of Oklahoma. The damage to our State will run into many, many millions of dollars. Terrific expense will be involved in replacing the highways, restoring farm homes and lands, and above all, in attempting to replace the fertile topsoil which today is washing down every river valley.

I know of the great fight my senior colleague made when he was the Governor of Oklahoma from 1942 to 1946. He fought to develop a great water program, which would stop the devastation of the periodic floods which have occurred altogether too frequently in Oklahoma, to harness the rivers, so as to get them to work for man, instead of destroying the fruits of man's labor, and to provide their multipurpose use for irrigation, hydroelectric power, industrial water, and for navigation. The senior Senator from Oklahoma has been the champion of this program.

When the rains happen to fall in torrential amounts in areas where these projects have already been constructed, I think the success of the projects—in the case of both the large dam programs and the small dam programs—has been ample proof that the devastation of floods, which cost so many millions of dollars, can be stopped.

I know we have a great current program, largely sponsored and largely brought to its present condition by the distinguished senior Senator from Oklahoma, and now before the Congress. If the program had been completed today, we would have suffered far less damage, because the history of the floods on the Cimarron, the Arkansas, the Verdigris, and on the other principal streams proves conclusively that where the primary danger has been from a flash flood, the program has anticipated the extraordinary flow of water throughout our State.

Floodwaters from west Texas, Kansas, and even points in Missouri must flow through Oklahoma on their way to the sea. Therefore, in addition to controlling our own heavy rainfall, which often occurs during a short period of time, our flood-control structures must be placed and built to control very great volumes of water.

While many civic leaders, the Army engineers, and others have worked long and hard to build an effective flood-control system, it was Senator BOB KERR, and former Governor Bob Kerr, who took the initiative and drafted the master plan for the State's flood protection and water development which we now so urgently need to complete. I, particularly, am grateful for his leadership. I know the people of Oklahoma are grateful for the leadership and courage which the senior Senator from Oklahoma has shown in formulating and carrying through this great program.

Mr. KERR. I wish to express my deep appreciation to my junior colleague for what he has just said, and to note the fact that no Member of this body has a more able and devoted colleague than I have, and that no State has a more effective and devoted Representative in Congress in working for its welfare than Oklahoma has in my great junior colleague.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. KERR. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. I wish to congratulate the Senator from Oklahoma on his very lucid and powerful statement in regard to control of waterways and what he has said today about his State. I express the sympathy of the people of Arkansas for the people of Oklahoma. The same flood which has affected Oklahoma is proceeding downstream and affecting Arkansas. I have talked to people in Arkansas. Floods are beginning in my State, and no doubt will cause great damage in the area from Oklahoma to Mississippi. I congratulate the Senator from Oklahoma for bringing this matter to the attention of the Senate in a very forceful manner.

I for one, and I know it is true of my senior colleague and other Senators, are eager to support him in the great work he is doing to bring about construction of dams in his State. The dams must be built in Oklahoma before we can make our own flood control in Arkansas effective. That is the way for the flood-control program to develop logically. I think it has been a great shame and waste that the program has been delayed as long as it has been.

The flood-control programs in Arkansas, as well as those in Oklahoma, were authorized many years ago, and they should have been built long since. I thank the Senator, on behalf of the people of my State, for all he has done to bring this program along.

Mr. KERR. I thank the Senator from Arkansas, and to say to him that we are indebted to him and his colleagues in the Senate and the House for their great effort in this mutual endeavor, and to remind the Senate that what the Senator has said with respect to Arkansas and Oklahoma applies to every State in the Union, because the conditions in our States affect the economy of the country as a whole, and have to do with a resource without which we cannot hope to have the future to which we are so proudly looking forward.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. ELLENDER. I wish to state to my good friend from Oklahoma, in light of the recent floods which have been occurring in Oklahoma, Arkansas, Texas, and other parts of the Nation, that I have asked the Corps of Engineers to make a quick survey of the damages that have been suffered and to report back to the Subcommittee on Public Works Appropriations, of which I am chairman. Because of these floods, and because of the lack of sufficient information in light of the floods that are now prevailing, I am going to delay further hearings on the bill providing funds for these projects, in the hope that after obtaining additional information, we can provide sufficient funds not only for surveys and planning, but also for the construction of dams that have been authorized and as to which the planning has already been completed.

As the Senator well knows, there are quite a few flood-control projects that, due to a lack of funds, we have been unable to build. It is my hope that in the early part of next month the Subcommittee on Public Works of the Appropriations Committee will be in a position to come before this Congress and do the very thing the Senator is now pleading for—that is, provide funds in order to take care of many of the projects to which he has referred. I wish to say it is entirely possible that if the Public Works subcommittee cannot obtain an estimate from the Budget Bureau, the subcommittee will take the bull by the horns and present a bill providing for sufficient funds without being bound by budget estimates.

We are faced with tragedies today because of a penny-wise, pound-foolish policy on our program to conserve and preserve our natural resources. For too long, we have neglected to provide money to keep pace with population growths; we have put the welfare of our people, the safety of our homes, second. I sincerely hope that the Congress this year can be persuaded to understand that money appropriated for flood control, for navigation projects and for similar water resources development is an investment in our national future.

The recent floods have wrought havoc; they have left not only damage in their wake, but death as well. This toll is the price we pay for a past policy which too frequently relegated important domestic work to the position of a fiscal stepchild.

I want to assure the Senator from Oklahoma, all Senators, and particularly the people of our land that if left up to me, fiscal 1958 will see the Federal Government expanding its efforts in the field of flood control, navigation, and water resources development. As soon as I hear from the Corps of Engineers, I intend to call the subcommittee back into session. I hope that I can prevail upon its membership, the membership of the full Committee on Appropriations, and the Senate to increase the funds for flood control in the fiscal year ahead.

Mr. KERR. I thank the distinguished Senator from Louisiana, and wish to make this public acknowledgment, that there is no Member of the Senate, in my judgment, who has made a greater contribution to the conservation of soil and water in our country than has the great senior Senator from Louisiana. The people of Oklahoma and of the Southwest are indebted to him beyond any hope of ever being able to express adequately their appreciation. I know that the sentiment I express is shared by the Members of this body who have been conscious of his tremendous and untiring efforts to speak for an acceleration of the program of conservation of soil and water in our country.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. KERR. I yield to the Senator from Kansas.

Mr. CARLSON. We in Kansas sympathize with our neighbors in both Oklahoma and Texas who are suffering terrific and irreparable damage in soil and

property, and, in many instances, in human life. We went through a flood in 1951, which centered in Kansas, and which extended into Oklahoma and other States. The flood which cost $1 billion was one of the most expensive this Nation has ever suffered. I fully understand the problems the distinguished Senators from Oklahoma are confronting at this time.

The source of the streams flooding Oklahoma are in Kansas. There have been authorized a number of projects the construction of which would have been of value to the great State of Oklahoma. I wish to assure the Senator from Oklahoma I have been trying in every way possible to get those projects started. They will represent investments in the future of our Nation and in the great area which has just been devastated.

I, too, wish to commend the Senator from Louisiana [Mr. ELLENDER]. He has been sympathetic. He knows our problems. We still have an opportunity to render a service to the Nation by preventing floods, so far as that is possible.

I should like to ask the Senator from Oklahoma a question relating to the construction of reservoirs to impound water for flood control. We have heard of attempts to protect the Washita watershed by small dams, retention dams, terracing, and soil conservation practices. Do they prevent floods, or is it necessary to build other reservoirs to impound more water?

Mr. KERR. I am glad the Senator has asked that question. I point out that the water-retention program which had been developed in southwest Oklahoma in the watershed of the Washita River did prevent a very considerable flood to a limited area in Oklahoma. Certainly, Mr. President, there is no more important part of the program for the conservation of soil and water than the upstream phases of it, but in order that there may be the most benefit and so that in concentrating on one very worthy part of it we may not feel that we are viewing the whole panorama of the problem, I refer only to what I said a moment ago, namely, that in some areas in recent floods 20 inches of rainfall occurred in a very few hours. There has never been an upstream program which contemplated the handling of anything like a considerable portion of that amount of waterfall.

The relationship of the upstream program and the program of flood control on the main stems is a good deal like having a glass and pouring water into it from a full pitcher. It would not take long to fill the glass. But if one continued to pour, unless there was another vessel down below, most of the water would not be impounded or contained or controlled. So it is with the upstream water control, retardation, and detention, and downstream control. In the areas where tremendous rainfalls occur, as they do throughout Oklahoma, Texas, and the Southwest, including the great State of the Senator from Kansas, it is a vital necessity that the program of conservation of water be coordinated so that as much as possible of the water will be kept in the areas where it falls. But we also must make an effort so that the rest of it, which constitutes the greater portion, may be contained in the larger reservoirs on the main stems, where so much is contributed, not only to flood control, but to irrigation, the development of power, municipal and industrial water supplies, and navigation.

Mr. CARLSON. Mr. President, will the Senator yield further?

Mr. KERR. I yield.

Mr. CARLSON. I appreciate very much the statement the Senator has just made, because I think it is important in this coordinated program.

I have always contended we needed both programs. They are both parts of the great program of conservation and control of water runoff, and in the area mentioned every drop of water is needed for beneficial uses.

I think the latest flood has probably proved one program alone will not solve the problem. It would be helpful if those of us who live in those areas would work together and coordinate the program so as to get effective results in the effort to control the water runoff at its sources plus the impounding of water when there is excessive rainfall, as has just occurred in Kansas, Texas, and Oklahoma.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. KERR. I yield to the Senator from Texas.

Mr. JOHNSON of Texas. First, I wish to congratulate my good friend, the senior Senator from Oklahoma [Mr. KERR], for the very instructive report he has just made to the Senate on the conditions in his State, which he has just surveyed.

Second, I wish to express to the senior Senator from Oklahoma the deep gratitude of the Members of the Senate for the enlightened and constructive work he has done in the field of flood control. I believe it is matched by very few Senators and that except for his efforts there would have been greater losses in the Southwest during the past 2 weeks.

I take great pride, Mr. President, in the fact that I became a Member of the Senate on the same day the Senator from Oklahoma took the oath as a Senator. I remember that on the day he entered the Senate he told me that his primary task was to do something about water conservation, and that if the people of Oklahoma permitted him to stay in the Senate long enough he was going to see that he got the job done.

I recall last year that it was under the leadership of the Senator from Oklahoma, as Chairman of the subcommittee dealing with flood control of the great Committee on Public Works, that the Senate passed a bill providing for an authorization of some one and a half billion dollars. The Congress finally sent that legislation to the White House, only to have it meet with a pocket veto.

Mr. President, if those projects were a reality many of our people might not be confronted with the specter of death and disaster that faces them at this hour.

In my State dozens of rivers remain undammed, and dozens of lives have been lost, hundreds of homes destroyed and millions of dollars of damage suffered.

I recall reading, in a North Texas newspaper, the Dallas News, last week, that one flood control project in that general area, which cost $65 million to construct, had already, according to the Army Engineers, prevented damages of $68 million.

So I say to the Senator from Oklahoma [Mr. KERR] and to our beloved colleague, the Senator from Louisiana [Mr. ELLENDER], the Chairman of the Subcommittee on Public Works of the Committee on Appropriations, that I hope they will not be deterred by charges of "pork barrel" legislation. I hope they will keep their chins up and their chests out, and continue to forge ahead with a constructive water conservation program, because I am convinced that it is the best insurance policy Congress can buy.

I live on a small stream. Most of the summer months it has very little water. A child can walk across it. I was home at Easter time, when a mother started to the capital, some 50 miles away, and she crossed that stream. A flash flood came by at that time. Two women were washed out of the car, along with a little baby, and the mother and baby drowned, all because we had not had the foresight and vision and courage to put a dam on that stream, which would have paid for itself time and time again. The mother and her baby went to an early death. The floodwaters went into the gulf, where they are of no use to anybody. And we came back to Washington to read about the "pork barrel" projects of the Senator from Oklahoma and the Senator from Louisiana.

I remember, with deep gratitude, the valiant effort made by the minority leader [Mr. KNOWLAND], when his party was in charge of the Congress, and when he was chairman of the Subcommittee on Public Works of the Committee on Appropriations. I remember the understanding he displayed toward great sections of the country which needed water projects.

Mr. President, while every dime the Congress authorizes must be justified, and while every dollar the Congress appropriates must be gone over with a fine-tooth comb, I hope that the chairman of the Committee on Public Works, the chairman of the Committee on Appropriations and the chairmen of the subcommittees dealing with flood control, will realize that we can be penny-wise and pound-foolish.

Today in the Southwest, in the State of the Senator from Oklahoma, in my State, and in the State of Louisiana and other States—and my friend reminds me, in the State of Rhode Island, indeed, in States all over the Nation—lives are being lost, property is being destroyed, and precious soil which cannot be replaced is being washed away, all because we have been hesitant and reticent, and because some would not see the way, thus permitting a flood-control measure to be pocket vetoed.

I hope, Mr. President, that the speech of the Senator from Oklahoma will be

read by all his colleagues, because the Subcommittee on Flood Control—Rivers and Harbors, on which he serves as Chairman, and the full Committee on Public Works, headed by the distinguished Senator from New Mexico [Mr. CHAVEZ], and the Subcommittee on Public Works of the Committee on Appropriations, headed by the Senator from Louisiana [Mr. ELLENDER], have a frightening responsibility in this connection. If we stand idly by, with our hands in our pockets, we shall continue to see our resources drift into the sea, and our peoples' homes and businesses flooded beyond repair.

Mr. KERR. Mr. President, I am deeply grateful to the great Senator from Texas for the eloquent and forceful statement he has made. I recall with much pride that when I came to the Senate the first bill I introduced was one of which he and his then colleague from Texas were joint sponsors, as were the two Senators from Arkansas, [Mr. MCCLELLAN and Mr. FULBRIGHT], the two Senators from Louisiana, [Mr. ELLENDER and Mr. LONG], one of the Senators from Kansas [Mr. SCHOEPPEL]—my good friend, the junior Senator from Kansas [Mr. CARLSON], was not here at the time—the two Senators from New Mexico, [Mr. CHAVEZ and Mr. ANDERSON] and I believe both Senators who then represented the State of Colorado. The purpose of the bill was to bring about a comprehensive survey of the soil and water resources of the Arkansas, White, and Red River watersheds, and to formulate a program for their adequate conservation.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. CHAVEZ. I think it would not be amiss to remind the Senate of the recent history of the flood-control program. We in the West have known about the problem for many years, and have tried to understand it. We realize that flood control is the best insurance we can possibly have against floods.

However, the people living in the northeastern section of the United States had to learn the hard way, as the Senator from Oklahoma knows. Only a short time ago Hurricane Carol took many lives in Pennsylvania, New York, and throughout New England.

Shortly after that, when the lives were gone and property to the value of many millions of dollars had been destroyed, the people in that area realized that flood control must be a good thing, and after that particular area had gone through this unfortunate experience, more flood-controll bills were placed in the hopper than had been the case for many years.

As the Senator knows from the hearings which he held, authority existed in New England as far back as 1936 to build flood-control projects, but they were never built.

I appreciate the remarks of the Senator from Oklahoma. I know what he is talking about. I congratulate him. He is chairman of the Subcommittee on Flood Control of the Public Works Committee, of which I have the honor and privilege to be chairman, a fact of which I am very proud.

The Senator from Oklahoma listened to all the testimony for many weeks. A bill was reported to the Senate, and the Senate actually passed it, probably 6 weeks ahead of schedule. So far as the Senate is concerned, we have followed through with a flood-control bill for this year. It is pending in the House, and I hope that Members of the Senate from the various States will get busy on the House side. Floods are no respecters of sections or political parties.

If I may recount a part of the history, with the indulgence of the Senator from Oklahoma, I recall vividly when the little Kaw River in Kansas and Missouri practically destroyed billions of dollars worth of property in Kansas alone, at a time when $400 million invested in flood-control projects would have prevented the loss. In that particular year those poor people could not pay a penny of income tax, because what they had was destroyed. The same thing applied to Missouri. The same thing applied to South Dakota. I have seen water in second-story windows in Pierre, S. Dak. I was in St. Joseph at a time when an airplane could not land at the airport. Millions of acres in the granary of America were destroyed.

Is the flood-control program good insurance? Or shall we sit idly by and refer to a flood-control bill as a pork-barrel bill?

I am glad the Senator from Oklahoma is making the statement which he is engaged in making. I appreciate his indulgence, and I wish to thank him.

Mr. KERR. I thank the Senator from New Mexico.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. CASE of South Dakota. I can attest to the interest displayed by the able chairman of the Committee on Public Works in the problem of flood control. He visited Pierre, S. Dak., in my company and saw some of the devastation wrought in that city at that time.

I am also grateful to him and to others for the work which has been accomplished in the construction of works on the Missouri River which will prevent a repetition of that particular tragedy.

At the same time, I also wish to say to the people of Oklahoma that the able Senator from Oklahoma [Mr. KERR], who serves as chairman of the Flood Control Subcommittee of the Senate Committee on Public Works, has been diligent in season and out of season working for flood-control protective works. I have had an opportunity to witness his work, and can testify to his diligence. I have observed his work in closed sessions of the committee, as well as open session. As his opposite number on the minority side of the committee, I can say to the people of Oklahoma that it was due as much to his industry as that of any other man whose name might be mentioned that the Senate took the action which it did with regard to the omnibus public works bill, which was passed early in the session.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. KERR. I yield.

Mr. JOHNSON of Texas. I wish to express my gratitude to the able Senator from South Dakota [Mr. CASE] for the great interest he has displayed in this problem and the effective service he has rendered in endeavoring to solve it.

Mr. CASE of South Dakota. I thank the Senator. The Senator from Texas is very generous.

Mr. President, I feel that the people from Oklahoma are entitled to the assurance that their representative has been diligent. As one who knows the facts in that connection, I am in a position to give such assurance.

Mr. KERR. Mr. President, I am grateful to the distinguished Senator from South Dakota; and I am aware, every time our committee meets, of the fact that there is no more able or effective worker for flood control than the distinguished Senator from South Dakota.

Mr. President, what has been said by so many of my colleagues with reference to the problem of conservation of water, and the story of tragedy in Oklahoma today constitute a warning that the Government of the United States must speed up the business of controlling and conserving the water of our country. The penalty we are paying for failing to adequately conserve this most precious resource is far greater than the cost of controlling and conserving it.

A little while ago the President warned that the price of peace and security is high—and that is true. To meet our responsibility at home and abroad we must continue to broaden the base of our national prosperity and economic development. The strongest element in that foundation is the conservation of our natural resources. They have been the foundation of our growth and development this far and will be in the future.

It has taken us 350 years to become a Nation of 170 million people. We are told by eminent authority that this number will double in 40 years. No Nation in history has had such a challenge and a pivotal part of that challenge is the necessity adequately to conserve, develop, and utilize our soil and water resources.

We are now engaged in a serious effort to reduce the record size budget submitted to the Congress by the President. This is something which the people call for and which the Congress is determined to do. But in doing this, as the Senator from Texas [Mr. JOHNSON] says, we must not be penny-wise and pound-foolish. Certainly we must trim the fat wherever possible and thus eliminate unnecessary expenditure. But, Mr. President, we must not impair the bone or mighty muscles of our great country. We must no longer neglect the absolutely necessary reinforcement of our economic growth and security which is the adequate conservation of our soil and water resources.

CAN LOCAL GOVERNMENT SURVIVE?

Mr. THURMOND. Mr. President, on Friday evening, May 17, speaking before the Ohio State Bar Association, a distinguished South Carolinian issued another warning against the United States

Supreme Court's usurpation of power not granted to it by the Constitution.

I cite the words of this outstanding citizen for several reasons. He is retired and therefore has no ambition for political gain. He is experienced in all three branches of the Federal Government and served for 4 years as Governor of his State.

The speaker who addressed the Ohio State Bar Association last Friday evening was the Honorable James F. Byrnes, former Congressman and Senator, member of the Supreme Court, War Mobilizer and Economic Stabilizer, Secretary of State, and Governor of South Carolina. Few men in the history of our Nation have served in as many varied high offices of the Federal Government. Few have had the same opportunity to observe over the past half century from the same close vantage point the changes which have taken place in the Federal Government.

In his speech in Columbus, Ohio, Governor Byrnes discussed, in the light of recent decisions of the Supreme Court, "whether local governments can survive the present trend of the courts."

I want to call the attention of the Senate particularly to one statement he made in his discourse. Governor Byrnes said:

> If the Supreme Court can alter the Constitution by its decisions, then five men—a majority of the Court—can make the Court a Constitution maker instead of a Constitution defender.

But there are many fine points in the text of this address which should be read by every American.

Mr. President, I ask unanimous consent to have the text of the address delivered by Governor Byrnes printed in the body of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN LOCAL GOVERNMENTS SURVIVE?

By training, the lawyer is more tolerant, as a rule, than his neighbors. By experience, he knows that most serious controversies have two sides, and it is wise to know upon what his opponent relies. This encourages me to discuss with you, regardless of your personal views, whether local governments can survive the present trend of the courts.

The founders of this Republic came here to escape the oppression of governments. They grudgingly gave power to local governments. Later some States refused to ratify the United States Constitution until assured that it soon would be amended. Thereafter the 10th amendment was adopted, providing:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

We have respect for the written Constitution of the United States. Heretofore we have had great respect for the Supreme Court because it has been regarded as the defender of the Constitution. We have relied upon the Court for protection against either the Executive or the Congress, acting in violation of the Constitution.

When we speak of the law of the land we refer to the United States Constitution which, according to article 4, "shall be the supreme law of the land."

We regard the Constitution as a statement of principles by which all departments of Government are bound and the liberties of the people assured, and that it can be altered only in the manner provided in that instrument.

All of us will agree with Chief Justice Marshall's statement in the Marbury-Madison case, "The Constitution is either a superior, paramount law, unchangeable by ordinary means, or it is on a level with ordinary legislative acts and, like other acts, is alterable when the Legislature shall please to alter it."

If the latter be true, a written Constitution is an absurdity. It is equally clear that if the Constitution is the superior, paramount law, it cannot be altered whenever the Supreme Court pleases to alter it.

If the Supreme Court can alter the Constitution by its decisions, then five men—a majority of the Court—can make the Court a Constitution maker instead of a Constitution defender.

Throughout our history, Presidents of the United States, from Washington to Lincoln, and to Franklin D. Roosevelt, have warned against the Court attempting to usurp such power.

Now it is agreed by students of the law that the Court, while still admitting its lack of power to amend, is exercising new powers without the public realizing that the powers are new. And these new powers are being exercised to destroy local governments.

A good illustration of this trend is the case of *Slochower* v. *The Board of Higher Education of the City of New York* (350 U. S. 551, 1956), where under its charter the city of New York was required to discharge an employee, a college professor, for claiming the protection of the fifth amendment when called before a congressional committee investigating national security to answer question regarding past membership in the Communist Party. The dismissal was affirmed by the highest court of the State. It was reversed by the United States Supreme Court. Four members of the Court, Justices Reed, Minton, Burton, and Harlan, dissented, declaring "The Court strikes deep into the authority of New York City to protect its local governmental institutions from influences of officials whose conduct does not meet the declared State standards of employment."

New York rightly contended the professor had no constitutional right to employment and had accepted the job subject to the provisions of the State statute; that it was within the province of the State alone to determine the qualifications of teachers. The State was not attempting to convict the professor of a crime. It was simply saying that it realized the people would not support a State college if its faculty included a professor who belonged to the Communist Party, membership in which had been declared by the United States Supreme Court in the *Dennis* case (314 U. S. 494) to constitute conspiracy.

How long can local government survive in the State of Ohio if, by State statute, you cannot declare that your children shall not be taught by a Communist or by a man who refuses to tell a congressional committee whether he is or is not a Communist? A teacher has the right to claim the protection of the fifth amendment if he fears his answer will incriminate him. But the people of Ohio and every other State have the right to say that such a man is unfit to teach their children.

More significant as showing the trend of the Court toward local governments was the decision in the case of *Commonwealth of Pennsylvania* v. *Nelson* (350 U. S. 497 (1956)). The sole question was whether the Federal statute known as the Smith Act, which prohibits the knowing advocacy of the overthrow of the Government of the United States by force and violence, superseded the Pennsylvania Sedition Act, which proscribes the same conduct and under which the defendant, a member of the Communist Party, had been convicted in the Pennsylvania courts.

In an opinion written by Chief Justice Warren, six members of the Court answered the question in the affirmative on the ground that Congress occupied the field to the exclusion of similar State legislation, and that administration of State acts would conflict with the Federal plan. The Attorney General filed a brief declaring there was no conflict but the Court would not be halted.

Justice Reed, with the concurrence of Justices Minton and Burton dissented, and among other things declared:

"The Smith Act appears in title 18 of the United States Code, and section 3231 provides, 'Nothing in this title shall be held to take away or impair the jurisdiction of the courts of the several States under the laws thereof.'"

Notwithstanding this positive language, the Supreme Court invalidated the laws of 42 States, which were enacted to protect the people agains the overthrow of Government by Communists.

The Communists cannot destroy this Union of States as long as we have 48 State governments which first must be destroyed. However, if they can make it impossible for the States to protect themselves, they will make easier the task of destroying the United States.

I do not cite these two cases to prove that a majority of the Supreme Court is too soft on communism. I cite them only to show the trend of the recent decisions to curtail the powers of local governments. They are significant, following the decision in the school segregation cases, invalidating the constitutions and laws of 17 States.

Because the segregation decision not only affects the lives of 40 million white southerners, but establishes legal precedents that will affect the people of all States, I ask the privilege of discussing it at some length.

In 1952 a three-judge court presided over by Hon. John J. Parker, senior judge of the fourth circuit, in a case from Clarendon County, S. C., held that the segregation statutes of South Carolina did not violate the 14th amendment. It was unanimously sustained by the Circuit Court of Appeals for the Fourth Circuit. Lawyers for the National Association for the Advancement of Colored People appealed to the Supreme Court.

There were similar cases from other States. Some months after the case was first argued, the Court asked for further argument. Because the 14th amendment makes no reference to schools, the Court requested counsel to first direct their arguments to the question "What evidence is there that the Congress which submitted and the State legislatures and conventions which ratified the 14th amendment, contemplated or did not contemplate, understood or did not understand, that it would abolish segregation in public schools?"

The attorneys general of all interested States were invited to file briefs. Many of them responded. It was shown that about the time the amendment was submitted, Members of the Congress proposed that in the Constitution and in statutes, segregated schools should be specifically prohibited. The proposals were rejected.

The Congress that submittted the 14th amendment passed a bill distributing funds between white school and Negro schools in the District of Columbia, and ever thereafter dealt with school funds on a segregated basis. It was further shown that thereafter 24 of the 37 States then existing, legally sanctioned segregated public schools.

Ohio was 1 of these 24 States. For some years prior to ratification of the 14th amendment, Ohio had a statutory system of segregated schools. In 1871 the Supreme Court of Ohio unanimously sustained the con-

stitutionality of this statute. Your segregated system continued until 1887 and was abandoned only as a matter of policy, demonstrating the 14th amendment was not understood in Ohio as requiring that segregated schools be abolished.

The legislative history so conclusively demonstrated that the prohibition of segregated schools was not contemplated either by the framers of the 14th amendment or by the States in ratifying it, that the Supreme Court could not assert otherwise. The most it would declare was that the legislative history was inconclusive.

When the Court decided the legislative history was inconclusive, it should have declared as it did only a year ago in the case of *Ullmann* v. *U. S.* (350 U. S. 427), that "nothing new can be put into the Constitution except through the amendatory process." It should have upheld the doctrine of separate but equal facilities which had been sustained by the Supreme Court in eight different cases since 1896.

Instead, the Court declared, "We cannot turn the clock back to 1868 when the amendment was adopted, or to 1896 when *Plessy* v. *Ferguson* was written." Then why did it ask counsel to file briefs as to the intent of Congress in 1868? And why did it ask counsel to argue whether the Court was bound by its previous decisions such as *Plessy* v. *Ferguson?*

When the Court included such great Justices as Taft, Holmes, Brandeis, and Stone, it declared in *Gong Lum* v. *Rice* (275 U. S. 78), in an unanimous opinion, written by Chief Justice Taft, that segregation in public schools had been "many times decided to be within the constitutional power of the State legislatures to settle without interference of the Federal courts under the Federal Constitution."

The Court, speaking through Chief Justice Hughes, said in another case that the question could "no longer be considered an open one" (235 U. S. 151).

The doctrine of stare decisis is not sacred but when a case involving an interpretation of the Constitution was decided in 1896 and that interpretation is sustained by the Court's decisions over a period of 60 years, we should be able to rely upon it as the law.

I relied upon it, and while Governor, urged the issuance of bonds and the levying of a sales tax to build segregated schools. We have since allotted $175 million for new segregated schools. Of the first $75 million we allotted 70 percent to Negro schools, even though Negro students constituted only 39 percent of the total enrollment.

The Court based its segregation decision on the finding that to separate Negro children from white children because of race, generates a feeling of inferiority and that "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority." It cited only the writings of a group of psychologists, several of whom had been declared by the Department of Justice to be subversive, and then said, "See generally, Myrdal, 'An American Dilemma, 1944'." I have seen it. On page 13 it criticizes the Constitution of the United States. This citizen of Sweden also makes plain his view that intermarriage of the races is inevitable and is a solution of our dilemma. The psychologists did not testify, and their writings were not part of the records.

As late as 1952 in the case of *Beauharnais* v. *Illinois* (343 U. S. 250) the Court said:

"It is not within our competence to confirm or deny claims of social scientists as to the dependence of the individual on the position of his racial or religious group in the community."

Two years later the Court cited the claims of several social scientists as the justification for invalidating the laws of 17 States.

Where the precedent thus established will lead, no man knows. In 1832 Stephen Girard, of Philadelphia, left approximately $2 million to establish Girard College for the education of white orphan boys, making the city of Philadelphia trustee of the fund. For the past 132 years the city, through a trust committee, has carried out the wishes of the testator. Recently several Negroes were denied admission. The State Supreme Court, sustaining the position of the college, held, "It is one of our most fundamental legal principles that an individual has the right to dispose of his own property by gift or will as he sees fit," and "A testator's direction will be enforced even though contrary to the general views of society." The State court held the city government, in administering the fund, acted solely in a fiduciary capacity and not 1 cent of taxpayers' money had ever been used for the college.

The United States Supreme Court, however, held that the trust committee of the city is a State agency and under the public school segregation case, Negroes must be admitted. It struck down the decision of the Pennsylvania court and thwarted the purpose of the testator because of the means by which his purpose is carried out.

Because in 1954 the Court changed the 14th amendment, which was ratified in 1868, the Court now changes a man's will made in 1832.

If a church school or orphanage is chartered by a State for the care of white Protestants, Catholics, or Jews, will it because of its charter be held to be an agency of the State to which the segregation decision applies?

Some who do not like our written Constitution constantly urge in support of their position, that Chief Justice Hughes said "The Constitution is what the Supreme Court says it is." They create the impression that the great Chief Justice deliberately wrote those words in an opinion of the Supreme Court. That is not true. Fifty years ago while he was Governor of New York and was campaigning for a public service commission bill, he opposed a proposal which would have placed administrative duties upon the New York State courts, and made a statement which is often misquoted as referring to the Supreme Court. Later in his biographical notes he complained of the inferences drawn from the context of his extemporaneous speech, in which speech he said:

"We are under a Constitution, but the Constitution is what the judges say it is, and the judiciary is the safeguard of our liberty and of our property under the Constitution. I do not want to see any direct assault upon the courts, nor do I want to see any indirect assault upon the courts. And I tell you, ladies and gentlemen, no more insidious assault could be made upon the independence and esteem of the judiciary than to burden it with these questions of administration." (See Pusey's Biography, vol. 1, pp. 204–205.)

If the Constitution is whatever the Supreme Court says it is, instead of taking an oath to defend the Constitution, citizens should be required to swear to uphold and defend the decisions of the Supreme Court.

After the Court adopted the school amendment to the Constitution, it had a further hearing to determine how the new 14th amendment should be enforced. Why did the Court not look to the 14th amendment? Section 5 reads: "The Congress shall have the power to enforce by appropriate legislation the provisions of this article."

Discussing this section, in the case of *Fay* v. *The People of the State of New York* (332 U. S. 261), decided 10 years ago, the Supreme Court indicated in the absence of Congressional authority, it had no power to enforce the 14th amendment. That case involved alleged racial discrimination against Negroes serving as jurors. The Court called attention to an act of Congress by which it was controlled, specifically prohibiting such discrimination as to jurors, and then said of section 5:

"It is not said the judicial power of the general Government shall extend to enforcing the prohibitions and to protecting the rights and immunities guaranteed. It is not said that branch of the Government shall be authorized to declare void any action of a State in violation of the prohibitions. It is the power of Congress which has been enlarged. Congress is authorized to enforce the prohibitions by appropriate legislation."

But the Court that was unwilling in 1955 to leave the amendment of the Constitution to the Congress and the States, as provided in that instrument, likewise was unwilling to leave to the Congress the enforcement of the new 14th amendment.

It substituted the courts for the Congress. That means the power of injunction. It is a dangerous power, often abused.

Addressing the Vermont Bar Association last September, I said that in cases of criminal contempt, where the act complained of constituted a violation of a law of Congress or of a State as well as the order of the Court and was not done in the presence of the Court, the citizen was entitled to a jury trial unless the United States Government was a party, but it was evident that in such cases, efforts would be made to deny a jury trial.

I was not mistaken. In Clinton, Tenn., a district judge at the request of the district attorney, signed what he called an "integration order" and enjoined certain named individuals and all others acting in concert with them, from picketing or in any way interfering with the execution of his "integration order." Later, one man was tried by the judge for contempt and sentenced to imprisonment. Sixteen were arrested under section 3691, which provides for a jury trial unless the United States Government is a party. They demanded a jury trial. The order they are charged with having violated was issued in a suit pending for more than a year. However, on January 25, 1957, the district attorney petitioned to have the United Staes substituted as a party and on the same day the petition was granted.

The United States News and World Report called attention to the obvious move of the Department of Justice to circumvent a jury trial. Some newspaper editors joined in criticizing the Department. It was effective. About a month ago the district attorney filed a brief stating he would not oppose the demand for a jury trial. However, the incident justifies the warning I gave last fall and now repeat, that if the precedent should be established by the expansion of the injunctive power in school cases, it will have far-reaching effects in restricting the rights of free speech and the activities of organized labor.

If the court should sustain the Attorney General in his substitution of the United States as a party in the Tennessee case, it would be unnecessary for him to request the Congress to include in the civil rights bill now pending in Congress the provision authorizing the Attorney General to bring suit in the name of the United States for the benefit of a citizen who claims his civil rights have been violated.

If it be said we can rely upon the present Attorney General seldom using the power asked for, I answer that if a man asks for power he must be expected to use it and the power now asked is too great to place in the hands of any man. And, I remind you, the present Attorney General will hold that office for only 4 years and no man can tell who will succeed him.

When the people of the South are criticized by some of the metropolitan press for not cooperating in enforcing the segregation decision, they recall that only a few decades ago the Constitution was lawfully amended in the manner provided in that instrument and prohibition laws were enacted. Unquestionably that was the law of the land. Many of the present critics of the South strongly urged the nullification of the prohibition laws. They made it fashionable to carry flasks and boasted of distilling gin in bathtubs. They did not cease their nullification efforts until the 18th amendment was repealed.

We deplore violence and our people do not talk of or even think of forcibly resisting the orders of the United States courts. They know the United States Government can enforce its decisions. They hope for relief from the courts or the Congress. They feel that if the Supreme Court could reverse the doctrine of separate but equal facilities upheld in decisions of the last half century, then with changing personnel, it may reverse this recent decision.

The people created the Supreme Court. And the people gave to Congress in article 4 of the Constitution, the specific power to regulate the appellate jurisdiction of that Court. Congress should exercise that power. It should deny to the Supreme Court the power to invalidate the provisions of a State constitution affecting public schools or affecting the security of the State or the United States Government.

In view of the threat to nullify through the injunctive process, the constitutional guaranty of trial of all crimes by a jury, Congress by legislation should protect this right of the people.

One could not discuss this segregation decision without admitting that entirely apart from the legal phases, there is a fundamental objection by the people of many States to this social experiment of the Supreme Court.

They fear the purpose of many of those advocating integration in schools is to break down social barriers in the period of adolescence and ultimately bring about social integration and intermarriage of the races. They are unalterably opposed to this and are determined to resist it in every legal way. This is not petty prejudice. It is a serious problem of race relations.

Pride of race has been responsible for the grouping of people along ethnic lines throughout the world. Race preservation is the explanation of the political unrest and race tension in South Africa.

Pride of race as well as loyalty to religion contributes to the conflict between Jews and Arabs in the Middle East, which today threatens the peace of the world. Jews do not marry Arabs. Several Arab governments will not even allow a Jew to enter those countries.

It was a realization of the wisdom of segregating races that prompted 46 governments, including the United States, to agree in the Geneva Convention of 1929 that "belligerents shall, so far as possible, avoid assembling in a single camp prisoners of different races or nationalities."

If you say that in Northern States where there are integrated schools, there is no fear of intermarriage, then I ask why is intermarriage of the races prohibited by law in 12 States? The degree of race tension in various States and communities is dependent upon the percentage of Negro population.

According to the 1950 census, in Ohio there are approximately 8 million white persons and approximately 500,000 nonwhites—or a little less than 7 percent, and there is relatively little tension.

Similarly, in the mountainous areas of the South there are few Negroes and little race tension. In South Carolina there are 2 counties where the Negro population is about 12 percent and there is no serious problem, but in the school district where the litigation arose there are 2,900 Negro pupils and only 290 white pupils. The parents of those white pupils live in constant fear of what the courts may do.

In Northern States in the rural areas there are few Negroes and no race tension, while in the great cities of New York, Detroit, Washington, and Chicago, there is increasing Negro population and increasing tension.

It is useless for men to argue whether the racial instinct is right or wrong—it exists. It is nothing new.

Abraham Lincoln said in his joint debate with Douglas, at Charleston, Ill., on September 18, 1858, "I will say then that I am not, nor ever have been, in favor of bringing about in any way the social and political equality of the white and black races."

He said further: "Whether this feeling accords with justice and sound judgment is not the sole question, if indeed it is any part of it. Universal feeling, whether well or ill founded, cannot be safely disregarded." (Vol. 4, Writings of Abraham Lincoln, edited by Arthur Brooks Lapsley.)

Similar statements were made by Thomas Jefferson, patron saint of the Democratic Party, who at one time owned slaves.

In the days following the War Between the States, the people of other sections showed no great interest in educating the recently freed slaves. The problem of helping them educationally and economically was left to the war impoverished people of the South, who, unlike the people of Germany and Japan after World War II had no Marshall plan to help them. They did what they thought was right and now they can boast that since the days of reconstruction the Negro in the South has made greater progress than he has made in any country in the world.

I am proud of their progress in South Carolina. They are in all the professions. Some few are engaged in banking, hundreds in insurance and real estate. They are engaged in merchandising, farming, and in skilled trades.

With a Negro population of approximately 800,000, about 120,000 own automobiles. I am confident the number of cars owned by Negroes in South Carolina is greater than the number privately owned in Russia with its population of 200 million.

As a result of the educational program which I sponsored while Governor, there is at least one Negro high school in every school district. Because these schools are new in most instances, they are better than the high schools for white pupils.

In the State we have 7,000 Negro school teachers, approximately 40 percent of all teachers. In New York City with a larger Negro population, less than five percent of the regular teachers are Negroes.

Proud as I am of this progress of the Negro, I am even prouder that in the last 25 years there had been a steadily improving relationship between the races. The genuine Negro was developing pride of race. There was little talk of social equality and more talk of educational and economic progress. Between the leaders of the races there was mutual respect and cooperation.

The decision of the Supreme Court has undone all that men of good will in both races had accomplished. Instead of improving, the situation is worsening. Thoughtful people of both races know that an order of a court, cannot change the minds and hearts of people, and they fear the future.

In several States laws have been enacted providing that "if by order of any court, State or Federal, a student is assigned to a school different from that to which he is assigned by school officials, all appropriations for the school to which that student is assigned and all appropriations for the school from which he comes, shall immediately cease."

Counsel for the National Association for the Advancement of Colored People predict the Supreme Court will declare these laws unconstitutional. I hope they are mistaken, but in view of the segregation decision, I would not care to make a wager.

However, I predict that if the Court shall declare unconstitutional all State statutes having in its opinion, the effect of continuing segregation, then with great regret, many States will reluctantly discontinue public schools.

In anticipation of this last resort, provisions in State constitutions requiring appropriations for public schools have been repealed by the voters. Private schools will be preferred to integrated schools.

Of one thing I am confident, should the Supreme Court cause the closing of public schools, leaders of the white race in the South will see to it that the innocent Negro children receive an education. They will not be permitted to suffer because of the well-intentioned but misguided efforts of overzealous do-gooders.

We regret that the race problem has become a political football, the two national political parties bidding for the support of colored voters who all too frequently base their support solely upon the racial attitudes of candidates. And we regret that in some northern States, magazines and newspapers with wide circulation so grossly misrepresent our views and our conduct.

We are not an alien people. We are loyal Americans. Regardless of the difference between the North and South 100 years ago, in the Spanish-American War southerners proved their devotion to the United States. In World War I and again in World War II, sons of the South fought with your sons and demonstrated their patriotism and courage on the battlefields of the world.

Now, in time of peace, we want to cooperate with those of you who believe in constitutional government and in the survival of local governments.

We did not bring the African slaves to our shores. That crime was committed first by the slave traders of Europe and later by traders of New England. However, the southern planters of that period who purchased the slaves, shared the sins of the traders. For those sins they suffered and they bequeathed to those who came after them a race problem which has sorely tried the souls of our people. For more than a century they have borne this cross. Now they earnestly appeal to you for understanding as they pray that their burden may be lessened if not lifted.

ADDRESS DELIVERED BY SENATOR KENNEDY AT ANNUAL AWARDS DINNER OF OVERSEAS PRESS CLUB

Mr. MANSFIELD. Mr. President, on Monday, May 6, 1957, our distinguished colleague the junior Senator from Massachusetts [Mr. KENNEDY] made an address at the annual awards dinner of the Overseas Press Club in New York City. The address is worthy of the attention of all Senators, and I therefore ask unanimous consent that it may be printed in the RECORD at this point in my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR KENNEDY AT THE ANNUAL AWARDS DINNER OF THE OVERSEAS PRESS CLUB MONDAY EVENING, MAY 6, 1957, NEW YORK CITY

It is a genuine pleasure to be with you tonight to join in the tributes justly paid to these outstanding award winners. I gained

a new appreciation for the lot of the foreign correspondent when the April issue of American Heritage revealed that, in 1851, the New York Tribune under Horace Greeley employed as its London correspondent an obscure journalist by the name of Karl Marx. (Some of the copy he filed, it seems, was ghost-written by his friend and patron, Friedrich Engels—but that practice no doubt is as thoroughly discredited today among overseas correspondents as it is among practicing politicians.) In any event, we are told that foreign correspondent Marx, stonebroke and with a family ill and undernourished, constantly appealed to Greeley and managing editor Charles Dana for an increase in his munificent salary of $5 per installment—a salary which he and Engels ungratefully labeled as "the lousiest petty-bourgeois cheating." But when all his financial appeals were refused, Marx looked around for other means of livelihood and fame, eventually terminating his relationship with the Tribune and devoting his talents full-time to the cause that would bequeath to the world the seeds of Leninism, Stalinism, revolution, and cold war. If only this capitalist New York newspaper had treated him more kindly, if only Marx had remained a foreign correspondent, history might have been different, our taxes today might be lower—and I hope all publishers will bear this lesson in mind the next time they receive a poverty-stricken appeal from abroad for a small increase in the expense account.

Perhaps it was the Tribune that made Marx an expert on capitalist exploitation—for he used to scream to Engels, in language exceedingly inappropriate to the gentlemanly traditions of foreign correspondents, that this "lousy rag," as he called the Tribune, run by two "lousy bums" Greeley and Dana, was exploiting Engels and himself like "paupers in a workhouse." But what would Karl Marx say tonight about Communist Russia's systematic exploitation of the satellite economies and workers like "paupers in a workhouse"?

I want to refer particularly tonight to a classic example of Communist mismanagement, inefficiency and exploitation—Poland. For there absentee Soviet centralization and nationalization resulted only in decreased productivity, extensive raw material shortages, both labor shortages and unemployment, and increasing waste and obsolescence of machinery. The attempt to force a heavy industrialization and rearmament program too rapidly upon an economy milked dry by Soviet demands resulted in drastic shortages of consumer goods and housing, spiraling inflation and a raging black market. Without decent living standards, adequate housing or fuel, and ravaged by tuberculosis and other diseases, the Polish people turned rumbling discontent into a violent roar at Poznan, and finally last October insisted upon the new anti-Stalinist regime of Premier Gomulka.

It is, of course, still a Communist regime, still within the Soviet orbit, still patrolled by Red armies. The average uninformed observer at a distance would conclude there had been little change—unless the shroud of secrecy was lifted from official intelligence reports or the veneer of propaganda could be torn from the Communist propaganda reports. But fortunately, in Poland and the other satellite countries, we do not need to rely on uninformed observers at a distance, on unavailable government intelligence, or upon Communist propaganda. We have in those countries trained, objective observers, working not for our Government but for our newspapers, filing not what the Communists tell them but what they see and hear on their own. Their reports are invaluable to the informed public opinion our democracy needs—and it is unthinkable that we should not be able to get such reports from inside Communist China.

But the dispatches filed from the Polish nation show significant changes beneath the Communist label. Terrorism and thought control have diminished; public opinion, basically anti-Communist and always anti-Soviet, is awakening; and a working agreement has been reached with the Polish Catholic Church under Cardinal Wyszynski. Industry and agriculture have been increasingly decentralized and denationalized. Little over one week ago the Polish Parliament approved a new budget and economic plan to reduce industrial expansion and raise living standards. And perhaps most significant of all, the Polish Government has for the first time turned toward the West for increased trade, for friendship, and for American credit and economic assistance—specifically for $200 million worth of our surplus wheat, cotton, corn, fats and oils, to be repaid in Polish currency; and $100 million worth of credit at the Export-Import Bank, to be repaid in dollars, to buy coal, farm machinery and fertilizer.

And what kind of response did they meet from our State Department, whose Secretary boasted here not so long ago of his desire to "advance the aims and aspirations of freedom-loving peoples" by a policy of "liberation"? They met doubt; they met delay; they met timidity and indecision. The welcome mat was haltingly extended only after 5 months had passed from the time the President pledged our aid to the new government—and longer than 2 more months passed before we neared agreement last week on less than one-third of their original request.

In part, of course, this hesitancy has been the result of divisions within the President's own party. Senate Minority Leader KNOWLAND has denounced all proposals for a Polish loan. He quotes the irritating anti-Western and pro-Communist statements made by Mr. Gomulka whose prestige we would be raising. He warns that our aid will simply strengthen the Communist bloc, relieve pressure on the Soviets, and divert to armaments those resources now devoted to staving off Polish discontent. Others warn that extensive American aid to Red-occupied Poland may serve only as a pretext for violent Soviet intervention, permanently crushing the Gomulka government and completely wasting any American investment. Still others take a less valid and less sincere position—they favor Polish aid, they say to voters who support it, but only if her government becomes truly independent, or joins an anti-Russian alliance, or abandons national socialism; or they favor aid only if it is limited to surplus foods alone, accompanied by teams of American observers to guarantee its delivery to needy Poles alone.

I do not say that there are no real risks in aiding the Gomulka government. These are real risks; but, speaking for myself, I do say that risk for risk, dollar for dollar, we cannot fail to meet the Poles more than half way. Apparently our latest offer, though far below their needs and hopes, is acceptable to the Polish delegation. But should a Congressional veto or further administration haggling reduce this still further and turn them away nearly empty handed, after they have braved the Soviet's wrath to come, then we will either be forcing a suffering nation into a fruitless revolt—or forcing the Polish Government to again become hopelessly dependent on Moscow completely on Moscow's terms; encouraging the Polish Stalinists in their antiwestern propaganda; and very possibly causing the collapse of the present, more independent government. Other satellites, we may be sure, are watching—and if we fail to help the Poles, who else will dare stand up to the Russians and look westward?

If, on the other hand, we provide a dramatic, concrete demonstration of our sympathy and sincerity, we can obtain an invaluable reservoir of good will among the Polish people, strengthen their will to resist, and drive still a further wedge between the Polish Government and the Kremlin.

I know of no more critical issue facing our foreign policymakers today. For success in Poland could have early consequences in Czechoslovakia and East Germany, and then the whole Communist orbit—and the Soviets know it. The so-called satellite nations constitute the Achilles heel of the Soviet empire, the tender spot within its coat of iron armor, the potential source of an inflammation that could spread infectious independence throughout its system, accomplishing from within what the West could never accomplish from without.

I call tonight therefore, and I shall devote my efforts on the Senate Foreign Relations Committee, for the formulation of a new American policy toward the satellites. The basic laws governing our foreign economic policies, such as the Battle Act and the Agricultural Surplus Disposal Act, recognize only two categories of nations in the world: Nations "under the domination or control" of the U. S. S. R. or the world Communist movement—and "friendly nations." I suggest to you that there are more shades of gray than these black and white definitions would indicate—that there are and will be nations such as Poland that may not yet be our allies or even friendly, but which are at least beginning to move out from Soviet domination and control. I suggest that these acts be rewritten accordingly—that the policies based upon them be reformulated accordingly—and that we match our brave words about "Liberation" with some bold and imaginative moves of our own.

We have had enough of anguish and despair and empty promises. It is time now to reexamine, to illuminate, and then to act. In his book, One Man's America, Alistair Cooke tells the story which best illustrates my point. On the 19th of May 1780, as he describes it, in Hartford, Conn., the skies at noon turned from blue to gray and by mid-afternoon had blackened over so densely that, in that religious age, men fell on their knees and begged a final blessing before the end came. The Connecticut House of Representatives was in session. And as some men fell down in the darkened chamber and others clamored for an immediate adjournment, the speaker of the house, one Colonel Davenport, came to his feet. And he silenced the din with these words: "The Day of Judgment is either approaching or it is not. If it is not, there is no cause for adjournment. If it is, I choose to be found doing my duty. I wish, therefore, that candles may be brought."

Members of the Overseas Press Club, let those of us who are here tonight concerned with the dark and despairing problems of the satellites ask once again that, to illuminate our way, candles may be brought.

THIRD SUPPLEMENTAL APPROPRIATIONS, 1957

The Senate resumed the consideration of the bill (H. R. 7221) making supplemental appropriations for the fiscal year ending June 30, 1957, and for other purposes.

The PRESIDING OFFICER. The bill is before the Senate and open to further amendment.

Mr. JOHNSON of Texas. Mr. President, may we have the yeas and nays on final passage of the bill?

The yeas and nays were ordered.

Mr. DOUGLAS. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 28, lines 8 and 9, it is proposed to strike out the following:

CONTINGENT EXPENSES OF THE SENATE

Senate restaurants: For an additional amount for Senate kitchens and restaurants, $30,000.

Mr. DOUGLAS. Mr. President, we have already appropriated $55,000 of the taxpayers' money for the conduct of the Senate restaurant. The supplemental appropriation bill now before the Senate proposes to add $30,000 for that purpose. This would make a total expenditure of approximately $85,000, minus such amounts as would be returned at the end of the year, which are estimated to be approximately $5,000, and probably not more than $10,000.

Therefore, we may expect that there will be a subsidy of from $75,000 to $80,000 of the taxpayers' money for meals eaten by Senators, their guests, and others who patronize the restaurant facilities.

In going into the matter, I am informed that the probable gross receipts of the restaurant during the current fiscal year will be approximately $500,000. That means there will be a subsidy of 15 percent on the total amount on food consumed by Senators, their guests, and others in the Senate dining rooms.

I realize that the appropriation was placed in the bill to provide for the wage increase which was long overdue and which was much needed. I am informed that the wages formerly were 75 cents an hour for waiters and 53 cents an hour for waitresses. These have been raised to $1 and 85 cents, respectively. These increases in pay were necessary, highly desirable and should have been made.

However, I do not believe that the taxpayers should subsidize Senators or subsidize their guests for the meals which are consumed. We should pay for them from the charges imposed by the Senate restaurant. I have before me a menu for today. I believe most of us are familiar with parts of the menu. However, I shall read some of the items for the benefit of the general public, so that people will know that we get our food at less than cost and at the expense of the taxpayers.

For example, our famous bean soup costs us only 15 cents a cup, or 20 cents a bowl. I defy anyone to get as good soup as that anywhere in the country, and in as large quantities, for such a low price.

I point out that we can get chopped U. S. Choice sirloin steak on toast for $1.10, or a Spanish omelet for 85 cents, or broiled pork chops for $1.25.

We can get Italian spaghetti and meat balls, Naples style, with Parmesan cheese, and tossed chef's salad, for 95 cents. We can get fried filet of lemon sole, tartar sauce, with hashed in cream potatoes, and cabbage salad with tomato, for $1.20.

We can get émincé of chicken and fresh mushrooms a la King, timbale of rice, and buttered string beans, for $1.15.

We can get roast loin of fresh Jersey pork, with applesauce, whipped potatoes, and braised mustard greens, for $1.35.

These are all appreciably below current prices in Washington restaurants. In addition to that, if we ask for a second cup of coffee, no charge is made for it. Of course cornbread is also furnished free to Senators whose penchant lies in that direction.

Without being demagogic about the matter, it seems to me that the prices should be increased, so that we and our guests would pay for the cost. The present practice is a form of relief for public officials and their guests which I personally think is indefensible. I am for helping those who badly need help, but I am opposed to subsidies for those who do not need them. The Members of this body and their guests certainly do not need them. I do not believe we want to put ourselves in the position before the public of getting a $75,000 or $80,000 subsidy on the meals which we and our guests consume. I hope very much the amendment may be accepted.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MAGNUSON. I think the RECORD should be clear. I believe that a great porportion, perhaps 60 percent, of the meals served in the Senate restaurant are served to the public and members of the press.

Mr. DOUGLAS. I think they, too, should pay adequate prices.

Mr. MAGNUSON. Just a moment, please. They have to eat somewhere, and it is hard for them to get downtown. I agree with the Senator that we ought to pay for what we get. I do not disagree with the Senator, but perhaps my tastes are a little keener than the Senator's. At any rate I should like to note for the RECORD that what we read on the menu and what we get in the restaurant have no relation to each other. So for as clam chowder is concerned, I defy the Senator from Illinois to find any clams in it.

Mr. DOUGLAS. I used to have the same experience when I would be furnished with oyster stew at church socials.

Mr. MAGNUSON. The same thing is true downstairs. I believe we ought to pay for what we get. Senators are only 96 out of the hundreds of people who eat there, however.

Mr. DOUGLAS. That is correct.

Mr. MAGNUSON. The guests are quite limited, because of the limited space in the restaurant.

Mr. DOUGLAS. I think it should be made clear that this subsidy from $75,000 to $80,000 is not a subsidy exclusively to Senators. It is a general subsidy to all those who use the restaurant. However, the people who use the restaurant are not an indigent class of people.

Mr. MAGNUSON. That is correct.

Mr. DOUGLAS. On the whole, they are in the upper income group.

Mr. MAGNUSON. I do not know that the people in the press gallery are in the upper income group.

Mr. DOUGLAS. They should be, if they are not. I have never noticed any of them with tin cups begging in the streets. If they cannot pay, their newspapers can, and I have always noticed that newspapermen are not bashful about turning in expense accounts.

Mr. MAGNUSON. What I wanted to say was that I am in entire agreement with the Senator's objective in this matter, but——

Mr. DOUGLAS. People usually are.

Mr. MAGNUSON. But I do not believe there is a Senator who would disagree that prices could be raised 50 percent, if they could get better food for it.

But it is pretty bad. The menus always sound fine, but when we see what we get to eat, there is a big difference.

Mr. DOUGLAS. Perhaps I am more spartan than the Senator from Washington.

Mr. MAGNUSON. There is no high living down in the Senate restaurant. I think the Senator's objective is right. I have said this on many other occasions, having gone into the question some years ago.

Mr. DOUGLAS. Then I am very glad the Senator from Washington supports my amendment.

Mr. MAGNUSON. I think there ought to be a little history given on this subject. I think a distinguished Senator from Illinois was the chairman of the Committee on Rules at one time. I think it was Senator Brooks who handled the matter. He wanted to do something about the situation, so he hired someone from Chicago to run the restaurant. I do not know whether the fellow from Chicago is still running it; I understand he is. If so, let us ask that man from Chicago to give us food that is good food, and we will pay the price.

Mr. DOUGLAS. The best way to do that is not to pay a subsidy, but to compel the Rules Committee to raise the prices. So long as the subsidy is paid, they apparently will not raise the prices.

Mr. MAGNUSON. I think the prices ought to be raised much more than they are shown to be on the menu.

Mr. DOUGLAS. I am very glad the Senator from Washington agrees with me.

Mr. MAGNUSON. I think the caterer agreed to raise some prices a year ago, and they did raise the prices then on everything except soup. Why the price of soup was not raised, I do not know. Perhaps the price of soup should be raised a little. But I think the RECORD should be made clear.

Mr. DOUGLAS. I do not think we should be running a free soup kitchen.

Mr. MAGNUSON. No; of course, we should not. I think the RECORD ought to be clear that all kinds of people eat there. The number of people who visit the Capitol is increasing, and on this side of the building the Senate restaurant is the only place to eat.

The cafeteria is operated by the same people. I think anyone is willing to pay for what he gets—Senators and all others who eat there.

Mr. DOUGLAS. I am informed that the restaurant and the cafeteria in the Senate Office Building are about able to break even, but that the big loss is in the Senate itself.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. NEUBERGER. I may be laboring under rather false standards, but I have not been impressed by the fact that the prices are so cheap, as the Senator from Illinois says they are. It may be that

because the Senator from Illinois represents, in part, a State which has a city that contains the famous Pump Room, he has Pump Room prices in mind.

Mr. DOUGLAS. I have never been in the Pump Room in my life. I am not accustomed to dining off flaming swords.

Mr. NEUBERGER. If I may, I should like to get in a reference to the family business. My mother happens to be in the restaurant business in Portland, Oreg. She is a partner in operating 3 or 4 restaurant enterprises.

Recently I was home in Portland, and I made some speeches throughout the State. Because I am watching my weight and my cholesterol, I had the same lunch there that I habitually eat here, which consisted of fruit and cottage-cheese salad, and also a low-calorie dessert and coffee. That cost me, in one of the family restaurants in downtown Portland, 85 cents.

Mr. DOUGLAS. I would suggest to the Committee on Rules and Administration that the Senator's mother be engaged to run the catering service.

Mr. NEUBERGER. Would that be classified as nepotism?

Mr. DOUGLAS. No.

Mr. NEUBERGER. That same meal costs me more at the Senate dining room than it costs in Portland.

Mr. DOUGLAS. Whoever pays for it, the taxpayers' money should not pay for it; and if the service is not good, the Committee on Rules and Administration can sack the present caterer and get another caterer. On the whole, however, I think the service is good.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. JOHNSTON of South Carolina. I am glad the Senator from Illinois has brought up this point. I am glad, too, that it is a man from Illinois who is operating the dining room.

I had one of the leading cafeteria men from South Carolina look over the list. If the committee wants to turn over the operations to someone who will not ask any subsidies, I think I can get the man to come here; and I think the patrons will be fed as good food as they are at present, without increasing any of the prices.

Mr. DOUGLAS. We first have had a tentative offer from Oregon; now we have one from South Carolina.

Mr. NEUBERGER. Perhaps the man from South Carolina can operate the Senate dining room in collaboration with my mother and her partner.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. JAVITS. I am a member of the subcommittee which deals with this question.

Mr. MAGNUSON. Aha. Here is our man.

Mr. JAVITS. I rise only to give some information; not to engage in the debate.

I, too, felt as the Senator from Illinois did initially, that we ought to pay our way. The chairman has caused the people who run the restaurant to have a survey made—which is now in process—as to the prevailing prices, with a view toward increasing the prices in the Senate restaurant, so that it can come more nearly to the point of paying its own way.

Also, it is very hard to get someone to run a restaurant. On previous occasions many responsible operators were circularized; none could be obtained. Finally it was necessary to get the people who have the concession now. They do not operate at any profit as their own.

We are again opening the lists, in an effort to ascertain whether someone else wishes to operate the restaurant.

Those are the facts. They come to the point that the subcommittee is trying seriously to deal with this particular question.

I have no quarrel with the Senator's amendment. If the Senate believes it should be adopted, that is fine with me. But I am only pointing out that the subcommittee is aware of the problem, recognizes it, and is trying to do something about it.

I thought in fairness to the Senator from Georgia [Mr. TALMADGE], who is the chairman of the subcommittee, but who is not in the Chamber, this statement should be made.

Mr. JOHNSTON of South Carolina. May I ask the Senator from New York if the committee is affording other persons an opportunity to take over the operation of the restaurant?

Mr. JAVITS. Two things are being done: First, an effort is being made to find another operator who might do better, who might wish to take on the operations. I made some suggestions about someone in New York. If the Senator from South Carolina will give me his suggestion about persons from his State, we will add them to the list of persons to be circularized.

Second, a real effort is being made to deal with the question of price, with a view to narrowing the cost.

Mr. DOUGLAS. There is no use postponing a decision on the proper policy. The decision on policy is whether or not the public will subsidize the Senate restaurant. I think a subsidy for that purpose is indefensible, on the ground that the people who eat there—Senators, guests, and others—are perfectly able to pay the cost.

I am certain that if my amendment is passed, the prices will be increased by the Rules Committee and the restaurant will pay its way.

The volume of business—$500,000 a year—is such that responsible caterers can be attracted to offer service at reasonable prices. But so long as we keep appropriating money, and especially when a deficit is incurred on the restaurants in the Senate buildings themselves, we postpone dealing with the issue itself, and we put ourselves, I think, in an indefensible and vulnerable position before the general public.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. JOHNSTON of South Carolina. As a matter of securing information, does the present caterer pay for the lighting in the restaurant?

Mr. DOUGLAS. I am not certain.

Mr. JOHNSTON of South Carolina. Does he pay any of the utility costs?

Mr. DOUGLAS. May I ask that the Senator from New York respond to that question? The Senator from South Carolina wishes to know if the caterer pays for the lighting and other utility services.

Mr. JAVITS. I wish I could enlighten the Senator as to that detail, but I can only suggest that I will get a copy of the contract and make certain that it is published in the RECORD.

Mr. JOHNSTON of South Carolina. I think that would be a good thing to do. Free utility service is as good as a subsidy, if we are talking about giving a subsidy.

I think if the subject is looked into properly, the same prices can be paid to get as good food as we are getting at present.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. CARLSON. If I understand the Senator's amendment correctly, it applies not only to the restaurant where Senators eat, but also to the snack bars and cafeterias in the Senate Office Building. There are 1,800 employees on this side of the Capitol who eat in those places. I certainly have no objection to paying any cost the Senate Committee on Rules and Administration may suggest, but I think we should be careful about the charges made to the personnel who work in the buildings.

Mr. DOUGLAS. I think the Government should pay their employees an adequate salary, and they should then pay competitive prices for the food they eat. It is humiliating for us and for them to subsidize Government employees for the food they eat.

Mr. NEUBERGER. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. NEUBERGER. What I do not understand is this: In the case of the major items on the restaurant menu, what makes the Senator from Illinois think that the prices charged for the food served in the Senate dining room are so cheap? I have been examining the menu; and, for example, I find that today, if a person has lunch consisting of fillet of sole—and whitefish is traditionally not expensive anywhere, except at a swank restaurant—potatoes, cabbage, salad, coffee, and dessert, the charge is $1.50. I do not regard that as a particularly inexpensive luncheon. It may be that I have a low-priced viewpoint, since I come from the State of Oregon, where food at eating places may be less expensive than here. However, I cannot see why the prices charged for food in the Senate restaurant should be regarded as particularly nominal.

Mr. DOUGLAS. Mr. President, I do not wish to become involved in an argument on a comparison of the prices of individual items, because that would be ridiculous.

I will say that in the Senate restaurant the charge for a bowl of bean soup is 20 cents; and I defy anyone to get as good or as large a bowl of bean soup anywhere else for 20 cents.

Certainly it is true that in the ordinary restaurant, one pays for a second cup of coffee; and certainly one pays, ordinarily, for cornbread or other bread, which is furnished free in the Senate restaurant. There are other items which either are furnished gratuitously or for which a very low charge is made.

Regardless of all that, the subsidy amounts to $75,000 or $80,000 a year. I have had the figures analyzed. I am told that the cafeteria in the Senate Office Building, where the vast majority of the Senate employees eat, approximately meets its expenses; that the other cafeterias also approximately pay out; that virtually all the losses are incurred in the restaurant in the Senate building itself. I think that situation is very wasteful and humiliating.

Mr. CARROLL. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I am very glad to yield, although, Mr. President, I must say that I do not know why it is that whenever I propose that an economy be made, the hornets begin to swarm from all sides—sometimes those whom I expect to sting me, and sometimes those whom I do not expect to sting me.

Mr. CARROLL. In this case the distinguished Senator from Illinois need fear no sting—merely a gentle nudge. I wish to ask how long the subsidy has been going on.

Mr. DOUGLAS. Last year the subsidy was $30,827, plus the management fee of $15,000, or a total of $45,827.

Mr. CARROLL. Has the Senate restaurant always been operated in a sort of state of subsidy?

Mr. DOUGLAS. I am not able to answer that question.

Mr. CARROLL. I ask the question because, as a new Senator, I want my constituents to have the same benefits this year as those which have been extended for 20 years in the Senate; and I want them to be able to come with me into the Senate restaurant and see there the distinguished figures of American political life.

Mr. DOUGLAS. I, too, like to bring guests into the Senate dining room and show them the distinguished colleagues I have, including the Senator from Colorado. But I want to pay the check myself, and not charge it to Uncle Sam.

Mr. CARROLL. My question is whether this has been going on for many years.

Mr. DOUGLAS. I think it has, but I cannot take an oath on it. At any rate, it is a good thing to stop. Just because Henry Clay used snuff is no reason why we should.

Mr. CARROLL. As I understand, approximately 65 percent of the amount is for the salaries of the employees.

Mr. DOUGLAS. Mr. President, I am not complaining about the increase in costs. I think the former wage scale should have been increased. What I am saying is that instead of having the taxpayers meet the increased costs, the patrons of the restaurant should meet them.

Mr. JOHNSTON of South Carolina. Mr. President, I think one fact should be brought out, namely, that the Senate dining room remains in operation for as long a time as the Senate itself remains in session, and the employees have to be paid for being available as long as the Senate is in session. If we were to go to the restaurant at this moment, we probably would find only 1 or 2 persons eating there; and the same situation exists from approximately 1:30 or 1:45 p. m. each day, until the Senate ends its session for the day. Regardless of the number of persons in the dining room at a given time, the help are required to be on duty, even though basically only one meal a day is served in the restaurant. So the operation thus is more costly than it otherwise would be.

Mr. DOUGLAS. That is true. But it is a convenience to us, and either we or our guests should pay for it, or we should pay for our guests.

Mr. NEUBERGER. Mr. President, I think it would be very useful at a future time to include in the RECORD a comparison of the prices charged in the Senate restaurant with the prices charged in commercial restaurants of comparable standard, and where the food is of comparable quality and variety. I believe such a comparison will show that the prices charged in the Senate restaurant are not as abysmally cheap as the Senator from Illinois makes out.

Mr. DOUGLAS. Mr. President, I do not say the food in the restaurant is extraordinarily cheap. The Senator from Oregon is very cleverly trying to maneuver me into that position, but I simply say that the operation does not meet the costs. That is obvious from the subsidy we are being asked to appropriate.

Mr. NEUBERGER. But the Senator from South Carolina has pointed out a very basic reason, namely, the abnormal hours and the lack of a definite time schedule.

The operation of the Senate restaurant is very similar in some ways to the operation of a railroad dining car. Railroad dining cars operate in an unusual and unorthodox situation, because the crews are required to be transported either all day long or overnight, as the train travels from place to place; yet the service is expected to be available at all times to the traveling public. I have seen breakdowns made in that connection, and the accountants for the railroads invariably point out that, despite the fact that the prices charged for food served in railroad dining cars might appear to be rather high when compared with the prices charged for food in ordinary restaurants, yet the income the railroads receive from their dining cars is not sufficient to meet the expenses involved.

If the Senate wishes to adopt a schedule which will permit the Senate restaurant to serve meals at the customary times, I am prepared to vote to have that done. But I think the RECORD should show that the opertion of the Senate restaurant is at the present time quite an unusual one, and that the prices charged for the food served in it are not as dirt cheap as might be made out. I would be perfectly willing to have printed in the RECORD some representative menus from comparable restaurants.

Mr. DOUGLAS. Is the Senator from Oregon saying that the taxpayers should subsidize the restaurants in the Senate building to the tune of $75,000 or $80,000 a year?

Mr. NEUBERGER. Mr. President, what I emphasize is that the taxpayers of the United States pay for all sorts of things in connection with the operation of the Congress of the United States and the Government of the United States that are not comparable to the service in commercial restaurants or elsewhere. In that connection, we might refer to the so-called free haircuts. They might well be eliminated.

Mr. DOUGLAS. I tried that once. [Laughter.]

Mr. NEUBERGER. And we might as well eliminate the operation of the gymnasium, which is available to nearly all of us, and also the operation of the natatorium, unless a fee is charged us for swimming there. There will be no end to all this, if we wish to begin on it.

Mr. DOUGLAS. Mr. President, I think my record shows that when people are really in need or are starving, I am always ready to vote for appropriations to help them. I believe in our Government as an agency of welfare. However, just because I believe in that, I do not want the Government to subsidize those who do not need subsidies. We should not abuse a noble principle.

I do not want to lash myself into a fit of indigation over the matter. It is not a large amount. But the principle seems to me to be clear, and it is painful to have to stand here and insist on what seems to me to be simple truths.

Mr. NEUBERGER. But, as I understand, the basic reason why a subsidy is necessary—and I am sure that a cost study would bear this out—is the abnormal and irregular hours during which the Senate restaurant is required to operate. This in large measure is due to the schedule of the Senate itself. I think that is a basic factor in the matter, rather than the prices charged for the food.

Mr. DOUGLAS. I do not think that these costs should be paid for by the taxpayers.

Mr. President, I have said about all I wish to say on this topic.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Illinois [Mr. DOUGLAS] on page 28, in lines 8 and 9.

Mr. HAYDEN. Mr. President, I merely wish to say to the Senator from Illinois that this appropriation is to take care of a deficit occasioned by a directive issued by the Committee on Rules and Administration that the wages should be raised. The deficit amounts to $30,000. Does the Senator want to raise the restaurant prices between now and July 1 in an amount sufficient to pay the $30,000?

Mr. DOUGLAS. Yes, immediately tomorrow morning. I am for the wage increase, and we should pay for it.

Mr. HAYDEN. Does the Senator from Illinois want to recover the $30,000 from those who patronize the restaurant between now and June 30?

Mr. DOUGLAS. Yes; certainly.

Mr. HAYDEN. I am afraid the Senator will have a great deal of difficulty in doing it.

Mr. DOUGLAS. We can well afford it. We recently granted ourselves a raise of $7,500.

Mr. HAYDEN. I should like to point out that this deficit has been incurred because higher wages have been paid since July 1, and the deficit now amounts to $30,000. There is no way in the world by which the prices can be raised between now and the 30th of June so as to cover the $30,000. The only way this matter can be corrected is in the regular way, whereby the Committee on Rules and Administration will invite bids for carrying on the work of the restaurant, which it will do next month. At that time, with a new contractor, a new plan may be devised. But the present deficit must be paid. There is no way of avoiding it. The only method of paying it is to provide the money.

Mr. DOUGLAS. I do not have much money, but I am willing to give $20 toward it and I now lay that amount on the desk.

Mr. HAYDEN. Twenty dollars will not go very far.

Mr. DOUGLAS. Make it $50. It so happens I have only $20 on my person, but I am willing to make it $50. And similar contributions by all Senators would raise $4,800.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. DOUGLAS. Yes.

Mr. LAUSCHE. I have been in the Senate for 5 months, and every time a measure comes before the Senate and there is the possibility of correcting what is supposed to be a wrong, the argument has been made, "It cannot be done now." I am beginning to wonder whether we have gone so far in subsidizing that we are beyond the point of retreat. Two or three times today the argument has been made, "We can't do it now. We must wait 6 months."

Several weeks ago the President made a statement to the effect, "I do not believe we have gone beyond the divide." He did not use exactly those words, but the argument that we must wait to make reforms is made constantly, and I am beginning to wonder whether we have reached the point where we might as well quit arguing about retrenchments, whether we have reached the point where the Senate of the United States is saying to the people of the Nation, "There can be no withdrawal from the principle of subsidies."

What right have we to subsidize the food which I buy in the Senate? I have heard words of pity and sympathy for the downtrodden and the poor. Yet in the next breath after issuing the words "poor railroad man, poor man working in the ditch," we say, "subsidies."

I speak fervently on this subject, but I am merely giving expression to my thoughts. If there is a clamor of the people of the Nation for a reduction in taxes, it comes from an honest belief that they can no longer carry the burden. The item under discussion is insignificant; it means practically nothing; but it deals with a philosophy of government, and from that standpoint it is of the greatest importance.

I commend the Senator from Illinois for the firm position he has taken in this matter. From my standpoint, I will fight the theory of subsidization which seems to be rampant. I have begun to feel that granting subsidies is a disease. I do not know what it would be called; perhaps "subsiditis," or something like that. It has taken pretty serious hold, to the point where we are limping, and unable to abandon the practice.

Mr. DOUGLAS. I may say, in response to the remarks of the Senator from Ohio, that I believe in the Government protecting the welfare of people in need. I believe in protecting them from slums and from bad housing conditions. I believe they should have decent schools to attend and that the public matters need to be guarded.

I believe in social security, and in such measures, but I do not believe in subsidies for the rich, for the powerful, and for those who do not need them. We must cut these out if we are to help provide for those who are actually in grave need.

Mr. NEUBERGER. Mr. President, I should like to express some very brief comments, if I may, on the economy speeches which have been made today. It is my feeling we are going to get real economy in the Congress only when Members are willing to vote for economies that affect appropriations and funds for projects in their own States.

I ask the distinguished Senator from Ohio if it is not true that when the public-works bill was before the Senate, he and his able senior colleague were instrumental and influential in having the Cleveland Harbor project included in the bill. I make no objection to that, but the point is that then a vast majority of us voted to pass the public-works bill, and we have been criticized in the press and elsewhere as being "pork barrel" advocates. I am sure the Cleveland Harbor project was a very worthy and proper one, and I think the Senators from Ohio were within their rights in having it included, but they urged the Senate, and successfully, to have their project added to the public-works bill. Is that not correct?

Mr. LAUSCHE. It is correct in part, but not wholly correct because it does not state all the facts. There were $400 million worth of projects in the bill which were disapproved either by the Corps of Army Engineers or by the Bureau of the Budget. The Ohio study was completed and declared financially feasible and acceptable by both of those divisions of government. The senior Senator from Ohio [Mr. BRICKER], I believe, was notified of this existing acceptable project.

I opposed the "pork barrel" bill, and I label it that way from the standpoint of the $400 million worth of projects which were declared to be financially not feasible. I told the senior Senator from Ohio I would go along with him in including the Cleveland project in the bill inasmuch as there were included $400 million of unacceptable projects, but I told him, with equal force, that I would vote against the bill; and if I were the President of the United States today, I would veto it, even though it included the Ohio project.

Mr. NEUBERGER. But still the basic fact remains that the Senator from Ohio and his distinguished colleague—and both Senators from Ohio are distinguished—saw to it that the Cleveland Harbor project was in the bill. That basic fact remains and cannot be changed.

There is another situation involved here, because I have made up my mind that I am not going to make speeches about economy unless I am likewise willing to have economy applied directly to a bill which affects fundamentally the State of Oregon. I do not think that would be fair.

For example, the soil bank bill was before the Senate, and I could have made a big economy speech, because my State, unfairly, was almost entirely out of the soil bank. My State got $170,000 out of the soil bank last year, and a substantial number of Middle Western States got from $20 million to $50 million each. Some of the Senators who made economy speeches on the public works bill come from States which got as much as $20 million to $50 million each from the soil bank, yet they did not make economy speeches on the soil bank bill.

This is the first speech I have ever made in the Senate in which I have been at all indignant, but I believe if we are going to have economy then Senators should urge economies affecting their own States.

I could have made the most sweeping kind of economy speech on the soil bank bill, and it would have cost Oregon only $170,000, which is a relatively small sum. But I would not do that, because it would be insincere, coming from me under such circumstances, and hypocritical—when it barely affected my own State at all. I could do that with impunity, but not with complete sincerity.

I think the soil bank may have had a very valid application to the critical agricultural situation affecting some of the Middle Western States. I believe the Senators from those States would be derelict in their duty if they did not defend the legitimate interests of their States in that bill. But when I am here fighting for a public works bill, and I happen to represent the great seacoast State with some of the heaviest rainfall in the continental United States, I do not like to have the Senators from the soil bank States, which got a lot from the soil bank, make great big economy speeches at the expense of our needed water-control and water-conservation projects in Oregon.

I feel that if we are to have economy, the Senators from the soil bank States should offer amendments to cut the soil bank, and Senators from the rivers and harbors States should offer amendments to cut the rivers and harbors projects. That is the only way in which we will reach real economy, in my opinion.

Mr. DOUGLAS. Will the Senator not begin by cutting the $30,000 subsidy which is provided for the restaurant?

Mr. LAUSCHE. Mr. President, in reply to the statement just made by the Senator from Oregon, I should like to point out to the Senate that, considering whatever the cut was in the State Department appropriation bill, there was

included in the amount $5 million intended for use in the construction of a stadium in my home city of Cleveland, for use in the Pan American games.

I stated on the floor of the Senate that I would not ask for my State that which I would not be willing to give to another State. Three newspapers in Cleveland kept prodding me and beating at me to fight for the $5 million allocation for my own city. I did not waver on the item. I did not waver because I wished to be in a position to fight those appropriations which I thought were not justified.

I desire to say, with due respect, that I shall continue to fight, and I shall apply that attitude to my home State just as I shall apply it to other States.

Mr. DIRKSEN. Mr. President, I have heard these gastronomical fulminations from around Washington for the past 25 years. I think Senators eat too much, anyway, if the truth be known, but I rise only to defend the Senate restaurant contractor. He is from Chicago. I know him very well.

If Senators will examine the situation, they will observe the difficulty. There are in operation two cafeterias in the Senate Office Building; there is a snack bar on the Senate side of the Capitol, and, in addition, the Senate Restaurant. Then there are private dining rooms, the serving of meals in the minority policy committee room and majority policy committee room, the Vandenberg Room, and other special rooms. That is rather an extensive operation. There is a grand restaurant establishment, on the basis of one meal a day.

On the 1st of July 1956, the Committee on Rules and Administration asked to have the pay of the bus girls, waiters, and other employees increased. I think the contractor has done a good job. He is one of the largest operators in the United States. He operates a great feeding establishment wherever he is in business. I think he has made a good record in the Senate.

I hope, therefore, that the amendment presently pending will be voted down. Then, if it is desired to look into the matter, it can be done in the proper manner, through the Committee on Rules and Administration, because that committee has jurisdiction over the restaurant.

That is the whole story in a nutshell. We have a contractor fighting all around to get adequate space in which to feed people. It is no easy job to run a restaurant establishment on the basis of one meal a day, and satisfy everybody as to quality, quantity, and price.

I heard a great deal of complaining in the House in the early days, and I have heard much in the Senate. I am ready to pay increased prices for the food I buy. But I am not unmindful of the fact that the people of the United States, my constituents and others, like to come to the Senate. They feel honored when they can be entertained in the Senate restaurant. I am not willing to be picayunish when it comes to the people who visit the National Capitol, and whose Capitol it rightly is.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Illinois [Mr. DOUGLAS].

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. HAYDEN. Mr. President, I call up the committee amendment relating to the Civil Service Retirement Act, to be inserted on page 8 of the bill, following line 3. I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 8, after line 8, it is proposed to insert the following:

CIVIL SERVICE RETIREMENT ACT

For the purpose of determining the beginning date of the annuity under the Civil Service Retirement Act of any survivor of a Member of Congress who dies subsequent to April 1, 1956, and prior to the effective date of the Civil Service Retirement Act Amendments of 1956, such amendments shall be deemed to have taken effect on April 1, 1956, but no such annuity shall commence by reason of the enactment of this section prior to the date of such enactment.

Mr. HAYDEN. Mr. President, in explanation of the amendment, I should like to say that prior to the amendments of 1956 to the Civil Service Retirement Act, survivors of all Federal employees, Congressional and executive department employees alike, had to be 50 years of age to be eligible for immediate annuities unless they had dependent children. Effective October 1, 1956, this requirement was eliminated, and all survivors become immediately eligible for survivorship benefits.

Senator Barkley died in April of 1956, just a few months before the change in the law. Had he died October 2, 1956, his wife would have been eligible for an immediate annuity. The only effect of this amendment is to make her eligible for the same retirement that all other survivors of Federal employees are now eligible to receive—an immediate annuity regardless of age.

Mr. CARLSON. Mr. President, I certainly am not going to oppose the amendment, but I should like to invite the attention of the Senate to a few facts.

I have a high regard for the distinguished chairman of the Committee on Appropriations. Indeed, I have great respect for all members of the Committee on Appropriations.

We have under consideration an amendment submitted by the distinguished chairman of the Committee on Appropriations, which is strictly a civil service amendment. I invite the attention of the Senator to page 3, which deals with insurance companies that have been taken over under a special act, proposed and presented to the Congress by the Civil Service Committee. That is strictly a civil service matter.

I should also like to invite the Senator's attention to page 14 of the bill, where the matter dealt with is the doubling of the pay for Sundays and holidays for certain classified employees of the Public Health Service. Frankly, I am in favor of these different items, but I should like to remind the Senate that they are strictly civil service, legislative matters. I hope the Committee on Appropriations will not take all the work and all the matters away from the Committee on Post Office and Civil Service in the future.

Mr. HAYDEN. Mr. President, this one instance relates to the wife of a deceased Senator. If the proposal involved a general statute of any kind, I would not think of offering it.

Secondly, with respect to the rates of pay of public-health officers, that expense is not to be paid out of the Federal Treasury at all, but by the shipping interests.

Mr. CARLSON. I am certainly in favor of this amendment.

I should like to state, also, that the distinguished chairman of the Committee on Post Office and Civil Service, of which I happen to be a member, has on the calendar Order No. 318, a bill to authorize the payment from the employees' life-insurance fund of expenses incurred by the Civil Service Commission in assembling and maintaining the assets and liabilities of certain beneficial associations. Our committee reported the bill last year. I was very much in favor of it, I am in favor of it today. But I remind the Senate of what the Appropriations Committee is doing to the Committee on Post Office and Civil Service.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. JOHNSON of Texas. I understand the problem of the Senator, and I have some sympathy with him. In this particular case I hope the Senator will realize that this is an amendment offered on the floor of the Senate, where all Members of the Senate can act upon it.

This subject was first brought to my attention by a distinguished member of the minority. The committee which handled the legislation left a gap. An inequality existed, and it was our thought that the best way to handle the situation was to bring the amendment up on the floor of the Senate, so that every Senator might know about it, and so that the entire Senate might act upon it.

I have discussed this subject with the House leadership on both sides of the aisle. I think this is the proper way to handle a peculiar situation such as the one which has arisen, and I hope my friend will go along with us.

Mr. CARLSON. I assure the distinguished majority leader, who is a man of great persuasiveness, that I did not expect to oppose this amendment when I took the floor.

However, I call the attention of Senators to what seems to be happening to the Committee on Post Office and Civil Service, which has a proper and particular function to perform.

Mr. JOHNSTON of South Carolina. Mr. President, this is a subject which should come before the Committee on Post Office and Civil Service. Congress passed the Insurance Act, which is now on the statute books, and which was processed through our committee.

At that time the Congress of the United States agreed to do just what is proposed in the appropriation bill at this time. For that reason I wish to com-

mend the distinguished chairman and members of the Appropriations Committee for their action in including in this bill funds sufficient to permit the Civil Service Commission to complete the job of taking over the assets and liabilities of certain employee beneficial associations. As I have pointed out on numerous occasions, it is only just and fair that this action be taken. I urge that the Senate insist that the House accept the authorization contained in the Senate amendment. I think it would be a tragedy if this were not done.

For the information of Senators, a majority of the insurance companies have already been taken over. Some of them have not. It would be treating those which have not been taken over unfairly if they were not taken over.

Mr. President, for the information of all concerned, I introduced S. 1740 which if enacted would make available to the Civil Service Commission money out of the insurance reserve fund to take over and preserve policies of Federal employees held in these beneficial life-insurance associations. They have already built up a surplus in that fund of approximately $100 million. That bill was reported unanimously by the Post Office and Civil Service Committee and is now on the Senate Calendar. It is my intent to let it remain on the calendar until final action is taken on the appropriation bill now before us. If the additional funds provided in the Senate version are approved, I will then ask that the bill, S. 1740, be returned to the Post Office and Civil Service Committee. If, however, the funds are not approved, I will then ask for action on S. 1740. If the situation is taken care of in the manner now proposed, I shall later ask that the bill be taken from the calendar.

I am doing this contrary to my usual way of doing things in the past. This is legislation on an appropriation bill. I ask that the subject be taken up with the Committee on Post Office and Civil Service. If that is not done, we can get into a great deal of trouble. If different salaries are paid here and there to various and sundry employees, if the salary of one is raised, another will come along and say, "I must get an increase too."

I am waiving my rights at this time, because I think it is only right that the action proposed be taken.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Arizona [Mr. HAYDEN] on behalf of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The PRESIDING OFFICER. The bill having been read the third time, the question, Shall it pass?

Mr. CASE of South Dakota. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Fulbright	Morse
Allott	Green	Morton
Anderson	Hayden	Mundt
Barrett	Hickenlooper	Murray
Beall	Hill	Neuberger
Bennett	Holland	O'Mahoney
Bricker	Hruska	Pastore
Bush	Humphrey	Potter
Butler	Ives	Purtell
Capehart	Jackson	Revercomb
Carlson	Javits	Russell
Carroll	Johnson, Tex.	Saltonstall
Case, N. J.	Johnston, S. C.	Scott
Case, S. Dak.	Kefauver	Smathers
Chavez	Kerr	Smith, Maine
Church	Knowland	Smith, N. J.
Clark	Kuchel	Sparkman
Cotton	Lausche	Stennis
Curtis	Long	Symington
Dirksen	Magnuson	Thurmond
Douglas	Malone	Thye
Dworshak	Mansfield	Watkins
Eastland	Martin, Iowa	Wiley
Ellender	McClellan	Williams
Ervin	McNamara	Young
Frear	Monroney	

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). A quorum is present. The question is on the passage of the bill. On this question the yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Nevada [Mr. BIBLE], the Senator from Virginia [Mr. BYRD], the Senator from Tennessee [Mr. GORE], the Senator from Missouri [Mr. HENNINGS], the Senator from Massachusetts [Mr. KENNEDY], the Senator from West Virginia [Mr. NEELY], the Senator from Virginia [Mr. ROBERTSON], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Georgia [Mr. TALMADGE] is absent by leave of the Senate attending the Inter-American Trade Conference in Rio de Janeiro, Brazil, as representative of the Senate Agriculture Committee.

On this vote, the Senator from Nevada [Mr. BIBLE] is paired with the Senator from Virginia [Mr. BYRD]. If present and voting, the Senator from Nevada would vote "yea" and the Senator from Virginia would vote "nay."

I further announce that if present and voting, the Senator from Missouri [Mr. HENNINGS], the Senator from Massachusetts [Mr. KENNEDY], the Senator from West Virginia [Mr. NEELY], the Senator from Georgia [Mr. TALMADGE], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. DIRKSEN. I announce that the Senator from New Hampshire [Mr. BRIDGES], the Senator from Kentucky [Mr. COOPER], the Senator from Vermont [Mr. FLANDERS], the Senator from Arizona [Mr. GOLDWATER], and the Senator from Kansas [Mr. SCHOEPPEL] are necessarily absent.

The Senator from Indiana [Mr. JENNER], the Senator from North Dakota [Mr. LANGER], and the Senator from Maine [Mr. PAYNE] are absent because of illness.

The Senator from Pennsylvania [Mr. MARTIN] is absent on official business.

If present and voting, the Senator from New Hampshire [Mr. BRIDGES], the Senator from Vermont [Mr. FLANDERS], the Senator from Maine [Mr. PAYNE], and the Senator from Kansas [Mr. SCHOEPPEL] would each vote "yea."

The result was announced—yeas 72, nays 5, as follows:

YEAS—72

Aiken	Green	Morse
Allott	Hayden	Morton
Anderson	Hickenlooper	Mundt
Barrett	Hill	Murray
Beall	Holland	Neuberger
Bennett	Hruska	O'Mahoney
Bricker	Humphrey	Pastore
Bush	Ives	Potter
Butler	Jackson	Purtell
Capehart	Javits	Revercomb
Carlson	Johnson, Tex.	Russell
Carroll	Johnston, S. C.	Saltonstall
Case, N. J.	Kefauver	Scott
Case, S. Dak.	Kerr	Smathers
Chavez	Knowland	Smith, Maine
Church	Kuchel	Smith, N. J.
Clark	Long	Sparkman
Curtis	Magnuson	Stennis
Dirksen	Malone	Symington
Dworshak	Mansfield	Thurmond
Eastland	Martin, Iowa	Thye
Ellender	McClellan	Watkins
Ervin	McNamara	Wiley
Fulbright	Monroney	Young

NAYS—5

Cotton	Frear	Williams
Douglas	Lausche	

NOT VOTING—18

Bible	Gore	Neely
Bridges	Hennings	Payne
Byrd	Jenner	Robertson
Cooper	Kennedy	Schoeppel
Flanders	Langer	Talmadge
Goldwater	Martin, Pa.	Yarborough

So the bill (H. R. 7221) was passed.

Mr. HAYDEN. Mr. President, I move that the Senate insist on its amendments, request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer (Mr. MORTON in the chair) appointed Mr. HAYDEN, Mr. RUSSELL, Mr. CHAVEZ, Mr. ELLENDER, Mr. HILL, Mr. BRIDGES, Mr. SALTONSTALL, Mr. YOUNG, and Mr. KNOWLAND conferees on the part of the Senate.

STUDY OF CRITICAL RAW MATERIALS AND RESOURCES OF THE SOVIET UNION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 238, Senate Resolution 78.

The PRESIDING OFFICER. The resolution will be stated by title for the information of the Senate.

The CHIEF CLERK. A resolution (S. Res. 78) to make a study of critical raw materials and resources of the Soviet Union and certain Eastern Hemisphere countries and the effect upon the United States.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the resolution which had been reported from the Committee on Interior and Insular Affairs with an amendment to strike out all after the word "Resolved" and insert:

That the Senate Committee on Interior and Insular Affairs, or any duly authorized

subcommittee thereof, is authorized and directed (1) to gather, study, and make recommendations upon available unclassified data and information relating to critical and strategic raw materials and resources of the Eastern Hemisphere, many countries of which are a source of supply, in important quantities, to the United States; (2) to report to the Senate at the earliest possible date, and in any event not later than January 31, 1958, the results of its study, together with recommendations: *Provided, however,* That no additional expenses be incurred by the committee in making such study other than the time of staff members assigned to it.

Mr. JOHNSON of Texas. Mr. President, I understand the distinguished Senator from Nevada [Mr. MALONE] will make a brief explanation of the resolution. There is no opposition to the resolution, as I understand. The distinguished Senator from Montana [Mr. MURRAY], the able chairman of the Committee on Interior and Insular Affairs, who reported the resolution, had to leave the Chamber and asked me to have the Senator from Nevada make the explanation.

Mr. MALONE. Mr. President, Senate Resolution 78 merely authorizes the Committee on Interior and Insular Affairs to complete a report on the availability of critical raw materials and resources in the Eastern Hemisphere, as has already been done with respect to the Western Hemisphere. No additional expense will be involved, other than the time of the staff members assigned to the work of research.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

The resolution, as amended, was agreed to.

PRINTING OF ADDITIONAL COPIES OF REPORT ENTITLED "THE INTERNATIONAL PETROLEUM CARTEL"

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 298, Senate Concurrent Resolution 26.

The PRESIDING OFFICER. The concurrent resolution will be stated by title for the information of the Senate.

The CHIEF CLERK. A concurrent resolution (S. Con. Res. 26) to print additional copies of the report entitled "The International Petroleum Cartel."

Mr. JOHNSON of Texas. Mr. President, I yield to the Senator from Michigan.

RETIREMENT OF JUDGE ARTHUR A. KOSCINSKI

Mr. McNAMARA. Mr. President, on April 30, 1957, Hon. Arthur A. Koscinski, because of ill health, retired from active service as United States District judge for the eastern district of Michigan, after serving nearly 12 years on the Federal bench.

Appointed by President Truman, Judge Koscinski, a graduate of the University of Michigan Law School, brought with him to the bench a background of 35 years of active practice and a lifetime of keen interest in civic affairs. He served as a public administrator of Wayne County, Mich., for 12 years; and he was a member of the Detroit Pension Commission, whose members served for several years without compensation. This commission established an adequate pension system for city employees.

While on the bench he often worked a full 7-day workweek. Not only did he conscientiously perform the duties of his office, but he also devoted practically all of his leisure time to civic affairs.

The Federal bench and bar agree that Judge Koscinski's retirement constitutes a distinct loss to the Federal judiciary system; and although he feels that he is unable to continue the arduous duties imposed upon him by virtue of his position, his many friends hope that his retirement from the Federal bench will not mark the end of his many contributions to the civic life of the city of Detroit and to our State of Michigan.

I ask unanimous consent that an article on the life of the Honorable Arthur A. Koscinski be printed in the RECORD at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUDGE KOSCINSKI RETIRES

The Honorable Arthur A. Koscinski retired from active service as United States district judge for the eastern district of Michigan on April 30, 1957, after nearly 12 years on the Federal bench.

At the time Judge Koscinski assumed the duties of his office on August 7, 1945, he brought with him a wealth of experience not only as an able lawyer but as a public servant.

After receiving his law degree from the University of Michigan in 1910 and admission to the bar in the same year he entered the practice of law which he followed continuously for 35 years before his elevation to the bench. He was one of the oldest law practitioners, in years of service, among attorneys of Polish extraction. During this long career as a lawyer he represented many business institutions, including a newspaper and a bank, in the dual capacity of director or officer and lawyer.

In 1923 two public administrators were appointed for Wayne County. One of the posts just created was conferred on Mr. Koscinski and he served in that capacity for 12 consecutive years, administering during that time estates totaling in value well over a million dollars. He was also a member of the Detroit City Pension Commission from 1934 to 1937; this commission worked without compensation in the establishment of an adequate pension system for city employees. He served a 2-year term, during 1937 and 1938, as a member of the Public Trust Commission, and in 1941 a 1-year term as a member of the Michigan Constitutional Revision Commission. During 1942 and 1943 he was a member of the Board of Wayne County Institutions.

There were many civic, educational, and religious activities in which he had an active hand. In both World Wars he contributed services for which he received recognition, first as captain of a bond-selling team and for 5 years as Government appeal agent of the selective service board during World War II. He was a trustee of the Saints Cyril and Methodius Seminary of Orchard Lake, Mich., the school he himself once attended, and for 15 years was the president of the alumni association of that institution. He was also a member of the school board of Alliance College of Cambridge Springs, Pa., for many years.

Bar association activities also claimed his interest. He is a member of the American, Michigan, and Detroit Bar Associations and served on various committees.

Law was not only Judge Koscinski's vocation but his avocation as well. Most of his spare moments were devoted to reading and the reading material usually had some pertinence to law. During his term on the bench he worked relentlessly, often 7 full days a week and long hours each day. He not only conscientiously performed the duties of his office, which he always thoroughly enjoyed, but gave of his time freely, as he always did when he was a lawyer, seeing people of his own extraction who sought guidance on problems in no way related to law. As a law practitioner he also devoted endless hours of service as legal adviser to charitable institutions.

Ill health overtook Judge Koscinski several years ago and since then his vacation time was utilized for hospitalization in the interest of his health, though even on these occasions he worked from his hospital bed with the assistance of his staff, to keep his docket in motion. His retirement upon reaching the age of 70 was prematurely announced in the newspapers before he could complete pending matters requiring his disposition. His ready wit forestalled pressures which were bound to attend such an announcement and he jokingly admonished would-be successors "not to bargain for the bear's hide while the bear was still in the woods." Old homey Polish sayings, from which the above quotation stems, and which he attributes to his teacher-organist father, frequently served him in dealing with similar situations. From his father he also inherited his love of music and, before law absorbed all his attention, he was frequently known to entertain his friends with Chopin's compositions.

Those who have known him for a long time never cease in admiring his courage in overcoming almost unsurmountable difficulties. After he was forced to undergo an amputation of his left limb about 2½ years ago, he abandoned all activities outside of his judicial duties to preserve his strength for his work and he achieved his ambition to continue judicial service until his 70th birthday, at the cost of depleting most of his physical energy. He performed his duties conscientiously, fearlessly, and fairly and this mention of the highlights of his career, on the records of this body, is made in recognition of such service.

Mr. POTTER. Mr. President, I wish to join my colleague in paying tribute to Judge Koscinski, and to wish him happiness and health for many, many years to come.

Mr. McNAMARA. Mr. President, I thank the senior Senator from Michigan for his kind remarks.

ORDER FOR CALL OF THE CALENDAR ON WEDNESDAY

Mr. JOHNSON of Texas, Mr. President, I ask unanimous consent that on Wednesday next, it be in order to have a call of the calendar of bills and other

measures to which there is no objection, from the beginning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO WEDNESDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its business today, it stand in adjournment until Wednesday next, at noon.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE NEED FOR PACIFIC NORTHWEST RESOURCE DEVELOPMENT

Mr. MORSE. Mr. President, I had prepared to make a lengthy speech today on the subject "The Need for Pacific Northwest Resource Development." However, in view of the lateness of the hour, I have decided to request unanimous consent to have inserted at this point in the RECORD a manuscript entitled "The Need for Pacific Northwest Resource Development," based upon the testimony I gave this morning before the Appropriations Committee of the House of Representatives and a summary of certain appropriations. I request such unanimous consent, Mr. President.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE NEED FOR PACIFIC NORTHWEST RESOURCE DEVELOPMENT—STATEMENT BY SENATOR WAYNE MORSE BEFORE COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES

Mr. Chairman and members of the committee, a prudent businessman makes sure that his capital assets neither dwindle nor fall behind future demands. That business procedure is sound for the Government.

I join with my colleagues, Senator NEUBERGER, Representatives GREEN, ULLMAN, and PORTER, in urging the Appropriations Committees to make prudent investments in the future of America by the comprehensive development and protection of our natural resources.

As you know the Pacific Northwest has the greatest electric power potential of any region in the country. It has important agricultural potentialities, which will be needed in just a few short years to feed our growing population. My region and State have some of the finest lowland farm areas in the country—but they are under the constant threat of flood and erosion.

We appear today to urge that these assets be put to work and protected to meet the obvious needs of an underdeveloped region and a growing country.

The rate of Federal investment in Oregon in the last year of this administration has been under one-half of what it was in the last year of the previous administration. In fiscal 1953, $110 million were appropriated for multipurpose dams in or on the borders of Oregon. The bulk of the funds went, of course, into great multipurpose dams like McNary and The Dalles.

As the committee knows so well, these projects pay for themselves with interest. In addition, they pay ahead of schedule and create new wealth-producing facilities which make possible vast new tax revenues for the United States Treasury. For example, I am told that the aluminum industry in the Pacific Northwest has already paid into the Federal Treasury more than the cost of Grand Coulee Dam.

However, these wealth producing capabilities are being cut back. So, in the last Congress only one-half of the fiscal 1953 amount was appropriated for multipurpose projects. Those appropriations were an improvement over what the President's budget proposed and some new projects were made possible or brought closer to construction.

The administration's budget proposes not even as much as what was appropriated or even proposed last year. Indeed, the budget provides for less than one-half the appropriations of last year for multipurpose projects. The $30,595,000 in the budget is less than three-fifths of the funds for such projects.

Even if our full requests for multipurpose projects are acted upon favorably by Congress, Oregon multipurpose projects would come to $38,870,000, or less than four-fifths of what was appropriated last year. May I point out that Oregon is not the sole beneficiary of these projects. We share the fruits of them with Washington. If we ever get the Columbia Basin program back on the track, our neighbors, Idaho and Montana, would also share in them directly.

This administration has a strange answer to the electric power starvation facing the Pacific Northwest—it is prescribing a rigorous reducing diet.

My region faces a severe power shortage. There is unanimous agreement on this point. It is only a question of time. That time must be used to build low-cost power facilities as an investment in the future of the region. If that is not done, Oregon and its neighbors will suffer and be an economic drag on the rest of the country.

We of the Pacific Northwest are in an economic slump today as a direct result of administration policies. The administration's blockade of resource projects is one of the factors in the economic situation in Oregon and the Pacific Northwest. During the past 5 years, its consistent opposition to public works, which develop or protect wealth-producing resources, has led to the present deterioration in the rate of development of the public's resources.

Among the consequences of this administration program have been:

1. Continued lack of protection against property destroying floods;

2. Inadequate low-cost power supplies;

3. Failure to avert future power shortages;

4. Lack of work to offset chronic local unemployment.

In turn, Oregon and its neighbors have been unable to make their maximum contribution to the Nation as producers and consumers.

This vicious circle bred by wasting invaluable resources must be stopped.

My State and region need an aggressive and affirmative program to stimulate industry and commerce, jobs and profits. In turn, the Nation needs a more vigorous economy in my region which can contribute to the economic growth, strength, and stability of the rest of the Nation.

OREGON'S SENATORS AND THREE REPRESENTATIVES PRESENT COMMON PROGRAM

My colleagues, Senator NEUBERGER, Representatives GREEN, PORTER, ULLMAN, and I are presenting to the Appropriations Committees of the both Houses a program that we all have formulated and support. It calls for putting our resources to work for better and safer industry, farming, city, and rural life. It is a reasonable program—and a minimum program.

Our one regret is that because of administration delay, there are so few projects ready to go.

JOHN DAY DAM

It is impossible to overemphasize the urgency of readying John Day Dam for construction. When it comes on the line, it will be a major power producer contributing 1,100,000 kilowatts of initial installed capacity—the equivalent of approximately 2½ Bonneville Dams. With adequate upstream storage its capacity can be increased to 1,500,000 kilowatts.

The Pacific Northwest faces a power shortage in the 1960's that must be prevented. John Day Dam will take more than 5 years to build. Clearly, if it is to be ready in time to help prevent the predicted shortage, there can be no delay in readying the project for construction.

Last year Congress increased the President's inadequate budget request of $500,000 to $1,450,000. As a result of this action John Day construction is ready to go during this next fiscal year.

Once again the administration is blocking this vital project. To the amazement of all segments of opinion in my State, at least, the President's budget contains no funds for John Day Dam.

The Corps of Engineers advises that it can use $8 million for this first year of construction work. We urge this with all the vigor and conviction at our command.

I would point out to the committee that even if the administration has not yet understood the will of the people of the Pacific Northwest, industry and business have understood that determination as registered at the polls last November.

As a result private business, including private utilities, are backing appropriations for John Day Dam as a Federal project—many such groups for the first time.

In addition, many other groups are strong and consistent in their support of maximum progress on this great multipurpose project.

I ask consent to submit for inclusion at this point, a series of resolutions and letters urging funds to begin construction of John Day Dam.

GREEN PETER DAM-WHITE BRIDGE REREGULATING DAM

Flood control is sorely needed in the Willamette Valley. A key multipurpose project required to prevent floods and reduce constant losses from erosion is the Green Peter Dam-White Bridge reregulating dam project on the South Santiam River. The project will also provide power production and has potential water storage value.

But it will take 7 years to complete. Already valuable time has been lost because of administration delays and opposition to adequate appropriations.

Every year of delay means increased loss of irreplaceable topsoil. In addition, the constant hazard of floods poses the threat of enormous losses. Recurrent floods which Green Peter would prevent or mitigate have already run into tens of thousand of dollars.

The budget provides about half of what can be used for planning this project. With the relatively small appropriation of $500,000 preconstruction planning can be completed in fiscal 1958. That is the maximum that can be accomplished, and I urge that it be regarded as the minimum as well.

COUGAR, HILLS CREEK AND HOLLEY DAMS

Despite past opposition to funds for these projects, the administration has bowed to the inevitable and proposed adequate appropriations for Cougar, Hills Creek, and Holley Dams. They are primarily flood control projects. In addition, Cougar and Hills Creek will generate substantial power and we urge that the budget figures be approved.

BLUE RIVER AND FALL CREEK RESERVOIRS

These projects are also vital to flood control. Adequate funds are budgeted for Blue

River Reservoir, but nothing is included to initiate planning of Fall Creek Reservoir. As it will take 5½ years to complete this project at best, I strenuously urge that $150,000 be provided to initiate planning.

THE DALLES DAM

This great power producer is nearing completion. Last fall the dam structure was completed and the pool filled. It is imperative that the project be kept on schedule with an appropriation of $19 million as proposed in the budget.

EXAMINATIONS AND SURVEYS—FLOOD CONTROL

Events of the past year have demonstrated the importance of flood-control surveys to bring about early undertaking of works which will insure against flood damage that has occurred with alarming frequency in many areas of our State. I have only to refer to the disastrous floods in eastern Oregon which endangered lives and caused so much property loss this spring. These occurrences constitute ample warning that our survey program should be accelerated. However, once again the President's budget and the Army engineers' allocations for Oregon flood-control surveys are inadequate.

The budget contains no request for flood-control studies of the Grande Ronde and Crooked Rivers. Appropriations of $35,000 and $16,200 respectively would complete the flood-control studies for these eastern Oregon rivers.

The budget item of $100,000 for the upper Snake River survey may ultimately bring some flood-control benefits for that area, but $185,000 budget for Columbia River review studies is not for surveys and examinations, as I pointed out to the committee last year, but constitutes a study of the 308 report. Its net effect may be a reduction in the flood-control program of the Columbia River Basin.

Those of us who live in Oregon have vivid memories of the recent Rogue River flood. The survey of that project should be completed with great dispatch. I am advised that $44,000 would enable the Corps of Engineers to complete work on this survey, but nothing has been asked in the budget. The appropriation of $44,000 for this purpose would pave the way for a concerted fight against future flood damage in the Rogue River Basin.

Residents of the Yamhill River area have, for many years, sought assistance of the Corps of Engineers by way of effective flood control, but each year a heavy toll of flood damage continues in this vicinity. That is why I am disturbed to find that the budget makes no provision for completion of the Yamhill River flood-control survey; $31,500 would make possible the completion of the survey—a major step forward in bringing long overdue flood control relief to those who live in the Yamhill River area.

Some progress has been made budgetwise on flood-control surveys at the Coquille and Umpqua Rivers and their tributaries. The fiscal 1958 budget requests of $25,000 and $27,000 respectively, for these surveys will be of great help.

EXAMINATIONS AND SURVEYS—NAVIGATION

On March 14, 1957, the Senate Public Works Committee adopted a resolution requesting the Board of Engineers for Rivers and Harbors to review the existing project depth and width on the Columbia River between the mouth and Portland-Vancouver to determine the advisability of modifying the existing project. According to the Corps of Engineers, this study cannot be undertaken until funds are available for the purpose.

The present project, of 35-foot depth and 500-foot width, is inadequate to handle efficiently the larger-type vessels that have been constructed since World War II. At the beginning of World War II, ships entering the Columbia River had average beams of 54 feet and mean drafts of 26 feet. Today the beams of these ships vary from 75 to 90 feet, and the drafts up to 34 feet. Experienced river pilots advise that a 34-foot draft in a fresh water river for a vessel traveling upstream necessitates a 40-foot channel depth for safe movement. They also indicate that a 750-foot channel width is essential for modern ship travel in the Columbia.

Reliable officials and business interests engaged in the field of river traffic in the Columbia River area inform me that if an appropriation for this investigation is authorized, they can demonstrate annual benefits of $5 million to $7 million. In addition, it is my understanding that a channel modification to greater depth and width will bring about a reduction in annual maintenance costs due to engineering works that will enable scouring to be carried on through the flow of current.

The Corps of Engineers have advised me that the cost of a survey of this proposed project modification will amount to approximately $125,000; that the survey can be completed in a 3-year period, and that approximately $40,000 could be utilized during the first year. Because of the benefits to the Government and to the economic interests of the Columbia River Basin that will result from an improved channel, I strongly urge the committee to approve the initial $40,000 portion of the overall study costs of this channel modification.

ARMY CIVIL FUNCTIONS CONTINUING PROJECTS—NAVIGATION

Columbia River to the mouth

In fiscal 1956 Congress, despite the administration's failure to request one cent, appropriated funds for deepening the channel at the mouth of the Columbia River to authorize depth.

In fiscal 1957, $1,300,000 was both requested and appropriated and already substantial navigation benefits have resulted. The budget this year asks for $1,150,000 for further work on this important project. Congressional approval of the requested amount will enable this great artery of commerce to provide benefits for communities along the Columbia and Willamette Rivers and tributary areas. Economic and defense benefits to the United States will be substantial.

Chetco Harbor

In fiscal 1957, Congress appropriated $225,000 with which to initiate construction on the Chetco Harbor project, which is of such great importance to the coastal area of southern Oregon. The total cost of the project is estimated at $600,000 and the budget for fiscal 1958 requests $200,000. Approval of this request will enable the Corps of Engineers to complete more than two-thirds of the work. I urge that this budget request be approved.

CONTINUING PROJECTS—LOCAL PROTECTION FLOOD CONTROL

Amazon Creek

This very worthwhile project is of primary importance to the city of Eugene, Oreg., and surrounding area. The $446,000 requested in this year's budget will make possible the completion of work. It will bring protection against flood losses for the benefit of industrial, residential, and farm property in Eugene and vicinity.

Willamette River Basin bank protection

During the past year, I had the opportunity to make several onsight inspections of highly productive and valuable farm lands upon which a tremendous toll of flood damage has been inflicted due to the lack of adequate bank protection works.

For many years past, with almost monotonous regularity, the budget request has contained a standard item of $300,000 for Willamette River Basin bank protection. Consequently, my office receives scores of letters during the year urging bank protection assistance pending the completion of multipurpose dams which will hold back the flood waters. The Corps of Engineers expresses sympathy for my urgent pleas that such work be undertaken but in numerous instances advises it does not have sufficient funds to start the necessary work.

Local interests and affected property owners along the Willamette and its tributaries have, in a large number of cases, completely fulfilled the local cooperation requirements, but flood protection is denied to them because of the lack of funds. There is no question but that the full $800,000 could be put to use on projects that stand ready for work. Both the Corps of Engineers and the Willamette Basin committee have supplied my office with lists of projects upon which work could be done if money were available. In my opinion it is a regrettable situation that an inadequate appropriation is made each year. The overall losses to the individuals who suffer flood damage quite likely exceed the amounts that would be expended in protective works. I strongly urge the appropriation of an amount clearly usable for this purpose in fiscal 1958, namely, $800,000.

FLOOD CONTROL—LOCAL PROTECTION

Certain important Oregon flood control local protection projects have been authorized and are either ready for construction or have reached the stage at which planning should be initiated or completed. They are discussed in the paragraphs that follow.

Early this year the Malheur River overflowed its banks causing severe losses. This flood gives us one of the best arguments that can be advanced for prompt completion of planning on the Malheur River flood-control project, which includes studies of Willow and Bully Creeks. Not 1 cent was allocated in this year's budget for such planning, but the Corps of Engineers advises that planning could be completed with an appropriation of $25,000 for fiscal 1958. The Malheur flood of this spring makes early construction of such work imperative. I urge the committee to include $25,000 in its budget recommendations.

I am pleased to note that the fiscal 1958 budget request includes an item of $400,000 for the Umatilla-Pendleton project. An expenditure of that amount will bring to completion a most desirable flood-control project that has been pending far too long.

The budget also includes an allocation of $16,000 with which to start preconstruction planning on the Umatilla River project. I trust that this budget item will be allowed.

A justification report on the John Day River flood-control project could be undertaken with an appropriation of $15,000. Although the administration asked nothing for this item, I hope the committee, in recognition of the importance of the justification report, will recommend $15,000 for this purpose.

The Prineville area project for flood protection can be completed this year with an appropriation of $46,000. Although nothing was asked by the administration for this project, it is important that it be brought to completion promptly, and I ask the committee to give serious consideration to the inclusion of this item.

Almost every year with monotonous regularity communities and individuals in the lower Columbia River area are subjected to enormous flood losses. A mere $40,000 has

been allocated in the budget for fiscal 1958 to complete preconstruction planning on this project. However, a total of $612,000 could be used in fiscal 1958, according to the Corps of Engineers. This sum would make possible the initiation of construction work. An appropriation of the $612,000 appears to be clearly warranted in this case. Furthermore, it would be of great economic assistance to lower Columbia River communities that have been so adversely affected by the slump in Oregon's lumber industry.

It is with satisfaction that I observe this year's budget request of $500,000 for the purpose of initiating construction of the local protection works on Multnomah County Drainage District No. 1. The Federal Government, as well as the port of Portland and private owners, have multi-million-dollar investments within the confines of this drainage district. Its dikes protect Portland International Airport, where the Government has airbase installations, and where further Federal development is proposed. The port of Portland has a $12 million investment in Portland International Airport. The importance of improving Multnomah County Drainage District No. 1 is obvious. A $500,000 appropriation with which to initiate construction will be a step in the direction of protecting millions of dollars worth of Federal Government essential defense installations, as well as industrial and port of Portland properties.

The improvement of Peninsula Drainage District No. 2, which is adjacent to Multnomah County Drainage District No. 1, should be initiated as a companion project, inasmuch as any failure of Peninsula Drainage District No. 2 would threaten Multnomah County Drainage District No. 1. It is with regret, therefore, that I observe that although $150,000 could be used by the Corps of Engineers for construction on Peninsula Drainage District No. 2, the budget has allocated not 1 cent. I urge the committee to recommend $150,000 for this construction item. Valuable industrial improvements also lie within this district, and I have personally observed the alarming evidences of seepage under its dikes during a high water period. I share the concern of those who own property within this district over the possible washing out of these dikes at the several points at which seepage "boils" have formed.

No funds were requested in the budget for fiscal 1958 for improvement of the existing works in Peninsula Drainage District No. 1, which is adjacent to Peninsula Drainage District No. 2. The Corps of Engineers advise us that $150,000 could be used to initiate construction on this authorized project. The interrelationship between the three drainage districts just mentioned points to the importance of an appropriation of $150,000 for fiscal 1958 on this project. Here again, extremely valuable industrial property depends on the district's dikes for flood protection.

There are many other areas adjacent to Oregon's rivers that are in urgent need of dikes and other flood protection works. No funds have been requested in this year's budget for these projects, some of which are ready for construction, others of which could be completed by the expenditure of relatively small funds and the remainder of which require further planning before construction can be undertaken. Included in these categories are the following together with the amounts usable by the Corps of Engineers:

Clatskanie River area, $15,000, complete preconstruction planning.

Hayden Island, $36,000, complete preconstruction planning.

Beaver Drainage District, $147,000, complete project.

Clatskanie Drainage District, $162,000, complete project.

Clatsop County Diking District No. 1, $22,000, complete project.

Clatsop County Diking District No. 6, $50,000, complete project.

John Drainage District, $73,000, complete project.

Deer Island Drainage District, $23,000, complete preconstruction planning.

Magruder Drainage District, $62,000, complete project.

Midland Drainage District No. 1, $83,000, complete project.

Rainier Drainage District, $200,000, Initiate construction.

Sauvie Island Drainage District, $150,000, Initiate construction.

Woodson Drainage District, $81,000, complete project.

Scappoose Drainage District, $38,000, complete preconstruction planning.

Pilot Rock, $10,000, continue planning.

Willamette River Basin, channel clearing and snagging, $25,000, complete preconstruction planning.

Willamette River Basin, channel improvement and major drainage, $86,000, complete preconstruction planning—one unit.

ARMY CIVIL FUNCTIONS—CONSTRUCTION

Columbia River from Bonneville to The Dalles

In 1937 Congress authorized a ship channel from Vancouver, Wash., to Bonneville Dam with a project depth of 27 feet and a width of 300 feet. In 1946 extension of the same project depth and width to The Dalles, Oreg., was authorized by Congress.

By 1949, the stretch of the river between Vancouver and Bonneville was dredged to authorized depths and width, but since that time the river has silted to the point at which the controlling depth is now only 15 feet. Nothing has been done on the construction work authorized in 1946. The lack of an adequate channel has, therefore, hindered the full economic development of the 85-mile section of the Columbia River between Vancouver and The Dalles.

This area has entered a new phase of rapid industrial development, and unless work is undertaken promptly to develop the river to project depth and width, it will serve as a bottleneck rather than an artery of commerce.

The Vancouver-The Dalles river-development project is of a dual nature. It involves the use of construction funds as well as operation and maintenance funds.

The Corps of Engineers indicates that $500,000 could be used in fiscal 1958 for the purpose of starting construction on the entrance to the Bonneville ship canal and that $600,000 could be used during the same period to initiate construction work on a 27-foot channel in the Bonneville pool between Bonneville and The Dalles.

This 85-mile stretch of the river is important to commerce, and its usefulness as an artery of commerce during a period of defense emergency is obvious.

Eastern Oregon and Washington constitute a great wheat-raising center of our Nation. These wheat areas are tributary ports of the upper Columbia River and supply vast quantities of wheat for export as well as domestic trade. Substantial savings in wheat-shipping costs would result from a deepwater channel to The Dalles as oceangoing vessels could navigate to that point.

Similarly, large quantities of fresh and processed fruits would find better markets through the lower shipping costs that could be provided by ocean vessels calling at upper Columbia River ports.

Phosphate beds of Idaho would find a transportation outlet for their products in a deepwater channel to The Dalles.

Industrial shipments of manufactured items and raw materials to be processed at industrial centers along the upper Columbia, including the aluminum plant now under construction at The Dalles, could be carried on the river in ever-increasing quantities if the river were to be made navigable for oceangoing vessels.

The appropriation of $1,100,000 for these 2 construction items will constitute an investment in the interest of the United States as well as the local communities along the river. Such an appropriation would constitute a sound investment in the future of the entire Nation.

The second aspect of this project, namely, the use of appropriate moneys for dredging to project depth and width from Vancouver to Bonneville is included in my comments under the caption "Army Civil Functions—Operation and Maintenance," at a later portion of my remarks.

Garibaldi Basin

Funds for completion of the Tillamook Bay and Bar project were appropriated in fiscal 1957 and work has progressed satisfactorily to date. Not far from the mouth of Tillamook Bay is located the town of Garibaldi, Oreg., which depends largely upon lumber and fishing for its economic well-being. Garibaldi Basin, if developed to keep pace with the improvements resulting from the repair of the break on Bay Ocean Spit will assume the importance that it properly deserves. Substantial economic benefits will result from shipments that can be handled in the Garibaldi Basin, including the products of fishing boats that have commonly used this basin in the past.

An appropriation of $111,000 would complete planning and construction of this project. I urge the committee's favorable action on this item.

Rogue River Harbor at Gold Beach

For many years businessmen and residents of the Gold Beach area have looked forward to the improvement of the Rogue River Harbor. The feasibility of the project has been demonstrated, but a regrettably small budget request of $21,000 is all that the administration asks for the project for fiscal 1958. The Corps of Engineers advise that $250,000 could be used during the coming fiscal year to complete planning and to initiate construction. I strongly recommend that the latter amount be appropriated.

Coos and Millicoma Rivers

This is another project that has demonstrated feasibility. It has been outstanding for a considerable period of time. However, the administration requested nothing by way of an appropriation this year. The Corps of Engineers indicates that $19,000 could be used to complete preconstruction planning. An appropriation in this amount would appear to be warranted.

Other construction projects

Other authorized projects for which no appropriations have been asked this year are listed below, together with the amounts that could be used by the Corps of Engineers during fiscal 1958.

Entrance to Oregon Slough, $103,000, complete improvement of channel.

Alteration of bridge across Columbia, $10,000.

ARMY CIVIL FUNCTIONS—OPERATION AND MAINTENANCE

Columbia River—Vancouver-Bonneville

The Army engineers estimate that $2,500,000 expended over the next 2 fiscal years will

enable the corps to complete dredging to project depth and width on the Columbia River between Vancouver and Bonneville Dam. I urge the committee to appropriate $1,250,000 this year on this operation and maintenance project because it is essential that the stretch of the channel between Vancouver and The Dalles be developed at the same time the construction work in the upper reach of the river between Bonneville and The Dalles progresses. The economic advantages of this project to the entire Nation have been discussed above.

Other operation and maintenance projects

This year's budget includes numerous other operation and maintenance projects within the State of Oregon. Their importance to navigation and flood control has been demonstrated and they are vital to the commerce of our State. I urge the committee to appropriate the full amounts requested on these items because postponement of such work has far-reaching adverse effects by way of general increased costs.

BUREAU OF RECLAMATION CONSTRUCTION AND GENERAL INVESTIGATION PROJECTS

The chart attached to this statement contains a list of the Oregon Bureau of Reclamation projects for which construction and rehabilitation and general investigations funds have been requested. I urge that these amounts be appropriated, but for the information of the committee, I submit the following additional comments:

Talent division—Rogue River project

For fiscal year 1957 Congress appropriated $2,400,000 which enabled initial construction work to be undertaken.

For fiscal 1958, $6,410,000 has been requested in the budget.

The important rehabilitation work on the Talent Irrigation District involving flood control, irrigation, and electric power generation warrants the full approval of this appropriation request.

Vale—Bully Creek

I am disturbed to note that only $1,526 has been included in the budget request for this project. This is particularly regrettable in view of the serious flood that struck the Vale area this spring. I hope that there will be an immediate reevaluation of this item by the Bureau and that substantially increased funds will be forthcoming for the purpose of carrying on this urgently needed work.

Yamhill

Reclamation development has for many years been an urgent need of the Yamhill River area. I trust that sufficient funds will be made available to the Bureau for the purpose of completing the studies of the Yamhill project, including the Mill Creek Dam. This dam has been the subject of considerable interest on the part of residents of Oregon during the past year. I have personally visited the entire Yamhill River area, and I share the concern of residents who feel that reclamation work in this part of our State is long overdue.

Crooked River

This long overdue project, involving substantial irrigation and flood control benefits, was authorized in 1956 pursuant to the bill S. 3101, cosponsored by Senator NEUBERGER and myself. The additional water to be supplied through this project will irrigate additional fertile farmlands, which can be brought into production to feed Americans of this and coming generations. The budget requests $850,000 with which to initiate construction during fiscal 1958. Its economic benefits for Oregon, both now and for the future, will be substantial. I strongly urge favorable action thereon.

Summary—Appropriations, Army Civil Functions and Bureau of Reclamation

ARMY CIVIL FUNCTIONS—CONSTRUCTION

[Recommendations of Senators Morse and Neuberger and Representatives Green, Ullman, and Porter for fiscal year 1958, July 1, 1957–June 30, 1958]

Project	Project cost	Benefits	Status	Amount in President's budget	Amount usable, fiscal 1958	Recommended by Senators Morse, Neuberger, and Representatives Green, Ullman, and Porter

JEFFERSON-JACKSON DAY DINNER ADDRESS BY SENATOR McNAMARA

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a very able address delivered on Saturday night, at Detroit, Mich., by my able and beloved friend, the Senator from Michigan [Mr. McNAMARA].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR McNAMARA AT THE JEFFERSON-JACKSON DAY DINNER AT DETROIT, MICH., ON MAY 18, 1957

It is a pleasure for me to be with you tonight, and to tell all of you what a wonderful job you have been doing for the Democratic Party in Michigan.

The record of victories is very impressive and inspiring to Democrats all over the country. And, I might say, it is very impressive but not very inspiring to the Republicans here in Michigan.

I am also happy to welcome to Michigan my good friend and colleague, WAYNE MORSE. I listen to WAYNE quite often on the Senate floor in Washington, but I don't mind at all coming back to Detroit to hear him again.

I would like to speak to you briefly tonight about something that is going on in Washington.

Now, there is a lot going on in Washington, such as trying to get the President to make sense out of his budget.

His handling of the budget will go down as an utterly fantastic chapter in American history, and a rather dark one at that. It sets a poor example for the future.

But what I have particular reference to is the work of the Senate Select Committee on Improper Activities in the Labor or Management Field, of which I am a member.

For nearly 3 months we have been hearing a great variety of witnesses testifying about these so-called improper activities.

I suppose it is inevitable, from the press accounts, that the public is given the idea that the labor movement is riddled with racketeers.

In fact, however, the disclosures before this committee thus far relate almost entirely to one union. And particularly, to the activities of one union leader.

Witness after witness has testified to big deals for private gain, frequently using the union treasury for the purpose.

All this is raw meat to the hungry dogs who would like to cripple, if not destroy, the entire labor movement.

They talk piously about new laws to protect the dues-paying union member, but their real motive is to ruin the effectiveness of organized labor, if they can.

But something curious has been happening just in the past few days. The witnesses have not been unionists who betrayed their trusts by dipping into the vault. The witnesses have been businessmen, brokers, insurance men, company executives, real estate people, who seem to be preying on the dues money just as much as any corrupt union leader.

Sometimes they appear to do it for private gain. Sometimes they seem to extend favors to keep in good with the union leaders. In any event, it is a betrayal of the union member.

The testimony of these people has been interesting to say the least. They have talked about their collaboration, collusion, if you will, with men such as Dave Beck, to work mutual profits.

Some of these deals are so fantastically tangled and profitable that men like Jay Gould and Sam Insull would look on with awe and envy.

Someone once gave this definition of business: "Business? It's very simple. It's using other people's money."

And the ultimate loser in these deals appears to be the dues-paying member.

Even this is not all black and white, however. The average teamster member, for example, has got a great deal of good out of his union in the way of higher wages and better living standards.

Perhaps he doesn't care if a portion of his dues goes to fatten the pocket of a union leader or a businessman. He should care, of course. He and his fellow members, in the long run, can do more to clean up his union than any new law.

But to get back to this sudden emergence of certain business interests in this tangled web. Evidence before our committee indicates that Dave Beck's dearest friend, in a financial sense, sought to reap a $70,000 profit by artificially rigging the price of the union's headquarters property in Washington. When this failed, he still got a check of $12,000 from the union, and a month later he gave $8,000 to Beck.

Is this businessman just a small time operator?

Hardly. Do you know that this same man has 121 clients in Michigan? That he has 63 right here in Detroit? That his clients include many of the top-flight business establishments in this city.

I don't know exactly what is the relationship between him and his clients, although I have some suspicions.

I doubt very much whether there is anything illegal about it.

It is possibly true that what Dave Beck did is not illegal, outside of allegedly not paying some income tax, but some businessmen have found themselves in that boat, too.

But the curious thing here is the double standard of ethics that has been set up.

Is the business world damned in its entirety because some of its members have made a dollar out of Beck's union?

No. In fact, these people may be looked upon as pretty sharp operators.

We do not condemn all businessmen for the practices of a few, and we should not.

By the same token, can we indict the labor movement for the activities of a few?

I have said before, and I will say again, that I believe a union official has the same moral and ethical responsibilities of anyone in public office.

I don't see anything wrong with extending this same code of ethics to the business world either.

As James Russell Lowell once facetiously put it:

"I don't believe in principle, but, oh, I do believe in interest."

It is time all of us removed the double standard and put principle first.

CONFLICT OF INTEREST AMONG HELLS CANYON OPPONENTS

Mr. MORSE. Mr. President, several weeks ago, Members of Congress received an analysis of S. 555, the Hells Canyon authorization bill, prepared by the American Enterprise Association. It was rather remarkable that the AEA got out its study so early in the session, when it had issued only one other bill analysis for the 85th Congress.

Each Congress, the AEA has produced and sent to Members of Congress studies of Hells Canyon bills. They do not contain conclusions; they contain only discussion and questions. But what discussion and questions. They are rigged and loaded against the Federal high dam. As the principal sponsor of the bill for 5 years, I have yet to recognize in the analysis the hard facts and the arguments employed by high-dam backers, although the studies purpose to present both sides.

The AEA represents itself as an impartial, objective groups with no ax to grind. It has attempted again and again to influence Congress against the high Federal Hells Canyon Dam—but always in the disguise of disinterestedness.

Why has not the American Enterprise Association, in submitting these bill analyses, divulged the fact that it receives financial support from the Idaho Power Co.? This is a pertinent fact, discovered in the Idaho Power Co.'s annual reports to the Federal Power Commission, which are not generally scrutinized by the press or public.

The American Enterprise Association has an obvious, but undisclosed, conflict of interest between objectivity and receipt of financial support from the private utility directly involved. The 1956 report shows a contribution of $250. My staff reports that in years past, similar contributions have been listed. Lack of time prevented a complete research on these contributions from Idaho Power Co.

The American Enterprise Association is under a moral obligation to inform, on the face of its reports, whether it receives money from a party in interest. Its failure to do so impeaches not only the impartiality, but also the integrity, of its reports.

Other questions arise. What other utilities, allied with the Idaho Power Co., contribute funds? If it receives and expends funds to defeat proposed legislation, why does not it register as a lobbyist under the law?

The American Enterprise Association's attempt to sail under false colors is another instance of the kind of improper tactics employed by the Idaho Power Co. in its attempt to seize a public resource for underdevelopment. It is part and parcel of the sleazy scheme in which the taxpayers are to foot the bill to the tune of millions of dollars in special tax treatment to help the company put up its inadequate dams.

COUNCIL OF STATE CHAMBERS OF COMMERCE USES PHONY FIGURES

Once again the organization which calls itself the Council of State Chambers of Commerce has published a blast against a Federal dam bill—a report which specializes in phony figures. The council is composed of 24 State chambers and a small assortment of other reactionary groups. The Idaho State Chamber of Commerce is a member. The Idaho Power Co.'s 1956 report to the Federal Power Commission lists a $300 dues payment to chamber of commerce. Presumably this is the same group.

However, the council is only doing what comes naturally. It will be remembered that it opposed the upper Colorado project in the same fashion, claiming that taxpayers in each State would bear the costs ranging from several hundred thousand to several million dollars in each case.

That council makes no mention of the fact that Hells Canyon would pay for itself with interest and would create new tax-producing wealth and income.

The council asserts that both the Federal and the company dams are basically hydroelectric projects although other benefits are involved in each. This is highly misleading, because the high dam is vital for flood control in the Columbia Basin, while the company dams would be about useless for flood control. Other benefits, so blandly dismissed by the council, also involve important public purposes, such as recreation, for which the high dam is vastly superior.

The council's comparison of power output is fantastically misleading. It credits the company three dams with their total possible installed capacity. However, it makes no mention of the fact that the third dam will probably never be built. Moreover, no mention is made of the Federal Power Commission examiner's finding that the company dams power cost would be so high that the full capacity will not be installed for lack of a market. Indeed, the council's chronology omits all mention of the FPC examiner's report in which he found the high Federal dam the more nearly ideal development, and gave facts and figures on the high cost of the company's power, and the lack of a market for it.

Even when discussing cost to the taxpayer, is it not odd that the council makes no mention of the quick tax write-off handout to the company—at the Treasury's expense?

It is some measure of the inferiority and unjustifiability of the Idaho Power Co.'s small-dam scheme that its apologists must suppress and distort the facts.

INCONSISTENT AND INDEFENSIBLE GOVERNMENT POLICY IN CONNECTION WITH THE POULTRY INDUSTRY

Mr. WILLIAMS. Mr. President, we hear a great deal about inconsistencies in Government and how these inconsistencies result in tremendous losses to the American taxpayers. Today, I wish to discuss a situation where an inconsistent and indefensible policy of the United States Government in connection with the poultry industry has during the past several years cost the American taxpayers millions of dollars and at the same time had the effect of practically bankrupting many American farmers.

During the past several months the producers in the poultry industry—both those producing broilers and those producing eggs—have been losing money.

The Department of Agriculture during this interval has persistently been urging and strongly recommending that farmers in the major producing areas curtail their production; and when information was brought to my office that the Government was again heavily involved in financing the expansion in other areas, I could not believe it.

But recognizing that inconsistency in government is not too unusual, I took the precaution of directing inquiries to the agencies which might be involved; and early this year I received positive assurances from all the agencies contacted that the report was erroneous, and that they were shocked at any suggestion that they had been encouraging or financing the expansion of the poultry industry during the past 2 years under such conditions of overproduction as they recognized existed.

But they were in error; their denials were not supported by facts which later were confirmed by the same agencies. The agencies now admit that their activities in this field far exceed their first appraisals.

It has now been definitely established that millions of dollars of Government money have been pouring out from six different agencies through loans, many of them unsecured, in various areas of the country, for the sole purpose of building new poultry houses and financing the increased production both of broilers and laying hens.

At the same time that these millions of taxpayers' dollars were being used to expand this overproduced industry, the Department of Agriculture was issuing bulletins and warnings to the regular broiler and egg producers, urging the curtailment of production.

I shall incorporate in the RECORD today an itemized breakdown of approximately $35 million in loans financed by six Government lending agencies during the past 3 years, with most of it during the past 2 years.

Furthermore, there is every reason to believe that this $35 million, which I have been able to document, in no way represents the full amount loaned by these six agencies. Some of these agencies actually do not know even now to what extent they have been involved in pouring money into this industry.

Frankly, I was amazed to find Government money pouring into an overexpanded industry, in contradiction of an announced departmental policy; but what was even more surprising and alarming was to realize just how little the top officials of these agencies know about what is transpiring in their own departments.

First, they denied any loans; then they said maybe a few but of an insignificant amount, and then as the reports began to be established they started trying to explain.

To illustrate further the inconsistency of the Government's having six different lending agencies scouring the country in an effort to get rid of the taxpayers' dollars in loans to finance an overexpanded industry, we find that during this same interval a seventh Government agency was spending approximately $12 million buying surplus eggs to remove them from an oversupplied market.

The broiler-producing industry has throughout the years consistently rejected all offers of Government price supports, maintaining that they wanted a free industry, and there is a strong suspicion that this inconsistent policy of certain Government officials, deliberately pouring millions of dollars into new areas to finance increased capacity and increased production, at a time when the industry was in a serious state of oversupply, has been done with the deliberate intention of forcing the poultry industry into such a serious economic state that it would have to renounce its previous independence and come under price supports.

I shall present the report of the loans which I have been able to document, involving the six Government lending agencies.

I first ask unanimous consent to have incorporated in the body of the RECORD the report giving an itemized breakdown of the $9,690,660 granted in loans by the Farmers Home Administration between July 1, 1954, and March 1, 1957, for the purpose of increasing broiler and egg production.

This report shows $9,157,870 as having been loaned by this agency for the purpose of increasing the country's layer capacity by nearly two million. Some of the loans were to finance the building of the houses and some the equipment and feeding operations.

Five hundred and thirty-two thousand seven hundred and ninety dollars was loaned to build new broiler houses and to buy equipment to increase the broiler production by nearly three million per year.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request?

There being no objection, the report was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FARMERS' HOME ADMINISTRATION,
Washington, D. C., April 15, 1957.

Hon. JOHN J. WILLIAMS,
United States Senate.

DEAR SENATOR WILLIAMS: Your letter of February 28, 1957, requested information concerning Farmers' Home Administration loans to finance poultry enterprises. In order to obtain such information it was necessary to contact the more than 1,500 county offices for this special report, which thus has caused the delay in answering your letter.

These reports have been tabulated and summarized and we are attaching copies of a national summary. We are also attaching separate tabulations for the fiscal years 1955, 1956, and 1957 through March 1, showing the loan activity by year in all the States and Territories.

Although this agency has rather broad statutory authority to finance poultry facilities on family-type farms, this authority is being administered on a conservation basis. With respect to the making of loans to commercial poultrymen for egg production, the agency has followed the policy that loans may be made only to those applicants who: (1) have a background of successful experience with a poultry egg-laying enterprise, either as an owner, or in some other capacity which would enable them to obtain the required experience; (2) have, or can obtain on their own or with the assistance of the Farmers' Home Administration, sufficient resources necessary to carry out a sound poultry enterprise; and (3) are able and willing to carry out the approved practices considered by responsible poultry specialists as essential to the poultry enterprise.

With respect to the financing of individuals engaged in the production of broilers, loans are not made to individuals who are primarily engaged in the production of broilers. However, when loans are made for other purposes and the applicant wishes to produce some broilers as an incidental part of his farming operations, funds may be included in the loan for this enterprise.

We hope that these attached studies will satisfactorily answer your questions concerning the activity of this agency in the poultry industry. If there are any further questions, please feel free to contact us.

Sincerely yours,

K. H. HANSEN, *Administrator.*

FARMERS' HOME ADMINISTRATION

Summary of Loans To Finance Poultry Enterprises During the Period July 1, 1954, through Mar. 1, 1957

TABLE 1.—*Farm ownership and farm housing loan funds used to finance poultry buildings and equipment* [1]

Year	Broilers		Layers	
	Number (1)	Amount (2)	Number (3)	Amount (4)
1955	20	$49,055	88	$427,803
1956	49	152,814	188	866,607
1957 (Mar. 1)	29	81,347	195	883,457

[1] Includes loans of $1,000 or more to construct, repair, or replace poultry buildings and equipment.

TABLE 2.—*Operating loan funds used to finance poultry production*

Year	Broilers		Layers [1]	
	Number (1)	Amount (2)	Number (3)	Amount (4)
1955	75	$97,222	1,038	$2,456,073
1956	100	88,440	1,024	2,302,719
1957 (Mar. 1)	28	63,912	939	2,221,211

[1] Flocks of 500 birds or more.

TABLE 3.—*Number of borrowers who received FHA loans that increased broiler and egg production*

Year	Number for broiler production (1)	Increase in broilers per year (2)	Number for egg production (3)	Increase in layers per year (4)
1955	56	895,950	386	496,345
1956	124	1,508,750	529	776,147
1957 (Mar. 1)	37	487,800	477	723,273

Mr. WILLIAMS. Immediately following these charts showing how this Agency has loaned over $9 million in the past 3 years to finance the increased production in the poultry industry, I ask unanimous consent to have incorporated an article appearing in the Poultryman of Friday, April 19, 1957, entitled "FHA Is Billed as Hero Instead of Villain in Denying Loans To Aid Overproduction."

This article quotes Mr. Henry C. Smith, Deputy Administrator of FHA as testifying before the House Agriculture Appropriations Subcommittee to the effect that his Agency had not been using its authority "to start people in the poultry business, mainly for the reason that there is overproduction."

That statement of Mr. Smith's to the House Appropriations Committee was not true, as is borne out by the facts incorporated in the report immediately above. The Farmers' Home Administration has been loaning money to build new poultry houses, increasing the productive capacity of both the broilers and layers.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FHA IS BILLED AS HERO INSTEAD OF VILLAIN IN DENYING LOANS TO AID OVERPRODUCTION

WASHINGTON.—The Farmers' Home Administration won't lend anyone money to help them go into the poultry producing business.

Henry C. Smith, Deputy Administrator of FHA, says the agency has authority to lend Government money to finance construction of poultry buildings.

But, he explained to the House (Agriculture) Appropriations Subcommittee, the agency has not been using the authority "to start people in the poultry business mainly for the reason that there is overproduction."

The testimony was given to the subcommittee at a closed door budget hearing in February. The subcommittee made public the transcript last Thursday.

There have been recurring complaints from broiler producers that Government lending programs have financed increased production at a time of price-depressing surpluses.

The subcommittee did not inquire into the extent to which the agency is financing expansion of production facilities of existing producers or the extent to which it may have in the past provided credit for new producers to enter the business.

A House Small Business Subcommittee has indicated that it will inquire into this during public hearings later in the session.

Mr. WILLIAMS. The Federal Housing Administration under title I is the second agency involved.

Apparently this agency does not keep sufficient records of their different loans to be able to have readily available complete information as to the extent to which they may be involved in this field, but they definitely have been underwriting some of the expansion of this industry.

Commissioner Mason, when testifying before the Select Committee on Small Business in the House on Monday, May 13, 1957, minimized their activities with a lot of confusing statistics, but they are involved a little more than Mr. Mason indicated. For instance, during the past 3 years they have insured over $2 million in loans of which we have record for the purpose of building new poultry houses.

The bulk of this, or $1,003,000, went to Texas; $420,000 was loaned in Kansas; and $393,000 in Tennessee; with the remainder scattered throughout the various other States.

A couple of years ago, when the poultry industry first began getting in trouble as the result of overproduction, this same agency was identified as one of the major factors in financing expansion in the industry by guaranteeing loans on new poultry houses.

It should be noted that the Federal Housing Administration has no procedure to follow through on loans to determine whether or not the money borrowed is used for the stated purpose of building new poultry houses.

I ask unanimous consent to incorporate the FHA reports on its lending to the poultry industry.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

FEDERAL HOUSING ADMINISTRATION,
Washington, D. C., April 11, 1957.

Hon. JOHN J. WILLIAMS,
United States Senate,
Washington, D. C.

DEAR SENATOR WILLIAMS: At your suggestion the FHA has made a study of the extent to which insured loans are being used in connection with poultry houses. It has just been completed, and I am pleased to send you the attached table and summary.

The State of Delaware is not included in this study solely because there is only 1

title I lender in the State, and that institution has made only 8 loans in the past 3 years.

I am sure you will agree that it is apparent from this study that few new poultry houses are built under the FHA title I program. As you know, the FHA cautions lenders to make these loans only to experienced poultry husbandmen who have good credit records.

From the limited utilization of FHA insured title I financing for poultry builders, as shown in the attached study, it would appear that this warning has been effective.

Sincerely yours,

NORMAN P. MASON,
Commissioner.

FHA TITLE I LOANS ON POULTRY HOUSES, 1954–56

The limited utilization of FHA-insured title I loans for financing the construction of buildings for poultry or egg production during the period 1954–56 is indicated by the data in the attached table. This information was obtained by the title I Division of FHA in a March 1957 survey covering 1,888 lenders in 15 selected States.

Replies were received from 1,107 institutions which, investigation revealed, had originated a majority of the title I loans made in the 15 States during this period. Only about 136 of the responding lenders reported financing any title I loans for poultry building purposes. Nearly half of these were Texas institutions. No such loans were reported by Connecticut or Rhode Island lenders.

Title I poultry building loans made by the reporting institutions during the 3-year period total 1,043 amounting to an estimated $2,136,000. These represented only one-tenth of 1 percent of the total number and four-tenths of 1 percent of the total amount of all title loans insured in the 15 States during the survey period. The largest volumes of poultry building loans were made by lenders in Texas (estimated at $1,003,000), Kansas ($420,000), and Tennessee ($393,000). In most States the amount of these loans represented less than one-half of 1 percent of all title I loans. The highest proportions were reported by institutions in Kansas (1.4 percent) and Tennessee (nine-tenths of 1 percent).

The average amount of poultry building loans for all reporting States was $2,048 compared with an overall title I loan average of $618 in the same States. Averages ranged from $530 in Vermont and $995 in Massachusetts to $2,500 in Maine and $3,500 in New Hampshire. In virtually every State, these averages substantially exceeded the average for all types of title I loans.

The claims which had been paid by FHA as a result of default on the poultry building loans covered by the survey totaled $20,082 or just under 1 percent of the total amount of these types of loans insured during the 3-year period. This is somewhat less than the 1.4 percent claims ratio for all title I loans outstanding (throughout the Nation) during this period of generally high prosperity. Lenders in only 5 States reported claim payments on poultry building loans—Florida ($6,838, or 16 percent of total insured), Kansas ($335, or one-tenth of 1 percent of total), Tennessee ($4,023, or 1 percent of total), Texas ($7,853, or eight-tenths of 1 percent of total), and Washington ($1,033, or 4 percent of total).

Loans totaling $77,853, or about 4 percent of the aggregate amount of poultry building loans remaining in force, were in default at the time of the survey. Over 85 percent of the amount of the defaulted loans was reported by lenders in Tennessee ($27,976) and Texas ($38,724). No defaults were reported by lenders in Florida, Maine, New Hampshire, Oregon, or Vermont.

Mr. WILLIAMS. Third, the Small Business Administration has approved 36 loans totaling $1,053,405 to the poultry industry in the past several months. Their loans vary from a few thousand to $125,000.

One loan of $100,000 was made to a turkey grower in Missouri and another $30,000 loan to a turkey farm in Wisconsin.

The Department of Agriculture spent millions in supporting last year's turkey market because of overproduction, and for the past 2 years has been urging the farmers to reduce their turkey flocks.

The remainder of the million dollars loaned by this agency went to other segments of the poultry industry, and the complete breakdown may be found in the chart which at this point I ask unanimous consent to have printed in the RECORD. These are all participation loans.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

SMALL BUSINESS ADMINISTRATION,
Washington, D. C., April 24, 1957.

The Honorable JOHN J. WILLIAMS,
United States Senate,
Washington, D. C.

DEAR SENATOR WILLIAMS: This is with reference to my letter of April 16, 1957, concerning your request for detailed information on the number of business loans approved by this agency to operators of poultry and hatchery firms. I am enclosing this material as you requested.

Sincerely yours,

WENDELL B. BARNES,
Administrator.

Small Business Administration—Business loans approved to operators of hatcheries and poultry farms, cumulative through Feb. 15, 1957

Name and address	Type	Total amount approved
Irving Bodner, Heflin, Ala.	75 percent participation	$15,305
The Irven E. Gee Hatchery & Poultry Farm, Tucson, Ariz.	do	10,000
Milton & Helen Vanderkolk, Tucson, Ariz.	90 percent participation	40,000
Troy Henley, Cleveland, Ark.	Direct	3,000
James F. Baker, doing business as Baker's Hatchery, Danville, Ark.	do	61,000
Austin Hatchery, Inc., Fontana, Calif.	do	10,000
Erwin Paul Menzen, Keystone Heights, Fla.	66⅔ percent participation	60,000
Crenshaw's, Inc., Cleveland, Ga.	75 percent participation	30,000
Putney Farms, Inc., Dahlonega, Ga.	do	50,000
Hiawassee Hatchery, Hiawassee, Ga.	Direct	15,000
A. W. Thompson Hatchery, Inc. and Macon County Poultry Farm, Inc., Hoschton, Ga.	75 percent participation	[1] 125,000
T. Fernwood Broome, doing business as Fernwood Poultry Farm & Hatchery, Rossville, Ga.	Direct	20,000
Robert L. Nelson, doing business as Nelson Poultry Service, Franklin, Ill.	75 percent participation	[1] 6,200
Don Smith, Inc., Albion, Ind.	do	50,000
Pine Manor, Inc., Goshen, Ind.	80 percent participation	60,000
L. L. Diamond, doing business as Diamond Hatchery, Knightstown, Ind.	75 percent participation	15,000
LaVern Waugh, Delmar, Iowa	do	5,000
Harold Bayse, doing business as Bayse Hatchery & Produce, Humboldt, Iowa.	60 percent participation	60,000
John M. Schon, doing business as Lytton Hatchery, Lytton, Iowa.	Direct	8,000
Marcus A. Neppl, doing business as Neppl, Hatchery & Produce, Wall Lake, Iowa.	75 percent participation	13,000
William Jerome Garinder, doing business as Master Breeder's Hatchery, Cherryvale, Kans.	do	16,000
W. C Mayfield, Hoisington, Kans.	75 percent participation	$16,500
Quality Poultry Farms, Inc., Wichita, Kans.	Direct	25,900
George Burkel, Greenbush, Minn.	75 percent participation	[1] 30,000
Baumgartner's Poultry Farm, Inc., Litchfield, Minn.	Direct	13,000
Erwin W. Peterson, doing business as Dixie K Hatchery, Menahga, Minn.	75 percent participation	15,000
Charles H. Dahlke, doing business as Dahlke Hatchery, New Germany, Minn.	Direct	$8,000
Edwin A. Krueger, doing business as Krueger Poultry Farms, North Branch, Minn.	do	60,000
H. H. Hill, doing business as Hill Turkey Farms & Hatchery, La Plata, Mo.	90 percent participation	100,000
Vernon G. Alder, doing business as Alder's Hatchery & Alder's Farm, Richmond, Mo.	do	20,000
Holcomb York Hatchery, Inc., York, Nebr.	50 percent participation	20,000
G. E. Kemnitzer, doing business as Kemnitzer Colonial Hatchery, Marysville, Ohio.	75 percent participation	7,000
Do	90 percent participation	7,000
B. E. Lucas and R. T. Johnson, doing business as Clinton Hatchery & Implement Co., Clinton, Wis.	50 percent participation	20,000
John Zielinski, Grand Marsh, Wis.	64.7 percent participation	8,500
Melvin K. Wright, doing business as Wright's Turkey Farm, Weyerhauser, Wis.	66⅔ percent participation	30,000
Total (36)		1,053,405

[1] Authorization canceled in full subsequent to approval.

Source: Office of Controller, Budget and Reports Division, Apr. 12, 1957.

Mr. WILLIAMS. Fourth, the Banks for Cooperatives have refused to disclose their loans to the poultry industry. Why these loans are kept secret when they are, or at least they should be, a matter of official record in the courthouses of the respective areas in which these loans are made is hard to understand.

Nevertheless, without their cooperation it has been established that over $12 million have been loaned by this agency to cooperatives in the State of Georgia for the expansion of the poultry industry, and there is every reason to believe that this is only a part of their activities.

Fifth, the Federal Land Banks during the past 3 years have made 658 loans

totaling $2,074,000 to build new broiler houses, and during this same period they have made 1,309 loans representing $4,295,000 for the purpose of building new poultry houses for layers. This makes a total of $6,369,000 loaned by this Government agency to finance the expansion of an overproduced industry.

Sixth, the Federal Intermediate Credit Banks, which finance the production credit associations, have during the past 3 years underwritten 534 loans, involving $1,342,025 to farmers, for the purpose of building new broiler houses.

During this same period this agency has made 1,000 loans to farmers, aggregating $2,382,258, for the purpose of building more poultry houses for layers.

Their total loans to finance increased capacity amounts to $3,724,283.

At this point I ask unanimous consent to have incorporated the letter of May 9, 1957, signed by Mr. Tootell, confirming the two aforementioned reports.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARM CREDIT ADMINISTRATION,
Washington, D. C., May 9, 1957.

Hon. JOHN J. WILLIAMS,
United States Senate.

DEAR SENATOR WILLIAMS: This refers to your letter of March 5, 1957, inquiring concerning financing of broiler and laying house construction by the Federal land banks, and by the production credit associations and other financing institutions rediscounting with the Federal intermediate credit banks.

The following figures have been obtained from the 12 Federal land banks and the 12 Federal intermediate credit banks and represent the best available estimates of such financing:

Loans financing construction of poultry houses made in 3 years, 1954–56

	Broiler houses		Laying houses		Total	
	Number of units	Total amount, advances	Number of units	Total amount, advances	Number of units	Total amount, advances
Federal land banks	658	$2,074,000	1,309	$4,295,000	1,967	$6,369,000
FICB's	534	1,342,025	1,000	2,382,258	1,534	3,724,283
Total	1,192	3,416,025	2,309	6,677,258	3,501	10,093,283

The banks for cooperatives are not included in the above table since they do not make loans to individual farmers and we have no reason to believe that any of their financing to borrowing cooperatives would be utilized for such purpose.

Sincerely yours,
R. B. TOOTELL, *Governor.*

Mr. WILLIAMS. Altogether, this documents approximately $35 million as having been loaned during the past 3 years by these 6 Government agencies to farmers for the purpose of increasing poultry production.

This policy of having 6 different Government agencies canvassing the country, soliciting and encouraging farmers to borrow money to expand the poultry industry, when at the same time the Department of Agriculture was urging regular poultry producers to curtail production, appears even more indefensible when we consider that for the past 12 months another division of the Department of Agriculture has been spending approximately $1 million per month to buy surplus eggs at the taxpayers' expense to remove them from an oversupplied market.

I ask unanimous consent to have incorporated at this point the report of the Department of Agriculture showing its recent expenditures to support the egg market.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
AGRICULTURAL MARKETING SERVICE,
Washington, D. C., April 18, 1957.

Hon. JOHN J. WILLIAMS,
United States Senate.

DEAR SENATOR WILLIAMS: Pursuant to a telephone request from your office to Mr. Clyde Wheeler, of the Secretary's Office, there is submitted herewith the following information with respect to the amount of funds that has been spent during the past 3 years on the egg purchase program.

During 1956 there was expended approximately $6.6 million for the purchase of 584,134 cases of eggs as summarized in the enclosed press release of December 6, 1956. This program was again resumed on January 25, 1957, with additional purchases of 313,714 cases and expenditures amounting to approximately $3,184,000 as again summarized in a press release of March 20, copy enclosed.

It will be noted from the last-mentioned press release that the shell egg purchase program was modified by offering to buy the new-type "stabilized" dried whole egg solids. To date under this current program, as summarized in the enclosed press release of April 16, purchases of egg solids to date have amounted to 1,507,500 pounds with a total expenditure of approximately $1,648,000.

It will be noted from the above that total expenditures to date approximate $11,432,000 which cover expenditures in 1956 and 1957, there being no egg purchase program in 1955.

Sincerely yours,
ROY W. LENNARTSON,
Deputy Administrator.

Mr. WILLIAMS. Every official of the Department of Agriculture with whom this has been discussed has agreed that this inconsistent policy cannot be defended from the standpoint of either the farmers or the taxpayers. Certainly it cannot be denied that the result has been the wasting of millions of dollars and the practical bankruptcy by governmental action of thousands of American poultry farmers.

The poultry industry has never sought Government supports, but they do ask the Government to stop using their tax dollars to finance their own competition, especially at a time when the industry is in a serious state of overproduction.

At the same time, it is in order to suggest that the Department review the overlapping jurisdiction of these lending agencies, with the hope that their functions can be consolidated and about two-thirds of the agencies abolished. Certainly even if loans were necessary there could be no need for six lending agencies calling on the same farmers soliciting the same type loans.

PRINTING OF ADDITIONAL COPIES OF THE REPORT ENTITLED "THE INTERNATIONAL PETROLEUM CARTEL"

Mr. O'MAHONEY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. O'MAHONEY. Did the Senator from Texas, the majority leader, not make a motion, before he left the Chamber, to proceed to the consideration of Calendar No. 298, Senate Concurrent Resolution 26?

The PRESIDING OFFICER. The Chair understands the majority leader made a unanimous-consent request that Calendar No. 298, Senate Concurrent Resolution 26, be made the unfinished business. The Chair did not put the question. He now puts the question.

Is there objection to the consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution (S. Con. Res. 26) to print additional copies of the report entitled "The International Petroleum Cartel."

ADJOURNMENT TO WEDNESDAY

Mr. O'MAHONEY. Mr. President, in accordance with the previous order, I move that the Senate stand in adjournment until Wednesday next at noon.

The motion was agreed to; and (at 5 o'clock and 19 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, to Wednesday, May 22, 1957, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate May 20, 1957:

DEPARTMENT OF THE AIR FORCE

Malcolm A. MacIntyre, of New York, to be Under Secretary of the Air Force, vice James H. Douglas, elevated.

IN THE AIR FORCE

The following-named officers under the provisions of section 8066, title 10 of the United States Code to be assigned to positions of importance and responsibility designated by the President in the rank as follows:

Lt. Gen. Frank Fort Everest, 366A (major general, Regular Air Force), in the rank of general, United States Air Force.

Lt. Gen. Thomas Sarsfield Power, 481A (major general, Regular Air Force), in the rank of general, United States Air Force.

Maj. Gen. William Evens Hall, 460A, Regular Air Force, in the rank of lieutenant general, United States Air Force.

Maj. Gen. Walter Edwin Todd, 361A, Regular Air Force, in the rank of lieutenant general, United States Air Force.

Maj. Gen. John Koehler Gerhart, 525A, Regular Air Force, in the rank of lieutenant general, United States Air Force.

Maj. Gen. William Evens Hall, 460A, Regular Air Force, to be senior Air Force member,

Military Staff Committee, United Nations, under the provisions of section 711, title 10 of the United States Code.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 20, 1957:

INTERNATIONAL MONETARY FUND AND THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

C. Douglas Dillon, of New Jersey, to be United States Alternate Governor of the International Monetary Fund and the International Bank for Reconstruction and Development for the term of 5 years.

DIPLOMATIC AND FOREIGN SERVICE

The following persons to be Ambassadors Extraordinary and Plenipotentiary of the United States of America to the country indicated with each respective name:

Walter P. McConaughy, of Alabama, to Burma.

Joseph S. Farland, of West Virginia, to Dominican Republic.

Don C. Bliss, of New Jersey, to Ethiopia.

Wilson C. Flake, of North Carolina, to Ghana.

Robert C. Hill, of New Hampshire, to Mexico.

Miss Frances E. Willis, of California, to Norway.

HOUSE OF REPRESENTATIVES

MONDAY, MAY 20, 1957

The House met at 12 o'clock noon.

Rev. Father Clarence Liederbach, of St. Adalbert Parish, Cleveland, Ohio, offered the following prayer:

O God, our Father, Creator of heaven and earth, the first beginning and last end of nations as of men, whose providence, inscrutable as it is ineffable, brought into being these United States that its oneness in many might ever be an object lesson for all nations, we have always been humbly grateful that our Republic, under Thee, has ever reminded absolute temporal monarchs, incontrovertibly if sometimes silently, that all power to rule comes only from Thee; only through the free consent of the governed.

Because Thou art the sole worker of miracles, lighten, we beseech Thee, the burden of original sin under which the governing groan as do the governed.

By dispelling darkness from our intellects and fortifying our wills through the virtue of the Holy Spirit, that the weak being made strong in Thee may truly confound those who are wise in their own conceits.

Pour down upon these Thy servants and those whom they direct the spirit of that grace which wins salvation and accompany them with Thy never-failing help, pouring down upon them the dew of Thy blessing that they may please Thee in all truth.

Vouchsafe to break the pride of our enemies by uncovering the deceits wherein they would take us and repress their presumption by the power of Thy strong right hand.

Be Thou appeased, O God, by our supplications—that no righteous desire may remain unfulfilled and no prayer be in vain, we beseech Thee, that we may truly obtain that which we crave with faith, asking it through Jesus Christ, Thy Son, our only Lord and King, who lives and reigns with Thee, in the unity of the Holy Spirit, forever and ever. Amen. In the name of the Father and of the Son and of the Holy Spirit. Amen.

The Journal of the proceedings of Thursday, May 16, 1957, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McBride, one of its clerks, announced that the Senate had passed, with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H. R. 6700. An act making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

The message also announced that the Senate insists upon its amendments to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. HOLLAND, Mr. ELLENDER, Mr. MAGNUSON, Mr. STENNIS, Mr. JOHNSON of Texas, Mr. PASTORE, Mr. HAYDEN, Mrs. SMITH of Maine, Mr. BRIDGES, Mr. KNOWLAND, Mr. THYE, and Mr. POTTER to be the conferees on the part of the Senate.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 358. An act to authorize the conveyance to the State of Wyoming of about 37.75 acres of land comprising a part of Francis E. Warren Air Force Base;

S. 413. An act to provide for transfer of title to irrigation distribution systems constructed under the Federal reclamation laws upon completion of repayment of the costs thereof;

S. 768. An act to designate the east 14th Street highway bridge over the Potomac River at 14th Street in the District of Columbia as the Rochambeau Memorial Bridge;

S. 999. An act authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science;

S. 1556. An act granting the consent of Congress to the States of Montana, North Dakota, South Dakota, and Wyoming to negotiate and enter into a compact relating to their interest in, and the apportionment of, the waters of the Little Missouri River and its tributaries as they affect such States, and for related purposes; and

S. 1794. An act to amend section 6 of the act approved July 3, 1890 (26 Stat. 215), relating to the admission into the Union of the State of Idaho by providing for the use of public lands granted therein for the purpose of construction, reconstruction, repair, renovation, furnishings, equipment, or other permanent improvements of public buildings at the capital.

The message further announced that the Senate agrees to the amendment of the House of Representatives to the amendment of the Senate to the bill (H. R. 4897) entitled "An act making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1958, and for other purposes."

The message also announced that the Presiding Officer had appointed the Senator from Arkansas [Mr. FULBRIGHT] as conferee on the bill (H. R. 6871) entitled "An act making appropriations for the Departments of State and Justice, the Judiciary, and related agencies for the fiscal year ending June 30, 1958, and for other purposes," in lieu of the Senator from Montana [Mr. MANSFIELD], excused.

REREFERENCE OF A BILL

Mr. DAVIS of Tennessee. Mr. Speaker, I ask unanimous consent that the Committee on Public Works be discharged from the further consideration of the bill H. R. 7068 and that it be referred to the Committee on Interior and Insular Affairs.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

HON. JOHN W. McCORMACK

Mr. NATCHER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. NATCHER. Mr. Speaker, on the evening of May 13, 1957, our distinguished majority leader, who has represented the 12th Congressional District of Massachusetts since 1928, and has served as majority leader in all Democratic controlled Congresses since 1940, received the annual award from Bellarmine College in Louisville, Ky., for "his breadth of vision and powers of conciliation employed for so many years as majority leader of the House." As a Kentuckian, I am proud that Mr. McCORMACK was thus signally honored by a renowned college in my State. Indeed the Members of the United States House of Representatives are fortunate in having as their Speaker the Honorable SAM RAYBURN, and as our majority leader the Honorable JOHN W. McCORMACK.

In looking back over my short tenure in office I find that one of the great privileges derived has been from knowing and associating with outstanding men and women. Since my first day on the floor of the House, Mr. McCORMACK has gone out of his way to render me assistance, and, whenever required, the benefit of his guidance. This consideration has not only been bestowed upon me, but upon all new Members, both on the Democratic and Republican sides of the aisle. It is thus quite natural that he has endeared himself to the membership as a whole. I, personally, shall always feel indebted to him for his courteous treatment, encouragement and help. He is a kind, considerate, devout man, and his bigness is demonstrated by his treatment of his colleagues.

It is quite fitting that Mr. McCORMACK should have received the award from Bellarmine College, for he is not only one of the great Members of Congress but will go down in history as such. He possesses all the characteristics of a great man—the ability, the energy, the kindness and the aggressiveness inherent in a true leader. Though he has never deviated from the principles laid down by the Democratic Party, his country comes before politics. It can truly be said that he has the integrity and honor to maintain the scales of justice.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. WILLIAMS of Mississippi. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce be permitted to sit during general debate while the House is in session for the remainder of this week.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

WOMEN LAWYERS IN THE COMMONWEALTH OF MASSACHUSETTS

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include an article from the Washington Post and Times Herald.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, at this very moment 41 of our very fine women lawyers in the Commonwealth of Masachusets are being sworn in to practice before the Supreme Court. We are very, very proud of them and wish them luck in their practice of the law. They will be looking down from the gallery upon our deliberations very shortly. The group is the largest from one State ever to be presented to the Court. The following women are hereby sworn in:

LIST OF PARTICIPANTS IN MASSACHUSETTS ASSOCIATION WOMEN LAWYERS "WASHINGTON SAFARI"

Mildred E. Bixby, Lynn, Mass.
Celia F. Blumerfield, Brighton, Mass.
Rosalind Poll Brooker, New Bedford, Mass.
Ann Carey Curley, Boston, Mass.
Winifred B. Doherty, Malden, Mass.
I. Cyrille Geisinger, Dorchester, Mass.
Marjorie H. Gleason, South Boston, Mass.
Mildred J. Hunter, Boston, Mass.
Clare S. Nash, Weymouth, Mass.
Gladys M. Slowe, Jamaica Plain, Mass.
Lucy N. Yakim, South Deerfield, Mass.
Helen M. Allen, Dedham, Mass.
Theresa M. Bohnenberger, West Roxbury, Mass.
Elsie L. Cooper, Allston, Mass.
Kathleen T. Ryan Dacey, Roxbury, Mass.
Helen Degnan, Hyde Park, Mass.
Ethleen H. Diver, Lexington, Mass.
Florence P. Ferris, Brookline, Mass.
Marion L. Gaffney, Malden, Mass.
Katherine F. Gesmer, Quincy, Mass.
Marion D. Gould, Billerica, Mass.
Arlyne F. Hassett, Watertown, Mass.
Evelyn Hodsdon, Belmont, Mass.
Anna D. McInerny, Dedham, Mass.
Nellie F. Malone, Marlboro, Mass.
Susanne P. Shalina, Cambridge, Mass.
Lillian Sorkin, Brookline, Mass.
Frances N. Whiting, Haverhill, Mass.
Nella Q. Wendell, Belmont, Mass.
Anna Chopek, Mattapan, Mass.
Ann W. Lake, Dedham, Mass.
Julia Hoffman, Chelsea, Mass.
Miriam Flaherty, Waltham, Mass.
Anna E. Hirsch, Dedham, Mass.

The Washington Post and Times Herald article is as follows:

FORTY BOW AT SUPREME COURT DEBUT

Forty women lawyers will be admitted this morning to the bar of the Supreme Court of the United States on the recommendation of Senator LEVERETT SALTONSTALL, Republican, of Massachusetts.

All of them come from the Senator's State and all are members of the National Association of Women Lawyers.

Also on hand for the occasion will be Neva Talley, the president of the National Association of Women Lawyers.

After a formal motion by Senator SALTONSTALL in the Supreme Court, this morning, the ladies will be deemed qualified to practice before the highest Court in the land.

Afterward, they will be entertained at luncheon by Representative EDITH NOURSE ROGERS, Republican, of Massachusetts, and later in the day they will return to Boston by air.

On Friday, District of Columbia members of the National Association of Women Lawyers gathered at a dinner to honor the Massachusetts ladies.

The party was held at the Army and Navy Club.

THE ITEM VETO

Mr. KEATING. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KEATING. Mr. Speaker, one week from today a subcommittee of the Committee on the Judiciary headed by our distinguished colleague, the gentleman from Louisiana [Mr. WILLIS], will open hearings on House Joint Resolution 47, which permits the President to veto individual items in appropriation bills.

In my judgment, Mr. Speaker, this is the single most effective procedural blow which we could strike for governmental economy. The proposal has been endorsed by the President, as have similar proposals by 5 or 6 preceding Presidents. An administration spokesman will be on hand to present the President's views with regard to it. I hope that all Members who are either in favor of or in opposition to this proposal will make known to the gentleman from Louisiana their wish to be heard.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATIONS, 1958

Mr. CANNON. Mr. Speaker, on behalf of the gentleman from Georgia [Mr. PRESTON], chairman of the subcommittee handling appropriations for the Department of Commerce and related agencies, I ask unanimous consent to take from the Speaker's desk the bill (H. R. 6700) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1958, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Missouri? [After a pause.] The Chair hears none and appoints the following conferees: Messrs. PRESTON, THOMAS, ROONEY, YATES, SHELLEY, FLOOD, CANNON, CLEVENGER, BOW, HORAN, LAIRD, and TABER.

STATUE OF GENERAL STONEWALL JACKSON IN THE HALL OF FAME AT NEW YORK UNIVERSITY

Mr. DORN of South Carolina. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN of South Carolina. Mr. Speaker, it was my privilege yesterday in New York City at New York University to attend the unveiling of the bronze bust of Gen. Stonewall Jackson in the Hall of Fame for great Americans. It was a splendid occasion in every respect. There are only 86 Americans who have been selected for the Hall of Fame. I commend the board of electors for selecting Stonewall Jackson. He was one of the greatest military geniuses the world has ever known. It was interesting to note that the only other generals in the Hall of Fame whose principal achievements were in the field of military science were William T. Sherman and Robert E. Lee. It is true that General Washington, Gen. Andrew Jackson, and General Grant are in the Hall of Fame, but they were also Presidents of the United States. This fact alone is proof of the esteem in which Lee and Jackson are held by all Americans. I learned many interesting things at this meeting as to the high opinion the world has of Stonewall Jackson and Robert E. Lee. Most great military experts in foreign countries agree that there were only five English-speaking generals who are universally recognized throughout the world, and they are Marlborough, Washington, Wellington, Robert E. Lee, and Stonewall Jackson.

In recognition of his great military ability, leadership and character, Robert E. Lee was selected by the College of Electors in the year 1900, the first year that the Hall of Fame came into existence. Field Marshall Viscount Wolseley, commander in chief of the British Army, said:

The fame of Stonewall Jackson is no longer the exclusive property of Virginia and the South; it has become the birthright of every man privileged to call himself an American.

The great military leader, Earl Frederick S. R. Roberts, said:

In my opinion, Stonewall Jackson was one of the greatest natural military geniuses the world ever saw. I will go even further than that. As a campaigner in the field, he never

had a superior. In some respects, I doubt whether he ever had an equal.

Von Moltke, the German commander in chief who crushed France in 1870, said that Jackson's valley campaign was without a rival in the world's history.

All of these great military experts had a very high regard also for the ability of Robert E. Lee. The college of electors which selects great Americans for the Hall of Fame consists of approximately 100 American men and women of distinction, representing every State of the union and many different professions. The present College of Electors very properly selected Stonewall Jackson to join his chief, Robert E. Lee, in the immortal Hall of Fame.

At the superb ceremony yesterday in the Hall of Fame, I was particularly impressed with the West Point and VMI cadets who participated, and with General Garrison H. Davidson and General William H. Milton, Jr., superintendents of West Point and VMI, respectively. Secretary of the Army, Wilber M. Brucker, made the principal address and delivered an eloquent eulogy of Stonewall Jackson. President Eisenhower extended his greetings in a telegram. The following telegram from the greatest general of World War II, Douglas MacArthur, was read during the ceremony.

Perhaps the most prized message I ever received came from the famous historian, Douglas Southall Freeman, who wrote me at the close of my campaigns in the Southwest Pacific area of World War II: "the mantle of Robert E. Lee and Stonewall Jackson has now fallen on your shoulders." General Jackson was a complete master of the art of war. He used its two greatest elements, initiative and surprise, in unsurpassed applications. Swift and sure of attack, dogged and determined in defense, undismayed by adverse odds, he was the ideal battlefield commander. His fearless independence of character, his spirited presentation of his own views, however in conflict with those above him, can only serve as a model for every officer of high field responsibility. I take great pride in the memory of my three uncles who fought under his inspired leadership.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar Day. The Clerk will call the first bill on the calendar.

SETTLEMENT FOR CERTAIN INEQUITABLE LOSSES IN PAY SUSTAINED BY OFFICERS OF THE COMMISSIONED SERVICES

The Clerk called the bill (H. R. 293) to authorize settlement for certain inequitable losses in pay sustained by officers of the commissioned services under the emergency economy legislation, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FORD. Mr. Speaker, I ask unanimous consent that this bill be passed over without projudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

LIMITING PAYMENTS TO CERTAIN BENEFICIARIES OF CERTAIN VETERANS

The Clerk called the bill (H. R. 72) to amend section 21 of the World War Veterans' Act, 1924, to provide for the disposition of certain benefits which are unpaid at the death of the intended beneficiary.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, a rule having been granted on this bill, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

SUSPENDING APPLICATION OF CERTAIN FEDERAL LAWS WITH RESPECT TO PERSONNEL EMPLOYED BY THE HOUSE COMMITTEE ON WAYS AND MEANS

The Clerk called the resolution (H. J. Res. 230) to suspend the application of certain Federal laws with respect to personnel employed by the House Committee on Ways and Means in connection with the investigations ordered by H. Res. 104, 85th Congress.

The Clerk read the title of the resolution.

The SPEAKER. Is there objection to the present consideration of the resolution?

There being no objection, the Clerk read the resolution, as follows:

Resolved, etc., That service or employment of any person not presently employed by the Federal Government as an attorney, accountant, expert, or professional staff member in assisting the Committee on Ways and Means of the House of Representatives, or any duly authorized subcommittee thereof, in the investigations authorized by House Resolution 104, 85th Congress, shall not be considered as service or employment bringing such person within the provisions of section 281, 283, or 284 of title 18 of the United States Code, or of any other Federal law imposing restrictions, requirements, or penalties in relation to the employment of persons, the performance of services, or the payment or receipt of compensation in connection with any claim, proceeding, or matter involving the United States.

The resolution was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

RELINQUISHMENT OF OFFICE OF CHIEF JUDGE OF FEDERAL COURTS AT THE AGE OF 70

The Clerk called the bill (H. R. 985) to provide that chief judges of circuits and district courts shall cease to serve as such upon reaching the age of 70.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, at the request of my colleague, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

AUTHORIZING THE UNITED STATES TO DEFRAY THE COST OF ASSISTING THE KLAMATH TRIBE OF INDIANS

The Clerk called the bill (S. 469) to authorize the United States to defray the cost of assisting the Klamath Tribe of Indians to prepare for termination of Federal supervision, to defer sales of tribal property, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. CUNNINGHAM of Iowa. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

MEDAL OF HONOR TO THE UNKNOWN AMERICAN WHO LOST HIS LIFE IN THE KOREAN CONFLICT

The Clerk called the bill (H. R. 1214) to authorize the President to award the Medal of Honor to the unknown American who lost his life while serving overseas in the Armed Forces of the United States during the Korean conflict.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the President is hereby authorized and directed to award, in the name of the Congress, a Medal of Honor to the unknown American who lost his life while serving overseas in the Armed Forces of the United States during the Korean conflict, and who will lie buried in the Memorial Amphitheater of the National Cemetery at Arlington, Va., as authorized by the act of August 3, 1956, Public Law 975, 84th Congress.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

EQUIPMENT TO PROVIDE CERTAIN SERVICES TO THE BOY SCOUTS OF AMERICA

The Clerk called the bill (H. R. 6881) to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and provide certain services to the Boy Scouts of America for use at the Gold Rush '57 Jamboree of the Boy Scouts of America, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

DECLARING PORTION OF BACK COVE, PORTLAND, MAINE, TO BE NONNAVIGABLE WATER

The Clerk called the bill (H. R. 4511) to declare a certain portion of Back Cove, at Portland, Maine, to be nonnavigable water of the United States.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That (a) that portion of Back Cove, at Portland, Maine, lying southerly of a line across the 12-foot Federal project channel in Back Cove 2,500 feet upstream from the Tukey Bridge, to the head of Back Cove, is declared to be a nonnavigable water of the United States within the meaning of the Constitution and laws of the United States.

(b) That portion of the 12-foot Federal project channel in Back Cove lying southerly of a line across the channel 2,500 feet upstream from the Tukey Bridge, to the head of Back Cove, a distance of approximately 3,500 feet, is hereby abandoned.

(c) The right to alter, amend, or repeal this act is expressly reserved.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AMENDING SECTION 214 OF THE INTERSTATE COMMERCE ACT RELATING TO STOCK PAR VALUES

The Clerk called the bill (H. R. 3625) to amend section 214 of the Interstate Commerce Act, as amended, to prevent the use of arbitrary stock par values to evade Interstate Commerce Commission jurisdiction.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 214 of the Interstate Commerce Act, as amended (49 U. S. C. 314), is hereby further amended by—

(1) striking out "par value" wherever it appears in the first sentence of the first proviso and inserting in lieu thereof "principal amount"; and

(2) striking out the second sentence of the first proviso and inserting in lieu thereof the following: "In the case of capital stock having no par value, the principal amount thereof for the purpose of this section shall be the fair market value as of the date of its issue; and in the case of capital stock having par value, the principal amount for the purpose of this section shall be the fair market value as of the date of its issue, or the par value, whichever is the greater:".

With the following committee amendment:

Page 1, line 3, strike out all after the enacting clause, and insert "That section 214 of the Interstate Commerce Act, as amended (49 U. S. C. 314), is hereby further amended by—

"(1) striking out 'par value' wherever it appears in the proviso in the first sentence and inserting in lieu thereof 'value of capital stock or principal amount of indebtedness'; and

"(2) striking out that part of the second sentence which precedes the proviso and inserting in lieu thereof the following: 'In the case of capital stock having no par value, the value thereof for the purpose of this section shall be the fair market value as of the date of its issue; and in the case of capital stock having par value, the value for the purpose of this section shall be the fair market value as of the date of its issue, or the par value, whichever is the greater:'."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AMENDING THE MEDALS OF HONOR ACT

The Clerk called the bill (H. R. 5328) to amend the Medals of Honor Act to authorize awards for acts of heroism involving any motor vehicle subject to the motor carrier safety regulations of the Interstate Commerce Commission.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

Mr. HARRIS. Mr. Speaker, a similar bill has been passed in the Senate. I ask unanimous consent that the Senate bill (S. 1463) be considered at this time.

The Clerk read the title of the bill.

The SPEAKER. Is there objection?

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted, etc., That the Medals of Honor Act of February 23, 1905 (38 Stat. 743; 45 U. S. C., secs. 44–46) is amended as follows:

(1) By inserting between the word "commerce" and the colon preceding the proviso in section 1 thereof the words "or involving any motor vehicle on the public highways, roads, or streets of the United States,", and

(2) By changing section 3 thereof to read: "Appropriations for the Interstate Commerce Commission are hereby made available for carrying out the provisions of this act."

Mr. HARRIS. Mr. Speaker, I offer an amendment, which is at the Clerk's desk.

The Clerk read as follows:

Amendment offered by Mr. HARRIS: Page 1, line 9, immediately after the quotation mark, insert: "Sec. 3."

The amendment was agreed to.

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, the Medals of Honor Act—38 United States Statutes, page 743; volume 45, United States Code, sections 44 to 46—now provides for the award of Presidential bronze Medals of Honor, with suitable emblematic devices, to any persons who shall, by extreme daring, endanger their own lives in saving, or endeavoring to save, lives from any wreck, disaster, or grave accident, or in preventing, or endeavoring to prevent, such wreck, disaster, or grave accident, upon any railroad within the United States engaged in interstate commerce. This law was enacted on February 23, 1905, when there were practically no motor vehicles or highways in existence. Today we have over 65 million motor vehicles operating on 3½ million miles of public highways. Many acts of heroism are performed by persons in saving, or endeavoring to save, lives in serious accidents, or in preventing or endeavoring to prevent serious accidents on the Nation's highways, roads, and streets in which motor vehicles are involved. Yet, no Presidential awards may be made for such heroism.

H. R. 5328 recognizes the fact that acts of heroism, comparable to those involving railroads, are also performed by persons under similar circumstances involving motor vehicles, and should be similarly recognized and rewarded.

H. R. 5328, as reported by the Committee on Interstate and Foreign Commerce, would have limited the awards of medals of honor to those individuals who performed acts of heroism involving any motor vehicle subject to the motor carrier safety regulations of the Interstate Commerce Commission. There are, however, millions of motor vehicles which are not subject to the Commission's safety regulations, such as the motor vehicles of carriers operating wholly in intrastate commerce, and all private passenger motor vehicles.

The American trucking associations suggested that this bill be broadened to encompass any person who performs an act of heroism in connection with any wreck, disaster, or grave accident involving any motor vehicle on the public highways, roads, or streets of the United States, regardless of whether or not the vehicle is subject to the safety regulations of the Interstate Commerce Commission. The Commission has approved this amendment. The Senate adopted it. It is an excellent amendment and I am glad that the House has concurred in the Senate amendment.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H. R. 5328) was laid on the table.

EXCHANGE OF LAND BETWEEN THE UNITED STATES AND THE STATE OF CALIFORNIA

The Clerk called the bill (H. R. 787) to authorize the exchange of certain lands between the United States of America and the State of California, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object, I wonder if I could have the attention of some member of the committee. I note, Mr. Speaker, that no current value of the property with improvements is given, although it is intimated that that figure might be in the neighborhood of $500,000.

Can the gentleman advise me what the present current value of the property owned by the Government which may be transferred to California amounts to?

Mr. DURHAM. That is all relocated free of cost to the Government.

Mr. BYRNES of Wisconsin. My understanding is that this involved an exchange of two parcels of property. The parcel owned by the Federal Government at this time has a value of approximately $500,000 to $600,000, although the report is not clear as to whether that is the current value of the property. The value of the property owned by California is approximately $200,000.

If my information is correct that is a difference of something like $300,000. It would not sound to me as though that were a good exchange, and I am wondering what justification there is for it.

Mr. DURHAM. According to our information the State agreed to relocate Government-owned facilities, utilities, and improvements from the lands made available for tube and roadway purposes in accordance with Army requirements, and will be in my opinion worth more than at present to the Government because it will be new construction. The land we receive from the State of California has a value of $181,872. The land we agree to transfer to the State of California has a value of $173,870, and the exchange does not involve expenditure of Federal funds.

Mr. BYRNES of Wisconsin. There must be quite a little road building involved with a differential of $300,000.

Mr. DURHAM. The State of California agrees to relocate all Government property in accordance with the Army requirements.

Mr. BYRNES of Wisconsin. The only information I have is what is contained in the report, I may state to the gentleman, and all I am seeking is information with respect to it.

Mr. DURHAM. The gentleman from California [Mr. MILLER], a member of the committee and the gentleman who introduced the measure, is more familiar with the property and building than I am. Possibly he can answer the gentleman's question.

Mr. BYRNES of Wisconsin. Mr. Speaker, I ask unanimous consent that this bill be placed at the foot of today's calendar.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

CONVEYANCE OF LAND TO STATE OF WYOMING

The Clerk called the bill (H. R. 2515) to authorize the conveyance to the State of Wyoming of about 37.75 acres of land comprising a part of Francis E. Warren Air Force Base.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Air Force is authorized and directed to convey to the State of Wyoming, at the fair market value, all the right, title, and interest of the United States in and to about 37.75 acres of land comprising a part of Francis E. Warren Air Force Base, Wyo., and more particularly described as follows:

Beginning at a point which is 303.4 feet north 73 degrees 55 minutes west from monument No. 28; thence south 7 degrees 33 minutes west, 1,320 feet, more or less, to the point of 1 degree 54 minutes curve to the left, the radius of which is 3,015 feet; thence along said curve through an angle of 21 degrees 5 minutes, a distance of 1,110.0 feet, more or less, to a point on the old boundary of Francis E. Warren military reservation; thence north 89 degrees 48 minutes west, 660 feet, more or less, to a point on the present boundary of Francis E. Warren Air Force Base reservation; thence north 00 degrees 3 minutes east, 2,629 feet, more or less, to monument No. 27; thence south 73 degrees 55 minutes east, 813 feet, more or less, to the point of beginning. Said parcel of land containing 37.75 acres, more or less.

Monument No. 28 is located at a point 832.32 feet, north 73 degrees, 55 minutes west of point which is 2,224.38 feet, south 70 degrees, 09 minutes west of the east corner of section 24, township 14 north, range 67 west.

SEC. 2. The Secretary of the Air Force may include in the deed of conveyance authorized under this act such terms as he considers to be in the public interest.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

Mr. DURHAM. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk a similar Senate bill (S. 358) to authorize the conveyance to the State of Wyoming of about 37.75 acres of land comprising a part of Francis E. Warren Air Force Base, and that it be substituted for the House bill.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted, etc., That the Secretary of the Air Force is authorized and directed to convey to the State of Wyoming, at the fair market value, all the right, title, and interest of the United States in and to about 37.75 acres of land comprising a part of Francis E. Warren Air Force Base, Wyo., and more particularly described as follows:

Beginning at a point which is 303.4 feet north 73 degrees 55 minutes west from monument numbered 28, thence south 7 degrees 33 minutes west, 1,320.0 feet more or less, to the point of 1 degree 54 minutes curve to the left, the radius of which is 3,015.0 feet, thence along said curve through an angle of 21 degrees 05 minutes, a distance of 1,110.0 feet more or less, to a point on the old boundary of Francis E. Warren Military Reservation, thence north 89 degrees 48 minutes west, 660.0 feet more or less, to a point on the present boundary of Francis E. Warren Air Force Base Reservation, thence north 00 degrees 03 minutes east, 2,629.0 feet, more or less, to monument numbered 27, thence south 73 degrees 55 minutes east, 913.0 feet, more or less, to the point of beginning. Said parcel of land containing 37.75 acres, more or less.

Monument numbered 28 is located at a point 832.32 feet, north 73 degrees 55 minutes west of point which is 2,224.38 feet, south 70 degrees 9 minutes west of the east quarter corner of section 24, township 14 north, range 67 west.

SEC. 2. The Secretary of the Air Force may include in the deed of conveyance authorized under this act such terms as he considers to be in the public interest.

The bill was ordered to be read a third time, was read the third time and passed.

A motion to reconsider was laid on the table. The proceedings whereby the bill H. R. 2515 was passed were vacated and said bill laid on the table.

SUPPLIES AND SERVICES TO FOREIGN VESSELS AND AIRCRAFT

The Clerk called the bill (H. R. 5237) to authorize the Secretary of the Navy to furnish supplies and services to foreign vessels and aircraft, and for other purposes.

Mr. GROSS. Mr. Speaker, reserving the right to object, I wonder if we might have a brief explanation of what the bill does.

Mr. DURHAM. The purpose of this bill is to permit the Secretary of the Navy to furnish supplies to foreign naval vessels and military aircraft.

Mr. GROSS. What will it cost?

Mr. DURHAM. It is the same type of service we are now rendering here in America to the same vessels.

Under the present situation with our vessels operating all around the world it does not cost the Government anything. The Government is paid in full for this service; we charge them for it, and they pay us.

Mr. GROSS. There is no additional cost?

Mr. DURHAM. No additional cost to the Federal Government.

Mr. GROSS. And we are reimbursed in all cases, reimbursed in full?

Mr. DURHAM. We are reimbursed in all cases before we render the service or supply anything.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 7227 of title 10, United States Code, is amended to read as follows:

"§ 7227. Foreign naval vessels and aircraft: supplies and services

"(a) The Secretary of the Navy, under such regulations as he prescribes, may authorize any United States naval vessel or activity to furnish, on a reimbursable basis without advance of funds, to naval vessels and military aircraft of any foreign country which makes available comparable assistance—

"(1) supplies and services such as overhauling, repairs, and alterations, including the installation of equipment; and

"(2) miscellaneous supplies such as fuel, provisions, spare parts, and general stores.

"(b) The Secretary may authorize any United States naval activity to furnish on a reciprocal basis to foreign vessels or aircraft, without cost where such services are provided by Navy personnel or equipment without direct cost to the Navy, or on a reimbursable basis without advance of funds where direct costs to the Navy are involved—

"(1) routine port services such as pilotage, tugs, garbage removal, line handling, and utilities; and

"(2) routine airport services such as landing and takeoff assistance, use of runways, parking, and servicing.

"(c) Payments for supplies and services furnished under this section may be credited to current appropriations so as to be available for the same purpose as to appropriation initially charged."

SEC. 2. The analysis of chapter 631 of title 10, United States Code, is amended by striking out the item

"7227. Foreign naval vessels: supplies and services."

and inserting the following item in place thereof:

"7227. Foreign naval vessels and aircraft: supplies and services."

With the following committee amendment:

Page 2, line 21, strike out the word "to" and insert the word "the."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

EXCHANGE OF LANDS BETWEEN UNITED STATES AND PUERTO RICO

The Clerk called the bill (H. R. 3246) to authorize the exchange of lands at the United States Naval Station, San Juan, Puerto Rico, between the Commonwealth of Puerto Rico and the United States of America.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Navy is hereby authorized to convey to the Commonwealth of Puerto Rico, under such terms and conditions as he may deem proper, all right, title, and interest of the United States in and to—

(a) An irregularly shaped parcel of land containing 3.18 acres as delineated and shown in red on the 10th Naval District, San Juan, Puerto Rico district public works office drawing No. 2368, revised November 2, 1954, and entitled, "United States Naval Station, San Juan, Puerto Rico, Proposed Entrance Layout and Land Exchange with Commonwealth of Puerto Rico," being on file in the Department of the Navy, and

(b) Three irregularly shaped parcels of land containing 2.31 acres, twenty-five one-hundredths acre, and one one-hundredth acre, respectively, as delineated and shown in yellow on the said district public works office drawing, and comprising a part of the area conveyed to the United States by the people of Puerto Rico by deed dated November 7, 1939; in consideration of

(1) The relinquishment and quitclaim by the Commonwealth of all right, title, and interest it may have under the aforementioned deed dated November 7, 1939, in and to an irregularly shaped parcel of land containing 1.05 acres as delineated and shown in blue on said district public works office drawing, and

(2) The conveyance to the United States by the said Commonwealth of all of its right, title, and interest in and to an irregularly shaped parcel of land containing seven one-hundredths acres as delineated and shown in pink on said district public works office drawing: *Provided*, That the conveyance herein authorized shall not be consummated by the Secretary of the Navy unless and until the Commonwealth shall have provided, in a manner satisfactory to the Secretary of the Navy, or has borne the cost of so providing a new entrance to the United States Naval Station, San Juan, which in general will include construction of sidewalks and pavements, relocation of existing fences, sentry booth, provision of a parking area for vehicles of naval station personnel and construction of isles to channel traffic.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AMENDMENT TO PUBLIC LAW 472, 81ST CONGRESS RELATING TO NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS

The Clerk called the bill (H. R. 6744) to amend Public Law 472, 81st Congress, as amended, relative to the attendance of professional personnel of the National Advisory Committee for Aeronautics in graduate schools.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 6 of Public Law 472, 81st Congress, as amended by Public Law 352, 83d Congess, is amended to read "The total of the sums expended each year pursuant to this act shall not exceed 2 percent of the total salaries paid to NACA professional employees during the fiscal year."

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

IMPLEMENTING CONVENTION BETWEEN UNITED STATES AND NORWAY

The Clerk called House Joint Resolution 185 to implement the convention between the United States of America and Norway, which entered into force on November 9, 1948, for disposition of the claim against the Government of the United States of America asserted by the Government of Norway on behalf of Christoffer Hannevig.

There being no objection, the Clerk read the House Joint Resolution, as follows:

Whereas on March 28, 1940, a convention was entered into by the Government of the United States of America and the Government of Norway for the disposition of the claim of the Government of Norway on behalf of Christoffer Hannevig against the Government of the United States of America, the validity of which claim is denied by the Government of the United States of America; and

Whereas the convention was duly ratified and the respective instruments of ratification were duly exchanged on November 9, 1948, on which date the convention entered into force; and

Whereas, by said convention, provision was made for the exchange between the respective agents for the two Governments of certain pleadings and briefs as therein described and defined; and

Whereas, by said convention, it is provided that in the event that, after the exchange of such pleadings and briefs, the two Governments should be unable to agree upon a disposition of the claim, or any portions thereof, through diplomatic discussion, the claim shall be referred to the Court of Claims of the United States of America, for adjudication of said claim, or any unsettled portions thereof, by the said Court of Claims, and for appeal to and review by the Supreme Court of the United States of America, under and pursuant to the terms and conditions of said convention; and

Whereas the two Governments have been unable through such diplomatic discussion to agree upon a disposition of the claim: Therefore be it

Resolved, etc., That the United States Court of Claims shall hear and adjudicate the said claim under and pursuant to the terms and conditions of the said convention. The proceedings in the said court shall be initiated within 6 months after the approval of this resolution.

SEC. 2. Upon appeal by either the Government of the United States of America or the Government of Norway, or both, the Supreme Court of the United States of America shall, under and pursuant to the terms and conditions of the convention, review the decision of the United States Court of Claims.

The House joint resolution was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

STATE OF WASHINGTON

The Clerk called the bill (H. R. 2224) providing for payment to the State of Washington by the United States for the cost of replacing and relocating a portion of secondary highway of such State which was condemned and taken by the United States.

Mr. BYRNES of Wisconsin. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

MEAT PROMOTION PROGRAM

The Clerk called the bill (H. R. 7244) amending the Packers and Stockyards Act, 1921, to permit deductions for a self-help meat promotion program.

Mr. WEAVER. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

VILLAGE OF HIGHLAND FALLS, N. Y.

The Clerk called the bill (H. R. 1987) to provide for an additional payment of $165,000 to the village of Highland Falls, N. Y., toward the cost of the water filtration plant constructed by such village.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That, notwithstanding the second proviso of Public Law 627, 80th Congress, approved June 12, 1948 (62 Stat. 381), the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the village of Highland Falls, N. Y., the sum of $165,000. The payment of such sum shall be in full settlement of all claims of the village of Highland Falls, N. Y., against the United States for contribution toward the cost of the water filtration plant constructed by such village as a result of construction activities by the Department of the Army on the military reservation at West Point: *Provided*, That no part of the amount appropriated in this act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection

with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 1, line 8, strike out "$165,000" and insert "$40,000."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time and passed.

The title was amended to read as follows: "A bill to provide for an additional payment of $40,000 to the village of Highland Falls, N. Y., toward the cost of the water filtration plant constructed by such village."

A motion to reconsider was laid on the table.

AMENDING ACT OF MARCH 3, 1911, REMOVING RESTRICTIONS ON USE OF A PORTION OF SPRINGFIELD CONFEDERATE CEMETERY, SPRINGFIELD, MO.

The Clerk called the bill (H. R. 5687) to amend the act of March 3, 1911 (36 Stat. 1077), to remove restrictions on the use of a portion of the Springfield Confederate Cemetery, Springfield, Mo., and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

Mr. ENGLE. Mr. Speaker, I ask unanimous consent that the bill S. 1274, to amend the act of March 3, 1911 (36 Stat. 1077), to remove restrictions on the use of a portion of the Springfield Confederate Cemetery, Springfield, Mo., and for other purposes, an identical bill to the House bill, be considered in lieu of H. R. 5687.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from California?

There being no objection, the Clerk read the Senate bill, as follows:

Be it enacted, etc., That the condition contained in the first section of the act of March 3, 1911 (36 Stat. 1077), which requires that the land comprising the Confederate Cemetery at Springfield, Mo., be used only as a cemetery for the graves of men who were in the military or naval service of the Confederate States of America, is applicable only to the portion of that cemetery inside the walled enclosure where those graves are located. The portion of that cemetery outside of the walled enclosure shall be used as part of the Springfield National Cemetery.

The Senate bill was ordered to be read a third time, was read the third time, and passed. A motion to reconsider and a similar House bill (H. R. 5687) were laid on the table.

INCREASED MILEAGE AND SUBSISTENCE ALLOWANCES FOR JURORS

The Clerk called the bill (H. R. 3370) to amend section 1871 of title 28, United States Code, to increase the mileage and subsistence allowances of grand and petit jurors.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 1871 of title 28, United States Code, is amended to read as follows:

"§ 1871. Fees

"Grand and petit jurors in district courts or before United States commissioners shall receive the following fees, except as otherwise expressly provided by law:

"For actual attendance at the place of trial or hearing and for the time necessarily occupied in going to and from such place at the beginning and end of such service or at any time during the same, $7 per day, except that any juror required to attend more than 30 days in hearing 1 case may be paid in the discretion and upon the certification of the trial judge a per diem fee not exceeding $10 for each day in excess of 30 days he is required to hear such case.

"For the distance necessarily traveled to and from a juror's residence by the shortest practicable route in going to and returning from the place of service at the beginning and at the end of the term of service and for all additional necessary daily transportation expense, 10 cents per mile except that if daily travel appears impracticable, subsistence of $7 per day shall be allowed. Whenever in any case the jury is ordered to be kept together and not to separate, the cost of subsistence during such period shall be paid by the United States marshal upon the order of the court in lieu of the foregoing subsistence allowance.

"Jury fees and travel and subsistence allowances provided by this section shall be paid by the United States marshal on the certificate of the clerk of the court, and in the case of jury fees in excess of $7 per diem, when allowed as hereinabove provided, on the certificate of the trial judge."

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AMENDMENT TO BANKRUPTCY ACT AS TO NOTICES

The Clerk called the bill (H. R. 5811) to amend subdivision b of section 14—Discharges, when granted—of the Bankruptcy Act, as amended, and subdivision b of section 58—Notices—the Bankruptcy Act, as amended.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That subdivision b of section 14 of the Bankruptcy Act, as amended, is hereby amended to read as follows:

"SEC. 14b. After the filing fees required to be paid by this act have been paid in full the court shall make an order fixing a time for the filing of objections to the bankrupt's discharge which shall be not less than 30 days after the first date set for the first meeting of creditors. Notice of such order shall be given to all parties in interest as provided in section 58b of this act. If the examination of the bankrupt concerning his acts, conduct and property has not or will not be completed within the time fixed for the filing of objections to the discharge the court may, upon its own motion or upon motion of the receiver, trustee, a creditor, or any other party in interest or for other cause shown, extend the time for filing such objections. Upon the expiration of the time fixed in such order or of any extension of such time granted by the court, the court shall discharge the bankrupt if no objection has been filed; otherwise, the court shall hear such proofs and pleas as may be made in opposition to the discharge, by the trustee, creditors, the United States attorney, or such other attorney as the Attorney General may designate, at such time as will give the bankrupt and the objecting parties a reasonable opportunity to be fully heard."

SEC. 2. Subdivision b of section 58 of the Bankruptcy Act, as amended, is hereby amended to read as follows:

"b. The court shall give at least 30 days' notice by mail of the last day fixed by its order for the filing of objections to a bankrupt's discharge (1) to the creditors, in the manner prescribed in subdivision a of this section; (2) to the trustee, if any, and his attorney, if any, at their respective addresses as filed by them with the court; and (3) to the United States attorney of the judicial district wherein the proceeding is pending. The court shall also give at least 30 days' notice by mail of the time and place of a hearing upon objections to a bankrupt's discharge (1) to the bankrupt, at his last known address as appears in his petition, schedules, list of creditors, or statement of affairs, or, if no address so appears, to his last known address as furnished by the trustee or other party after inquiry; (2) to the bankrupt's attorney, if any, at his address as filed by him with the court; and (3) to the objecting parties and their attorneys, at their respective addresses as filed by them with the court."

Mr. KEATING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. KEATING. Mr. Speaker, H. R. 5811 is a bill recommended by the Judicial Conference of the United States to amend the Bankruptcy Act. Its purpose is to permit two notices now required in bankruptcy proceedings to be combined into one.

At present a 10-day notice of the first meeting of creditors, at which the bankrupt is examined, must be sent by the court to all interested parties. Not until the examination of the bankrupt has been completed can the court fix by order a last day for filing objections to the bankrupt's discharge. At that point, a second separate notice must be sent to all interested parties.

The amendment proposed by H. R. 5811 would permit these two notices to be combined into one in approximately 75 percent of ordinary bankruptcy cases. In such cases the notice of the first meeting of creditors would also state the last day for the filing of objections to the discharge of the bankrupt. Should the examination of the bankrupt continue beyond the day fixed for his discharge that date could be extended.

Mr. Speaker, I urge the enactment of H. R. 5811, not only because it would contribute to a more efficient procedure in the majority of bankrupt cases, but because it is bound to result in a saving of thousands of dollars year after year to the Federal Government. Aside from saving many hours of clerical work yearly, it is estimated that the saving in the cost of postage alone would amount to from $50,000 to $60,000 per year.

The bill was ordered to be engrossed and read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

AUTHORIZING AN EXCHANGE OF LAND BETWEEN THE UNITED STATES AND THE STATE OF CALIFORNIA

The SPEAKER. Is there objection to returning to Calendar No. 61 and to the consideration of the bill H. R. 787?

The Clerk read the title of the bill.

Mr. BYRNES of Wisconsin. Mr. Speaker, reserving the right to object, can the gentleman now advise me about this bill?

Mr. DURHAM. Looking at the figures here, it appears that the land value of the United States Government is $181,872. The approximate value of the land of the State of California given in return is $173,870. Those are the figures.

Mr. BYRNES of Wisconsin. But those are not the complete figures. There are improvements on the land that the Federal Government is transferring, according to the report, and that is all I have to go on, the value of the improvements is about $404,000.

Mr. DURHAM. As I recall, there were some old barracks or something built there. They have been there since World War II. As to the exact value I do not recall any figure being given to the committee.

Mr. BYRNES of Wisconsin. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

Mr. DURHAM. The State of California is paying the cost of the relocation. The Government is not spending any money.

Mr. BYRNES of Wisconsin. I am not trying to be unreasonable. There probably must be a reason, but I would like it shown someplace as to why we are exchanging something the total value of which is $600,000 for property that is worth not quite $200,000. I think there should be some explanation of why we are entering into that kind of a trade.

Mr. Speaker, I renew my request that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

AUTHORIZING THE SALE OR LOAN OF VESSELS TO FRIENDLY FOREIGN NATIONS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 250 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 6952) to authorize the transfer of naval vessels to friendly foreign countries. After general debate, which shall be confined to the bill and continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN] and yield myself such time as I may desire.

Mr. Speaker, House Resolution 250, which provides for the consideration of H. R. 6952, was unanimously reported, with amendments, from the Committee on Armed Forces.

The resolution provides for an open rule and 1 hour of general debate on the bill.

H. R. 6952 authorized the President to transfer by sale 4 ships and by loan 45 ships of the destroyer, escort, and submarine type from the reserve fleet to friendly foreign nations. Nineteen ships would go to the Republic of Germany, Greece, Netherlands, Norway, and Turkey; 21 ships will go to the Latin American countries—Argentina, Brazil, Chile, Colombia, Cuba, Peru, Uruguay, and Venezuela; Taiwan and Thailand in the Far East will receive 2 ships and 7 ships will be in a pool to be loaned to friendly nations in an emergency.

If the bill is enacted into law, formal agreements will be concluded by the State Department with the recipient foreign governments. The term of the loans will be 5 years with renewable clauses and will stipulate that the ships will be used in accordance with the conditions of the mutual defense assistance agreement.

The ships would be used by the recipient countries to maintain their own internal security, assist in the training of their naval forces and, in the event of an emergency, will be in the hands of reliable allies, manned and immediately available to be deployed to critical areas.

The cost of the measure will be about $89 million. However, some of this amount, as yet unknown, will be recovered by the United States under the reimbursable provisions of the Mutual Security Act.

The committee report complies with the Ramseyer rule and I urge the adoption of House Resolution 250 so the House may proceed to the consideration of this measure.

Mr. ALLEN of Illinois. Mr. Speaker, I agree with the gentleman from Missouri. There is no opposition to the rule.

I yield 10 minutes to the gentleman from Ohio [Mr. Bow] and ask unanimous consent that he be permitted to proceed out of order.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. BOW. Mr. Speaker, I take this time, and I appreciate the gentleman from Illinois [Mr. ALLEN], yielding to me for this purpose, to discuss with the House a matter that has come up under the Status of Forces Agreements. My colleagues know that I have been interested in this matter for some time, but I believe the case of Private Girard of Illinois should be brought to the attention of the House. I sincerely hope that the Committee of Foreign Affairs and the Committee on Armed Services will make an immediate investigation of this case.

Private Girard was stationed in Japan. He was on active duty and was sent as a guard on an American reservation to guard American property. They had been firing on the range in this reservation. The Japanese had been taking the empty cartridges from the reservation; they had been trespassers, and actually had been in theft of this material of the Government of the United States. Girard's duty was to guard this property. They came across this reservation, 8 or 10 of them, and took the property, and Girard fired a blank cartridge with a grenade at the end of the rifle. It hit a woman. She was killed. The Japanese demanded the right to try Girard first for homicide.

Now, remember, this was on an American reservation; the man was under orders as a guard. Had he not made an effort to protect the property of the United States, he would have been subject to court-martial for failure to do his duty. This young man, unfortunately, killed this Japanese woman.

Under the Status of Forces Agreement with Japan, which is not a treaty but an Executive agreement, a board made up of an American admiral and a member of the Japanese Ministry of Justice meets to determine whether this boy should be turned over to Japan for trial or not. After some long period of time and communications between Washington through the State Department and through the military, on last Thursday this American soldier, who had been on duty on an American reservation, protecting American property, was turned over to the Japanese for trial on a manslaughter charge. We have talked about the Status of Forces Agreements on this floor many times. On one occasion this House adopted an amendment asking that they be changed. But now we have had what we might have expected. We have given away our sovereignty. We have abandoned protection to these men. Now this boy, on American soil, on duty, has been turned over to be tried by the Japanese.

Mrs. ST. GEORGE. Mr. Speaker, would the gentleman yield?

Mr. BOW. I yield to the gentlewoman from New York.

Mrs. ST. GEORGE. Mr. Speaker, I want to commend the gentleman for bringing this very flagrant and outrageous case to the attention of the House of Representatives. I have always agreed with the gentleman in his fight against the Status of Forces Agreement. I realize that it is not a treaty.

This brings another matter to our attention at this time; that is, that they have gone much further even that the Status of Forces Treaties or Agreements contemplated. Here was a man who was acting, as I see it, under orders, who was protecting American property on Amer-

ican soil. Under our law and international law this soil was the soil of the United States of America. This is one of the most flagrant and outrageous incidents, and if this House does not go on record to do everything humanly possible to protect this man, it will be a sad day for the House of Representatives.

Mr. BOW. I thank the gentlewoman from New York.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from South Carolina, a member of the Committee on Armed Services.

Mr. RIVERS. Mr. Speaker, I might say to the gentleman that this morning I directed a wire to the Secretary of Defense congratulating him on his intercession to hold up turning over this boy to the hostile Japanese authorities. I am hopeful that it will do him some good.

I might say that I have a boy from my own district from whom his parents have not heard for many weeks. They read through the press that allegedly he had had an altercation with a Japanese taxi driver and the next thing they knew, through the medium of the newspapers or the radio, the boy had been tried by a Japanese court and sentenced to 5 years. It points up the unfortunate consequences of this status of forces agreement. It also points up that the leftwing press of Japan and the leftwing Communist element are stirring up these matters, and the State Department does not have sense enough to see it.

Mr. BOW. I thank the gentleman from South Carolina.

Mr. ADAIR. Mr. Speaker, would the gentleman yield?

Mr. BOW. I yield to the gentleman from Indiana, a member of the Committee on Foreign Affairs.

Mr. ADAIR. Mr. Speaker, I, too, would commend the gentleman from Ohio for bringing this matter to the attention of the House. When hearings were held upon the general question of the Status of Forces Agreement before the Committee on Foreign Affairs time after time witnesses pointed out to the committee that these agreements or this treaty only concerned people who were off duty and off the reservation. Here we have a case where, as the gentleman from Ohio has pointed out, a man was doing his duty, on a military reservation. This House and our Government have a duty to protect American servicemen abroad.

Mr. BOW. I thank the gentleman.

Mr. BAILEY. Mr. Speaker, would the gentleman yield?

Mr. BOW. I yield to the gentleman from West Virginia.

Mr. BAILEY. Mr. Speaker, I, too, want to join the gentleman from Ohio in bringing this matter to the attention of our colleagues in the House. I have in mind the efforts he has made over the past year or year and a half to get something done about this Status of Forces Agreement. I should like to say also that a constituent of mine from West Virginia is now serving 5 years in a Japanese prison for an offense for which he would have been sentenced to 30 or to 90 days by a court anywhere in this country.

Again let me laud the gentleman for his efforts.

Mr. BOW. I thank the gentleman from West Virginia.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Iowa.

Mr. GROSS. I join my colleagues in commending the gentleman and concur wholeheartedly with everything he has said in this respect. The gentleman will recall that he and I appeared before the Committee on Foreign Affairs in behalf of his legislation seeking to put an end to these reprehensible Status of Forces Agreements. If this soldier is delivered for trial before a Japanese court it will be as the gentlewoman from New York has said, a most outrageous and unthinkable proceeding.

Mr. DORN of South Carolina. Mr. Speaker, will the gentleman yield.

Mr. BOW. I yield.

Mr. DORN of South Carolina. I congratulate the distinguished gentleman from Ohio on his continuing fight for justice to the American servicemen who have been drafted and sent abroad. The gentleman is on the right track, and I hope he will be successful.

Mr. BOW. I thank the gentleman.

Mr. SMITH of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield.

Mr. SMITH of Wisconsin. I want to associate myself with the gentleman in the statement he has made. I have always supported the legislation he has been sponsoring in opposition to the Status of Forces Agreements.

The facts in this case seem to be somewhat in conflict. The story broke by an Associated Press dispatch last week stating that the American commander had ordered the surrender of this boy to the Japanese officials. Now the press says that the Secretary of Defense has issued a stop order on turning him over. Can the gentleman enlighten us as to the facts?

Mr. BOW. Yes. I can say to the gentleman that last week when this story broke, due to my interest in the Status of Forces Agreements I sent a wire immediately to Secretary Wilson. After he had received the wire he investigated and ordered that the boy not be turned over to the Japanese as of this time. However, Admiral Hubbard of the Commission has said that he will be turned over. Secretary Wilson has held that he is now at the United States military camp, he has not been turned over, and I hope he will not be turned over, that we will have the courage to defend an American soldier doing his duty.

Mr. SMITH of Wisconsin. I agree with the gentleman.

Mr. MASON. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from whose district this boy comes.

Mr. MASON. This young man is from my district. He comes from the county seat, 15 miles from where I live. I was responsible for getting the gentleman from Ohio [Mr. Bow] to present this matter to the House, because he knows all of the details, with which I am not familiar.

Did I correctly understand the gentleman to say that he has also notified the President of this?

Mr. BOW. I have notified the President but he has not yet replied.

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield.

Mrs. ROGERS of Massachusetts. Has the gentleman considered introducing a resolution? I think he could get it through by unanimous consent, if he would, and take care of this case at this moment.

Mr. BOW. I have had resolutions, I have had hearings, I have begged this House to do something to try to get something done, but I cannot get it on the floor. If the gentlewoman can tell me how we can get the resolution here to be acted on, I shall be delighted to bring it in.

Mrs. ROGERS of Massachusetts. I shall be glad to assist in the matter. I know that happens sometimes.

Mr. JUDD. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Minnesota.

Mr. JUDD. If our Armed Forces were to turn this soldier over to the Japanese, under circumstances such as the gentleman has described, namely, on duty and in uniform and on an American reservation, that woud be the surest way to get fast action on the gentleman's resolution, because such action would be in violation of everything we have been told in the Foreign Affairs Committee regarding the Status of Forces Agreements.

Mr. BOW. I agree with the gentleman.

Mr. JUDD. Those agreements apply only when the men are off duty and not in uniform. Therefore, if this action were taken, it would mean not so much a black mark against the Status of Forces Agreements as that somebody on our side is not following out the Status of Forces Agreements.

Mr. BOW. This man was not only on duty but his duty was to guard the property.

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Florida.

Mr. HALEY. I commend the gentleman on bringing this matter to the floor of the House. I think it is a most deplorable situation when we send American forces to foreign countries and then they are tried by civilian courts in those countries.

Mr. BOW. I thank the gentleman.

Mr. BYRNE of Illinois. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield.

Mr. BYRNE of Illinois. I would like to associate myself with the very able remarks of my colleague from Ohio. The facts as outlined by him indicate to me as a trial lawyer with 30 years' experience in the criminal courts that the important thing is to get a fair and impartial hearing. I think that is only to be had by keeping jurisdiction.

Mr. BOW. I thank the gentleman.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

AUTHORIZING TRANSFER OF NAVAL VESSELS TO FRIENDLY FOREIGN COUNTRIES

Mr. RIVERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 6952) to authorize the transfer of naval vessels to friendly foreign countries.

The SPEAKER. The question is on the motion offered by the gentleman from South Carolina.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 6952) to authorize the transfer of naval vessels to friendly foreign countries, with Mr. METCALF in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. RIVERS. Mr. Chairman, I yield myself 15 minutes.

Mr. Chairman, the bill H. R. 6952 will authorize the President to sell 3 destroyers and 1 submarine and to lend up to 45 destroyers, destroyer escorts and submarines to friendly foreign nations.

Mr. SMITH of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield.

Mr. SMITH of Wisconsin. I hesitate to interrupt the gentleman so early in his remarks, but I have been intrigued by the statement that the ships would go to friendly nations. Is there a definition in the bill as to friendly nations?

Mr. RIVERS. The nations are listed in the bill. I am going to read them and I am sure you will recognize that they are friendly.

This bill was transmitted to Congress by the Department of the Navy as part of the legislative program of the Department of Defense. The program contained in the bill has been approved by the Joint Chiefs of Staff and the Secretary of Defense, and the Bureau of the Bureau has advised that this proposal, as part of our military assistance program, is in accord with the program of the President.

The program provided by the bill contains the numbers and types of ships recommended for transfer to our allies in order that they may be able to perform their assigned war time tasks.

The vessels authorized to be sold or loaned by the bill would be distributed as follows: 19 ships to the Nato and European area for the following countries: Germany, Greece, Italy, the Netherlands, Norway, and Turkey—we have an amendment to include Spain; 21 ships to the Latin American area for the following countries: Argentina, Brazil, Chile, Colombia, Cuba, Peru, Uruguay, and Venezuela; 2 ships to the Far Eastern area for Taiwan and Thailand; and a pool of not more than 7 ships to be available to meet emergencies.

At this point I will be glad to explain what an emergency may be. Not too very long ago the Government of Nationalist China lost a ship. This pool would take care of an immediate emergency like that because they are doing their own work and it will relieve us of that responsibility. They want to have a pool to meet these exigencies and these emergencies.

The basic objective of the program contained in this bill is to reenforce and implement our world-wide policy of collective security. We have mutual defense treaties with 42 nations and commitments with 20 other nations—all overseas.

The nations of the Free World must retain control of the sea lanes if these collective security arrangements are to be effective. The major objective of any prospective enemy will be to isolate the United States from its friends and allies. They will try to cut our line of sea communications; supplies for our ships deployed overseas and for support of our allies must be transported by ship. Today over 99½ percent of these supplies go by sea.

I might mention right here, when we transfer these ships to these friendly nations, it relieves our Navy of work they are now doing. Hence it would be economically sound, because it is expensive for us to do this work ourselves and in their very front yards and the entrance to their homelands.

As our potential enemies increase their relative submarine and surface naval strength, the problem of insuring our continued control of the sealanes increases proportionately. The problem of insuring the delivery of the huge quantities of material which would be required in case of war continues to become more difficult.

Delivery of the men and materials required for modern war requires protection of our convoys, which would be opposed not only on the high seas but up to the very wharves where they will be unloaded. This requires strong harbor defenses, minesweeping, coastal antisubmarine escort, and local air defense in addition to effective control of the broad expanses of the oceans. The free nations of the world in defense of their local areas and approaches must be in a position to render maximum practicable assistance to our Navy.

The United States is the only nation which has the quantity and quality of seapower needed to control the high seas. Our balanced naval forces are capable of maintaining this control, and are deployed in strategic places to strike and restrike the enemy for an indefinite period of time. They rely mainly on mobile support forces for logistic supplies.

But, in harbors and ports, and in the waters adjacent to its homeland, each free nation must provide for itself, to the maximum practicable extent, the means for protection of shipping.

In addition, certain of our allies can perform other naval tasks which contribute to collective security. These are offensive mining, submarine warfare, and ocean escort.

The ships which the Navy proposes to sell or loan under the authority of this bill will assist selected foreign nations in the performance of these tasks. The ships which we will provide are combatant ships with excellent characteristics in consonance with our policy of providing effective weapons to our allies.

In this connection one of the results which will be achieved by this program is in improving the immediate readiness of vessels which are now lying idle in the Reserve Fleet. These ships will be manned, maintained and deployed in the waters of the recipient countries. In this respect we also achieve the advantage of increased dispersal of these units. This will reduce the concentration of ships in our Reserve Fleet berthing areas.

Another important aspect of the ship-loan program is the manner in which it extends United States influence throughout the world. The recipients of the ships tend to adopt United States Navy doctrines and standards of operation and maintenance. This is the result of the personnel training program which is carried out in conjunction with the rehabilitation and transfer of the ships. The training costs are small but the effects of this program are lasting and far-reaching. The training program in conjunction with the proposed transfer of ships proposed by this bill will affect approximately 450 officers and 7,000 enlisted men of European, Asiatic, and Latin American navies. Our past experience with these trainees is that they return home convinced of the superiority of our methods, equipment, and organization. Furthermore, their observance of our American way of life during the periods of leave and liberty has a lasting impression. Most of them become stanch friends of the United States. This is very important because these are the officers and men who will provide the leadership for their respective navies in future years.

The contemplated loans are in keeping with our national policy toward each of the countries who will receive the vessels. These countries have the available manpower and capabilities of operating the ships contemplated for transfer. In most cases the recipient country is able to afford the additional operational expenses involved. However, in those cases where a country is unable to undertake the additional expenditures, the Department of the Navy has determined that overriding military considerations warrant additional United States support.

Each of the loans will be the subject of a formal loan agreement with the recipient foreign government, and will be for a period of 5 years, with an option by the President to renew the loans for additional periods of 5 years.

The recipient navies will have the use of the equipment and spare parts aboard the ships at the time of delivery. Even though the ships may be placed under the recipient government's flag, the United States retains title to the vessels and possession of a ship cannot be relinquished to a third party without the consent of the United States. Furthermore, the United States may repossess any of these ships if its own emergency defense situation requires it. The loan agreements also require that the ship be returned at the expiration of the loan in the same condition as when loaned, excluding fair wear and tear. However, the recipient would not be liable for loss or damage through enemy action of the loaned vessel.

The Committee on Armed Services has reported out this bill unanimously and has indicated its concurrence with the objectives of the bill. Accordingly, I recommend that this bill be approved and passed by the House.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I shall be delighted to yield to my colleague from Massachusetts.

Mr. BATES. I want to commend the gentleman for the very convincing and comprehensive statement he has just made.

One of the most important aspects of H. R. 6952 from my point of view is the salutory effect its enactment will have on the shipbuilding industry and our mobilization potential.

The program of rehabilitating these ships which will be taken out of the reserve fleet will provide a substantive program of ship work for a period of about 3 years. The private shipbuilding industry has made remarkable improvement as a result of the current tanker shortage and other new construction of commercial and military vessels.

This ship rehabilitation program will do much to fill in the gaps in production schedules at naval shipyards throughout the country and help to maintain activity and employment at the Government yards at a high level.

Furthermore, our industrial mobilization base of manpower and equipment will be enforced through this work.

Even the reserve fleet will be favorably affected. Berthing and maintenance costs will be reduced by having these ships in operation and the ships themselves will be in operating condition, immediately available to us if our needs should so require.

Costs for the program, as a result of the activation charges being paid by many of the recipient countries, will only slightly bear on the national budget; it has been estimated that probably less than half the total cost of $89 million will have to be borne out of appropriated mutual security funds. I think that this is an extremely economical way for us to improve our mutual defense capabilities and to strengthen our own defenses.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I shall be glad to yield to the gentleman.

Mr. GROSS. Can the gentleman tell us something about the cost of the bill?

Mr. RIVERS. Certainly, if I can.

Mr. GROSS. At one point in the report under the heading "Fiscal Data" it says the cost will be $89 million. Under "Cost and Budget Data" in the same report it states that the transfer program will cost approximately $87 million. That is a difference of $2 million.

Mr. RIVERS. I understand the bill authorizes $89 million. That is the authorization. As a practical matter I do not think it will cost anywhere near that because the Defense Department and the Navy Department have assured the committee that wherever any recipient nation is able to pay for the expenses involved in the rehabilitation of these ships they will pay.

I think the cost will be much less than either $87 million or $89 million.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield.

Mr. VAN ZANDT. Section 3 of the bill reads as follows:

SEC. 3. All expenses involved in the activation, rehabilitation, and outfitting, including repairs, alterations, and logistic support, of vessels transferred under this act shall be charged to funds programed for the recipient government under the Mutual Security Act of 1954.

Mr. RIVERS. I may say to the gentleman that whatever expenses are attached will be paid by those nations able to pay.

Mr. GROSS. But it can cost $89 million.

Mr. RIVERS. That is the maximum.

Mr. GROSS. I do not quite understand the following language of section 3:

In the event that a loan is terminated by the United States prior to the expiration of the loan period, the Secretary of Defense may reimburse the recipient government on a pro rata basis for funds provided by it under the reimbursable provisions of the Mutual Security Act of 1954, as amended, in connection with the loan.

Will the gentleman explain?

Mr. RIVERS. That simply means that with respect to those countries who do pay for the costs of rehabilitating, if the ship is recalled by our Government we will, on a pro rata basis, return the funds which that foreign government had spent.

Mr. GROSS. Is there any information as to what countries are going to get the 3 destroyers and 1 submarine that will be purchased?

Mr. RIVERS. I would rather yield to the gentleman from Pennsylvania [Mr. VAN ZANDT] to answer that.

Mr. VAN ZANDT. I may say to the gentleman from South Carolina [Mr. RIVERS] I would be glad to give that to the gentleman privately.

Mr. GROSS. I am not insisting upon it. I was just wondering why, if certain countries can pay for these ships, why other countries cannot do likewise.

Mr. RIVERS. It is based solely on the ability to pay. I may say to the gentleman that this was very carefully screened by our Government, and they will insist that those countries that can pay for it must pay for it. We have that assurance. I may state to my distinguished friend from Iowa that we have been insisting on that. That is our assurance. I may also state that one of the recipient nations has paid for the rehabilitation of every ship it received. I know that of my own knowledge.

Mr. GROSS. I am not going to pursue the question further because, apparently, it is classified information, but I am wondering if any of them are going to India because I heard recently—I do not know whether it is true or not—that India has purchased an aircraft carrier from Great Britain at a reported price of $20 million. If India can buy ships from Great Britain or any other country, and we are giving ships to her under the terms of this bill, then there is something wrong. If they can buy them from Great Britain they can buy them from us.

Mr. RIVERS. I agree with the gentleman.

Mr. GROSS. Are any of these countries listed in the bill presently buying ships from Great Britain?

Mr. RIVERS. I do not know.

Mr. GROSS. That question was never asked when the bill was before the committee?

Mr. RIVERS. I do not know. India, however, is not included in this bill.

Mr. GROSS. Who is not?

Mr. RIVERS. India is not included in this bill.

Mr. GROSS. I see.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. Is it not true that it is very important to have their good will and that it is very necessary to have their help at a later time?

Mr. RIVERS. I should certainly say so. The gentlewoman from Massachusetts has raised an extremely important aspect of this whole problem. You have gone to the core of this bill as it affects our friends in the Free World. We as individuals all need friends. Our country needs friends as well. This bill will go far toward cementing friendship with these countries. The lady has shown her usual perception in making this very important point.

Mrs. ROGERS of Massachusetts. We should have their good will, and possibly their help.

Mr. RIVERS. Yes. These nations have been carefully screened. I might say to the gentlewoman from Massachusetts that these countries have demonstrated that they are friends of this country. There is no nation getting any of these ships that cannot operate them and who has not demonstrated their willingness to be on our side.

Mr. WHITENER. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman from North Carolina.

Mr. WHITENER. Are these ships for the most part coming from the inactive fleet?

Mr. RIVERS. Yes.

Mr. WHITENER. They are not in active service?

Mr. RIVERS. They are from the reserve fleet.

Mr. WHITENER. I want to commend the gentleman from South Carolina for his magnificent presentation of this matter.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman from Louisiana.

Mr. BROOKS of Louisiana. When the gentleman states that these come from the reserve fleet, it means that when they are disposed of we will not have the required maintenance cost in the future under the terms of this law.

Mr. RIVERS. That is right.

Mr. BROOKS of Louisiana. Mr. Chairman, I want to rise to compliment the gentleman for his fine presentation of this bill and for the fine work he is

doing as a member of the Committee on the Armed Services, especially with reference to the Navy portion of the work of that committee. He is always most attentive and interested in the Navy Department and in connection with this bill he worked hard and conscientiously on it so that he might be fully versed on all of its details and the intricate facts involved when the time came for the bill to be considered on the floor of the House. I again compliment him on his fine presentation.

Mr. RIVERS. I thank my distinguished colleague for his remarks.

Mr. WIER. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman from Minnesota.

Mr. WIER. Will the gentleman kindly tell me as to what agency of our Government this $89 million is going to be charged against? In my opinion, this is a part of the general overall defense bill and should be included in the arms bill.

Mr. RIVERS. It comes from the military defense assistance program. That is part of foreign aid, called military assistance.

Mr. WIER. This will increase the military budget by another $89 million?

Mr. RIVERS. No; much of this money has already been appropriated.

Mr. VAN ZANDT. Mr. Chairman, I yield myself 9 minutes.

Mr. SCOTT of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Pennsylvania.

Mr. SCOTT of Pennsylvania. I would like to ask the gentleman from Pennsylvania if the work which will be required in the rehabilitation of these vessels is to take place in American shipyards?

Mr. VAN ZANDT. That is true. The ships are in mothballs but they will be assigned to the various yards, and there prepared for transfer to the nations concerned.

Mr. SCOTT of Pennsylvania. So that these funds from the military defense assistance program will actually be a form of American aid in that they will keep American workmen employed in our naval and other shipyards, is that not true?

Mr. VAN ZANDT. That is true. In addition to the repair of these ships, we, will have the responsibility of training the crews, so that will be an additional expenditure on the part of the foreign governments that the naval yards and the people living in the vicinity of the naval yards will benefit from.

Mr. SCOTT of Pennsylvania. We have submarines and other vessels at the Philadelphia Navy Yard, too, and we have been very much concerned about keeping the level of employment above 10,000 in that yard in order not to lose through dispersion of skills the kind of trained hands and minds which otherwise would be lost, and I hope some portion of this program will be equitably allocated to the Philadelphia Navy Yard.

Mr. VAN ZANDT. The submarines which are in mothballs in the Philadelphia Navy Yard are involved in this program. They will be taken out of mothballs and overhauled at the Philadelphia Navy Yard, and in addition the crews would also be trained there for the submarines.

Mr. SCOTT of Pennsylvania. I know we count on the interest of the gentleman from Pennsylvania in seeing that our people continue to remain employed, and I thank the gentleman very much.

Mr. VAN ZANDT. I thank the gentleman.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. Do I understand that these ships are to be rehabilitated and reactivated in navy yards or in private shipyards, or in both?

Mr. VAN ZANDT. In both.

Mr. GROSS. The gentleman is a member, I believe, of the Joint Committee on Atomic Energy. Is there any possibility under this legislation that any of our atomic-powered ships can be turned over to a foreign government?

Mr. VAN ZANDT. Under the provisions of the Atomic Energy Act of 1954, it would not be possible to turn over any of our nuclear-powered ships to a foreign government, because there is a very definite limitation contained in that law against a transfer of nuclear material, and our naval ships contain nuclear material.

Mr. GROSS. But there is no prohibition in this legislation.

Mr. VAN ZANDT. It is unnecessary. We discussed it in committee, and we thought it would be unnecessary because it is already covered in another law.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Louisiana.

Mr. BROOKS of Louisiana. That was the specific point that I thought everybody was deeply interested in, and we were assured and reassured that such could not occur.

Mr. VAN ZANDT. The gentleman from Louisiana developed this point in committee and, as he mentioned, we were assured and reassured by spokesmen of the Navy Department that nuclear-powered ships were not involved in this legislation.

The assignment of the ships contemplated to be loaned under H. R. 6592 is part of our worldwide strategy. In particular, the loans to the NATO countries will serve to strengthen these allies in their assigned NATO missions. Antisubmarine warfare is a vital part of the military missions of each of these countries under the mutual defense organizations contemplated by NATO.

The lifeline to our European allies in time of war would be the bridge of ships which would supply the vital weapons, materials, and food which our allies would require.

Our potential enemies are well aware of this, and their war plans undoubtedly are based on the rapid destruction of our sea lines of communications. The largest submarine force the world has ever known in peacetime is poised to strike at this lifeline.

The program of ship loans set out in H. R. 6592 is designed to thwart this threat to our control of the oceans. Each of the countries to whom vessels will be loaned has an important assignment in the defense of its own adjacent ocean areas as well as a supporting mission in keeping the ocean lines of communication open. The ships which we intend to transfer, destroyers, destroyer escorts, and submarines, are all primarily suited for antisubmarine warfare and for training for antisubmarine warfare.

By supplying these ships to our allies, we effectively reduce the need for United States forces to perform many of the local antisubmarine warfare missions for these countries, and we also increase the overall readiness of the fleets of the Free World.

These ships, manned, operating and equipped with modern weapons in the hands of trusted allies, are far more valuable to our own war effort than the same ships would be lying idle, deteriorating slowly and becoming obsolete. Furthermore, we do not have the trained crews in peacetime for the operation of these vessels, and in time of war, months would be spent in organizing and training crews to man our reserve fleet vessels.

Our ability to reacquire these ships on short notice insures that they will be available if they are needed for our own military requirements.

You will notice that the bill permits a considerable amount of leeway in regard to the types and numbers of vessels which may be loaned in each of the areas set out in the bill, Europe, Latin America, and the Far East. In addition, there is a pool of seven destroyers, destroyer escorts, and submarines available for use to meet emergency needs of our allies.

This flexibility is needed for two reasons. First of all, as world conditions change from day to day the defense requirements of each of the countries listed in the bill are subject to change, and these changing needs can be met by assigning types or different numbers of vessels to them.

Secondly, many of these nations are operating with a minimum number of ships to meet urgent defense commitments. There is no reserve of vessels upon which they may draw. In the case of damage or loss of a vessel, the only way in which these defense commitments can be met is by either having the United States supply a vessel with crew to meet the commitment, or by rapidly transferring another vessel to the country. The latter is far the cheaper and more effective way of accomplishing this purpose.

From my own experience I can tell you that this program of ship loans is a valuable and effective part of our mutual-defense program. By supplying American ships, together with American training for the foreign crews which will man these ships, the United States is able to achieve a standard of training and equipment in foreign navies which supplements our own naval force and which exercises a far-reaching influence on the patterns of thought and motivation in these foreign navies.

Accordingly, it is my belief that this bill should be enacted by Congress as soon as possible and that Congress should continue to support this facet of

our mutual-security program. The purposes to be achieved by these ship loans and the effect of previous ship loans clearly demonstrate that for a relatively small expenditure of appropriated funds the navies of the Free World are greatly strengthened.

Mr. GROSS. Mr. Chairman, would the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. The British are reducing the size of their Navy. Does the gentleman know whether they are selling their ships to other countries? Can the gentleman inform me what the British are doing in this respect?

Mr. VAN ZANDT. The British made a very drastic decision after the Bermuda Conference, to put many of their ships in mothballs and to scrap others. In addition they are making ships available to members of the Commonwealth such as the Union of South Africa, Canada, and so forth. They are simply taking ships out of the Navy, ships that they have been operating, and transferring them to other Commonwealth navies. Whether Britain may be selling or disposing of some of her ships to other nations we do not know. If the ships are sold, I imagine they are disposed of in that manner because Britain no longer has any use for them.

Mr. GROSS. I hope we do not discover that we are giving ships to countries that are able to purchase warships from Great Britain. I hope we do not discover that to be true when and if we enact this bill.

I should like to ask the gentleman a question about the pool of 7 ships that may be allotted anywhere in the world by the President.

Mr. VAN ZANDT. I think the gentleman is mistaken when he makes the statement that they may be allotted anywhere in the world by the President. They may be allotted only to those countries listed on page 1 of the committee report which accompanies this bill.

Mr. GROSS. Only to those countries?

Mr. VAN ZANDT. Only to those countries.

Mr. GROSS. Let us assume that the authority is limited to that. Is that a constant pool or does the pool diminish as a ship is allocated?

Mr. VAN ZANDT. The pool diminishes as the ships are allocated.

Mr. GROSS. That is not a constant pool over the length of the bill?

Mr. VAN ZANDT. It is not.

Mr. GROSS. You provide in this bill that these ship loans are renewable at the discretion of the President after a period of 5 years? Is that correct?

Mr. VAN ZANDT. That is correct, but before any additional ships can be loaned or disposed of by the Navy, the Navy must come to the House and Senate Armed Service Committees and ask for approval.

Mr. GROSS. The gentleman has talked about changing conditions, and I am sure he is correct in that. I am wondering if conditions might not change at the end of the 5 years so that the Congress would want to take another look at this loan program that is being offered here today. I wonder what the gentleman would think of an amendment to provide that we come back at the end of 5 years and look over this loan program again, rather than leave it discretionary with any President—I am not speaking of any one President, but any President—to renew it.

Mr. VAN ZANDT. In reply to the gentleman may I say that we have annually before us as a committee a ship construction program. In the course of considering that program we always spend some time in looking at the Navy as a whole, especially from the standpoint of the number of ships they have in commission, and the number of ships they have in reserve. If we think for a moment we are depleting our reservoir of reserve ships to the point that we are jeopardizing the security of our Nation as it is provided for by the Navy, I can assure the gentleman we will stop this program.

Mr. GROSS. That is not the only consideration. There is no denying the fact that there is a dictator in Cuba. It is proposed here to give some kind of combat vessel to Cuba. Cuba has a dictator, and there are South American dictators. Until recently there has been one in Colombia. I doubt that Congress ought here today turn over to any President or to any one committee of Congress the renewing authority for legislation of this kind. I think in view of the gentleman's answer I will be inclined to offer an amendment that the Armed Services Committee come back to Congress at the end of 5 years to renew this program.

Mr. VAN ZANDT. The gentlman has put the question to the gentleman from Pennsylvania as to whether or not he would support an amendment that would limit the loans under this bill to 5 years. I should like to refer that inquiry to the gentleman from South Carolina, who is handling this bill on the floor for the committee.

Mr. RIVERS. I would say that if the Congress wants to limit this to 5 years and come back to the Congress in 5 years, I feel certain I personally would not object to it. I cannot see any real harm in it.

Mr. VAN ZANDT. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. HOFFMAN].

Mr. HOFFMAN. Mr. Chairman, on page 2 of the committee report, in the fourth paragraph, appear these words:

> The proposal is designed to assist this country in carrying out its responsibilities in the North Atlantic Treaty area, the Far East, and in South and Central America.

May I ask whoever has charge of the bill or wishes to answer just what is meant by "responsibilities." Are those treaty obligations? Are they hard and fast responsibilities or commitments, or what are they?

Mr. RIVERS. Is the gentleman asking me?

Mr. HOFFMAN. I am asking anybody who wants to answer or who knows anything about it.

Mr. RIVERS. If the gentleman is asking me, I will attempt to answer it. I will be very glad to try to answer it. What line is that?

Mr. HOFFMAN. That is on page 2, the 2d line of the 4th paragraph—responsibilities. I am asking if that is a direct commitment or a treaty or just what it does mean.

Mr. RIVERS. As I said in my opening statement, we have treaties and agreements with 42 nations and agreements with 20 other nations and also the NATO countries. The agreements outline the responsibilities. All agreements carry responsibilities.

Mr. HOFFMAN. Of course, I know that we have treaties. I guess everyone in the House knows that. But, just what are these responsibilities? Have we by some treaty agreed to give these vessels or some vessels to some other nation?

Mr. RIVERS. We have not agreed to give these people any ships. That is why they are listed in this bill.

Mr. HOFFMAN. What do we agree to do?

Mr. RIVERS. I do not know specifically what the treaties contain.

Mr. HOFFMAN. What we are doing, if I understand this correctly, is that we are transferring or making it possible to transfer 19 ships—or not to exceed that, and an additional 21 ships.

Mr. GROSS. Mr. Chairman, if the gentleman will yield, it is about 49 ships—47 or 49.

Mr. HOFFMAN. I thank the gentleman from Iowa. He always makes a study of these bills. I do not know how he does it, but he seems to have some idea of what is in them. As I understand it, the gentleman in charge of the bill does not know about these responsibilities.

Mr. RIVERS. The gentleman in charge of the bill cannot tell you what is in the treaties. The treaties are available to all people including the gentleman from Michigan.

Mr. HOFFMAN. What the gentleman's answer amounts to is that the people in charge of this bill do not know what our obligations or responsibilities are except that there are—how many did the gentleman from Iowa say—49 vessels?

Mr. RIVERS. I say to the gentleman from Michigan that with the NATO countries and all of those countries we have agreements for a unified and collective security philosophy.

Mr. HOFFMAN. Yes, that is a broad general agreement. But, as I understand it, nothing is spelled out in it. We just agree to go and assist any one of those countries that may become involved anywhere.

Mr. RIVERS. That is my understanding of NATO.

Mr. HOFFMAN. All right, but even though they are not included, we now propose to give these 49 vessels to these countries; is that right?

Mr. RIVERS. To sweep their own front yards and their approaches to their countries and to relieve us of the things we are now doing. We are now doing this very work. We want to be relieved of the job that we are now doing. That is what we are doing to let these people do their own work. That is the theory and philosophy behind it. It helps us more than anybody else.

Mr. HOFFMAN. Here in the first paragraph, the very first words are:

> Many requests for United States ships have been received since World War II from foreign countries and each has been carefully assessed in the light of individual country needs.

There is a flat statement that the committee has figured out just how many of these ships each nation should have. Where can I find—where can any Member of the House find, the reasons why, for example, any of these countries named here—especially the latter group including Cuba, Peru, Uruguay, and those in South America—where can we find evidence which shows how many ships they need and why they need them?

Mr. RIVERS. If the gentleman will read the rest of the paragraph, it says: "United States mobilization requirements, worldwide demands on United States resources, and the availability of mutual defense assistance funds."

This thing was screened by the Joint Chiefs of Staff and many considerations—many considerations go into it—the need for our reserve fleet, our active fleet, our worldwide commitments and many, many other factors. I cannot stand here and name them or make any attempt to name them. I cannot catalog them for the gentleman.

Mr. HOFFMAN. That is the very question out of which my difficulty arises. Apparently, we have entered into some broad general agreement to help anybody and everybody in the world who comes over here who wants something. Can the gentleman tell me the approximate value of, for example, the 19 ships or the 21 ships named on the first page?

Mr. RIVERS. I do not know the value of them now. I can tell you what a destroyer costs to build or a destroyer escort costs to build, and I can tell the approximate cost of the submarine.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. VAN ZANDT. Mr. Chairman, I yield the gentleman one additional minute.

Mr. HOFFMAN. What it appears to be is an attempt to go along with some overall agreement under which this Congress can give away and apparently it is the intent to give away practically everything that we have including, if I might venture to say so, the hair on our heads if we had it and the toenails on our feet to some other nation and for no more reason than is set forth in this report. It is a general, overall, broad statement that these countries want aid, but no one except God Himself knows whether they will be friendly toward us or in the enemy's camp, should war come.

Mr. SPRINGER. Mr. Chairman, will the gentleman yield?

Mr. RIVERS. I yield.

Mr. SPRINGER. I did not hear the first half of the remarks of the gentleman from South Carolina. Perhaps he explained it then. I wanted to ask this question:

I find only 42 ships instead of 45 in adding this up. Is it 42 ships involved instead of 45?

Mr. RIVERS. It is 49.

Mr. SPRINGER. In adding them up, I get only 42.

Mr. RIVERS. This is what the report says:

> The ships to be loaned or sold are embodied in 3 categories which are as follows: 1 to be sold; 3 destroyers and 1 submarine to be loaned, and 30 destroyers and destroyer escorts and 8 submarines. Two of these submarines constitute renewal of an existing loan to the Netherlands; and a third to consist of a pool of seven ships to be loaned in the event of an emergency, all of which must be destroyers, destroyer escorts, or submarines. No other ships can be loaned under this authority.

Mr. SPRINGER. I find in adding up there are 19 to go to the European area, 21 to South America—that makes 40; and 2 to the Far East, making 42. Then there are 4 to be sold, and there are 7 that will be in the pool, but the report, as I understand it on page 1 says, "To authorize the transfer of naval vessels to friendly foreign countries"; to transfer by sale 4 ships and by loan 45 ships of the destroyer, escort, and submarine type. It seems to me there is a discrepancy.

Mr. RIVERS. That adds up to 49 ships, as I understand, 7 of which are in the pool.

Mr. SPRINGER. But there are not 45 ships on loan. There are only 42. I looked at the bill.

Mr. RIVERS. I understand it is 49, some of which are in the pool.

Mr. SPRINGER. On page 2 of the bill, I read as follows:

> The Federal Republic of Germany, Greece, Italy, The Netherlands, Norway and Turkey not to exceed 19 ships; Latin American area (Argentina, Brazil, Chile, Colombia, Cuba, Peru and Uruguay and Venezuela) not to exceed 21 ships; Far Eastern area (Taiwan, and Thailand not to exceed 2 ships).

That makes a total of 42 ships on loan. That is the discrepancy I am asking about.

Mr. RIVERS. And 7 in the pool make 49.

Mr. BROOKS of Louisiana. If you will add in the pool, that gives you 49. On page 1 the reference to 45 was stricken out. Originally the bill said "Not to exceed 45 in number." That has been stricken out.

Mr. SPRINGER. The report does not conform to the bill. Am I correct?

Mr. RIVERS. I think the report and the bill are in complete agreement. Let me read page 1 of the report: "and by loan 45 ships."

Mr. BROOKS of Louisiana. And then four by sale.

Mr. RIVERS. That is correct.

Mr. SPRINGER. That makes 49, but I find only 42 in here for loan, in the bill.

Mr. RIVERS. Plus seven in the pool.

Mr. SPRINGER. I am talking about on loan. You say "45" in the report, and it adds up to only 42.

Mr. RIVERS. I understand it adds up to 49.

Mr. VAN ZANDT. Will the gentleman yield?

Mr. RIVERS. I yield.

Mr. VAN ZANDT. I think if you add 3 more ships that will be sold outright, then you will have a total of 45.

Mr. SPRINGER. That does not conform to the report. If you add the bill up, it only comes to 42, and that is why I ask about page 1 of the report and page 2 of the bill.

Mr. RIVERS. I can understand the confusion that has arisen with respect to the number of ships. We had exactly the same difficulty during the consideration of the bill in committee. May I explain it this way There are a total of 49 ships, all involved will go to the countries named in section 1 of the bill. Of the 49, 4 will be sold, and 45 will be loaned. The difficulty arises from the fact that the four ships to be sold appear twice in the bill. It was a difficult concept to put into legislative language, but the total result is, as I say, 45 to be loaned and 4 to be sold.

The four ships to be sold are to be sold to one of the countries in group 2, the Latin American area. You will note that this area would receive 21 ships, 17 of these would be loaned, and 4 would be sold, so that when we add the 19 ships for the European area the 21 ships for the Latin American area, the 2 ships for the Far Eastern area and a pool of 7 ships to friendly nations in an emergency, we come up with a total of 49. But of these 49, 4 will be sold, out of the 21, as I said, which are designated for the Latin American area.

I can understand the difficulty which the bill is having in this respect because the members of the committee during the detailed consideration of the bill had exactly the same difficulty.

Mr. SPRINGER. I thank the gentleman for his explanation and I will say that it is the somewhat complex drafting of the bill which caused the confusion.

I think the difficulty in understanding this bill arises from category 4 where a pool of 7 ships is created which may be loaned to friendly nations in an emergency. This category apparently will be retained and may be used at the discretion of the President when he believes there is an emergency on.

Secondly, it appears to me that beginning page 1, line 6, with these words, "Lend or otherwise make available to friendly nations from the reserve fleet" applied only to the 42 ships contained in the bill from line 10, page 1, through line 8, page 2.

From reading the report I think you you can see from the questions which have been asked by other Members that their understanding was the same as mine; namely, that language applied only to the 42 ships set out from line 10, page 1, through line 8, page 2.

It was this apparent discrepancy between the bill and the report with which I was most concerned.

Mr. RIVERS. I am glad the gentleman from Illinois has raised this question because I think a bill that is complex in its drafting has through his questioning become clear in its true meaning to all Members on the floor.

Mr. Chairman, I yield 2 minutes to the gentleman from Louisiana [Mr. BROOKS].

Mr. BROOKS of Louisiana. Mr. Chairman, I want to clear up one point brought out by our colleague from Iowa

[Mr. GROSS] in reference to the length of time the bill lasts. Page 3, section 5, provides:

The authority of the President to transfer naval vessels under this act terminates on December 31, 1959.

That does not give him 5 years in which to do it. It gives him only to the end of 1959.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BROOKS of Louisiana. I yield to the gentleman from Iowa.

Mr. GROSS. What are you going to do with the language of section 2 reading:

But the President may, in his discretion, extend any such loan for additional periods of not more than 5 years.

What is meant by that?

Mr. BROOKS of Louisiana. That refers to action which the President has already taken. The authority of the President under the bill terminates, except he has the right to renew a loan previously made. The bill terminates by 1959, not in 5 years. I think it is a better termination date than 5 years.

Mr. GROSS. I think we should have the other language out, so there will be no conflict.

Mr. BROOKS of Louisiana. There is no conflict at all. It terminates as of December 31, 1959, under its own terms. After that the President cannot make any loans.

Mr. GROSS. Then why not take it out?

Mr. VAN ZANDT. Mr. Chairman, I have no further requests for time.

Mr. RIVERS. Mr. Chairman, I ask unanimous consent that the bill be considered as read and open for amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The bill is as follows:

Be it enacted, etc., That notwithstanding section 7307 of title 10, United States Code, or any other law, the President may sell 3 destroyers and 1 submarine, and he may lend, or otherwise make available to friendly foreign nations, on such terms and under such conditions as he deems appropriate, destroyers, destroyer escorts, and submarine, not to exceed 45 in number. The President may promulgate such rules and regulations as he deems necessary to carry out the provisions of this act.

SEC. 2. Loans under this act shall be for periods not exceeding 5 years, but the President may, in his discretion, extend any such loan for additional periods of not more than 5 years. All loans shall be made on the condition that they may be terminated at an earlier date if necessitated by the defense requirements of the United States.

SEC. 3. All expenses involved in the activation, rehabilitation, and outfitting, including repairs, alterations, and logistic support, of vessels transferred under this act shall be charged to funds programed for the recipient government under the Mutual Security Act of 1954, as amended, or to funds provided by the recipient government under the reimbursable provisions of that act. In the event that a loan is terminated by the United States prior to the expiration of the loan period, the Secretary of Defense may reimburse the recipient government on a pro rata basis for funds provided by it under the reimbursable provisions of the Mutual Security Act of 1954, as amended, in connection with the loan.

SEC. 4. No vessel may be made available under this act unless the Secretary of Defense, after consultation with the Joint Chiefs of Staff, determines that its transfer is in the best interests of the United States. The Secretary of Defense shall keep the Congress currently advised of all transfers under this act.

SEC. 5. The authority of the President to transfer naval vessels under this act terminates on December 31, 1959.

With the following committee amendments:

On page 1, line 4, following the word "sell" insert the following: "(not to exceed."

On page 1, line 5, following the word "submarine" insert a closing parenthesis ")", and strike the words "and he may."

On page 1, line 6, following the word "nations," insert the following: "from the Reserve Fleet."

On page 1, lines 8 and 9, strike the words "not to exceed 45 in number." and insert in lieu thereof the following: "as follows: (1) NATO and European area (the Federal Republic of Germany, Greece, Italy, the Netherlands, Norway, and Turkey) not to exceed 19 ships; (2) Latin American area (Argentina, Brazil, Chile, Colombia, Cuba, Peru, Uruguay, and Venezuela) not to exceed 21 ships; (3) far eastern area (Taiwan, and Thailand) not to exceed 2 ships; and (4) a pool of not to exceed 7 such ships to be loaned to friendly nations in an emergency.

The committee amendments were agreed to.

Mr. RIVERS. Mr. Chairman, I offer an amendment at the request of the gentleman from Pennsylvania [Mr. GAVIN]. Unfortunately, the gentleman from Pennsylvania is in his district today on business of great importance to him, and he asked me to express to the House his regret that he could not be present to offer this amendment himself.

The Clerk read as follows:

Amendment offered by Mr. RIVERS: Insert on page 2, line 2, after "Norway" a comma and the word "Spain."

Mr. RIVERS. Mr. Chairman, Mr. GAVIN, because of his necessary absence from the city, has asked that I have inserted in the RECORD the following remarks relating to Spain:

As a result of recent conversations with Spain, the Department of Defense, in conjunction with the Department of State, has determined that there is a requirement for naval aid to Spain.

The omission of the name of Spain from this bill was the result of the fact that negotiations with Spain and determinations in connection with these negotiations to be made by the Joint Chiefs of Staff and the National Security Council had not been concluded at the time this bill was heard by the Armed Services Committee. I am happy that this determination has been made and that this amendment to the bill can be offered at this time.

The development of a modern naval force by Spain will aid greatly in our mutual-defense arrangements for the European area. The geographical position of Spain will make her a very valuable ally in time of war for the basing of antisubmarine vessels. I hope that the vessels which may be provided to Spain under this bill will provide a substantial improvement in the antisubmarine capability in her navy.

Mr. Chairman, I might say that of all our allies there is no country that has rendered us more help than has Spain. We have bases there, and all of these have been given to us by the Government of Spain. We have spent less to get more in Spain, I guess, than most countries with whom we are dealing. Spain is now included in this bill, and the reason it was not included to begin with is because certain studies were going on which had not been concluded. They have become concluded now.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. SIKES. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SIKES: On page 2, line 4, after the word "Cuba" insert "Guatemala."

Mr. SIKES. Mr. Chairman, may I say that I have cleared this with the majority and the minority ranking members of the subcommittee, both of whom are experts in this field, and they have no objection to the amendment.

May I point out that this is permissive language; it is not mandatory, but it does make Guatemala eligible to share in the distribution of ships to Central and South America. It does not involve any additional ships. It makes that deserving nation eligible to share in the distribution which is proposed. It is my hope, however, that additional ships will be made available if it is found they are required for this purpose.

I have said many times, and I am sure my colleagues in the House will agree, that it is very important that we show our friendship to our sister republics of the Western Hemisphere and that we assist them where necessary to build and maintain a strong defense. I agree sincerely with the contention that the future of the United States rests in this hemisphere rather than in other parts of the world. I think it very obvious that Guatemala should be included in this eligibility list, because, if my memory serves me, Guatemala is the only nation where a Communist government has been thrown out. I would like for us to be sure that we show to the world our appreciation of Guatemala's brave struggle to remain a part of the democratic free world.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. BOW. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BOW: On page 3, insert a new section as follows:

"SEC. 6. No vessel or ship may be made available under this act unless the countries to which such vessels are to be transferred shall agree to waive criminal jurisdiction over troops of the United States stationed

within the country or territories of such nation."

Mr. RIVERS. Mr. Chairman, I make the point of order that the amendment is not germane. However, I shall be glad to reserve my point of order.

Mr. BOW. Mr. Chairman, as I submit this amendment today I assume the House knows that in a so-called friendly nation there is today an American soldier who has been turned over to the jurisdiction of that so-called friendly nation under the so-called Status of Forces Agreement. He was in uniform on an American reservation, on duty as a guard to protect American property. In his attempt to protect American property on an American reservation unfortunately a Japanese woman was killed. This American soldier in an American uniform, on American duty, it has now been agreed will be turned over to the Japanese authorities to be tried for manslaughter.

We have talked about the status of forces in the past and here today is a flagrant example. Are we going to protect American soldiers? Here we are again giving away or lending to friendly nations property worth millions of dollars, but we do not defend the American soldiers we send into these countries to help defend those nations.

Are we so interested in giving away or in lending property, in giving these opportunities to foreign nations, yet are not going to defend or protect the American servicemen abroad?

I say, Mr. Chairman, that I believe this amendment is in order. Section 4 provides that no vessel may be made available under this act unless the Secretary of Defense, after consultation with the Joint Chiefs of Staff, determines that its transfer is in the best interests of the United States. You say that the Joint Chiefs of Staff and the Secretary of Defense shall make a determination as to whether or not this is in the best interest of the United States. I think it is germane for the Congress to decide whether it is in the best interest of American servicemen as to whether or not criminal jurisdiction shall be waived before we turn these vessels over to these countries. I think the amendment is germane. This other provision would give these rights and limitations, so the amendment is germane.

I shall not belabor the subject. I think everyone knows the situation in Japan today, a so-called friendly nation, which is demanding the trial of an American soldier who was on duty.

Mr. Chairman, I hope sincerely that this amendment will be found to be in order, that my colleagues will today take this opportunity to serve notice on the world that situations such as exist in Japan today and in other foreign nations will not be tolerated by the United States, and that we intend to protect our American youth, our American servicemen, wherever they may be, that the flag will follow them, and that this Congress is interested not only in giving away property but in protecting the rights of those men.

Mr. RIVERS. Mr. Chairman, while I agree thoroughly with the sentiments of the gentleman, this bill deals only with the transfer of ships by the Department of the Navy. We cannot transgress on the jurisdiction of the Committee on Foreign Affairs in the realm of treaties and such matters. I agree with the gentleman from Minnesota [Mr. JUDD] who made it plain a while ago that they had the understanding with the gentleman from Iowa in the case of a man carrying out his duty, the State Department would defend him and that this would be breaking the faith with the gentleman from Ohio. This is purely and simply a transfer of ships, purely an agreement between the Navy Department, acting for the United States, and the recipient countries. While I agree with the gentleman's sentiments, I do not think it is in order at this time.

Mr. GROSS. Mr. Chairman, if I may be heard, the gentleman speaks of the responsibilities of the Committee on Foreign Affairs. Up to this point that committee has not recognized any responsibility in this field—as in many other fields, I may say.

The CHAIRMAN. Does the gentleman from Ohio desire to be heard?

Mr. BOW. Mr. Chairman, I again call the attention of the Chair to section 4 which gives the Secretary of Defense and the Joint Chiefs of Staff certain authority which does not go merely to the question of turning over these ships, but goes to the question of whether it is in the best interests of the Nation. I believe under the broad power contained there that this amendment is germane. This is another limitation against the transfer of ships. I do not know how else we can reach it. Of course, it is the question of a transfer of ships, but the transfer of ships under certain conditions. The conditions have been set forth by the committee and this is another condition under which these transfers may be made—namely, if they waive criminal jurisdiction.

Mr. RIVERS. Mr. Chairman, I must insist on my point of order.

The CHAIRMAN. The Chair is ready to rule. The gentleman from South Carolina makes a point of order against the amendment offered by the gentleman from Ohio [Mr. BOW] on the ground that the amendment is not germane. The Chair holds that the amendment consists of an unrelated contingency which is under the jurisdiction, as has been pointed out by the gentleman from South Carolina, of another committee of the House, namely, the Committee on Foreign Affairs. Therefore, the amendment is not germane and the point of order against it is sustained.

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 2, line 12, after the word "years", strike out the comma and insert a period and strike the remainder of line 12, all of line 13, and the first four words including the period in line 14.

Mr. RIVERS. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. RIVERS. Is the effect of this amendment to limit this to 5 years?

Mr. GROSS. The effect of this amendment is to eliminate Presidential authority to renew these loans of ships for an interminable period.

Mr. RIVERS. In other words, the effect of this amendment is to let him have this authority for 5 years and then to come back to the Congress?

Mr. GROSS. Yes, come back to the Congress for further scrutiny and possible renewal.

Mr. RIVERS. I agree with the gentleman. I accept the amendment.

Mr. GROSS. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa [Mr. GROSS].

The amendment was agreed to.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do so for the purpose of calling attention to the language on page 3 of the report which says that if a ship is damaged or lost through enemy action, a recipient country is exempt from liability for the damage or loss. My question is—what would happen for instance, if one of these ships should be sunk in one of the many revolutions in South America? What would happen then?

Mr. RIVERS. I do not think that would be regarded as an enemy action against the United States or in any joint venture involving the United States and our allies.

Mr. GROSS. Then could we collect for a ship or ships lost under such circstances?

Mr. RIVERS. I certainly hope that we could. Certainly I would be for it and I would try to make every effort to collect for it. We are not supposed to finance revolutions.

Mr. GROSS. Again that raises a question concerning the present revolution in Cuba. Suppose one or more of these ships that are supposed to go to Cuba is lost or damaged. There is a revolution in Cuba today. Would these ships be used in furtherance of Dictator Batista?

Mr. RIVERS. I would not want to say to the gentleman that these ships could not be used by any country to protect its own sovereignty.

Mr. GROSS. And further in the case of a revolution, would the ships be used to haul a dictator to some safe place of refuge?

Mr. RIVERS. I understand enemy action to mean a joint venture of our allies and ourselves for the common good. That is my understanding.

Mr. GROSS. I would hope that there would be some way to enforce the collection of our loss if one of these ships should be used in a revolution.

Mr. RIVERS. I think we should collect. I stand on my original statement.

Mr. GROSS. Mr. Chairman, I yield back the remainder of my time.

Mr. PELLY. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. PELLY. Mr. Chairman, I felt a strong inclination to offer an amendment

to H. R. 6952 to strike out "Chile" and "Peru" as Latin American nations authorized to receive naval vessels under this bill. This was owing to the fact that both Chile and Peru have failed to agree with the United States as to offshore boundary limits and our fishing fleet has been subjected to unlawful acts over a period of years as a result. In certain cases I believe the very vessels we have transferred to these countries have been used against our fishermen whose boats have been boarded and taken into port for fines, and American fishermen have been humiliated and imprisoned.

I realize, Mr. Chairman, that our State Department protests such actions on the high seas—and also I fully appreciate that the losses of these fishermen are reimbursed by our Government.

Ordinarily I would point up the international dispute by seeking to block legislation such as H. R. 6952, but it is a defense measure and I will limit myself to a strong expression to the effect that our historic fishing rights must be upheld, and I trust our Coast Guard will not have to protect American citizens and property against our own naval vessels in the hands of and under loan to foreign nations.

The CHAIRMAN. Under the rule, the Committee will rise.

Accordingly the Committee rose; and the Speaker having resumed the chair Mr. METCALF, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee had had under consideration the bill (H. R. 6952) to authorize the transfer of naval vessels to friendly countries; and, pursuant to House Resolution 250, he reported the same back to the House with sundry amendments adopted in Committee of the Whole.

(The previous question was ordered.)

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The Committee amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

ANNIVERSARY OF CUBAN INDEPENDENCE

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, today is the gladsome anniversary of Cuban independence, and to the government and people of the Republic of Cuba from this historic Chamber we send our warm congratulations and our affectionate greetings. The hearts of the people of our own land and the hearts of the people of the land we aided in the attainment of national sovereignty beat as one. No nations were ever closer interwoven by bonds of enduring sentiment.

On the occasion of my visit to Cuba in December of 1955, after an absence of 57 years, I felt the thrill of one who as a boy had dreamed of Cuba Libre, and had played a very humble part, and as a man grown into the sunset years had returned to find in the reality of the present a dream that had come true with a glorious framing exceeding the hope of the dreamer. Wherever the seeds of freedom are planted the very soil in which they are deposited takes on the hues of a rare radiance. Strange indeed if the soil of Cuba should not, in a very much magnified measure, be fertile for the growth of the seeds of freedom because for many, many long years, when the odds opposing were terrifying the sons and daughters of Cuba held firmly and uncompromisingly to their ideals of government for, of, and by the people with reverence for God and respect for the dignity of man.

I stood with reverence and in meditation at the tomb of José Martí, and the floral offering that, with bowed head, I placed at the tomb was my humble but very sincere tribute to the memory not only of this great poet and patriot but of all the men and women who, in the long roll of the years, had kept high the torch of Cuba Libre.

On the wall of my office in the House Office Building, facing me as I sit at my desk, is a large framed photograph of Gen. Emilio Nuñez, the 100th anniversary of whose birth I was privileged to mention on the occasion of the observance of Pan-American Day in this Chamber on April 14, 1955. He was one of the great men of his times, a leader in Cuba's fight for independence, and at all times a stout friend of the United States. His son is the permanent delegate of Cuba to the United Nations, and his grandson is an eminent physician in Washington.

When, 57 years later, President Batista pinned on me, much above what my service in Cuba as a boy just turned 16 had earned, the Order of Military Merit with distinction in white, I remarked:

> Mr. President, I have two sweethearts. First, my own country, the United States. Then, your country, Cuba. They are so much alike in their love of freedom and the respect of the dignity of man.

And when I left Cuba, and the Cuban Army paraded in honor of the boy who had returned to Cuba in the sunset years, I fell on my knees and in embrace of the national banners kissed first the flag of my country and then the flag of Cuba—the emblems of my two national sweethearts in the order of my affection.

The Cubans' titanic struggle for liberty was long and bloody. Our relations with the people of the island were very close and sympathetic during their dark hours. Between 1848 and 1851 the United States was the scene for the organization by Narciso Lopez of several expeditions to free Cuba from Spain's grip. The attempts, however, failed. Again in 1868 the island people took up arms, and for 10 years patriots valiantly struggled to free their people from alien rule. Even in defeat which befell them, the gallant Cuban people determined to fight on until liberty was won.

In that troubled and ravaged island a sensitive young man was growing up. From the terror and ashes emerged the great José Martí—poet, soldier, leader of men. Before he was 20 he suffered imprisonment and exile. Most of his adult life he was a poor wanderer. Where he set foot in the other American Republics, he carried the story of bleeding Cuba. For a decade our own New York City served Martí as a base from which he planned and organized the revolutionary movement. During that time he toiled unceasingly to win adherents to the cause of Cuba Libre. Sadly, the heroic Martí did not live to see his beloved country free, for he died in battle shortly after the rebellion which he so nobly inspired had begun.

Martí had made many friends in the United States for the Cuban cause. As news of the revolution reached the United States, our people were horrified at the cruel repression wreaked on the Cuban people by the Spanish army. When, in 1898, the United States battleship *Maine* blew up in Habana Harbor, the United States gladly joined the Cuban revolutionaries to drive imperial Spain from its last foothold in America.

It is fitting that we share a deep sense of thanksgiving and pride with our Cuban neighbors on the attainment of their independence. American blood as well as Cuban blood was shed that Martí's free Cuba might become a reality. Moreover, the United States in the Cuban affair set an example for the whole world. Instead of seizing the opportunity for self-aggrandizement, Congress in a joint resolution which sent our military power into the conflict, also declared:

> That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination when that is accomplished, to leave the government and control of the island to its people.

Cuba was a rich prize—the proverbial "Pearl of the Antilles." The United States, in an act rare for a powerful nation, followed the dictum of Congress. When the ravages of the long war years were cleaned up, the United States withdrew, leaving Cuba free to carve its own destiny. May 20, 1902, the day the lone-star flag of the newborn republic fluttered for the first time over free Cuba, is a proud page in United States history as well as that of Cuba.

The history of Cuban-American relations in subsequent years continues in the finest tradition of cooperation for mutual benefit. During World War II Cuba and the United States worked together to defend the Caribbean region.

But United States-Cuban relations are not based solely upon historical or strategic ties. The economic ties which bind us are very strong indeed. Last year our two-way trade with Cuba climbed to over

$968 million. Of this total, over a half-billion dollars consisted of Cuban purchases in the United States of articles from almost every State in the Union.

Last year Americans showed their interest and preference for Cuba in a dramatic fashion. Two hundred and sixty-one thousand Americans visited the charming island. They left behind them around $37 million, a sizable jump over the record $27 million of the previous year. Cubans traveled in the United States in great numbers also. Besides the economic harvest to the two countries, this interchange is the source of many direct personal contacts between Cubans and Americans and the basis for ever-growing understanding.

On this the 55th anniversary of the birth of the Cuban Republic, I am sure I speak for the Congress and for the people of the United States in sending greetings and best wishes to our friends in Cuba. May the next year bring them an ever increasing measure of peace and prosperity.

H. R. 6790: NATURAL GAS BILL, 1957

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DINGELL. Mr. Speaker, the natural gas bill of this year is not any different in its end effect from the gas bill of last year. Under either bill it is plain that the gas companies intend to and will raise prices all the traffic can bear. The only difference between the present bill and last year's is that this year's is sugar coated so it is much more difficult to fight. Any compromises that appear to be made in the bill are purely phony and are made by gas companies at the expense of the consumers who were neither adequately represented nor properly consulted. As a member of the House Interstate and Foreign Commerce Committee which is at present holding hearings on this measure, I am convinced that if the bill is passed a long and steady increase in gas prices to all consumers, both industrial and domestic, will result.

I wholeheartedly endorse the position taken by the governors of a number of States and expressed in a telegram sent May 13 to the Chairman of the House Interstate and Foreign Commerce Committee, the text of which has been released. The telegram reads:

> Renewing the opposition expressed last year by governors of 12 States to the enactment of the Harris-Fulbright bill that would have amended the Gas Act of 1938, we the undersigned governors hereby state our unalterable opposition to the new Harris bill, H. R. 6790, on which your committee is holding hearings that began May 7 and are scheduled to continue through May 17. H. R. 6790 of 1957 is even harder on the consumer than the Harris-Fulbright bill of 1955–56. It purports to provide for regulation but, by outlawing cost as a factor in determining prices and by substituting "reasonable market price" for "just and reasonable price," it would legalize unconscionable increases in gas producers' prices. Such increases would be passed all along the line to the ultimate consumer. The record plainly shows that "reasonable market price" will mean charging all that the market will bear. Additional hundreds of millions of dollars annually in increased natural gas bills will have to be paid by consumers, if effective Federal regulation of sales by gas producers in interstate commerce is ended by enactment of this bill. The effectiveness of regulation of local gas rates by our State regulatory commission would be largely nullified if field gas prices were exempted from effective Federal or State regulation. In the absence of effective Federal regulation, producer prices will continue to skyrocket. Increasing gas prices invite increases in already high prices for competitive fuels. We call upon the members of the House Interstate and Foreign Commerce Committee to reject H. R. 6790.

THE MUTUAL-SECURITY PROGRAM

The SPEAKER. Under previous order of the House, the gentleman from Illinois [Mr. McVEY] is recognized for 30 minutes.

Mr. McVEY. Mr. Speaker, we shall soon have before us the consideration of the mutual-security program, better known to the public as the foreign-aid spending program. The amount of aid extended to foreign countries since the inception of this program has reached staggering proportions. The sum extended, together with interest carrying charges, now amounts to approximately one-half of our Federal debt, on which we pay annual interest in excess of $7 billion.

The aid which we have extended to foreign governments during the period beginning with World War II and extending to June 30, 1956, amounts to $109,934,648,000. This total does not include investments in the International Bank for Reconstruction and Development, $635 million, and in the International Monetary Fund, $2,750 million. These investments should be added to the foreign aid underwritten by the United States Government:

Summary of the aid

Grants in aid and lend lease, July 1 to 1940, to June 30, 1956	$97,223,702,000
Loans, July 1, 1940, to June 30, 1956	17,056,369,000
Repayment of loans	4,345,423,000
Summary total	109,934,648,000

The foreign aid program began with the lend-lease shipments on July 1, 1940. The extension of these huge sums during World War II is understandable. We were engaged in an all-out war, and we felt the need of winning that war at any cost. In the postwar years, however, one appropriation has followed after another. The Congress seems to have found no stopping place. Not enough thought has been given to the damage that may be done to the economy of our own country. We have seen other countries, to which we have given aid, balance their budgets and reduce taxes while we go on our lively way of taxing, spending, and unbalancing the budgets much of the time.

We have loaded upon our people more of a tax burden than all of the nations of the free world put together; we have seen our budgets outgrow the total budgets of all the free nations of the world; we have seen our dollar decrease in purchasing power to about one-half of its former value. Let us look for a moment at the decline in the purchasing power of our dollar.

In 1939, the purchasing power of the American dollar, according to the Consumers Index, was a little more than 100 cents. It declined gradually during World War II until it reached a level of 78 cents. It did not stop there. It continued to decline during the postwar years until in January 1953, its purchasing power was only 52 cents. It remained stationary there for 3 years, and there was hope that the purchasing power of the dollar had at last been stabilized. It was a sad awakening when in 1956 it began to decline again. Let us look at the record:

	Cents
1956:	
June	51.5
July	51.1
August	51.2
September	51.1
October	50.8
November	50.8
December	50.7
1957:	
January	50.4
February	50.2
March	50.1

It will be noted there has been a gradual decline in the purchasing power of the dollar since early 1956. The question is where will this decline stop. Will it reach eventually the point where it will hardly buy a newspaper? This situation has been reached in France, Italy, and various countries of the world. The French franc which was once worth 20 cents in our money now exchanges at the rate of 347 for $1; the lira which was once worth 20 cents now exchanges at the rate of 625 for $1. Similar stories can be said for other currencies in various parts of the world. It was Lenin who said:

> The best way to promote a revolution in a country is for its currency to commit suicide.

It is well for us to ponder over this situation when we vote large expenditures of funds.

The belief held by some that our foreign-aid spending program is solely for the purpose of rebuilding the free nations of Europe and assisting them to rearm is erroneous. The fact of the matter is our foreign-aid spending program has encompassed most of the nations of the world. It is believed the taxpayers have a right to know where their money has gone, and with this in mind, the following information has been gathered from authoritative sources.

Lend-lease, July 1, 1945–June 30, 1956

Brazil	$3,616,000
Colombia	11,000
Dominican Republic	3,000
Guatemala	1,347,000
Mexico	553,000
Paraguay	2,000
Peru	237,000
Belgium	59,480,000

Lend-lease, July 1, 1945–June 30, 1956—Con.	
United Kingdom	$341,462,000
Australia	12,300,000
India	3,000,000
New Zealand	2,300,000
China (Formosa)	729,418,000
Czechoslovakia	2,000
France	372,441,000
Greece	5,956,000
Iran	750,000
Italy (civilian supplies)	134,444,000
Netherlands	64,344,000
Poland	92,000
Saudi Arabia	1,591,000
U. S. S. R	277,254,000
Yugoslavia	76,000
Unspecified	29,364,000
Total	2,039,490,000

Grants in aid, July 1, 1945–June 30, 1956	
Argentina	$198,000
Bolivia	49,576,000
Brazil	26,914,000
Chile	11,644,000
Colombia	9,496,000
Costa Rica	14,972,000
Cuba	1,705,000
Dominican Republic	3,223,000
Ecuador	9,710,000
El Salvador	5,675,000

Near East and Africa	1,746,502,000
South Asia [3]	
Others	402,612,000
Total	16,655,950,000
Economic-technical assistance	15,654,000

[3] Includes South Asia.

No one would challenge for one moment the motives behind the origin of this program. The nations of Europe had been devastated by the ravages of war. Their industrial potential had been largely destroyed. In the rebuilding process, our aid was badly needed. However this program began in 1948, supposedly for a 5-year period, but it has continued in force until the present day—notwithstanding the fact that many of the original recipients of aid have been balancing their budgets and reducing taxes. This situation has occurred in recent years when our own budget was running a deficit.

During these years, we have piled upon our people a taxload about equal to that of the free nations of the world combined, and a Federal debt almost twice as great as the other nations of the Free World put together. For many years, we have indulged in an unsound fiscal policy. During that time, we have piled up a Federal debt of approximately $275 billion—the greatest debt load that any nation has been called upon to bear since the dawn of history. We have seen the purchasing power of our dollar decline to a little more than 50 percent of its prewar value.

The decline of the American dollar has had a great impact upon the lives and fortunes of the American people. The value of life-insurance policies, time deposits, E, F, and G savings bonds has just about been cut in half. The misery caused the old-age pensioner and those, who with thrift, had saved something for their declining years is sad to relate.

The question today is, "Will the United States adopt a policy consistent with its resources and taxing power, or will it continue to distribute its largess to the entire world?"

In the light of facts here presented, it seems that, in addition to our efforts to make our Nation secure, we must make certain that we keep our economy strong and our currency sound. Would it not be better to think more of the homefront for a while and take a vacation from foreign-aid grants? We may be surprised how well other nations can get along without us.

Mr. BETTS. Mr. Speaker, will the gentleman yield?

Mr. McVEY. I yield to the gentleman from Ohio.

Mr. BETTS. I want to say to the gentleman that I always respect his judgment and opinion in matters of this kind. I think he has made a distinct contribution today.

Mr. McVEY. I thank the gentleman.

SCHOOL SHELTERS FOR AMERICAN SURVIVAL

The SPEAKER. Under previous order of the House, the gentleman from Oklahoma [Mr. EDMONDSON] is recognized for 45 minutes.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. EDMONDSON. Mr. Speaker, I want to talk today, for at least 45 minutes, about the life or death of America's children.

During the past few years, much more time than that has been spent on the floor of this House, in the discussion of matters affecting the health and well-being of our children.

We spent a number of hours, during the last session, talking about the problem of polio, and Government action to provide vaccine for this dread disease that has crippled so many of our boys and girls.

Many hours have also been spent in debating various ways to provide additional classrooms for children of school age.

I do not question either the wisdom or the need for these discussions and debates, and others like them, on this floor. No concern of Government is more farsighted, or sagacious, than a genuine concern for the health and safety of a nation's children.

I know in my heart that every Member of this House shares in this genuine concern, and devotes hours of study and thought to its problems.

Yet there is a field, Mr. Speaker, in which most of us in this body have too long been silent, inattentive, and irresolute.

With the exception of a farsighted few like the gentleman from California [Mr. HOLIFIELD], and the distinguished Member from Michigan [Mrs. GRIFFITHS], most of us have regarded the problem

of civil defense—and especially the problem of atomic shelters for our children—as a matter of only secondary responsibility, both for ourselves and for the Federal Government.

As a matter of fact, we have passed a law to that effect, placing primary responsibility for the entire matter of civil defense in State and local hands.

When I look at the RECORD for the 4 years and nearly 5 months that I have served in the Congress, I can find no glory and very little credit in my own position on this matter.

Nearly 3 years ago, I did take the floor to report to the House on an atomic raid drill which I had witnessed in one of Maryland's fine new schools, where two of our boys were then enrolled as students.

The sight of 6- and 7-year-old children, huddled on their knees with no protection but their own little desks, and within a few feet of tremendous glass windows surrounding the school, made an impression I have never been able to forget.

At that time, I asked this House:

In the name of God, Mr. Speaker, must we wait until A-bombs and H-bombs begin to fall before providing adequate and safe emergency shelters for our children? It is shocking evidence of national complacency in a time of great world peril, that construction is not already completed in every target city of our Nation.

The time to act on this national need is not next week, or tomorrow, but today.

That was in June of 1954, Mr. Speaker, and the Nation's school children are still waiting, on their knees and under their desks, for action by their Government's leaders.

I wish I could say that I have been hammering, at every opportunity and before every proper committee, for more attention by the Congress to this problem. The fact is, however, that I have been guilty for 3 years of the same inattention and irresolution that I have found in many colleagues.

There have been pressing problems on the part of business, on the part of our farmers, and from many other groups in the 2d Congressional District, and there has been the great disaster of a long drought, to account in part for the inattention.

There has also been the long and perhaps necessary debate on the possibility of evacuation as an answer to the dangers of atomic warfare, to account in part for the lack of resolution.

Only in recent months has it become crystal clear that the way of evacuation is the way of certain death for the great majority of our people and cannot stand alone as this Nation's answer and only alternative for atomic attack.

It was only last week, for example, that the Bureau of Public Roads advised the Federal Civil Defense Administration that road facilities alone made it impossible to move more than one-third of our city population to a point 15 miles from ground zero, with a warning time of 90 minutes before atomic attack.

Even with a warning time of 5½ hours, the Bureau reported there is absolutely no hope of exacuation of the total population in our larger cities, over present street and highway systems.

We have therefore come, Mr. Speaker, to the point which our colleague from California reached a good many months ago. On September 1, 1956, the American Legion heard these words from Congressman HOLIFIELD:

The key to an effective civil defense * * * is a nationwide system of group shelters. Adequate shelters * * * are the one means of protection against all the effects of nuclear explosions—blasts, heat and radiation * * *. Other measures, such as evacuation and industrial dispersion, are secondary or supplemental measures.

On February 7, 1957, this same California Congressman, who has indeed been America's Paul Revere in this atomic age, had these words and this question for the Women's Forum on National Security:

Unless we build a nationwide shelter system our other efforts, however energetic and well meaning, will come to little. * * * Casualties will be minimized only if shelters are near at hand—near enough to permit entry in a few minutes' time and equipped for 1 or 2 weeks of occupancy. * * * Our Nation has the resources for a shelter-building program. The question is not, can we afford to spend the money? We can. The question is, what will it cost in human life not to build the shelters?

And, on that point, our colleague from California also had the grim answer:

If nuclear war comes and we do not have these shelters, it is estimated that 75 to 100 million people could be destroyed. We should start now to prevent the possibility of such a catastrophe.

Mr. Speaker, these chilling pieces of evidence are not the offhand and hasty conclusions of a single Member of this body, on the basis of casual study. The distinguished gentleman from California has been chairman of a subcommittee of the Committee on Government Operations which has been studying this problem for many, many months. In my office library are seven impressive volumes of testimony presented before this subcommittee, during hearings which continued from January 31 to June 27 of 1956.

The report of that subcommittee, submitted to this body on July 27 of last year and entitled "Civil Defense for National Survival," is one of the most thoughtful and challenging legislative reports I have ever read. To the members of the Holifield subcommittee, including the distinguished EDWARD A. GARMATZ, of Maryland; JOE M. KILGORE, of Texas; DANTE B. FASCELL, of Florida; MARTHA W. GRIFFITHS, of Michigan; WILLIAM L. DAWSON, of Illinois; CLARE E. HOFFMAN, of Michigan; R. WALTER RIEHLMAN, of New York; and GLENARD P. LIPSCOMB, of California, I want to express by personal appreciation for the great contribution represented by these hearings and this report.

In the foreword of that report, we find these initial conclusions:

The catastrophe of nuclear war, we believe, could destroy civilization. Every effort therefore must be made to prevent such war. But until the foundations of universal peace are firmly established, other grave responsibilities must be discharged.

This Nation must build and maintain, without delay, every factor of strength to deter war. The two most powerful deterrents we possess today are the military power to strike back against an aggressor's blows and the military defenses within the Nation.

These military forces of offense and defense cannot guarantee that an aggressor will turn aside a mad impulse to strike. Neither can they wholly prevent the exposure of our people to death and destruction if such an attack comes.

Confronted with these hard facts of the contemporary world, we must strive to increase the deterrent factors against war. The subcommittee believes that a third powerful deterrent can be created—to strengthen our capacity to substantially withstand attack, our national resiliency, by insuring the continuity of civil government and the protection of civilian life.

On the need for protection of civilian life, there is no division of opinion among civil defense or military authorities. One military witness after another, before the Holifield subcommittee, told our colleagues that effective measures for protection of our civilian population were not only urgently needed, but would also operate to reduce greatly the actual possibility of an atomic attack upon our country.

The subcommittee established under rules of this House to inquire into this problem has concurred in these conclusions.

Their chairman has submitted a bill, H. R. 2125, as a necessary first step to fix responsibility for a shelter program and effective civil defense in the Federal Government, and to establish a new Department of Civil Defense to carry out the policies of our Government in this field.

I hope we shall soon have the opportunity to vote on this bill, and to end the question of responsibility for civil defense, for all time.

Mr. Speaker, I do not believe we can afford to delay consideration of this important question until the next session.

We are passing up a priceless opportunity to strengthen our Government's hand in a critical time of negotiations on a world front, if we do not assert Federal responsibility in this field. The legislation would not only testify to our Government's resolution, but also to its readiness, to give full backing to our Nation's friends among the free men of the world. The knowledge that we are dealing from civilian readiness, as well as military strength, would be a strong argument against aggressive action on the part of any hostile nation in the future.

We are also passing up another priceless opportunity to take advantage of the many building programs now going on, all over the country, and to incorporate in this new construction the facilities necessary to provide atomic and disaster shelter for our people.

Is there any reason why a hospital should be constructed today—from which evacuation would be physically impossible for many patients under any conditions—without building into that hospital the features necessary to give protection against disaster and bombing attack?

Is there any reason why a new Federal building, or post office, should not have these protective features?

In West Germany, according to testimony before the Holifield subcommittee, laws have been enacted to require that shelter facilities be included in every new house constructed in cities over 10,000 in population—and this has been in effect since April of 1956.

Are we in the United States less farsighted, or less concerned about the safety of our people, than are the lawmakers of the West German Republic?

I do not believe that we are, but I cannot look at the new school buildings now under construction throughout the land, without being sick at heart over the lack of foresight we are showing.

Beautiful showpieces of modern masonry and glass, the new schools of our Nation are built without any regard for protection against external blast, fire, and fallout radiation from nuclear weapons. In the words of Congressman HOLIFIELD:

> The present school buildings which exist in our country today would become horrible deathtraps in the event of nuclear warfare.

And, during the coming fiscal year, we are going to build somewhere between 50,000 and 65,000 additional classrooms in our country, to meet the needs of our expanding school population, whether we pass a bill for Federal aid to education or not. Unless something is done in this Congress, many of those additional classrooms will be additional deathtraps for America's boys and girls, in the event of nuclear war or natural disaster.

Mr. Speaker, this is an opportunity and a challenge which we cannot afford to defer for another session of this body.

We do not have the authority to say, as they have said in some countries, that no building can be constructed without containing an atomic shelter.

We do have the authority, and the means, to say that we are going to establish certain Federal incentives to encourage the construction of atomic shelters to protect our people, in new buildings being provided across the country.

The logical place to begin such a program is in the Nation's schools—the same place where the polio-vaccine program was begun, a few years ago.

It would be a simple matter to provide for a program of Federal incentive payments in connection with the school-construction program in each of the 48 States, to insure that a portion of the new classroom space would meet Federal civil-defense requirements as an atomic and disaster shelter.

One architect has estimated that a Federal contribution of about $25,000, in a school with 500 enrollment, would make it possible to add bomb-shelter facilities to a multipurpose room already being constructed as an auditorium, a visual education room, a cafeteria, or a study hall.

I have talked this possibility over with school people in my section of the country, and have found them highly enthusiastic. The possibilities of the shelter for protection against tornadoes, cyclones, and hurricanes, as well as in the event of atomic attack, make it a school addition of great utility and desirability.

There is also interest and enthusiasm among the architects, who share in the apprehension over safety features of some modern school construction, in the event of disaster or bombing attack.

One well-known school architect, Mr. T. Ewing Shelton, has made available drawings of a bomb shelter easily and conveniently placed in a school of the future—and more than 200 of Mr. Shelton's Maximlite schools have been built in this country, some of them in eastern Oklahoma, but all of them without the provision of the needed shelter.

Addition of this shelter, according to Congressman HOLIFIELD, would represent "a tremendous improvement over conventional school buildings."

Some kind of shelter must be provided in these new schools, Mr. Speaker, to provide the safety which our children are entitled to in these perilous times, and also to provide a rallying point for each community that surrounds the school itself.

In order to place the issue of school bomb shelters before the House, and to stand on its own feet or as a companion measure for the Holifield bill, H. R. 2125, I have today introduced a bill which provides a formula for Federal incentives to secure construction of school bomb shelters at the earliest possible date.

I would like to ask unanimous consent to insert a copy of this bill, and a summary of its provisions, at the conclusion of these remarks.

In a few words, the proposal would authorize the Federal Civil Defense Administrator to match any local funds for schoolroom construction, on a 50–50 basis up to $50,000 of Federal funds for a single schoolroom, provided the schoolroom being constructed met Federal Civil Defense specifications for an atomic shelter. A limit of $100,000 in Federal funds is set for payment to any single school, and the bill provides an authorization of $100 million for the first year's operation of the program.

In terms of our national need, this is only a modest beginning, but it should make possible the construction of at least 2,000 shelters capable of protecting at least 1 million American school children, in the first full year of construction.

For the sake of our entire school population, and the country itself, the program should be accelerated by subsequent legislation at the earliest possible date, to provide a substantial atomic shelter on the grounds of every school in America.

If we build these shelters, and build them in time, we may never see the terror of atomic war, and we may never see them used for any purpose that is not peaceful and constructive.

If we do not build them, then we continue to place our entire faith in a military force which has told our own committees that it is physically and militarily impossible to prevent atomic attack upon our civilian population.

We also continue to place a blind and unreasonable faith in the proposition that America, for some reason or other, is immune from actual attack upon our shores—or that no enemy today will dare to begin atomic war against us.

In this regard, Mr. Speaker, the American people, and we in the Congress as well, are very much in the position of a great ostrich, with his head firmly in the treacherous and deadly sand of forgetfulness.

It seems only yesterday, in some ways, that our Nation learned a bitter and a painful lesson about the danger of underestimating a potential enemy. It was a lesson which we swore at the time, in the blood of our fallen dead, that we would never forget—and yet a lesson which we apparently have already forgotten.

I know there is not a man or a woman, gathered today in this Chamber, who cannot remember the day of December 7, 1941.

Here in Washington, D. C., it was a clear and a beautiful day.

Early in the afternoon of that day—while the sun was still rising over Pearl Harbor—I walked into a small restaurant on Connecticut Avenue to get lunch.

So long as I live, I will never forget the amazement, the shock, and the disbelief on the faces on the men and women in that restaurant, when the first news came of the bombing of Pearl Harbor.

The idea that the Japanese Nation would dare to attack the Stars and Stripes, would dare to drop bombs on American citizens, would dare to fly over American soil on a mission of destruction, was almost beyond American comprehension.

That such a deadly attack would occur in the very midst of peaceful negotiations, in our own Capitol, made the brutal fact of attack even more difficult to accept and comprehend.

As the minutes and the hours of December 7 went by, however, we heard additional facts to challenge our comprehension. We heard that Japanese planes and submarines had inflicted terrible damage upon the military forces of the United States.

We heard that the proudest and strongest units of the Pacific Fleet had been stricken. We heard that America's Air Force in the Far East had suffered crushing losses. We heard that hundreds of American citizens—in uniform and out of uniform—had lost their lives.

We heard that our Nation—despite its great military forces and the unflinching bravery of its fighting men—had not been prepared for the devastation and destruction of a sneak attack by a ruthless enemy.

In the blood and disaster of Pearl Harbor, the American people learned a tragic and terrible lesson.

We learned, all over again, that eternal vigilance is the price of liberty.

We learned, more brutally than ever before in American history, that a Nation dealing with pirates must not be surprised by acts of piracy.

We learned, all over again, the message of the Holy Scripture: "Be sober, be vigilant; because your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour."

We learned that vigilance, in the dictionary sense and in a real sense, has meaning over and beyond watchfulness and caution, and also calls for provision for safety.

There was no vigilance at Pearl Harbor, in the sense of a real and watchful caution, coupled with provision for safety, and a full knowledge of the capability for evil and destruction in a bitter and determined enemy.

In the bitter days and weeks and years which followed Pearl Harbor, as the American people began the long and painful road from the valley of defeat to the heights of final victory, a new and a strong resolution was born in the hearts and minds of our citizens.

I believe that resolution can be stated in a simple phrase: "There shall never be another Pearl Harbor."

I do not question today, in the hearts and minds of all who listen to me here, the continued vitality of that resolution.

The determination to prevent another Pearl Harbor has led this Nation of ours to appropriate vast treasure, during the last 11 years, to support and maintain a mighty military organization.

We have spent billions of dollars to provide the fastest airplanes, the most powerful Navy, the most effective radar, a tremendous system of overseas bases and early warning devices.

We have created one of the greatest deterrents to aggressive attack the world has ever known, the Strategic Air Command, a coiled and ready fighting force capable of incredible retaliation from the air.

Patiently and bravely, the American people have paid the bills for these great forces of modern vigilance, in a ceaseless effort to prevent another Pearl Harbor.

If the wheels of military science had come to a stop on December 7, 1941, these remarks in 1957 would neither be necessary nor in order.

The state of American preparedness today is more than adequate to meet the dangers of 1941. From the standpoint of military readiness, and of military caution, we are stronger today than we were in 1941.

From another standpoint, however—from the standpoint of provision for safety—we are many times more vulnerable than we were in 1941.

The lesson of Pearl Harbor does not have real significance today, in this year of 1957, unless we add to that lesson another even more terrible lesson: the lesson of Hiroshima and Nagasaki.

In the flames and ashes of Hiroshima and Nagasaki, a new dimension was added to war in the 20th century. In the short time that it takes for a terrible explosion to send its cloud of dust and flesh into the air—the line of battle and danger was shifted from the Far Pacific to Main Street, United States of America.

Within 24 hours after the explosion at Nagasaki, the military leaders in every major capital were aware of a great new truth, the first axiom of atomic war: every man, woman, and child in a warring nation must now be considered available targets for the enemy.

The wheels of military science did not stop with the terrifying juggernaut of Hiroshima.

In a short time, as the knowledge of atomic science grew like Frankenstein's monster, we had atomic weapons many times as powerful as the bombs that shattered the Japanese people.

Then, on a dark day for all mankind, a new and even more terrible monster was created—the thermonuclear weapon, or hydrogen bomb.

In a single weapon, the men of war now have in their hands a destructive power and force greater than all the bombs which were dropped from the first hour to the last day of World War II.

With only 16 of these weapons, an Air Force general has been quoted, every large city in Europe can be wiped from the face of the earth.

In the same way, and with the same weapons, every city in America can also be wiped from the face of the earth—and the line of battle and danger therefore comes to pass from Main Street, U. S. A., to Elm Street, and Mulberry Street, and the street where you live, and street where I live.

It is for this reason, Mr. Speaker, that I speak today about a great and a terrible void in the state of preparedness of our Nation—a vacuum in our condition of vigilance which could mean a Pearl Harbor in every community of our beloved land, if something is not done about it.

Vigilance in 1957, I repeat once again, does not only mean military preparedness and caution, but it also means provision for safety.

In a world where women and children are now military targets, what provision for their safety has America made?

Can we face the world today, where another brink of war may be just beyond the horizon, and say with confidence: "There shall never be another Pearl Harbor"?

Can we look into the cold and implacable faces of the men who rule the Kremlin, and say with certainty: "These men will never dare to do what the leaders of Imperial Japan dared to do, in 1941"?

Can we read the bloody record of Poland, and Czechoslovakia, and Hungary, and Korea, and say with any assurance: "These men will never dare attack the Stars and Stripes"?

Mr. Speaker, we deal today, on the diplomatic front, with a group of international pirates every bit as dangerous, and unprincipled, and ruthless, as those we dealt with in 1941.

In the godless ideology of communism, we are confronted by a devil that also walks about the world "as a roaring lion, seeking whom he may devour."

If we fail to recognize this elemental fact, if we fail to measure and to comprehend the full capability for evil and destruction in Soviet communism, and if we fail to make full provision for safety against the danger of atomic attack—then we as legislators in this great hall are not the true sons of men and women who gave us the American heritage.

Let us, therefore, get on with the job of providing the vigilance that is the true price of America's precious liberty—and make provision for the safety of our people, in full recognition of the constitutional responsibility we all share.

The Constitution was enacted to "secure the common defense" of all the people, and to this Congress was given the responsibility of "all laws necessary and proper" to provide for that defense, and repel invasion.

We are late, Mr. Speaker, but with God's help we are not too late to live up to that responsibility.

For the sake of our children, and our neighbor's children, let us take the first step with provision for shelters in the Nation's schools, and let us take that step without further delay.

A bill to authorize Federal assistance to the States and local communities in financing a program of atomic and disaster shelters in the Nation's schools

Be it enacted, etc.,

SHORT TITLE

SECTION 1. This act may be cited as the "School Shelter Construction Act of 1957."

FINDINGS AND PURPOSE OF ACT

SEC. 2. The Congress finds that there is a serious and urgent need for atomic and disaster shelters in the Nation's schools requiring emergency action on the part of the Federal Government. It is the purpose of this act to provide a program for the solution of this problem by authorizing incentive payments to State educational agencies, for assistance on a grant basis to communities where this type of assistance can be most effectively utilized, as determined under priorities established by the State and approved by the Federal Civil Defense Administrator after consultation with the Secretary of Health, Education, and Welfare.

TITLE I—PAYMENTS TO STATE EDUCATIONAL AGENCIES

Authorization of appropriations

SEC. 101. There is hereby authorized to be appropriated for the fiscal year beginning July 1, 1957, not to exceed $100 million for making payments to State educational agencies under this title.

Allotments to States

SEC. 102. From the total funds appropriated for any fiscal year pursuant to section 101, the Administrator shall allot to each State an amount which bears the same ratio to the total funds so appropriated as the school-age population of the State bears to the total of the school-age population of all the States. As used in this section, the term "school-age population" means that part of the population which is between the ages of 5 and 17, both inclusive, as determined on the basis of the most recent estimates certified by the Secretary of Commerce.

State plans

SEC. 103. (a) Any State which desires to accept the benefits of this title shall submit to the Administrator through its State educational agency, a State plan which shall—

(1) provide that the State educational agency shall be the sole agency for administering the plan;

(2) set forth a program under which funds paid to the State under this title will be expended solely for school-shelter construction projects approved by the State educational agency;

(3) provide for such fiscal control and fund accounting procedures as may be necessary to assure proper disbursement of and accounting for Federal funds paid to the State under this title; and

(4) provide an opportunity for a hearing before the State educational agency to each local educational agency within the State which applies for approval of a construction project under this title.

(b) The Administrator shall approve any State plan and any modification thereof

which complies with the provisions of subsection (a), but shall not finally disapprove any State plan or modification thereof without first affording to the State educational agency reasonable notice and opportunity for a hearing.

(c) Whenever the Administrator after reasonable notice and opportunity for hearing to the State educational agency, finds that—

(1) the State plan approved under this section has been so changed that it no longer complies with the provisions of subsection (a), or

(2) in the administration of the plan there is a failure to comply substantially with any such provision, he shall make no further reservations under section 104 (b) for projects in the State, and no further payments for any project directly affected by such failure, until he is satisfied that there is no longer any such failure to comply, or if compliance is impossible, until the State repays or arranges for the repayment of Federal funds which have been diverted or improperly expended. After notice as provided in this subsection to any State, the Administrator may suspend further reservations of funds for projects in the State, pending the making of findings under this subsection.

Payments to States

SEC. 104. (a) Payments under this title shall be made to those State educational agencies which administer approved plans and which furnish statements to the Administrator in accordance with this section. Each such statement shall set forth one or more projects approved by the State educational agency under the plan, the estimated cost of each such project, and the amount which the State educational agency desires to be paid for each project out of the State's allotment.

(b) Payments under this title shall not exceed 50 percent of the construction cost of the schoolroom meeting requirements for a shelter as defined in this act, and shall not exceed the sum of $50,000 for a single room, nor the sum of $100,000 for a single school building.

(c) Except as provided in section 105, the Administrator shall issue to each State educational agency furnishing a statement in accordance with subsection (a), a commitment reserving, out of the State's allotment, for each project included in the statement, the amount requested by the State educational agency for that project. The Administrator shall change any amount so reserved upon request of the State educational agency and receipt of an amended statement from such agency, but only to the extent the change is not inconsistent with the other provisions of this title. The Administrator shall pay the amount reserved to the State educational agency, through the disbursing facilities of the Department of the Treasury, upon certification by the State educational agency that the financing of the remainder of the cost of construction of the project has been arranged. Funds so paid shall be used exclusively to meet the cost of constructing the project for which the amount was reserved.

(d) If any project for which one or more payments have been made under this section is abandoned, or is not completed within a reasonable period determined under regulations of the Administrator, the State to which such payments were made shall repay to the United States, for deposit in the Treasury of the United States as miscellaneous receipts, the amount of such payments or such lesser amount as may be reasonable under the circumstances (as determined by agreement of the parties or by action brought in the Federal district court for the district in which such project is located).

Matching by States and local communities

SEC. 105. The administrator may issue or modify a commitment under section 104 only if the amount to be reserved under the commitment, plus any amounts paid or to be paid under other commitments previously issued under this title to the same State educational agency, does not exceed one-half of the sum of (1) the cost of constructing the project in question and (2) the total cost of constructing the projects for which such other commitments have been issued, and if the State educational agency certifies that the remainder of the cost of constructing the project in question will be paid out of funds other than funds paid by the administrator under Public Law 815, 81st Congress, as amended. Until actual construction costs are available, cost determinations under this section shall be made on the basis of the estimates furnished under section 104 (a).

Judicial review

SEC. 106. (a) If any State is dissatisfied with the administrator's final action under section 103, such State may appeal to the United States district court for the district in which the capital of the State is located. The summons and notice of appeal may be served at any place in the United States. The administrator shall forthwith certify and file in the court the transcript of the proceedings and the record on which he based his action.

(b) The court shall have jurisdiction to affirm the action of the Adminstrator or to set it aside, in whole or in part. The judgment of the court shall be subject to review by the appropriate United States court of appeals and the Supreme Court of the United States, as provided in sections 1291 and 1254 of title 28 of the United States Code.

TITLE II—GENERAL PROVISIONS

Definitions

SEC. 201. For purposes of this act—

(1) The term "Administrator" means the (United States) Federal Civil Defense Administrator.

(2) The term "State" means a State, Alaska, Hawaii, Puerto Rico, Guam, or the Virgin Islands, except that for purposes of title I it also includes the District of Columbia, American Samoa, and the Canal Zone.

(3) The term "State educational agency" means the State board of education or other agency or officer primarily responsible for the State supervision of public elementary and secondary schools, or, if there is no such officer or agency, an officer or agency designated by the governor or by State law.

(4) The term "State school-financing agency" means the single agency, official, governmental entity, or instrumentality of a State, designated or established by the State for purposes of this act.

(5) The term "local educational agency" means a board of education or other legally constituted local school authority having administrative control and direction of free public education in a city, county, township, school district, or political subdivision in a State; and includes any State agency which directly operates and maintains public schools or provides assistance for institutions having as a primary purpose the education of children under 18. If a separate public authority has responsibility for the provision or maintenance of school facilities for any local education agency or the financing of the construction thereof, such term includes such other authority.

(6) The term "schoolroom," except as otherwise provided herein, means classrooms and related facilities such as visual education rooms, band rooms, cafeterias, auditoriums, workshops and laboratories (including initial equipment, machinery and utilities necessary or appropriate for school purposes), for education which is provided as elementary or secondary education, in the applicable State, at public expense and under public supervision and direction, or in any institution having as a primary purpose the education of children under 18, for which the State provides funds and recognizes eligibility for shelter construction; and interests in land (including site, excavation, grading and improvement) on which such facilities are constructed.

(7) The terms "constructing" and "construction" mean the preparation of drawings and specifications for school facilities; erecting, building, acquiring, altering, remodeling, improving, or extending school facilities; and the inspection and supervision of the construction of school facilities.

(8) The term "shelter" means a room so planned and constructed as to provide protection against external blast, fire, and fallout radiation from nuclear weapons, as well as protection from other known types of explosion, tornado, hurricane, cyclone, and windstorm, and meeting standards and specifications established by the Federal Civil Defense Administration for such construction.

Utilization of other agencies

SEC. 202. In administering the provisions of this act, the Administrator is authorized to utilize the services and facilities of any agency of the Federal Government and, without regard to section 3709, as amended, of the Revised Statutes, of any other public or nonprofit agency or institution, in accordance with agreements between the Administrator and the head thereof. Payment for such services and facilities shall be made in advance or by way of reimbursement as may be agreed upon by the Administrator and the head of the agency or institution concerned.

Appropriation for Administration

SEC. 203. There are hereby authorized to be appropriated for each fiscal year to the Federal Civil Defense Administration and Department of Health, Education, and Welfare such sums as may be necessary for the administration of this act.

Delegation of functions

SEC. 204. The Administrator may delegate to any officer or employee of the Federal Civil Defense Administration any of his functions under this act except the making of regulations.

Assurance against Federal interference in schools

SEC. 205. In the administration of this act, no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the personnel, curriculum, or program of instruction of any school or school system.

SUMMARY OF PROVISIONS OF SCHOOL SHELTER CONSTRUCTION ACT OF 1957

The bill recognizes the urgent need for immediate construction of atomic and disaster shelters in the Nation's schools, both for provision of safety for our children and as a deterrent to atomic warfare.

It authorizes an initial appropriation of $100 million in Federal funds as incentive payments to the States for construction of shelters in the Nation's schools, providing for 50-50 sharing of actual shelter costs, up to a maximum of $50,000 Federal participation in a single shelter, with a ceiling of $100,000 Federal contribution to a single school.

Shelters constructed under the act would provide protection from explosion, tornado, hurricane, cyclone, and windstorm, in addition to protection against external blast, fire, and fallout radiation from nuclear weapons, under standards established by the Federal Civil Defense Administration. Many additional school and community uses could be made of the shelters.

Federal interference with personnel, curriculum, or program of instruction of any school or school system is prohibited under the act.

The bill places in the States the authority to allocate the funds to schools within their boundaries, requiring the States to formulate plans subject to approval by the Federal Civil Defense Administrator, after consultation with the Secretary of Health, Education, and Welfare.

Primary objective of the bill is the early construction of needed shelter facilities, and the States are given wide latitude as to multipurpose uses of the shelters and eligibility of participating schools in the program.

1957 goal is at least 2,000 shelters capable of protecting 1 million American schoolchildren, in the first year of construction under the act.

While this is admittedly a modest start falling far short of the Nation's need, it is a start, recognizing immediate budgetary problems as well as the need for wider public support for a more realistic program.

Unless there is an early and substantial improvement in world conditions, the program should be expanded by subsequent legislation at the earliest possible date, to provide for at least 10,000 shelters a year with the widest possible geographic and strategic distribution.

Added to strongly maintained and balanced military forces, an adequate national shelter program offers our best hope that no enemy will dare to launch an atomic attack upon the United States.

Should this hope fail, the shelters could mean the vital difference between life and death for this Republic, and for the American people.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield to my distinguished colleague, the gentleman from California [Mr. HOLIFIELD].

Mr. HOLIFIELD. Mr. Speaker, I first want to compliment the gentleman from Oklahoma [Mr. EDMONDSON] for the thought that he has given to the subject of civil defense in our Nation. Secondly, I want to thank him for the kindly references he has made to the Subcommittee on Military Operations which has spent the better part of 18 months studying this problem. I also want to thank him for the several different times that he has appeared on the floor and talked on the subject of civilian defense. Sometimes I feel that we are living in an unreal world when we are spending some $35 billion to $40 billion a year in military offensive and defensive measures and, yet, we are ignoring the factor of nuclear attack on our people. The best testimony before our subcommittee from members of the Chiefs of Staff and other expert military people has been that it would be impossible to forestall a partial breakthrough of enemy bombers coming in with nuclear bombs against the populated centers of our Nation. It is true that we would knock down a certain percentage of those bombers, but a great percentage of them—over half of them, according to the expert testimony—would get through. This means then that notwithstanding the fact that we are spending some $40 billion a year in military expenditures, we are still unable to protect the people in our populated centers.

The big cities would be the target areas of the Nation, and the object of enemy attack by an enemy nation. If that be true, it would seem only logical then that we would turn to the problem which faces us, namely, the problem of preserving the lives of our people in case such an event should come to pass. To those who say that this will never occur, I can only say prayerfully that I hope it will never occur, but I would point out to them the fact that this Congress is annually authorizing expenditures on the basis of the possibility that an enemy might attack this country with nuclear weapons. So, if there is no possibility of us being stricken by enemy attack, then we are wasting $40 billion a year and if there is a possibility, then it seems to me we would be well repaid to use our efforts and our thought and our judgment to establish an element of protection for the lives of our people and our school children, which has so concerned the gentleman from Oklahoma in his address. Referring to this latter part of building at least new schools in such a way that the children will have a chance of survival, I was very much intrigued and interested by the sketches which the gentleman has here, the originals of which I have seen, and which a firm of architects has described as what they seem to think would be an answer or at least a partial answer to this problem.

Now, without passing complete approval on the sketches that we have before us, but in comparing them with the types of buildings which we have today, and in which our children are going to school, I think it would be the judgment of anyone who had studied this problem that these sketches which provide for underground shelters and underground schoolrooms or aboveground corridors covered with concrete and with a thickness of 3 feet of earth, would fulfill the requirements which the tests out in Nevada have, to a certain extent, made known to us as being required, if we are going to have protection from radiation. This type of shelter which they envisage would also protect the children from the blasts and heat of atomic hydrogen weapons, providing they were not near to what we call the ground zero point of explosion.

It is true that people in most any kind of a structure that would be immediately under the point of explosion would be casualties. It is also true that for a distance of a mile and a half or 2 miles from the point of explosion of even a 10-million-ton TNT bomb you would start gaining in the saving of lives. It is estimated by Atomic Energy Commissioner Dr. Libby, who appeared before our committee, that all life would be extinguished above ground for 10 to 14 miles from zero in the explosion of a 10-million-ton bomb. Shelters can be built so that we would start gaining lives from 1½ to 2 miles from point zero, and from there out to 12 miles and even far beyond that, because the fire and blast effects would die out, but you would still have the danger of radioactive fallout. Dr. Libby testified before our committee that in the test in the Pacific in which the Japanese fishermen were burned—and incidentally they were some 80 miles from the point of explosion—that there was an area of 7,000 square miles which was contaminated with deadly radioactive fallout. This would be a strip of territory some 70 miles wide and 100 miles long. So you see that the downwind radioactive fallout from these bombs have even more lethal danger to them than that in the immediate explosion area, because it covers so much wider territory.
